FOREWORD

The election of a new Israeli Prime Minister in May 1999 and the unexpected reactivation of the Wye River Memorandum (through September's 'Wye Two' agreement) contributed to a mood of cautious optimism towards the end of a year which had begun so uncertainly for the region, with the death of King Hussein of Jordan.

The forty-sixth edition of THE MIDDLE EAST AND NORTH AFRICA provides a comprehensive discussion of the issues and interests involved in the peace process, as well as examining the historical perspectives of the topic. An expanded Documents on Palestine section includes the full texts of the Palestinian National Charter (PLO Covenant), the 1995 Interim Agreement and the Wye River Memorandum. In addition, our presentation of the Emerging Palestinian Autonomous Areas has been further revised to incorporate, for the first time, a statistical survey of the territories.

The Editor would once again like to thank all the contributors for their articles and advice, and the various governmental and other organizations which have assisted in the revision of statistical and directory material in the new edition.

October 1999

ACKNOWLEDGEMENTS

The editors gratefully acknowledge the interest and co-operation of all the contributors to this volume, and of numerous national statistical and information offices, and government departments, as well as embassies in London and throughout the region, whose kind assistance in updating the material contained in THE MIDDLE EAST AND NORTH AFRICA is greatly appreciated.

We are particularly grateful for permission to make extensive use of material from the following sources: the UN *Statistical Yearbook, Demographic Yearbook, Industrial Commodity Statistics Yearbook, National Accounts Statistics* and *International Trade Statistics Yearbook*; the UNESCO *Statistical Yearbook*; the FAO *Production Yearbook, Yearbook of Forest Products* and *Yearbook of Fishery Statistics*; the ILO *Yearbook of Labour Statistics*; and the IMF's monthly *International Financial Statistics*. We are also grateful to the International Institute for Strategic Studies, 23 Tavistock Street, London, WC2E 7NQ, United Kingdom, for the use of defence statistics from *The Military Balance 1998–99*; and to the Israeli embassy, London, for the use of two maps illustrating the disengagement agreements between Israel and Egypt (1974) and Israel and Syria.

The following publications have been of special value in providing regular coverage of the affairs of the Middle East and North Africa region: *Middle East Economic Digest*, The Invicta Press, Ashford, Kent, United Kingdom; *IMF Survey*, Washington, DC, USA; *Keesing's Record of World Events*, Cambridge, United Kingdom; and *Summary of World Broadcasts: Part 4, The Middle East*, BBC, Reading, United Kingdom.

Our thanks also go to the following for particular assistance: Bank Markazi, Islamic Republic of Iran; Saudi Arabian Monetary Agency, Riyadh; United Nations Relief and Works Agency for Palestine Refugees in the Near East.

EXPLANATORY NOTE ON THE DIRECTORY SECTION

The Directory section of each chapter is arranged under the following headings, where they apply:

THE CONSTITUTION

THE GOVERNMENT
- HEAD OF STATE
- CABINET/COUNCIL OF MINISTERS
- MINISTRIES
- POLITICAL BUREAU OF PARTY

LEGISLATURE

POLITICAL ORGANIZATIONS

DIPLOMATIC REPRESENTATION

JUDICIAL SYSTEM

THE CONTRIBUTORS

Simon Chapman. Editor of *The Middle East and North Africa*, 1989–97.

Dr Youssef Choueiri. Reader in Modern Arab and Islamic History, Institute of Arab and Islamic Studies, University of Exeter, England.

Stephanie Cronin. Senior Research Associate, Department of History, School of Oriental and African Studies, University of London, England; Research Fellow, Department of History, University College, Northampton, England.

Alan J. Day. Editor of *The Annual Register*, London, England; former Joint Editor of the *Political Handbook of the World*, Binghamton University, New York, USA.

Michael James den Hartog. Graduate in Middle East Studies from the Universities of Exeter (England) and Nijmegen (The Netherlands). Nato Research Fellow at the Peace Research Centre (University of Nijmegen, 1996–98).

Richard I. Lawless. Emeritus Reader in Middle Eastern Studies, University of Durham, England.

Dr Kamil Mahdi. Director of Studies, Centre for Arab Gulf Studies, University of Exeter, England.

Nur Masalha. Lecturer in International Relations and Politics, Richmond, The American International University, London, England.

Malise Ruthven. Centre for the Study of Religions, University of Aberdeen, Scotland.

Rodney Wilson. Professor of Economics, University of Durham, England.

TRANSCRIPTION OF ARABIC NAMES

The Arabic language is used over a vast area. Though the written language and the script are standard throughout the Middle East, the spoken language and also the pronunciation of the written signs exhibit wide variation from place to place. This is reflected, and even exaggerated, in the different transcriptions in use in different countries. The same words, names and even letters will be pronounced differently by an Egyptian, a Lebanese, or an Iraqi—they will be heard and transcribed differently by an Englishman, a Frenchman, or an Italian. There are several more or less scientific systems of transliteration in use, sponsored by learned societies and Middle Eastern governments, most of them requiring diacritical marks to indicate Arabic letters for which there are no Latin equivalents.

Arabic names occurring in the historical and geographical sections of this book have been rendered in the system most commonly used by British and American Orientalists, but with the omission of the diacritical signs. For the convenience of the reader, these are explained and annotated below. The system used is a transliteration—i.e. it is based on the writing, which is standard throughout the Arab world, and not on the pronunciation, which varies from place to place. In a few cases consistency has been sacrificed in order to avoid replacing a familiar and accepted form by another which, although more accurate, would be unrecognizable.

Consonants

- d represents two Arabic letters. The second, or emphatic *d,* is transliterated *ḍ*. It may also be represented, for some dialects, by *dh* and by *z,* e.g. Qāḍī, qadhi, qazi.
- dh in literary Arabic and some dialects, pronounced like English *th* in *this*. In many dialects pronounced *z* or *d*.
- gh A strongly guttural *g*—sometimes written *g,* e.g. Baghdād, Bagdad.
- h represents two Arabic letters. The second, more guttural *h,* is transliterated *ḥ,* e.g. Husain, Husein.
- j as English *j* in *John,* also represented by *dj* and *g*. In Egypt this letter is pronounced as a hard *g,* and may be thus transcribed (with *u* before *e* and *i*), e.g. Najib, Nadjib, Nagib, Naguib, Neguib.
- kh as *ch* in Scottish *loch,* also sometimes represented by *ch* and *h,* e.g. Khalīl, Chalil, Halil.
- q A guttural *k*, pronounced farther back in the throat. Also transcribed *ḳ, k,* and, for some dialects, *g,* e.g. Waqf, Waḳf, Wakf, wagf.
- s represents two Arabic letters. The second, emphatic *s,* is transliterated *ṣ*. It may also be represented by *ç,* e.g. Sāliḥ, Saleh, Çaleh.
- sh as in English *ship*. The French transcription *ch* is found in Algeria, Lebanon, Morocco, Syria and Tunisia, e.g. Shaikh, Sheikh, Cheikh.
- t represents two Arabic letters. The second, emphatic *t,* is transliterated *ṭ*.
- th in literary Arabic and some dialects, pronounced as English *th* in *through*. In many dialects pronounced *t* or *s,* e.g. Thābit, Tabit, Sabit.
- w as in English, but often represented by *ou* or *v,* e.g. Wādā, Vadi, Oued.
- z represents two Arabic letters. The second, or emphatic *z,* is transliterated *ẓ*. It may also be represented, for some dialects, by *dh* or *d,* e.g. Ḥāfiẓ, Hafidh, Hafid.
- ' A glottal stop, as in Cockney *'li'l bo'ls'*. May also represent the sound transliterated ', a deep guttural with no English equivalent.

Vowels

The Arabic script only indicates three short vowels, three long vowels, and two diphthongs, as follows:

- a as in English *hat,* and often rendered *e,* e.g. balad, beled, emir, amir; with emphatics or gutturals usually pronounced as *u* in *but,* e.g. Khalīfa, Baghdād.
- i as in English *bit*. Sometimes rendered *e,* e.g. jihād, jehād.
- u as in English *good*. Often pronounced and written *o,* e.g. Muhammad, Mohammad.

In some Arabic dialects, particularly those of North Africa, unaccented short vowels are often omitted altogether, and long vowels shortened, e.g. Oued for Wādī, bled for balad, etc.

- ā Long *a,* variously pronounced as in *sand, dart* and *hall.*
- ī As *ee* in *feet*. In early books often rendered *ee*.
- ū As *oo* in *boot*. The French transcription *ou* is often met in English books, e.g. Maḥmūd, Mahmood, Mahmoud.
- ai Pronounced in classical Arabic as English *i* in *hide,* in colloquial Arabic as *a* in *take*. Variously transcribed as *ai, ay, ei, ey* and *ê,* e.g. sheikh, shaikh, shaykh, etc.
- aw Pronounced in classical Arabic as English *ow* in *town,* in colloquial Arabic as in *grow*. Variously rendered *aw, ew, au, ô, av, ev,* e.g. Tawfīq, Taufiq, Tevfik, etc.

Sun- and Moon-Letters

In Arabic pronunciation, when the word to which the definite article, *al,* is attached begins with one of certain letters called 'Sun-letters', the *l* of the article changes to the initial letter in question, e.g. *al-shamsu* (the sun) is pronounced *ash-shamsu*; *al-rajulu* (the man) is pronounced *ar-rajulu*. Accordingly, in this book, where the article is attached to a word beginning with a Sun-letter, it has been rendered phonetically.

There are 14 Sun-letters in the Arabic alphabet, which are transcribed as: d, dh, n, r, s, sh, t, th, z, zh (d, s, t and z, and their emphatic forms, ḍ, ṣ, ṭ and ẓ, are not differentiated in this book). The remaining 15 letters in the Arabic alphabet are known as 'Moon-letters'.

TURKISH ORTHOGRAPHY AND PRONUNCIATION

Turkish has been written in Roman characters since 1928. The following pronunciations are invariable:

- c hard *j,* as in *majority, jam.*
- ç *ch,* as in *church.*
- g hard *g,* as in *go, big.*
- ğ not voiced, or pronounced *y*; Ereğli is pronounced *erayly.*
- ı short vowel, as the second vowel of *'centre',* or French *'le'.*
- i *i* sound of *India, bitter* (NOT as in *bite, might*).
- o *o,* as in *hot, boss.*
- ö *i* sound of *'birth',* or French *'oeuvre'.*
- u as in *do, too,* German *'um'.*
- ü as in *burette,* German *'Hütte'.*

CALENDAR OF POLITICAL EVENTS IN THE MIDDLE EAST AND NORTH AFRICA, OCTOBER 1998–SEPTEMBER 1999

1998

OCTOBER

1 Cease-fire declared by Algeria's Armée islamique du salut, an armed opposition group.

Turkey threatened invasion of Syria if alleged support for the separatist PKK (Kurdistan Workers' Party) continued; both countries subsequently ordered troop redeployments along their joint border.

8 Qatari Minister of Municipal Affairs and Agriculture resigned.

15 Gen. Emile Lahoud elected Lebanese President, having received the approval of all 118 deputies present at the National Assembly vote.

US-brokered talks between Israeli Prime Minister, Binyamin Netanyahu, and Palestinian leader, Yasser Arafat, opened in Washington, DC.

21 Syria and Turkey signed a bilateral security agreement following two days of negotiations near the southern Turkish city of Adana.

23 Overwhelming victory for 'conservative' candidates in elections to Iranian Assembly of Experts.

PNA President Arafat and Israeli Prime Minister Netanyahu signed Wye River Memorandum in the presence of US President Clinton and King Hussein of Jordan in Maryland, USA; signing of the agreement broke a 19-month stalemate in the Israeli-Palestinian track of the peace process.

31 Iraq announced ending of co-operation with weapons inspections by UN Special Commission (UNSCOM).

NOVEMBER

1 Kuwaiti Deputy Prime Minister and Minister of State for Cabinet Affairs resigned.

15 Amid US-led threats of military action should Iraq not comply with inspections, Iraq agreed to permit resumption of work by UNSCOM.

17 Israeli Knesset ratified Wye River Memorandum by 75 votes to 19.

20 Israel implemented first stage of troop redeployment from West Bank and released 250 Palestinian prisoners (as agreed under Wye River Memorandum).

24 Palestinian leader, Yasser Arafat, formally opened Gaza International Airport.

President Lahoud took office in Lebanon; Prime Minister Hariri subsequently declined an invitation from Lahoud to form a new government.

25 Turkish Government collapsed after suffering a vote of 'no confidence' in the Grand National Assembly.

Minister of State removed from office in Turkey following parliamentary censure motion arising from corruption allegations.

30– Elections to People's Assembly held in Syria; the
1 Dec. National Progressive Front (led by ruling Baath Party) won 167 of the 250 seats.

DECEMBER

2 Selim al-Hoss appointed Lebanese Prime Minister.

4 New, reduced 16-member Cabinet announced in Lebanon.

6 Elections for the Legislative Assembly held in the 'Turkish Republic of Northern Cyprus'.

7 UNSCOM inspectors prevented from entering a 'sensitive' site in Baghdad, Iraq.

8 Two new ministers appointed in Kuwait.

12–15 Visit to Palestinian territories by US President Clinton; violent clashes between Palestinian demonstrators and Israeli security forces in West Bank and Gaza preceded visit.

14 Ahmed Ouyahia resigned as Prime Minister of Algeria.

Palestinian Legislative Council reconfirmed the annulment of those articles of the Palestinian National Charter (PLO Covenant) deemed to be anti-Israeli.

15 Smail Hamdani appointed Prime Minister of Algeria.

Government changes effected in Libya, including the restructuring of a number of secretariats.

Summit meeting held between US President Clinton, Israeli Prime Minister Netanyahu and PNA President Arafat at Erez checkpoint between Israel and Gaza Strip; Netanyahu announced that Israel would not proceed with the second troop redeployment prescribed by the Wye River Memorandum.

16 Israeli Minister of Finance, Yaacov Ne'eman, resigned, citing the ineffectiveness of the governing coalition.

Following report by head of UNSCOM, Richard Butler, severely critical of Iraq's non-compliance with inspections obligations, forces of USA and United Kingdom launch 'Operation Desert Fox', targeting strategic sites in Iraq.

19 New Council of Ministers appointed in Algeria.

20 'Operation Desert Fox' ended in Iraq.

Israeli Cabinet voted to suspend implementation of Wye River Memorandum.

21 Opposition motion resulted in dissolution of Israeli Knesset and organization of early general elections.

29 Greek Cypriot Government announced that Russian-supplied missiles were not to be deployed on Cyprus.

30 New Government announced in the 'Turkish Republic of Northern Cyprus'.

1999

JANUARY

1 Israeli Security Cabinet voted to respond to future Hezbollah offensives by targeting infrastructure in central and northern Lebanon.

4 Greek Cypriot Ministers of Defence and of Education resigned following the withdrawal of their party from the ruling coalition.

12 New Government formed in Turkey.

13 Government reshuffle in Qatar; three new ministries created.

14 People's Assembly in Syria formally nominated President Assad for a fifth term in office.

15 Kuwaiti Deputy Prime Minister and Minister of State

for Cabinet Affairs visited Jordan, the first Kuwaiti minister to do so since 1990.

23 Israeli Minister of Defence, Itzhak Mordechai, dismissed.

24 King Hussein of Jordan issued a royal decree naming his eldest son, Abdullah, as Crown Prince in place of his brother, Hassan.

25 Following three weeks of tensions in Iraq's 'air exclusion' zones, US fighter aircraft bombed targets in southern city of Basra; Iraq claimed that missiles had hit civilian targets. Operations by US and British aircraft in 'no-fly' zones continued in subsequent months.

27 Moshe Arens appointed Israeli Minister of Defence.

FEBRUARY

4 Trial of 107 alleged members of Islamic Jihad, charged with conspiracy to overthrow the Government, began in Egypt—largest security trial since beginning of Islamists' campaign against the Egyptian state in 1992.

7 King Hussein of Jordan died of cancer in Amman; Crown Prince Abdullah sworn in as King Abdullah ibn al-Hussein of Jordan.

8 State funeral of King Hussein of Jordan held in Amman, attended by more than 50 heads of state or government; first visit to Jordan by Syria's President Assad for five years.

9 Iranian Minister of Information resigned, following revelations of involvement of intelligence officials of the ministry in the killings of dissident intellectuals in late 1998.

10 National referendum in Syria endorsed the re-election of President Assad.

17 Abdullah Ocalan, leader of the separatist PKK (Kurdistan Workers' Party) captured in Kenya.

18 Israeli forces annexed Lebanese village of Arnoun, on edge of 'security zone'; Arnoun subsequently liberated by thousands of Lebanese students.

19 Assassination of senior Shi'a cleric, Grand Ayatollah Muhammad Sadeq as-Sadr, in Najaf, Iraq.

23 Turkish Minister of Finance and Customs resigned to stand for election as Mayor of İstanbul; replaced by Minister of Labour and Social Security.

Meir Shitrit appointed Israeli Minister of Finance.

26 Iran's first local council elections since the Revolution resulted in considerable success for 'centrist' and 'liberal' candidates.

28 Commander of Israeli army's liaison unit with the South Lebanon Army (SLA), Brig.-Gen. Erez Gerstein, killed in Hezbollah ambush in southern Lebanon—most senior Israeli officer to be killed there since 1982 invasion; Israel responded with series of air strikes against Hezbollah targets in southern Lebanon.

MARCH

3 Restoration of full diplomatic relations between Jordan and Kuwait; Jordanian embassy reopened in Kuwait.

4 New Cabinet appointed in Jordan; Abd ar-Raouf ar-Rawabdeh named Prime Minister; Abd al-Karim al-Kabariti appointed Chief of the Royal Court.

6 Amir of Bahrain died; Sheikh Hamad bin Isa al-Khalifa, hitherto Crown Prince, appointed new Amir.

8 Elections to the Municipal Council held under full adult suffrage in Qatar.

10 Six Libyans accused of bombing a French airliner over Niger in 1989 were found guilty *in absentia* by a court in Paris, France.

18 Greek Cypriot Minister of the Interior resigned following allegations of corruption, which he strenuously denied.

26 EU leaders, meeting in Berlin, Germany, issued the 'Berlin Declaration', which urged Israel to conclude 'final status' negotiations with the PNA within one year.

27 Jama'ah al-Islamiyah reportedly declared a unilateral cease-fire, and announced a new campaign of purely political opposition to the Egyptian authorities.

APRIL

5 Two Libyans accused of involvement in the Lockerbie affair arrived in the Netherlands, where they were to stand trial; the UN immediately suspended its sanctions against Libya, although bilateral US sanctions remained in force.

14–15 Israeli forces reannexed Lebanese village of Arnoun.

15 Leader of Shas party in Israel, Aryeh Der'i, sentenced to four years' imprisonment and fined, having been found guilty of bribery and fraud.

Presidential election held in Algeria.

18 General election to the Grand National Assembly held in Turkey.

22 Tunisian Council of Ministers reshuffled.

27 Abdelazìz Bouteflika inaugurated as President of Algeria.

29 PLO Central Council announced the postponement of any unilateral declaration of Palestinian statehood until after the Israeli general election; violent protests against the decision in the West Bank, Gaza and East Jerusalem.

MAY

4 End of Oslo interim period, as outlined in Interim Agreement signed by Israel and the PNA on 28 September 1995.

Amir dissolved Kuwaiti National Assembly and called early elections.

13 The Grand Mufti of Saudi Arabia died; his deputy, Abd al-Aziz bin Abdullah ash-Sheikh, appointed as his successor on 15 May.

16 Kuwait Government granted women full suffrage from 2003; the National Assembly was to approve the measure when it reconvened after elections in July.

17 Elections to Knesset and premiership in Israel; Labour leader, Ehud Barak, defeated Binyamin Netanyahu in premiership contest with 56.08% of votes; in Knesset vote Barak's One Israel alliance became largest grouping, having secured 26 of the 120 seats; Netanyahu resigned from both Knesset and Likud leadership.

20 New Speaker of the Grand National Assembly elected in Turkey.

27 Ariel Sharon, Israel's outgoing Minister of Foreign Affairs, became Chairman of the Likud party.

28 New Government announced in Turkey.

31 New Cabinet announced by the Amir of Bahrain.

JUNE

1–3 Israeli-backed SLA completed unilateral withdrawal from enclave of Jezzine, in the north-east of Lebanon's 'security zone'.

2 President Mubarak of Egypt formally nominated for a fourth six-year term of office, his nomination having been unanimously endorsed by the People's Assembly.

3 Palestinians in West Bank declared a 'day of rage' against the continuing expansion of Israeli settlements.

8 Four judges assassinated while conducting the trial of two Palestinians in Sidon, Lebanon.

9 Coronation of King Abdullah of Jordan.

16 Cabinet reshuffle in Saudi Arabia.

22 Two new ministers appointed in Qatar.

24–25 Outgoing Netanyahu administration in Israel launched massive series of air strikes against infrastructure targets in central and southern Lebanon—heaviest raids since 'Operation Grapes of Wrath' in 1996; at least eight civilians killed and as many as 70 injured.

29 PKK leader Ocalan sentenced to death in Turkey.

Algerian Minister of Communications and Culture, and Spokesman for the Government, was relieved of his portfolios but retained a cabinet position as Minister–delegate to the Prime Minister; Secretary of State in charge of the Algerian Community Abroad assumed the communications and culture portfolio, in an acting capacity.

30 Expiry of mandate of Richard Butler as chief of UNSCOM; efforts ongoing to agree on a new inspections regime.

JULY

2 UN Secretary-General announced that he was unable to recommend the permanent lifting of sanctions against Libya as the USA demanded further proof of Libya's compliance with Security Council demands.

3 Elections for National Assembly held in Kuwait.

Jordanian Minister of Youth and Sports, Muhammad Kheir Mamsar, resigned over handling of 9th Pan-Arab Games.

6 New Israeli Cabinet presented to Knesset; in his opening speech, Prime Minister Barak promised to negotiate a bilateral peace with Syria, based on UN Security Council Resolutions 242 and 338.

7 Following approval by the Iranian Majlis of stringent new press laws, closure of pro-reform newspaper *Salaam* prompted demonstrations at Teheran University, the harsh suppression of which by security forces and right-wing vigilantes precipitated demonstrations and rioting in Teheran and other cities in mid-July. Domestic and international condemnation of security forces' actions against pro-reform demonstrators. Four people subsequently sentenced to death for their part in the protests.

The United Kingdom announced that it was to resume full diplomatic relations with Libya, following that country's acceptance of general responsibility for the murder of a British policewoman outside the Libyan people's bureau in London in 1984.

8 Sheikh al-Jamri, a Bahraini dissident cleric, previously sentenced to 10-years' imprisonment on charges of inciting violence, was pardoned by the Amir.

9 Israeli Prime Minister Barak began a series of summit meetings with Arab, US and European leaders, beginning with talks with the Egyptian President, Hosni Mubarak.

11 Israeli Prime Minister Barak and the Palestinian leader, Yasser Arafat, held first direct discussions at Erez checkpoint between Israel and Gaza Strip.

13 New Government announced in Kuwait.

Constitutional Committee approved in Qatar to draft permanent constitution.

14–15 Municipal elections held in Jordan.

17 New Speaker of National Assembly elected in Kuwait.

20 Syria declared a 'cease-fire' with Israel.

23 King Hassan of Morocco died and was succeeded by King Muhammad.

AUGUST

1 Talks between Israeli and Palestinian delegations collapsed after Palestinian leader Arafat rejected Israeli Prime Minister Barak's proposal to delay implementation of the Wye River Memorandum and to combine further Israeli troop withdrawals from the West Bank with 'final status' negotiations.

5 Minor cabinet reshuffle in Israel.

17 Ayatollah Mahmoud Hashemi-Shahrudi installed as head of Iranian judiciary, succeeding Muhammad Yazdi.

25 New Ministers of Defence, Communications and Works and Health appointed in Cyprus, following resignations.

30 Jordanian security forces closed down offices of Hamas group in Amman.

SEPTEMBER

1 Government reorganized in Jordan.

4 Israeli premier Barak and Palestinian leader Arafat signed 'Wye Two' agreement in Egyptian resort of Sharm esh-Sheikh, detailing a revised timetable for outstanding provisions of original Wye River Memorandum.

9 Israel released 199 Palestinian prisoners, as agreed under 'Wye Two'.

10 Israel transferred a further 7% of West Bank territory to Palestinian self-rule.

13 King Abdullah of Jordan became the first Jordanian monarch since 1965 to visit the Lebanese capital, Beirut.

16 Some 98.6% of voters at a national referendum indicated their approval of President Bouteflika's attempts to restore peace and civil concord in Algeria.

22 Three Hamas leaders, including Khalid Meshaal,were detained by Jordanian security forces on their arrival at Amman airport; they faced charges of organizing illegal political activities and involvement in terrorism.

23 First direct presidential election held in Yemen; President Saleh re-elected with 96.3% of the votes cast.

26 President Mubarak re-elected, having received 93.8% of votes cast in a national referendum in Egypt.

LATE INFORMATION

EGYPT (p. 455)

COUNCIL OF MINISTERS

(October 1999)

Prime Minister: Dr ATIF MUHAMMAD OBEID.

Deputy Prime Minister and Minister of Agriculture and Land Reclamation: Dr YOUSUF AMIN WALI.

Minister of Defence and Military Production: Field Marshal MUHAMMAD HUSSAIN TANTAWI.

Minister of Information: MUHAMMAD SAFWAT MUHAMMAD YOUSUF ASH-SHARIF.

Minister of Foreign Affairs: AMR MUHAMMAD MOUSSA.

Minister of Justice: FAROUK MAHMOUD SAYF AN-NASR.

Minister of Culture: FAROUK ABD AL-AZIZ HOSNI.

Minister of Education: Dr HUSSAIN KAMAL BAHA ED-DIN.

Minister of Economy and Foreign Trade: Dr YOUSUF BOUTROS-GHALI.

Minister of Tourism: Dr MAMDOUH EL-BELTAGI.

Minister of Construction, Housing and New Urban Communities: Dr Eng. MUHAMMAD IBRAHIM SULAYMAN.

Minister of Labour and Migration: AHMAD AHMAN EL-AMAWI.

Minister of Awqaf (Islamic Endowments): Dr MAHMOUD HAMDI ZAKZOUK.

Minister of Health and Population: Dr ISMAIL AWADALLAH SALAM.

Minister of Higher Education and Minister of State for Scientific Research: Dr MUFID MAHMOUD SHEHAB.

Minister of Public Works and Water Resources: Dr MAHMOUD ABD AL-HALIM ABU ZEID.

Minister of the Interior: HABIB IBRAHIM EL-ADLI.

Minister of Insurance and Social Affairs: Dr AMINAH HAMZEH MAHMOUD AL-JUNDI.

Minister of Industry and Technological Development: Dr MOUSTAFA MUHAMMAD AR-RIFA'I.

Minister of Electricity and Energy: Dr ALI FAHMI IBRAHIM AS-SA'IDI.

Minister of Transport: Dr IBRAHIM MUTAWALLI AD-DUMEIRI.

Minister of Youth: Dr ALI AD-DIN HELAL AD-DASUQI.

Minister of Supply and Internal Trade: Dr HASSAN ALI KHIDR.

Minister of Planning and Minister of State for International Co-operation: Dr AHMAD MAHRUS AD-DARSH.

Minister of the Public Enterprise Sector: Dr MUKHTAR ABD AL-MUN'IM KHATTAB.

Minister of Finance: Dr MUHAMMAD MIDHAT HASANAYN.

Minister of Communications and Information Technology: Dr AHMAD MAHMOUD MUHAMMAD NAZIF.

Minister of Oil: Dr AMIN SAMIH SAMIR FAHMI.

Minister of State for Parliamentary Affairs: KAMAL MUHAMMAD ASH-SHAZLI.

Minister of State for Administrative Development: Dr MUHAMMAD ZAKI ABU AMER.

Minister of State for Environmental Affairs: Dr NADIA RIAD MAKRAM OBEID.

Minister of State for Local Development: MOUSTAFA MUHAMMAD ABD AL-QADIR.

Minister of State for Military Production: Dr SAID ABDUH MOUSTAFA MASH'AL.

EMERGING PALESTINIAN AUTONOMOUS AREAS (p. 677)

On 10 October 1999 the Chairman of the Palestinian Public Control Commission (currently JARRAH AL-QUDWAH) was granted ministerial status, under the terms of a presidential decree issued by Yasser Arafat.

PART ONE
General Survey

THE ISLAMIST MOVEMENT IN THE MIDDLE EAST AND NORTH AFRICA

MALISE RUTHVEN

Two decades after the proclamation of an Islamic revolution in Iran the Islamist political fervour afflicting the Middle East and North Africa shows little sign of abating. In Algeria the civil war between Islamists and the Government has devastated the country at the cost of more than 100,000 lives. In Egypt, where the Government, unlike Algeria, still appears to have the upper hand, the estimated casualty rate is much lower—about one-tenth of the Algerian figure—but the cost has been prodigious, with tourism, the country's largest foreign currency earner, devastated and the country's ancient Christian minority increasingly fearful of its future. In Gaza and the West Bank Islamic militants have adopted the 'rejectionist' position abandoned by the PLO since 1988, threatening to undermine the peace process—in ironic collusion with Jewish fundamentalists who also believe themselves to be acting on divine instructions. With Islamists already entrenched in Iran and Sudan and challenging for power in Algeria, alarm bells have been ringing on both sides of the Atlantic. Is a revitalized 'fundament-alist' Islam the new menace that will replace communism as the principal 'threat' to the secular, liberal, democratic values of the West?

This view, put forward among others by Samuel Huntington, the influential Harvard political scientist, and Willy Claes, the former Secretary-General of NATO, is based on the premise that the difference between 'Islamic' and 'Western' civilizations and value systems are as fundamental, in terms of economic management and social organization, as those which formerly divided the Eastern and Western blocs. It is seriously disputed by many leading scholars and journalists who argue that, despite its rhetorical excesses, the Islamist movement is not so much a 'threat' to the West or the regimes supported by it, as a reflection of a crisis—or series of crises—internal to the Islamic world. On closer inspection, these crises reveal themselves to be little different from those afflicting non-Islamic nations in the developing world.

In theory Islam is an inherently political religion. As well as being the bearer of divine revelation, the Prophet Muhammad founded a state which his successors, the caliphs, transformed into an empire stretching from the Atlantic to the Indus valley. Although the empire rapidly lost its political cohesion as rival claimants fought each other for the leadership, the elaboration of the laws derived from the Koran and the Hadith (reports of the sayings and deeds of the Prophet) by the *'ulama* (specialists in the interpretations of texts) came to supply the unchallenged, and unchallengeable, rules of daily social life. After the first disputes, resulting in the split between Sunni and Shi'a, the Muslim ruler's legitimacy came to depend less on his lineage than his role as protector of the Umma, or Islamic community, and preserver of the *Shari'a,* divine law, according to the Koranic command to 'enjoin the good and forbid the evil'. Despite many regional variations, the application of the *Shari'a* over the course of fifteen centuries produced a remarkably homogenous international society, bound by common customs and procedures, which contrasted strikingly with the tribalism operating at the level of power politics. Islamic identity *vis-à-vis* the rest of the world became a matter of practice as much as belief; orthopraxy as distinct from orthodoxy. Whereas the Christian road to salvation was determined mainly by faith and moral outlook, Muslims, additionally, lived in a world of legal exactitude where rules were specified, together with the means of enforcing them.

Although comprehensive in theory, however, the system was never complete. In theory the rulers (sultans or emirs) ruled according to the *Shari'a,* with *'ulama* support. In practice the *'ulama* were often forced to acquiesce in the loss of their legal monopoly. Islamic law was supplemented by the decrees of rulers in substantial areas of commerce, taxation, public and criminal law. Moreover, since the *qadis* (*Shari'a* judges) were appointed by the rulers, they were powerless to enforce decisions that went against those rulers' interests. A *de facto* separation of politics and religion came into existence. However, it was not formally acknowledged by the religious establishment, which continued to uphold the principle that sovereignty belonged to God alone. A major consequence has been the continuance of 'Islam' as a political factor: for so long as the principle has continued to exist that Islam is a 'total way of life' that makes no distinction between God and Caesar, people have sought to realize the Islamic ideal through political action—or, to express the same idea more cynically, they have tried to achieve political power by exploiting Islam's rich symbolic repertoire.

The principal intellectual forbears of the modern fundamentalist or 'Islamist' political movements which would challenge governments from the Maghreb to Malaysia during the latter decades of the 20th century CE, were to be found in the Middle East and South Asia, with increasing cross-fertilization between the two regions. From the 18th century CE Islamic reformers, such as Shah Wali Ullah in India and Muhammad ibn Abd al-Wahhab in Arabia, had prepared the ground for a modernist movement by seeking to purge Islamic belief and ritual of the accretions and innovations acquired over the centuries, particularly the cults surrounding the Sufi *walis* or 'saints', living and dead. An Islam pruned of its medieval accretions was better able to confront the challenge of foreign power than a local cult bounded by the intercessional power of a particular saint or family of saints. The movements of resistance to European rule during the 19th century and early 20th century were led or inspired by renovators (*mujaddids*), most of them members of Sufi orders, who sought to emulate the Prophet Muhammad's example by purifying the religion of their day and waging war on corruption and infidelity.

Both modernists, like Sir Sayyid Ahmad Khan, founder of the Anglo-Oriental College (later University) of Aligarh in India, and reformers like Muhammad 'Abduh (d. 1906), founder of the *Salafiyya* movement in Egypt, were inspired by the same example. Their problem was not, as 'Abduh's patron Lord Cromer (virtual ruler of Egypt between 1882 and 1908) would argue, that 'reformed Islam is no longer Islam'; but rather that there was no institutional hierarchy comparable to a Christian priesthood through which theological and legal reforms could be effected. Reformist *'ulama* like 'Abduh or his more conservative disciple, Rashid Rida, had no special authority through which they could impose their views and the *'ulama,* for the most part, have remained unreconstructed traditionalists up to the present.

Rida became the first important advocate of a modernized Islamic state. He formulated his views during the crisis surrounding the abolition of the Ottoman Caliphate by Kemal Atatürk and the Turkish National Assembly in 1924, a move which, blamed on the colonial victors over the Ottoman Empire during the 1914–18 war, had led to a mass agitation among Muslims in India. Though originally a supporter of the Ottoman Caliphate, Rida came to accept its demise as a symptom of Muslim decadence; and while no advocate of secularism, he saw the Assembly's decision as a genuine expression of the Islamic principle of consultation (*shura*). The ideal caliph, according to Rida, was an independent interpreter of the Law (*mujtahid*) who would work in concert with the *'ulama.* In the absence of a suitable candidate, and of *'ulama* versed in the modern sciences, the best alternative was an Islamic state ruled by an enlightened élite in consultation with the people, and able to interpret the *Shari'a* and legislate when necessary.

Many of Rida's ideas were taken up by the most influential Sunni reform movement, the Muslim Brotherhood, founded

in 1928 by Hassan al-Banna, an Egyptian schoolteacher. The Brotherhood's original aims were moral as much as political: it sought to reform society by encouraging Islamic observance and opposing western cultural influences, rather than by attempting to capture the state by direct political action. However, in the mounting crisis over Palestine during and after the Second World War the Brotherhood became increasingly radicalized. In 1948 the Egyptian Prime Minister, Nuqrashi Pasha, was assassinated by a Brotherhood member and Hassan al-Banna paid with his life in a retaliatory killing by the security services the following year.

The Brotherhood played a leading part in the disturbances that led to the overthrow of the Egyptian monarchy in 1952, but after the revolution it came into increasing conflict with the nationalist Government of Gamal 'Abdul Nasser. In 1954, after an attempt on Nasser's life, the Brotherhood was again suppressed, its members imprisoned, exiled or driven underground. It was during this period that the Brotherhood became internationalized, with affiliated movements springing up in Jordan, Syria, Sudan, Pakistan, Indonesia and Malaysia. In Saudi Arabia, under the vigorous leadership of Amir (later King) Faisal ibn 'Abdul 'Aziz, the Brotherhood found refuge, and political and financial support, with funds for the Egyptian underground and salaried posts for exiled intellectuals.

It was a radical member of the Brotherhood, Sayyid Qutb, executed in 1966 for an alleged plot to overthrow the Egyptian Government, who would prove to be the Arab world's most influential Islamist theorist. Some of Qutb's key ideas, however, are directly attributable to the Indian scholar and journalist, Abu'l 'Ala (Maulana) Maududi (1906–79), whose works became available in Arabic translation during the 1950s. One of Maududi's doctrines, in particular, would have a major impact on Islamic political movements. It was the idea that the struggle for Islam was not for the restoration of an ideal past, but for a principle vital to the here and now: the vice-regency of man under God's sovereignty. The *jihad* was therefore not just a defensive war for the protection of the Islamic territory or *Dar al-Islam*. It might also be waged against governments which prevent the preaching of true Islam, for the condition of *jahiliyya* (the state of ignorance before the coming of Islam) was to be found currently, in the here and now.

During his years in prison Qutb, who had spent some time in the USA as a member of an Egyptian educational delegation, wrote a comprehensive account of the modern *jahiliyya* in his book *Ma'alim fi'l-tariq* ('Signposts along the Road'):

> 'Today we are in the midst of a *jahiliyya* similar to or even worse than the *jahiliyya* that was 'squeezed out' by Islam. Everything about us is *jahiliyya*, the ideas of mankind and their beliefs, their customs and traditions, the sources of their culture, their arts and literature, and their laws and regulations. [This is true] to such an extent that much of what we consider to be Islamic culture and Islamic sources, and Islamic philosophy and Islamic thought . . . is nevertheless the product of that *jahiliyya*'.

Qutb advocated the creation of a new élite among Muslim youth that would fight the new *jahiliyya* as the Prophet had fought the old one. Like the Prophet and his Companions, this élite must choose when to withdraw from the *jahiliyya* and when to seek contact with it. His ideas set the agenda for Islamic radicals, not just in Egypt but throughout the Sunni Muslim world. Those influenced by them included Shukri Mustafa, a former Muslim Brotherhood activist and leader of a group known as *Takfir wa Hijra* ('excommunication and emigration') who followed the early Kharijites in designating their enemies (in this case the Government) as *kafirs* (infidels); Khalid Islambuli and Abd as-Salaam Farraj, executed for the murder of President Anwar Sadat in October 1981; and the *Hizb at-Tahrir* (Islamic Liberation Party), founded in 1952 by Sheikh Taqi ad-Din an-Nabahani (1910–1977), a graduate of al-Azhar whose writings lay down detailed prescriptions for a restored Caliphate.

While Qutb's writings remained an important influence on Islamic radicals or 'Islamists' from Algeria to Pakistan, a major boost to the movement came from Iran, where the Ayatollah Khomeini came to power after the collapse of the Pahlavi regime in February 1979. During the final two decades of the 20th century CE the Iranian revolution remained the inspiration for 'Islamists' from Morocco to Indonesia. Despite this universalist appeal, however, the revolution never succeeded in spreading beyond the confines of Shi'i communities and even among them its capacity to mobilize the masses remained limited. During the eight-year war that followed Iraq's invasion of Iran in 1980 the Iraqi Shi'is who form about 50% of the population conspicuously failed to support their co-religionists in Iran. The revolution did spread to Shi'i communities in Lebanon, Saudi Arabia, Bahrain, Afghanistan and Pakistan, but generally proved unable to cross the sectarian divide. The new Shi'i activism in these countries either stirred up sectarian conflicts or stimulated severe repression by Sunni governments (as in Iraq and Bahrain).

Within Iran the success of the revolution had rested on three factors usually absent from the Sunni world: the mixing of Shi'i and Marxist ideas among the radicalized urban youth during the 1970s; the autonomy of the Shi'i religious establishment which, unlike the Sunni *'ulama*, disposed of a considerable amount of social power as a body or 'estate'; and the eschatological expectations of popular Shi'ism surrounding the return of the Twelfth Imam.

The leading Shi'i exponent of Islam as a revolutionary ideology comparable to Marxism was 'Ali Shari'ati (d. 1977), a historian and sociologist who had been partly educated in Paris. Though without formal religious training, Shari'ati reached large numbers of youth from the traditional classes through his popular lectures at the Husayniyah Irshad, an informal academy which he established in Teheran. Shari'ati's teachings contain a rich mix of ideas in which theosophical speculations of mystics like Ibn al-'Arabi and Mulla Sadra were blended with the insights of Marx, Sartre, Camus and Fanon (who he counted among his friends and whose books he translated into Farsi). The result was an eclectic synthesis of Islamic and leftist ideas. God was virtually identified with the People, justifying revolutionary action in the name of Islam; the *kafirs* (infidels) excoriated in the Koran were identified with those who refused to take action against injustice. An outspoken critic of those members of the clergy who acquiesced in the Shah's tyranny, Shari'ati drew a distinction between the official Shi'ism of the Safavid dynasty (1501–1722), which made Shi'ism the state religion in Iran, and the 'revolutionary' commitment of such archetypical Shi'i figures as the Imams 'Ali and Husain and Abu Dharr al-Ghifari (a Companion of the Prophet often credited with having socialist principles). Shari'ati's ideas, disseminated through photocopies and audio tapes, provided a vital link between the student vanguard and the more conservative forces which brought down the Shah's regime. The latter were mobilized by Sayyid Ruhallah Khomeini, an Ayatollah or senior cleric from Qom who had come to prominence as the leading critic of Shah Muhammad Reza Pahlavi's 'White Revolution' during the early 1960s. This was a series of agricultural and social reforms which threatened the interest of the religious establishment, not least because the estates from which many of the *'ulama* drew their incomes were expropriated or divided up. Exiled to Najaf in Iraq, Khomeini developed his theory of government – the *Velayet-e-faqheh* (jurisconsult's trusteeship) – which radically broke with tradition by insisting that government be entrusted directly to the religious establishment:

> 'The slogan of the separation of religion and politics and the demand that Islamic scholars should not intervene in social or political affairs have been formulated and propagated by the imperialists; it is only the irreligious who repeat them. Were religion and politics separate at the time of the Prophet?'

Popular Shi'ism focuses on the martyred figures of 'Ali and Husain and the expected return of the Twelfth Imam to restore justice and peace in the world. These motifs were skilfully deployed in the mass demonstrations preceding the fall of the Shah in 1978/79. Though Khomeini never formally claimed to be the Hidden Imam, there can be no doubt that by allowing his followers to address him as 'Imam', a title normally reserved by Shi'is for the Imams of the Prophet's house (*Ahl al-bait*), Khomeini deliberately allowed popular eschatological expectations to work on his behalf.

Contrary to the view widely held in the West, however, Khomeini did not impose a fully 'Islamic' system of government (comparable, for example to Saudi Arabia, where the Government rules in accordance with the *Shari'a,* supplemented by

royal decrees.) The 1979 Constitution is really a hybrid of Islamic and western liberal concepts. As the sociologist Sami Zubaida points out, there is a 'contradictory duality of sovereignties'. Article 6 refers to the 'sovereignty of the popular will' in line with democratic national states, but the principle of *Velayet-e-faqheh* gave sweeping powers to Khomeini as 'chief jurisconsult' or trustee. The Constitution is the keystone of a range of institutions, including the *majlis-e-shura* (consultative assembly) composed of elected members under the supervision of a *shura-e-nigahban* (council of guardians). Although the *Shari'a* is supposed to be the basis for all law and legislation, many of the civil codes from the previous regime were retained: there were three court systems, the *madani* (civil) courts, the *Shari'a* courts and the 'revolutionary courts' which handed out often arbitrary punishments by the *komitehs* or revolutionary guards. 'Islamization' was introduced in a number of areas. Women were forced to wear 'Islamic' clothing and removed from certain professions, including the law; interest-bearing loans were forbidden and education was altered to include Islamic doctrines. In practice the *shura-e-nigahban* proved an embarrassment by vetoing, as contrary to the *Shari'a*, various measures passed by the Majlis, including a major land reform. In January 1988 Khomeini ruled decisively in favour of the Majlis, pronouncing that the power of the Islamic state was comparable to that enjoyed by the Prophet Muhammad and took precedence over *Shari'a*. Now that the Islamic state had been won, religious obligations were 'secondary' to government decrees. By giving the state priority over Islamic law from within the religious tradition, Khomeini ironically initiated a process that could open the way to a *de facto* secular regime in which the power of the clergy as a separate estate was effectively neutralized. The reduced status of the Shi'i hierarchy became apparent on Khomeini's death in June 1989, with the election, by the *majlis-e-khobregan* (council of experts), of the then President, Ali Khamenei, as Khomeini's successor to the position of Wali Faqih, supreme jurisconsult. As Khamenei was only *hojatoleslam* at the time (i.e. a middle-ranking cleric), the choice in effect negated the revolution's most significant achievement, which had been to place government under the moral and juridical authority of the supreme spiritual leadership—known in Shi'i terminology as the *marja'iyya*, (after the highest clerical office, the *marja' at-taqlid*, source of imitation, of whom there are several). The succession was legitimized by an amendment to the Constitution which sanctioned the eventual separation of the *marja'iyya* as theological authority from the *velaya* (guardianship or legal authority), by allowing any faqih with 'scholastic qualifications for issuing religious decrees' to assume the leadership. The result was a divorce of political and religious functions at the highest level in blatant contradiction of Khomeini's doctrine. Since then Iran has witnessed an increasingly open conflict between the spiritual authority of the senior clergy and the politico-religious leadership exercised by the clerics actually in power. In January 1995, in an open letter to the authorities, Ayatollah Ruhani declared that life in Iran had become 'unbearable' for those who adhered to true Islamic principles. He felt he 'could not remain a spectator while Islam is violated daily' and the 'true religious leaders' were silenced in a country claiming to be an Islamic republic. He claimed that his home had been attacked by armed criminals who threatened to kill him unless he pledged allegiance to Khamenei; in July of the same year his residence was raided again and his son was arrested. Other senior clerics or their spokesmen, articulated similar views. Sayed Muhammad Qomi, a son of Ayatollah Sayed Hasan Qomi-Tabataba'i, asserted that state and religion were incompatible, and must be separated. Since governments were bound to commit immoral acts, it was counter to the interests of religion that they be run by clerics. The experience of Iran since 1979 had done damage to Islam and its religious leaders. 'Terrorism, torture, bombing, explosions and hostage-taking', which had no place in Islam, were now identified with it. The rule of the clerics had only brought disgrace to Islam. The same critique has been articulated even more forcefully by one of Iran's leading intellectuals, the philosopher Abd al-Karim Soroush, a professor at the University of Teheran. Adopting a view of religion in line with Western phenomenology, Soroush argues that religion, unlike ideology, cannot be cast in any one shape, but bears interpretations that vary in accordance with time and circumstance. Religion is richer, more comprehensive and more humane than mere ideology. It can generate weapons, instruments and ideals, but itself transcends all of these things. Imposing a fixed interpretation on religion—any religion—makes it rigid, superficial, dogmatic and one-dimensional. Khomeini's movement, according to Soroush, will not bear the 'appropriate fruits' unless his followers nurture 'a new understanding of the faith'. Soroush has been physically attacked on several occasions and has been subjected to harassment and intimidation by militants, such as the Ansar-e-Hezbollah, assumed to have links with Khamenei and the right-wing elements associated with the Society of Combatant Clergy (Jameh-e-Ruhaniyat Mobarez—JRM) in the Majlis. In May 1996, in an open letter to the then President Rafsanjani, Soroush accused the Ansar-e-Hezbollah, of 'fostering barbarism' with the 'covert support of various authorities'. Recent developments, however, indicate that Soroush is far from isolated, and that the political tide is moving in his direction. In April 1996 elections to the Majlis revealed a decline in support for the JRM and advanced the cause of its more liberal challengers, the pro-Rafsanjani Servants of Iran's Construction. An even more decisive shift in public opinion was demonstrated a year later, in May 1997, with the unexpected election of Sayed Muhammad Khatami to the presidency with a massive majority (more than 20m. votes to 7.2m.) over his leading rival, the Speaker of the Majlis, Ali Akbar Nateq Nouri. A former Minister of Culture and Islamic Guidance, noted for his support for the film industry, Khatami was supported by a broad coalition of forces, including industrialists, urban professionals, university students, educated women and technocrats. The right-wing elements surrounding Khamenei, however, are determined to retain their collective grip on power. In 1998 the conflict between conservatives and liberals, dogmatists and pragmatists, raged in the Iranian courts, where the popular Mayor of Teheran, Gholamhossein Karbaschi, allegedly at Khamenei's instigation, faced charges of embezzlement and corruption. In July Karbaschi was sentenced to five years' imprisonment and 60 lashes. He was also fined and banned from public office for 20 years. In December Karbaschi's custodial sentence and ban on holding public office were reduced and the corporal punishment was commuted to a fine. Subsequent appeals against his conviction, however, were rejected. One of many repercussions of the trial was the impeachment from office of the Minister of the Interior, Abdollah Nuri, following a vote in the Majlis initiated by conservatives opposed to Nuri's countenance of expressions of support for Karbaschi. (In May it had been reported that the Ministry of the Interior had authorized the registration of the Servants of Iran's Construction as a political organization, with Karbaschi as Secretary-General.) Similar impeachment proceedings were initiated against the Minister of Culture and Religious Guidance, Ata'ollah Mohajerani, in May 1999, for his tolerant attitude towards the media and the arts, but were defeated. Mohajerani had argued that political and cultural changes in Iran were 'irreversible'. Meanwhile, in September 1998, several newspapers were closed and a number of journalists were imprisoned after Khamenei accused certain publications of abusing freedom of speech to undermine Islamic beliefs. In July 1999 it was reported that the largest student demonstrations since the 1979 revolution were being organized by Iranian students in Teheran, in support of demands for reform.

The gap between the regime's Islamic rhetoric and its political realities has been demonstrated in one of the most sensitive cultural areas, namely gender and family life. In opposition and exile, Khomeini had opposed the female franchise introduced by the Shah and bitterly denounced the Family Protection Laws introduced in 1967 and 1976 which limited the rights of men in divorce cases, improved the rights of women and raised the age of marriage to 18. Khomeini declared that divorces obtained according to these laws would not be recognized and marriages subsequently contracted would be punished as adulterous. Chador-clad women were among the most active participants in the revolution: the rhetoric of the time stressed that 'true Islam' fully protected female rights, while granting them a dignity and status denied by Western 'sexploitation', which reduced them to the condition of prostitutes. After coming to power with much female support, however, the mullahs were in no position to remove the female franchise. (Local elections

for some 200,000 officials, conducted in February 1999, were particularly successful for pro-Khatami reformists and female candidates. However, moderate candidates had only been permitted to contest the elections following the intervention of an arbitration panel which had reversed an earlier decision of the conservative-dominated election supervision board which had proscribed their participation.) Islamic legal practice was restored to the extent that the age of marriage for girls was lowered to 13, and in some cases to nine, the official age of maturity. However most of the provisions of the Shah's laws protecting the rights of women in marriage were retained. A new family law enacted in 1992 represents, in the view of the anthropologist Homa Hoodfar 'one of the most advanced marriage laws in the Middle East (after Tunisia and Turkey) without deviating from any of the major conventional assumptions of Islamic law'. At the same time, under clerical pressure, female employment in the public sector has been decreasing at a rate of 2% per year, and women are prevented by law from occupying certain senior offices of state. In May 1998 conservatives introduced two parliamentary bills (widely regarded as anti-feminist), that would outlaw press coverage of domestic violence, stifle criticism of laws affecting women and segregate medical services. While there was no certainty that the bills would succeed, their introduction demonstrated that in Iran, more than any other Middle Eastern country, the highly contentious issue of women's rights is being debated on the basis of contested interpretations of Islamic law, within the forum of an elected assembly. This may not be a fully fledged democracy according to Western models, but such open and public debate would be unthinkable in a conservative Islamic society such as that which prevails in Saudi Arabia.

Outside Iran, however, the factors that contributed to the Islamic revolution continued to sustain the Islamist movements, accounting for the continuing popularity of their ideologies. The collapse of communism and the failure of Marxism to overcome the stigma of 'atheism' made Islam seem an attractive ideological weapon against regimes grown increasingly corrupt, authoritarian and sometimes tyrannical. The rhetoric of national liberation, appropriated by monopolist ruling parties, became discredited as those parties failed to address fundamental economic and structural problems, and were increasingly seen to be controlled by tribal coteries or political cliques indifferent to the needs of the majority. In countries such as Egypt and Algeria, qualified successes achieved by governments in the field of education turned against them, as graduates from state universities found career opportunities blocked. As centres of opposition, the mosques enjoy privileged status, and the efforts of governments to subject them to state control are usually incomplete. If they close down 'rebel' mosques they merely confirm the charges of disbelief directed against them by their opponents. At the same time, the explosion of information technology and particularly the revolution in audio-visual communications undercut the authority of the literate élites. The effect of this has been twofold. While television and video expose ever-growing numbers of people to transgressive and often salacious images created by the Western entertainment and advertising industries, video and audio cassettes enable radical preachers to evade government controls on radio and television.

In many Middle Eastern countries an exponential leap in the rate of urbanization has decisively altered the cultural and demographic balance between urban and rural populations, creating a vast new proletariat of recently urbanized migrants susceptible to the messages of populist preachers and demagogues. The Islamist movements, through their welfare organizations, have been able to fill the gaps caused by government failure to deal with housing shortages and other social problems. Housing shortages are forcing young people to delay marriage in societies where extra-marital sexual activity is strictly taboo. The resulting frustration, it may be argued, accounts for the obsessive manner with which the Islamists seek to enforce their rigid sexual codes. Restrictions on government spending imposed by the IMF have tended to exacerbate housing and welfare problems by forcing cuts in social spending, leading to the withdrawal of the state from some areas and its replacement by Islamic welfare organizations and charitable associations. Such voluntary organizations have found generous sources of funds in Saudi Arabia and the Gulf. The Islamic financial sector, though still tainted by the massive losses sustained by investors in Egypt in the 1980s, provides employment opportunities and an avenue for building networks of patronage, religious orthodoxy and political mobilization able to compensate for the disappearance of older communal bonds and patronage networks. With rapid urbanization and the growth of slums and shanty towns, the old systems have ceased to function, as sheikhs and notables, local and party leaders have become detached from their previous clients. The former nationalist rhetoric, whether Nasserist or Baathist, has been discredited. 'It is into this vacuum of organization and power', writes Sami Zubaida 'that the Islamic groups have stepped to impose their authority and discipline. The organization they impose is not one of popular participation. The activists and militants remain in charge, and the common people, to whom they provide services against modest payments, are considered as subjects of ethical reform, to be converted to orthodox conformity and mobilized in political support.'

Though inspired by local conditions, the international factors affecting the Islamist movement should not be ignored. Veterans of the Afghan war against the Soviet occupation have formed the core of armed Islamist groups in Algeria, Yemen and Egypt. At the height of the conflict there are said to have been between 10,000 and 12,000 *mujahidin* from Arab countries financed from mosques and private contributions in Saudi Arabia and the Gulf states. Many of them, ironically, are reported to have been trained by the US Central Intelligence Agency (CIA) in the camps of Gulbuddin Hekmatyar. The Saudi-born militant Islamist businessman, Osama bin Laden (whose citizenship was revoked in 1994), was believed to have organized large groups of Arab volunteers in the Afghan *jihad*, before his campaign of direct sponsorship of terrorist attacks against Western targets took him and a loyal band of 'Afghan Arabs' to Sudan (from where they were expelled in 1996) and finally back to Afghanistan (where they became a considerable inconvenience for the Taliban administration, frustrating their attempts to secure recognition from the international community).

Saudi influence also operates at the religious or ideological level. Many of the Islamists active in Egypt and Algeria spent time in Saudi Arabia as teachers or exiles where they became converted to the rigid, puritanical version of Islam practised in that country. Thus a prominent (currently imprisoned) leader of the Front islamique du salut (FIS) in Algeria, Ali Belhadj, far from operating within the regional Maliki school of jurisprudence, which allows for considerable latitude of interpretation 'in the public interest', is trying to impose the rigid tenets of the Hanbali school prevailing in Saudi Arabia on the leadership of the FIS.

The responses of governments to the challenge of political Islam range from outright repression to co-optation and accommodation. In the Syrian city of Hama a rebellion by the Muslim Brotherhood in 1982 was suppressed by the Government of President Hafiz al-Assad at a human cost estimated at between 5,000 and 20,000 lives. In Algeria the army's cancellation of the second round of the national elections after the FIS won the first round in December 1991 led to a bloody civil war that came to resemble, in its barbarity and carelessness for the lives of non-combatants, the campaign fought by the French against Algerian nationalists nearly two generations earlier. Despite the intensified violence, which to date is thought to have cost some 100,000 lives, there is no clear conclusion in sight. Although it organized meetings with some of its Islamist opponents, the Zéroual administration refused to countenance outside mediation by France, or by the European Union, initiatives which might present the possibility of an end to this terrible conflict on Europe's southern borders. The prospects for a solution have been undermined by internal divisions on both sides. President Zéroual's freedom of manoeuvre was restricted by the powerful faction of senior army generals known as the 'eradicators', headed by the Chief of Staff Lt-Gen. Muhammad Lamari, who favour a military solution; the Islamist cause is even more riven by factionalism, with increasingly bitter rivalry between the FIS and its military wing, the Armée islamique du salut (AIS) on one side, and the extremist Groupe islamique armé (GIA) on the other, as well as by divisions within the political leadership of the FIS.

A secret dialogue between the Government and the two FIS leaders Abbasi Madani and Ali Belhadj in the spring of 1995 ended in failure, with the Government blaming the FIS for reneging on a promise to abandon violence and for refusing 'to renounce installing an Islamic state'; for its part the FIS leadership-in-exile accused the Government of employing political blackmail against the two imprisoned leaders, as well as attempting to dictate who the FIS representative should be, in order to ensure their compliance. Following the failure of the talks, the Government sought to legitimize its own position and to discredit that of its Islamist opponents by holding presidential elections (the first multi-party elections since independence) to be followed by the creation of a new National Assembly. Despite a boycott by all the main opposition parties the strategy was successful to the extent that it improved the Government's international standing, securing victory with a convincing—if disputed—majority of 61% for President Zéroual. It did not, however, halt the escalating spiral of violence. The presidential elections took place in November 1995 under stringent security, following threats from the AIS and GIA. Although opposition leaders insisted that the electoral turnout did not exceed 37%, the Government claimed a turnout of more than 75% (about 12m. of just less than 16m. eligible voters). International observers noted that notwithstanding some inflation of the official figures, the turnout was still higher than the opposition was claiming. During the campaign, registered opposition candidates including Mahfoud Nahnah, leader of the moderate Islamist Hamas party, were free to organize political rallies and to be critical of the Government in televised broadcasts. The relatively large showing for Nahnah, (25.6% against Zéroual's 61.0%, according to official figures) indicated that many FIS supporters had voted for him, though not in sufficient numbers to challenge the Government. Observers noted the high proportion of women voters, who had taken part in defiance of Islamist threats. Later, in an implicit acknowledgement of the set-back the elections had dealt the opposition, the FIS executive committee called for renewed negotiations between the Government and the 'effective opposition'.

Political advances towards participatory democracy and constitutional government, however, were vitiated by the deteriorating security situation, and by the spiralling cost in human lives in particular. The death toll among civilians, terrorists and armed forces since the conflict began in 1992 was unofficially estimated at 100,000 by mid-1999, considerably greater than the official Government figure. In the complex and highly unstable patterns of terror and counter-terror, attributing responsibility for the massacres in which unarmed civilians have been the principal victims has become increasingly difficult. Initially, both of the armed Islamist organizations aimed to weaken the foundations of the state by striking at its economic infrastructure and its officials. Army officers, government employees and politicians were among the primary targets, as were religious functionaries who dared to condemn the insurgents' activities as being contrary to Islam. Increasingly, however, the GIA expanded its activity to embrace a much broader 'culture war', in which anything with 'Western' or 'secular' associations was liable to attack. The view that the education system serves an 'impious state' has resulted in the destruction of more than a thousand schools. Students have been warned to stay away, and occasionally schoolchildren have been attacked. Journalists and media personnel have also been targeted. In their war against the *'jahiliyya'* state, the Islamists have murdered hundreds of artists and journalists accused of collaborating with the enemy or of peddling Western 'filth'; technicians responsible for installing TV satellite dishes, through which Algerians can receive French and Italian programmes, have had their throats cut. Musicians specializing in the formerly popular *rai* music (a blend of Arabic music and Western rock) have been assassinated, along with other representatives of 'Western' or hybrid culture, including scientists, athletes and foreign personnel. The assault on 'Western' culture is seen by some observers as an attack on culture itself. One foreign journalist noted that the GIA's war against 'intellectuals' had begun to resemble 'not so much an Islamic uprising but a Khmer-Rouge style slaughter of the élite'. Women, particularly those suspected of having 'Western' educations, have been singled out for attack, along with all those who refuse to wear the veil. According to one secularist organization, the Algerian Rally of Democratic Women, more than 500 unveiled women and girls were murdered at random during the month of Ramadan (January–February) in 1995.

The counter-measures initiated by the army have been no less brutal, and in the distorted world where terrorism and counter-terrorism meet, accusations that sections of the armed forces have themselves perpetrated atrocities in order to 'discredit' the Islamists have become increasingly plausible. In a report on Algeria published in November 1997, Amnesty International confirmed that 'at least' 80,000 people had been killed since 1992. Noting that the Government blamed the violence on terrorist groups, the human rights organization drew attention to the fact that most of the attacks on unarmed villagers had occurred 'in areas around the capital in the most heavily militarized region of the country and often in close proximity to army barracks and security force outposts'. It also noted that 'on no occasion have the army and security forces intervened to stop or prevent the massacres, or to arrest those responsible'. In the case of the murders of some 300 people in three villages in the Blida region in August 1997, one of the worst incidents of the conflict so far, Amnesty noted that there were two military barracks within 6 km of the scene of the massacres, while there were security force posts within 'a few hundred yards'. The report concluded that 'at the very least' the Government was culpable for its failure to provide adequate protection for the population. It also suggested that there was a growing concern that death squads working in conjunction with elements in the security forces 'may have been responsible for some of the massacres'. In November 1997 a Paris newspaper, *Le Monde,* reported an interview with a senior Algerian officer known only as 'Hakim' who claimed that the Algerian secret services were resposible for many of the atrocities, including the murder of seven elderly French monks in May 1996—an act that prompted widespread outrage against the Islamists in France. He also claimed that two bomb explosions that killed eight people and wounded 143 in the Paris Metro in 1995 were planted at the instigation of Algerian military intelligence and Lt-Gen. Lamari.

Although the GIA continued its campaign of violence during 1998, the scale of the conflict appeared to have diminished (a unilateral cease-fire declared by the AIS in September 1997 was maintained during the year), the strength of the Islamist opposition was clearly undermined by the deep divisions within its own ranks. Meanwhile, although many observers were encouraged by the conciliatory campaign pledges of the country's new President (Abdelaziz Bouteflika—elected in April 1999), some concern was expressed at his alleged close relations with the powerful commercial organizations associated with the security services.

In Tunisia the regime of President Zine al-Abidine Ben Ali, a former security chief, has responded to the perceived Islamist threat in a similarly uncompromising way. The main Islamist party, an-Nahda ('Renaissance', formerly the Islamic Tendency Movement) has been banned along with all other parties based on religion, and its membership subjected to a ruthless campaign of repression leading to accusations of human rights abuses by Amnesty International and the UN Commission on Human Rights. The Government refuses to accept declarations by an-Nahda's leader, Rached Ghanouchi (currently in exile in the United Kingdom) that his party is committed to pluralism and representative government, although an-Nahda has joined with other, non-Islamist opposition parties in proposing a dialogue with the regime. Ghanouchi emphasizes that 'the Islamists should accept a democratic coalition rule that might encompass only part of their programme' while believing that, far from being incompatible, Islamic and Western values can accommodate each other. 'Once the Islamists are given a chance to comprehend the values of Western modernity, such as democracy and human rights, they will search within Islam for a place for these values.' Non-Islamic opposition parties, which won only six out of more than 4,000 seats in the municipal elections in May 1995 have accused the Government of using the struggle against the Islamists to reinforce its authoritarian powers. President Ben Ali, however, insists that he is not dealing with the Islamists by security methods alone, but is adopting policies 'which tackle the economic and social problems, by taking care

of the poorer regions and helping the poorest sections of society'. In this he has been helped by Tunisia's relatively prosperous economy. Stringent security measures, including road-blocks on all main routes leading to Algeria and the presence of undercover police officers on cross-border trains appear to have prevented the Algerian conflict from spilling over into Tunisia.

In Morocco, despite much higher levels of poverty and serious social problems, the Government has been more emollient. The principal Islamist leader, Abd es-Salam Yassine, head of the banned *Al-Adl wa-'l Ihsan* (Justice and Charity movement) is technically under house arrest 'for his own protection' while 'judicial investigations' continue into his activities. However, he has been allowed to preach on at least one occasion, although the Government has insisted that he refrain from political statements. Islamic financial institutions have been refused licences. But compared to their Algerian counterparts, the Moroccan Islamists who, as elsewhere in the Arab world are active on university campuses, have taken a relatively moderate line, avoiding confrontation with the state or direct challenges to the authority of the monarch. According to one of Morocco's leading sociologists, there are at least 30 different Islamist groups in the country, but only four of them have a significant following and influence; security forces of the Ministry of the Interior constantly monitor their activities. Periodically weapons caches are discovered. In a few instances death sentences have been handed down by the courts. (At elections to the Chamber of Representatives conducted in November 1997 the centre-right Mouvement populaire constitutionnel et démocratique—subsequently the Parti de la justice et du développement—secured parliamentary representation for the first time. Earlier in the year the party had formally absorbed the Islamist association, *Al-Islah wa-Attajid*.) King Muhammad (like Hassan before him) derives much legitimacy from his descent from the Prophet Muhammad and his caliphal title 'Commander of the Faithful'. The vast Hassan II mosque in Casablanca, completed in 1993 and one of the largest in the world, provides a tangible, if flamboyant symbol of the regime's Islamic credentials. Morocco's public discourse is replete with Islamic symbolism; more secure in its identity than its neighbours, there is less space in the 300-year-old kingdom for an 'Islamic alternative' that challenges the *status quo*. In early 1999 it was reported that the Ministry of Religious Endowments and Islamic Affairs was to resume the organization of regular pilgrimages to Islamic holy sites in Israeli-occupied East Jerusalem, thereby ending an Arab boycott that had been maintained for more than 30 years.

In Jordan, King Hussein, who also claimed descent from the Prophet, was relatively successful in containing Islamic militancy within a parliamentary system. In the elections of November 1993—the first multi-party elections for 36 years—an Islamist victory was confidently predicted until a change in the electoral rules was introduced, with the King's warm approval, substituting the plural voting system in multi-member constituencies for one limiting each voter to a single vote. The result was a reduction in representation of the Islamic Action Front (Muslim Brotherhood) in the National Assembly from 22 seats to 16. At the July 1997 elections, however, the main Islamist party, the Islamic Action Front, in common with other opposition parties, boycotted the poll in protest against the 1994 Peace Treaty between Jordan and Israel and censorship laws placing restrictions on Islamist publications. In March 1996 a prominent Islamist and former parliamentary deputy, Leith Shbeilat (also head of the Engineers' Association—and the Treaty's most outspoken critic), was sentenced to three years' imprisonment after being found guilty of 'slandering the royal family'. He had publicly criticized Queen Noor for weeping before the television cameras at the funeral of the assassinated Israeli Prime Minister, Itzhak Rabin. Six months later, in a conciliatory gesture to the opposition, Shbeilat was granted a royal pardon, the King personally driving him from Swaqa prison, 100 km south of Amman, to his mother's home in the capital. Shbeilat was arrested and imprisoned again in early 1998 following allegations that he had organized a number of proscribed demonstrations in support of Iraq (at a time of increased US military pressure in the Persian (Arabian) Gulf) but was released, once again, following the intervention of King Hussein. It seemed unlikely that the succession of King Abdullah in February 1999 would result in any significant change in the general policy of containment.

In Israel, the Occupied Territories and the areas controlled by the Palestinian National Authority (PNA), Hamas and its counterpart Islamic Jihad continued to challenge the authority of President Yasser Arafat. The Islamist movement was divided between rejectionists who sustained the 'armed struggle' and accommodationists who gave conditional support to Arafat in order to ensure an Israeli withdrawal from part of the Occupied Territories in accordance with the 1993 Oslo accords. In the aftermath of the assassination of Prime Minister Itzhak Rabin by a right-wing Israeli extremist, in November 1995, the rejectionists appeared to gain the upper hand. A series of suicide bombings in Jerusalem, Ashkelon and Tel-Aviv (in which dozens of Israeli civilians were killed) helped to bring down the Labour Government of Rabin's successor, Shimon Peres, and elect the Likud coalition which, under Binyamin Netanyahu, effectively stalled the peace process by ending the 'freeze' on building new Jewish settlements. In order to appease the Israelis, Arafat was forced to clamp down on the rejectionists. While this appeared to confirm Islamist charges that he was, in effect, an Israeli stooge, the Hamas majority were prepared to bide their time, having no desire to take responsibility for an Israeli reoccupation of Palestinian territory. Hamas scored a moral victory when, following a bungled attempt by Israeli agents to murder one of its political advisers in Amman in September 1997, the Jordanian Government secured the release from an Israeli jail of its leader, Sheikh Ahmad Yassin, in exchange for returning the Mossad agents apprehended following the attempted assassination. Under the terms of the Wye Memorandum, brokered by the US Government and signed by Yasser Arafat and Binyamin Netanyahu in October 1998, the Palestinians undertook to intensify anti-terrorist activities in the Occupied Territories and to remove all clauses from the PLO Covenant which urged the armed destruction of the State of Israel. (A list of suspected Palestinian terrorists who were to be arrested forthwith was attached to the memorandum.) In late November (in a largely symbolic gesture), following an increase in Hamas terrorist activity, Arafat announced that Sheikh Yassin had been placed under house arrest for making declarations disadvantageous to the Palestinian national interest. By December of the same year, however, he had been released. At the end of August 1999, in an atmosphere of renewed expectation and hopes for peace proceeding from the election of a new Labour Prime Minister in Israel, the Jordanian authorities moved to close the headquarters of Hamas in Amman, and to suppress the activities of its members there.

In Egypt the Government initially adopted a broadly similar strategy to Jordan's, co-opting the moderates by allowing the Muslim Brotherhood to be represented through other parties in the National Assembly while seeking to eliminate the extremists by police methods. The more militant Islamist elements, led by Islamic Jihad and *Jama'ah al-Islamiyah*, active on university campuses since the 1970s, continued to wage a sporadic war of attrition against the regime, attacking Christians, government officials and foreign tourists. The violence was mainly concentrated in the southern part of the country, and was complicated by the still widely-practised tradition of blood-vengeance: when policemen, state officials or members of the Coptic minority were attacked or murdered, their families were honour-bound to respond in kind, and violence against the state rapidly became entangled in blood feuds. There were many reports of police officers taking hostage the relatives of Islamist fugitives, destroying their homes and burning their crops. In one of the worst incidents, near the southern village of Mallawi in May 1995, 24 people were killed and 18 others were wounded. Attacks on tourists were deliberately designed to cripple the country's economy by undermining its most important source of foreign currency. Tourists were also viewed as spies for Israel and the West, and a source of corruption. In an interview with Hisham Mubarak, an Egyptian Human Rights activist, Tal'at Fu'ad Qasim, a *Jama'ah* spokesman declared tourism in its present form to be 'an abomination', he went on to describe it as 'a means by which prostitution and AIDS are spread by Jewish women tourists', and 'a source of all manner of depravities, not to mention a means of collecting information on the Islamic movement'. The campaign against tourism had the desired effect

of crippling the industry. In April 1996 17 Greek tourists were killed and 15 others injured in an attack outside a Cairo hotel. In November 1997 68 tourists (mainly Swiss and Japanese) were shot dead outside the Temple of Queen Hatshepsut at Luxor in an attack that lasted for three full hours. As in April 1996, the *Jama'ah* accepted responsibility for the attack; however, they claimed that the casualties had been the result of bungling by the police, their intention having been to take the tourists hostage and attempt to force the release of a former head of the *Jama'ah's* governing council, currently serving a prison sentence for his involvement in the bombing of the World Trade Centre in New York in February 1993. Survivors of the massacre, however, rejected this excuse, stating that the gunmen, disguised as security officers, had begun firing automatic weapons at the tourists as soon as they arrived at the scene.

As the attack on the World Trade Center demonstrated, Islamists based in Egypt did not confine their attacks to Egyptian territory. In June 1995 President Mubarak's motorcade was attacked as he was driving from the airport to attend a conference of the Organization of African Unity in Addis Ababa, Ethiopia. Two Islamist organizations linked to the *Jama'ah* claimed responsibility. The following November at least 15 people were killed and 60 injured when a car bomb exploded in the Egyptian embassy compound in Islamabad, Pakistan. The Government's response to these attacks was to increase pressure not only on the militants, but also on so-called moderate elements within the mainstream Muslim Brotherhood. In 1994 moderate Islamists dominated the largest of the country's professional associations, including the medical, engineering and legal syndicates. The Government responded by introducing a 50% majority rule for elections to syndicates, hoping thereby to secure a secularist majority in future elections. In 1995 they took the additional step of granting the judiciary wide powers to supervise union elections, including the right to disqualify candidates. In the case of the engineers', doctors' and lawyers' unions where Islamists had been in control, secularists were able to use the new laws to reduce their influence or have them removed altogether. 'Grass roots' Brotherhood activists were arrested and detained, with dozens referred to military courts for rapid trials. Human rights organizations protested at the violation of civil rights. The judiciary in Egypt, however, is relatively independent, and contains its share of Islamist sympathizers at senior level. In a number of celebrated cases, the Egyptian courts became battle grounds for the culture wars conducted between the Islamists and their secular critics. In 1994 'The Emigrant', a semi-autobiographical film by a distinguished film-maker, Yusuf Shahin, loosely based on the story of Joseph, was withdrawn after an Islamist lawyer sued Shahin for offending Islamic sensibilities. In the most celebrated case of all, Nasir Hamid Abu Zayd, a professor of Arabic at the University of Cairo, was denied tenure and accused of apostasy after a colleague attacked his work in analysing the Koran from a literary-historical perspective. Not content with depriving Abu Zayd of his livelihood, some extreme Islamists demanded that his wife divorce him on the grounds that he was an 'apostate' who could not be married to a Muslim. While a lower court rejected their demands, a higher court ruled against Abu Zayd on appeal. The Abu Zayd case, which received widespread publicity, reveals the clear affinities between what might be called 'intellectual Islamism' and Protestant fundamentalism in the USA. American fundamentalists also object to the Bible being treated as a literary-historical text.

Between 1992 and mid-1998 106 death sentences were conferred by Egyptian courts on militant Islamists, of which number 72 were reported to have been carried out. In February 1999 Egypt's largest-ever trial of suspected Islamist terrorists began in a military court, when legal proceedings were initiated against 107 alleged members of Islamic Jihad. In April the court awarded death sentences to nine of those accused (who were among 62 of the total number being tried *in absentia*) and prison sentences ranging from three years to life to a further 78. In an unexpected development in March, one of the leaders of *Jama'ah al-Islamiyah* announced that the organization was abandoning its armed struggle and would henceforth seek to express opposition to the Government through political channels. Some 1,000 *Jama'ah* detainees were subsequently released by the Government in a conciliatory gesture designed to help consolidate the cease-fire.

In Yemen the Islamist Yemeni Islah Party (YIP), consisting mainly of the northern Hashed tribe with support from the Muslim Brotherhood, strengthened its position after the 1994 civil war with the South. Their rather narrow tribal base, however, prevented the YIP from securing more than 53 seats in the legislative elections of April 1997, compared with the 187 seats secured by the governing General People's Congress (GPC). A small extremist Islamist group, the Islamic Aden-Abyan Army, achieved some prominence in the international press in late 1998 and early 1999 following its involvement in a highly-publicized kidnapping (16 foreign tourists were taken hostage; four of them were later killed during an attempt to free them) and its alleged links to a number of foreign nationals who were arrested in Yemen in early 1999, allegedly intent on perpetrating terrorist attacks on Western targets in Aden.

Even Saudi Arabia, the most traditionalist and religiously observant of Muslim states was subjected to criticism from Islamist quarters, with the circulation of a manifesto in 1992 by mainly Nejdi *'ulama* complaining that the religious leaders were not sufficiently consulted by the Government, which, it complained, was 'inefficient, obsolete and corrupt in its upper reaches'. While the attack on princely corruption found an echo in some liberal circles, the ultra-traditionalist character of some of Saudi Arabia's religious protesters was evidenced by the fact that a leading member of the principal opposition group, the Committee for the Defence of Legal *(Shari'a)* Rights demanded that the whole of the country's Shi'ite minority be put to death. In mid-1995, in an attempt to counter publicly a perceived spread of Islamist zealotry, King Fahd replaced one-half of the members of the Council of Ulema (the country's most senior Islamic authority) and six of the country's seven university chancellors. Terrorist attacks against Western targets, encouraged by the prolonged US military presence in the region in the aftermath of the 1990–91 Gulf War, have been variously attributed to Sunni extremist factions and Saudi Shi'a groups operating with or without foreign support.

In Bahrain where a Sunni dynasty rules over an underprivileged Shi'i majority, members of a group called Hezbollah Bahrain, recruited from Bahraini Shi'i students at Qom, in Iran, and trained in Lebanon, were arrested for plotting to overthrow the Government in June 1996; the culprits appeared on television, where they confessed to their crimes. In all the Gulf states, as in Saudi Arabia, economic stagnation resulting from the decline in oil prices meant there was less money to placate opposition with generous welfare provisions and expensive lifestyles. Discontent inevitably manifested itself in Islamic forms. In the United Arab Emirates the Government attempted to deflect criticisms directed at the privileged status of foreigners by announcing in February 1994 that a whole range of offences, including murder, manslaughter, theft, adultery and drugs offences, would henceforth be tried in *Shari'a* courts, regardless of whether they were committed by nationals or foreigners. In Kuwait Islamists in the National Assembly have been pressing for legislation to enforce greater adherence to the *Shari'a* as the only source of law and to outlaw coeducation in the University, where two-thirds of the student body is female. At elections to the National Assembly conducted in October 1996 Islamist candidates made a strong showing, securing 14 seats compared with the 19 seats secured by pro-Government factions. In March 1998 the National Assembly endorsed a vote expressing 'no confidence' in the Minister of Information, and forcing the reorganization of the Council of Ministers, following accusations that he had allowed 'un-Islamic' publications to be exhibited at a book fair in Kuwait. Pre-empting a similar motion of 'no confidence' in the Minister of Justice, Awqaf (Religious Endowments) and Islamic Affairs, who was severely condemned by members of the Assembly following the discovery of a number of mistakes in a copy of the Koran prepared by the Ministry, in May 1999 the Amir dissolved the legislature and announced the organization of fresh elections.

The legitimacy of the territorial governments established after decolonization was always open to challenge on Islamic grounds. The new national states were in most cases being imposed on societies where the culture of public institutions was weak and where ties of kinship prevailed over allegiances

to corporate bodies. In most Middle Eastern countries and many others beyond the Muslim heartlands, the ruling institutions fell victim to manipulation by factions based on kinship, regional or sectarian loyalties. Even when the army took power, as the only corporate group possessing internal cohesion, the élite corps buttressing the leadership were often drawn from a particular family, sect or tribe. In the period following decolonization the new élites legitimized themselves by appealing to nationalist goals. Their failure to 'deliver the goods' either economically or militarily (especially in the case of the states confronting Israel) led to an erosion of their popular bases and the rise of movements pledged to 'restore' Islamic forms of government after years of *jahiliyya* rule.

Following the collapse of communism, Islamism is likely to dominate the political discourse in Muslim lands for the forseeable future. But for all the anxieties expressed in the West about a 'clash of civilizations' it seems unlikely to effect significant external political change. Existing Muslim states are locked into the international system. Despite the turbulence in Algeria and episodes of violence in Egypt there have been fewer violent changes of government in the Middle East since 1970 than in the preceding two decades when different versions of Arab nationalism competed for power. At the same time the political instability in Pakistan and the continuing conflict in Afghanistan demonstrate that 'Islam' in its current political or ideological forms is unable to transcend ethnic and sectarian divisions. The territorial state, though never formally sanctified by Islamic tradition, is proving highly resilient, not least because of the support it receives, militarily and economically, through the international system. For all the protests by Islamist movements that Saddam Hussain's invasion of Kuwait in August 1990 was a 'Muslim affair', the result of Operation Desert Storm (in which the Muslim armies of Morocco, Egypt, Pakistan, Syria and Saudi Arabia took part) demonstrated conclusively that where major economic and political interests are at stake, the *status quo* wins.

In the long term the globalization of culture through the revolution in communications technology must lead to a form of secularization in Muslim societies, not least because of the increasing availability of religious and cultural choice. A significant factor will be the presence of a large and growing Muslim diaspora educated in the West and able to rediscover in Islam a voluntary faith freed from the imperatives of enforcement, while finding an outlet for Islamic values through voluntary activity. Although the political currents of Shari'ati (exoteric) Islam appear to be in the ascendant, it is the pietistic and mystical traditions that promise to open up the 'straight path' (*sirat al-mustaqim*) in the future. Both Maududi and Hassan al-Banna built pietism into their systems, believing that society must be converted before the state could be conquered. Though the militants and activists who followed them, obsessed with the corruption of governments and embittered by the appalling treatment many of them received at the hands of the state, have tended to focus on action, not least because killings and bombings are bound to attract attention in an international culture dominated by television, there is evidence that quietist versions of Islam are rapidly gaining ground. The *Tablighi Jama'at*, originally founded in India, has spread to more than 90 countries from Malaysia to Canada and is now becoming thoroughly internationalized. Though active in promoting the faith, it is explicitly non-political.

With globalization eroding the classic distinction between *Dar al-Islam* and *Dar al-Harb*, the coming decades could see a retreat from direct political action and a renewed emphasis on the personal and private aspects of faith. But so long as government corruption persists, and governments such as those of Egypt and Algeria find it more expedient to respond to the Islamist challenge by repression than reform, the Islamists, however inept their political programmes, will find a ready audience.

THE RELIGIONS OF THE MIDDLE EAST AND NORTH AFRICA

Islam

R. B. SERJEANT

Islam is a major world religion and the faith predominating throughout the Middle East (with the exception of Israel) and North Africa. There are substantial Christian minorities in some countries (e.g. Lebanon) and communities of oriental Jews and other faiths, for centuries integrated with the Muslim majority. Islam is not only a highly developed religious system, but also an established and distinctive culture embracing every aspect of human activity from theology, philosophy and literature to the visual arts and even the individual's routine daily conduct. Its characteristic intellectual manifestation, therefore, is in the field of Islamic law, the *Shari'a*. Though in origin a Semitic Arabian faith, Islam was also the inheritor of the legacy of classical Greek and Roman civilization and, in its major phase of intellectual, social and cultural development after its emergence from its Arabian womb, it was affected by Christian, Jewish and Persian civilization. In turn, Greek scientific and philosophical writings—in the form of direct translations into Arabic or as a principal element in the books of Arab scholars—began to enter medieval Europe in Latin renderings about the early 12th century from the brilliant intellectual circles of Islamic Spain, and formed a potent factor in the little Renaissance of western Europe.

Islamic civilization had, by about the 18th century, clearly lost its initiative to the ascendant West and has not since regained it. Today, however, certain oil-rich Arab states, notably Saudi Arabia and Kuwait, have made significant progress in the world of international finance and mercantilism, engaging in activities such as the provision of Islamic banking services, for which there has been an increase in demand over the last two decades.

HISTORY

The founder of the religion of Islam was the Prophet Muhammad b. 'Abdullah, born about AD 570, a member of the noble house of Hashim, belonging to the 'Abd Manaf clan, itself a part of the Quraish tribal confederation of Mecca. 'Abd Manaf may be described as semi-priestly since they had the privilege of certain functions during the annual pilgrimage to the Meccan Ka'ba, a cube-shaped temple set in the sacred enclave (*haram*). Quraish controlled this enclave which was maintained inviolate from war or killing, and they had established a pre-eminence and loose hegemony even, over many Arabian tribes which they had induced to enter a trading alliance extending over the main Arabian land routes, north and south, east and west. Muhammad clashed with the powerful Quraish leaders in Mecca (temple guardians, chiefs, merchant adventurers), when, aged about 40, he began to proclaim the worship of one God, Allah, as against their multiplicity of gods. The Quraish leaders were contemptuous of his mission.

While his uncle Abu Talib, head of the house of Hashim, lived, he protected Muhammad from physical harm, but after his death Muhammad sought protection from tribes outside Mecca. However, even after asking to remain quietly without preaching, they would not accept him and Thaqif of Taif (at-Ta'if) drove him roughly away. Ultimately pilgrims of the Aws and Khazraj tribes of Yathrib (Medina), some 200 miles north of Mecca, agreed to protect him there, undertaking to associate no other god with Allah and accepting certain moral stipulations. Muhammad left Mecca with his Companion, Abu Bakr, in the year 622—this is the year of the *hijra* or hegira.

Arriving in Yathrib, Muhammad formed a federation or community (*umma*) of Aws and Khazraj known as the 'Supporters' (*Ansar*), followed by their Jewish client tribes, and the 'Emigrants' (*Muhajirun*—his refugee Quraish adherents) with himself as the ultimate arbiter of the *umma* as a whole. However, there remained a local opposition covertly antagonistic to him, the *Munafiqun*, rendered as 'Hypocrites'. Two internal issues had now to be fought by Muhammad—the enforcement of his position as theocratic head of the federation, and the acquisition of revenue to maintain his position; externally, he adopted an aggressive attitude towards the Meccan Quraish.

In Yathrib his disposal of the Jewish tribes who made common cause with the 'Hypocrites' improved his financial position. Muhammad overcame the Meccan Quraish more as a result of skilful political manoeuvre than of occasional armed clashes, and in year 8 he entered Mecca peacefully. He had previously declared Yathrib a sacred enclave (*haram*), renaming it Medina, the City (of the Prophet)—the two cities known as al-Haraman have become the holy land of Islam. Muhammad was conciliatory towards his defeated Quraish kinsmen, and after his success in at-Ta'if, south of Mecca, deputations came from the Arabian tribes to make terms with the Prophet—the heritor of the influence of the Meccan Quraish.

Early Islam

The two main tenets of Islam are embodied in the formula of the creed, 'There is no god but Allah and Muhammad is the Apostle of God'. Unitarianism (*tawhid*), as opposed to polytheism (*shirk*) or making partners with God, is Islam's basic principle, coupled with the authority conferred on Muhammad by God. Muhammad made little change to the ancient Arabian religion—he abolished idolatry but confirmed the pilgrimage to the Ka'ba; the Koran, the sacred Book in Arabic revealed to Muhammad for his people, lays down certain social and moral rules. Among these are the condemnation of usury or interest (*riba*) on loans and the prohibition of wine (*khamr*)—both ordinances have always been difficult to enforce. In many respects, the similarities between the old and new faiths enabled Arabia to embrace Islam with relative ease. While there is incontrovertible evidence of Muhammad's contact with Judaism, and even with Christianity, and the Koran contains versions of narrative known to the sacred books of these faiths, yet these are used to point purely Arabian morals. The limited social law laid down by the Koran is supplemented by a body of law and precept derived from the *Hadith* or Tradition of Muhammad's practice (*Sunna*) at Medina, and welded into the Islamic system, mainly in its second and third centuries.

Subsequent History

Immediately after Muhammad's death in 632, Abu Bakr, delegated by the Prophet to lead the prayer during his last indisposition, became his successor or Caliph. Some Medinan 'Supporters' had attempted a breakaway from Quraish overlordship but Abu Bakr adroitly persuaded them to accept his succession. Office in Arabia, generally speaking, is hereditary within a family group, though elective within that group, and Abu Bakr's action had taken no account of the claims of 'Ali, the Prophet's cousin and son-in-law. The house of Hashim, to which Muhammad and 'Ali belonged, was plainly aggrieved that a member of a minor Quraish clan, not of the 'house' (*Bait*) of their ancestor, Quṣaiy, the holder of religious offices in Mecca which he bequeathed to his descendants, should have snatched supreme power. Muhammad's Arabian coalition also weakened, the tribes particularly objecting to paying taxes to Medina, but Abu Bakr's uncompromising leadership reasserted cohesion. Expansionist thrusts beyond Arabia undertaken during his Caliphate were continued under his successors 'Umar and 'Uthman, diverting tribal energies to profitable warfare in Mesopotamia, Palestine-Syria, Egypt and Persia. Muslim armies were eventually to conquer North Africa, much of Spain, parts of France, and even besiege Rome, while in the east they later penetrated to Central Asia and India.

During 'Uthman's tenure the pace of conquest temporarily slackened and the turbulent tribes, now settled in southern Iraq

and Egypt, began to dispute the Caliph's disposal of plunder and revenue, maintaining that he favoured members of his own house unduly. A delegation of tribal malcontents from Egypt murdered 'Uthman in the holy city of Medina, and in the resultant confusion 'Ali, Muhammad's cousin, was elected Caliph with the support of the tribesmen responsible for murdering 'Uthman. This raised grave constitutional problems for the young Muslim state, and is regarded as the origin of the first and greatest schism in Islam.

If legitimist arguments were the sole consideration 'Ali's claims to succession would appear to be superior, but his claim had already been superseded by 'Uthman—whose father belonged to the Umaiya clan which had opposed Muhammad, but whose mother was of Hashim. 'Uthman naturally appointed Umaiya men loyal to him to commands in the Empire, notably Mu'awiya—the son of Abu Sufyan who had led Quraish opposition to Muhammad at Mecca, but was later reconciled with him—as governor of Syria. Mu'awiya demanded 'Uthman's murderers be brought to justice in accordance with the law, but 'Ali, unable to deliver the murderers from among his supporters, was driven by events to take up arms against Mu'awiya. When they clashed at Siffin, in Syria, 'Ali was forced, against his better judgement, to submit to the arbitration of the Koran and *Sunna,* thus automatically losing the position of supreme arbiter, inherited by the Caliphs from Muhammad. Although history is silent as to what the arbiters actually judged upon, it was most likely as to whether 'Ali had broken the law established by Muhammad, and that he was held to have sheltered unprovoked murderers. The arbiters deposed him from the Caliphial office, though historians allege trickery entered into their action.

'Ali shortly after was murdered by one of a group of his former supporters which had come out against the arbitration it had first urged upon him. This group, the Khawarij, is commonly held to be the forerunner of the Ibadis of Oman and elsewhere. Mu'awiya became Caliph and founder of the Umaiyad dynasty with its capital at Damascus. The ambitions of the Hashim house were not, however, allayed, and when Umaiyad troops slew 'Ali's son Husain at Karbala' in southern Iraq they created the greatest Shi'a martyr (see Religious Groupings, p. 14).

The house of Hashim also included the descendants of 'Abbas the Prophet's uncle, but 'Abbas had opposed Muhammad until late in his life. The 'Abbasids made common cause with the 'Ali-id Shi'a against the Umaiyads, but were evidently abler in the political field. In the Umaiyad empire the Arabian tribes formed a kind of military élite but were constantly at factious war with one another. The Hashimites rode to power on the back of a rebellion against the Umaiyads which broke out in Khurasan in eastern Persia, but it was the 'Abbasid branch of Hashim which assumed the Caliphate and ruled from the capital they founded at Baghdad.

The 'Abbasid Caliphate endured up to the destruction of Baghdad in 1258 by the devastating Mongol invaders of the eastern empire, but the Caliphs had long been mere instruments in the hands of Turkish and other mercenaries, and the unwieldy empire had fragmented into independent states which rose and fell, though they mostly conceded nominal allegiance to the 'Abbasid Caliphs.

The Mongol Ilkhanid sovereigns, now turned Muslim, were in turn displaced by the conquests of Tamerlane at the end of the 14th century. In fact the Islamic empire had largely been taken over by Turkic soldiery. The Mameluke or Slave rulers of medieval Egypt who followed the Aiyubid (Kurdish) dynasty of Salah ud-Din (Saladin) were mainly Turks or Circassians. It was they who checked the Mongol advance at 'Ain Jalut in Palestine (1260). The Ottoman Turks captured Constantinople in 1453, and took Egypt from the Mamelukes in 1516, subsequently occupying the Hijaz where the Ashraf, descendants of the Prophet, ruled in Mecca and Medina, under first Mameluke then Turkish suzerainty. In 1533 the Turks took Baghdad, and Iraq became part of the Ottoman Empire. The Ottoman Sultans assumed the title of Caliph—though in Islamic constitutional theory it is not easy to justify this. The Ottoman Caliphs endured until the Caliphate was abolished by Mustafa Kemal in 1924. The Turks have always been characterized by their adherence to Sunni orthodoxy.

Throughout history the 'Ali-ids have constantly asserted their right to be the Imams or leaders of the Muslim community—this in the religious and political senses, since Islam is fundamentally theocratic. The Shi'a, or followers of 'Ali and his descendants, were in constant rebellion against the 'Abbasids and came to form a distinct schismatic group of legitimist sects—at one time the Fatimid Shi'a rulers of Egypt were near to conquering the main part of the Islamic world. The main Shi'a sects today are the Ithna'asharis, the Isma'ilis, and the near-orthodox Zaidis of Yemen. The Safavids who conquered Persia at the beginning of the 16th century brought it finally into the Shi'a fold. Sunni Hashimite dynasties flourish today in Jordan and Morocco as they did until fairly recently in Iraq and Libya, and the Shi'a Zaidi ruler of Yemen was only displaced in 1962. The main difference between Sunnis and Shi'a concerns the Imamate, i.e. the temporal and spiritual leadership of Islam; for Sunnis, while they respect the Prophet's house, do not consider the Imam must be a member of it—the Shi'a insist on an Imam of the descendants of 'Ali and Fatima his wife, the Prophet's daughter.

It has been too readily assumed that, during the later Middle Ages and long Turkish domination, the Islamic Middle East was completely stagnant. The shift in economic patterns after the discovery of the New World and the Cape route to India, coupled with widening Western intellectual horizons and the development of science and technology, did push European culture far ahead of the Muslim Middle East. It was confronted by a vigorous and hostile Christianity intent on proselytizing in its very homelands. Muslims had to face the challenge of the ideas and attitudes of Christian missionaries. Muslim thinkers like Muhammad 'Abduh (1849–1905) of Egypt and his school asserted that Islam had become heavily overlaid with false notions—hence its decline; like earlier reformers they were convinced that present difficulties could be resolved by reversion to an (idealized) pure, primitive Islam. Sometimes, in effect, this meant reinterpreting religious literature to suit attitudes and ideas of modern times—as for instance when the virtual prohibition of polygamy was identified in the restrictions which define the practice. Since the earlier modern days political leaders like Mustafa Kemal (Atatürk) of Turkey have often taken drastic measures, secularizing the state itself even in the sensitive field of education, and accusing the more conservative forms of Islam of blocking progress. In recent years the Islamic Middle East has witnessed regimes ranging from the strong supporters of traditional Islam—like Saudi Arabia and Libya—to the anti-religious Marxist group which controlled Aden (the People's Democratic Republic of Yemen) until 1990. In Libya, nevertheless, Colonel Qaddafi has published *The Green Book,* embodying his personal solution (very socialist in tone) of problems of democracy and economics. Theocratic Shi'a Iran has a distinctive character of its own.

ISLAMIC LAW

Orthodox Sunni Islam finds its main expression in *Shari'a* law which it regards with great veneration. The Sunnis have crystallized into four schools or rites (*madhhab*), all of which are recognized as valid. Although in practice the adherents of one school can sometimes be at loggerheads with another, in modern times it is claimed that the law of any one of the rites can be applied to a case. The schools, named after their founders, are the Hanbali, regarded as the strictest, with adherents mainly in Saudi Arabia; the Shafi'is, the widest in extent with adherents in Egypt, Palestine-Syria, South Arabia and the Far East; the moderate Hanafi school which was the official rite of the Ottoman Turkish empire and to which most Muslims in the Indian sub-continent belong; and the Malikis of the North African states, Nigeria and Sudan. The Shi'ite sects have developed their own law, and give prominence to *ijtihad,* the forming of independent judgement, whereas the Sunnis are more bound by *taqlid* or following ancient models. However, as the law of Sunnis, the moderate Shi'a and the Ibadis is basically derived from the same sources, the differences are generally more of emphasis than principle.

The completely Islamic state as the theorists envisage it, run in conformity with the rules of the *Shari'a,* has probably never been achieved, and people's practice is often at variance with some or other requirements of *Shari'a.* The imprint of Islam is nevertheless unmistakably evident, in one way or another, on almost every country in this volume.

Civil Courts

In modern states of the Islamic world there exists, side by side with the *Shari'a* court (judging cases on personal status, marriage, divorce, etc.), the secular court which has a wide jurisdiction (based on Western codes of law) in civil and criminal matters. This court is competent to give judgment irrespective of the creed or race of the defendant.

Islamic Law as Applying to Minorities

In cases of minorities (Christian or Jewish) residing as a community in Muslim countries, spiritual councils are established where judgment is passed according to the law of the community, in matters concerning personal status, under the jurisdiction of the recognized head of that community.

Tribal Courts

In steppe and mountain areas of some countries a proportion of the population maintain tribal courts which administer law and justice in accordance with ancient custom and tribal procedure. Among tribes these courts are often more popular than *Shari'a* courts, because justice is swifter. Conciliation (*sulh*) is generally their objective. There is, nonetheless, constant pressure to eliminate customary practices where they are unequivocally seen to be contrary to Islamic principles.

Awqaf

In Muslim countries the law governing *awqaf* (singular, *waqf*) (called in North Africa *habous* (*hubus*)) is the law applied to religious and charitable endowments, trust and settlements. This important Islamic institution is administered in most Muslim countries by a special ministry of *awqaf*. *Awqaf*, or endowments, are pious bequests made by Muslims for the upkeep of religious institutions, public benefits, etc. Family *awqaf* provide an income partly for religious purposes and partly for the original donor's family.

SUFIS

In common with other religions where simple observance of a code of law and morals proves spiritually unsatisfying, some Muslims have turned to mysticism. From early times Islamic mystics existed known as Sufis, allegedly owing to their wearing a woollen garment. They seek complete identification with the Supreme Being, and annihilation of the self—the existence of which they term polytheism (*shirk*). The learned doctors of Islam often think ill of the Sufis, and indeed rogues and wandering mendicants found Sufism a convenient means of livelihood. Certain Sufi groups allowed themselves dispensations and, as stimulants, even used hashish and opium, which are not sanctioned by the Islamic moral code. The Sufis became organized in what are loosely called brotherhoods (*turuq*; singular, *tariqa*), and have to a large extent been incorporated into the structure of orthodox Islamic society. Some *turuq* induce ecstatic states by their performance of the *dhikr*, meaning, literally, the mentioning (of Allah). Today there is much disapproval of the more extravagant manifestations of the Sufis and in some places these have been banned entirely.

BELIEF AND PRACTICE

'Islam' means the act of submitting or resigning oneself to God, and a Muslim is one who resigns or submits himself to God. Muslims disapprove of the term 'Muhammadan' for the faith of Islam, since they worship Allah, and Muhammad is only the Apostle of Allah whose duty it was to convey revelation, though he is regarded as the 'Best of Mankind'. He is the Seal (*Khatam*) of the prophets, i.e. the ultimate Prophet in a long series in which both Moses and Jesus figure. They are revered, but, like Muhammad the Prophet, they are not worshipped.

Nearly all Muslims agree on acceptance of six articles of the faith of Islam: (i) Belief in God; (ii) in His angels; (iii) in His revealed books; (iv) in His Apostles; (v) in the Resurrection and Day of Judgement; and (vi) in His predestination of good and evil.

Faith includes works, and certain practices are obligatory on the believing Muslim. These are five in number:

1. The recital of the creed (*Shahada*)—'There is no god but God (Allah) and Muhammad is the Apostle of God.' This formula is embodied in the call to prayer made by the *muezzin* (announcer) from the minaret of the mosque before each of the five daily prayers.

2. The performance of the Prayer (*Salat*) at the five appointed canonical times—in the early dawn before the sun has risen above the horizon, in the early afternoon when the sun has begun to decline, later when the sun is about midway in its course towards setting, immediately after sunset, in the evening between the disappearance of the red glow in the west and bedtime. In prayer Muslims face towards the Ka'ba in Mecca. They unroll prayer mats and pray in a mosque (place of prostration), at home, or wherever they may be, bowing and prostrating themselves before God and reciting set verses in Arabic from the Koran. On Fridays it is obligatory for men to attend congregational Prayer in the central mosque of the quarter in which they live—women do not normally attend. On this occasion formal prayers are preceded by a sermon.

3. The payment of the legal alms (*Zakat*). In early times this contribution was collected by officials of the Islamic state, and devoted to the relief of the poor, debtors, travellers and to other charitable and state purposes, and it often became, in effect, a purely secular tax on crops. Nowadays the fulfilment of this religious obligation is left to the conscience of the individual believer. The *zakat* given at the breaking of the fast at the end of Ramadan, for example, is a voluntary gift of provisions.

4. The 30 days of the fast in the month of Ramadan, the ninth month in the lunar year. As the lunar calendar is shorter by 11 days than the solar calendar, Ramadan moves from the hottest to the coldest seasons of the solar year. It is observed as a fast from dawn to sunset each day by all adults in normal health, during which time no food or drink may be taken. The sick, pregnant women, travellers and children are exempt; some states exempt students, soldiers and factory workers. The fast ends with one of the two major Muslim festivals, 'Id al-Fitr.

5. The pilgrimage (*Hajj*) to Mecca. Every Muslim is obliged, circumstances permitting, to perform this at least once in his lifetime, and when accomplished he may assume the title, *Hajji*. More than two million pilgrims go each year to Mecca, but the holy cities of Mecca and Medina are prohibited to non-Muslims.

Before entering the sacred area around Mecca by the seventh day of Dhu'l-Hijja, the twelfth month of the Muslim year, pilgrims must don the *ihram*, consisting of two unseamed lengths of white cloth, indicating that they are entering a state of consecration and casting off what is ritually impure. The pilgrims circumambulate the Ka'ba seven times, endeavouring to kiss the sacred Black Stone. Later they run seven times between the nearby twin hills of Safa and Marwah (now covered in by an immense hall), thus recalling Hagar's desperate search for water for her child Ishmael (from whom the Arabs claim descent). On the eighth day of the month the pilgrims leave the city for Mina, a small town six miles to the east. Then, before sunrise of the next day, all make for the plain below Mount 'Arafat, some 12 miles east of Mecca, where they pass the day in prayers and recitation until sunset. This point is the climax of the pilgrimage when the whole gathering returns, first to Muzdalifah where it spends the night, then to Mina where pilgrims stone the devil represented by three heaps of stones (*jamra*). The devil is said to have appeared to Abraham here and to have been driven away by Abraham throwing stones at him. This day, the 10th of Dhu'l-Hijja, is 'Id al-Adha, the Feast of the Sacrifice, and the pilgrims sacrifice an animal, usually a sheep, and have their heads shaved by one of the barbers at Mina. They return to Mecca that evening. In recent years the increasing number of pilgrims arriving (especially by air) has presented the Saudi authorities, guardians of the Holy Places, with major problems of organization, supply, health and public order. In 1988, following the tragic events of July 1987, when 402 people, including 275 Iranian pilgrims, lost their lives in clashes between the Iranians and Saudi security forces, and in order to reduce overcrowding, the Saudi Government imposed national quotas for the numbers of pilgrims performing the *Hajj*. However, overcrowding has continued to present serious

problems, and tragic incidents similar to that of 1988 have become worryingly frequent in recent years.

The Holy War (*Jihad*) against the infidel was the means whereby Arab Muslim rule made its immense expansion in the first centuries of Islam, but despite pressures to do so, it has never been elevated to form a sixth Pillar of Islam. Today some theologians interpret *jihad* in a less literal sense as the combating of evil, but it is significant that the Afghan guerrillas, who resisted the Soviet presence in their country, called themselves *mujahidin*, i.e. those who wage the *jihad* against the enemies of Islam.

The Koran (*Qur'an*, 'recital', 'reading') is for Muslims the very Word of God. The Koran consists of 114 chapters (*surah*) of uneven length, the longest coming first after the brief opening chapter called *al-Fatiha*. (The Koran is about as long as the New Testament). *Al-Fatiha* (The Opener) commences (as does every chapter) with the words, *'Bismillahi 'l-Rahmani 'l-Rahim'*, 'In the name of God, the Compassionate, the Merciful', and forms part of the ritual five prayers (*salat*). Other special verses and chapters are also used on a variety of occasions, and, of course, Muslim children are taught to recite by heart a portion of the Koran or, preferably, the whole of it. The Koran has been the subject of vast written commentaries, but translation into other languages is not much approved by Muslims, though interlinear translations (a line of Koran underneath which is a line of translation) are used, and a number of modern translations into English and most other languages exist. The earlier (Meccan) chapters of the Koran speak of the unity of God and his wonders, of the Day of Judgement and Paradise, while the Medinan chapters tend to be occupied more with social legislation for marriage, divorce, personal and communal behaviour. The definitive redaction of the Koran was ordered by the Caliph 'Uthman (644–56).

HOLY PLACES

Mecca (Makkah): Hijaz province of Saudi Arabia. Mecca is centred around the Ka'ba, the most venerated building in Islam, traditionally held to have been founded by Abraham, recognized by Islam also as a prophet. It stands in the centre of the vast courtyard of the Great Mosque and has the form of a cube; its construction is of local grey stone and its walls are draped with a black curtain embroidered with a strip of writing containing verses from the Koran. In the eastern corner is set the famous Black Stone. The enlarging of the Great Mosque commenced under the second Caliph 'Umar. Both the Ka'ba and Great Mosque have undergone many renovations, notably since 1952. Mecca is the centre of the annual pilgrimage from all Muslim countries.

Al-Medina (*Al-Madinah—The City*, i.e. of the Prophet): Hijaz province of Saudi Arabia. Medina, formerly called Yathrib, was created as a sacred enclave (*haram*) by Muhammad, who died there in the year 11 of the *hijra* and was buried in the Mosque of the Prophet. Close to his tomb are those of his companions and successors, Abu Bakr and 'Umar, and a little further away, that of his daughter Fatima. Frequently damaged, restored and enlarged, the mosque building was extensively renovated by the Saudi Government in 1955.

Jerusalem (Arabic *al-Quds* or *Bait al-Maqdis, The Hallowed/Consecrated*): West Bank (currently annexed by Israel). Jerusalem is Islam's next most holy city after al-Haraman (Mecca and Medina), not only because it is associated with so many pre-Islamic prophets, but because Muhammad himself is popularly held to have made the 'Night Journey' there. Jerusalem contains the magnificent Islamic shrine, the Dome of the Rock (688–91), built by the Caliph 'Abd al-Malik, and the famous al-Masjid al-Aqsa, severely damaged by arson a few years ago.

Hebron (Al-Khalil): West Bank. The Mosque of Abraham, called al-Khalil, the 'Friend of God', is built over the tomb of Abraham, the Cave of Machpelah; it also contains the tombs of Sarah, Isaac, Rebecca, Jacob, and Leah. The shrine is revered by Muslims and Jews, and is also important to Christians.

Qairawan: Tunisia. The city is regarded as a holy place for Muslims, seven pilgrimages to the Great Mosque of Sidi 'Uqbah b. Nafi' (an early Muslim general who founded Qairawan as a base for the Muslim invaders of North Africa) being considered the equivalent of one pilgrimage to Mecca.

Muley Idris: Morocco. The shrine at the burial-place of the founder of the Idrisid dynasty in the year 687, at Walili, near Fez.

Every Middle Eastern country has a multitude of shrines and saints' tombs held in veneration, except Wahhabi states which consider saint cults to be polytheism (*shirk*). In Turkey, however, the policy of secularization led to Aya Sofya Mosque (St Sophia) being turned into a museum.

The following shrines are associated with the Shi'a or Legitimist sects of Islam.

Mashhad (Meshed): Iran. The city is famous for the shrine of Imam 'Ali ar-Rida/Riza, the eighth Imam of the Ithna'ashari group, which attracts some hundred thousand pilgrims each year. The shrine is surrounded by buildings with religious or historical associations.

Qom: Iran. A Shi'a centre, it is venerated as having the tomb of Fatima, the sister of Imam ar-Rida/Riza, and those of hundreds of saints and kings including Imams 'Ali b. Ja'far and Ibrahim, Shah Safi and Shah 'Abbas II. Following the Iranian Revolution it became the centre favoured by Ayatollah Khomeini.

Najaf: Iraq. Mashhad 'Ali, reputed to be constructed over the place where 'Ali b. Abi Talib, fourth Caliph, the cousin and son-in-law of Muhammad, is buried, is a most venerated Shi'a shrine, drawing many pilgrims.

Karbala': Iraq. The shrine of Husain b. 'Ali where, at Mashhad Husain, he was slain with most of his family, is today more venerated by the Shi'a than the Mashhad 'Ali. 'Ashoura Day (10th Muharram) when Husain was killed is commemorated by passion plays (*ta'ziya*) and religious processions during which the drama of his death is re-enacted with extravagant expressions of emotion.

Baghdad: Iraq. The Kazimain/Kadhimain Mosque is a celebrated Shi'a shrine containing the tomb of Musa al-Kazim/Kadhim, the seventh Imam of the Ithna'asharis.

RELIGIOUS GROUPINGS

Sunnis

The great majority, probably over 80% of Muslims, are Sunni, followers of the *Sunna*, i.e. the way, course, rule or manner of conduct of Prophet Muhammad; they are generally called 'Orthodox'. The Sunnis recognize the first four Caliphs (Abu Bakr, 'Umar, 'Uthman, 'Ali) as Rashidun, i.e. following the right course. They base their *Sunna* upon the Koran and 'Six Books' of Traditions, and are organized in four Orthodox schools or rites (*madhhab*), all of equal standing within the Orthodox fold. Many Muslims today prefer to avoid identification with any single school and simply call themselves Muslim or Sunni.

Wahhabis

The adherents of 'Wahhabism' strongly disapprove of this title by which they are known outside their own group, for they call themselves Muwahhidun or Unitarians. In fact they belong to the strict Hanbali school following its noted exponent, the 13th/14th century Syrian reformer Ibn Taimiyah. The founder of 'Wahhabism', Muhammad b. 'Abd al-Wahhab of Arabian Najd (1703–87), sought to return to the pristine purity of early Islam freed from all accretions and what he regarded as innovations contrary to its true spirit, such as saint worship, lax sexual practices, and superstition. His doctrine was accepted by the chief Muhammad b. Sa'ud of Dar'iya (near ar-Riyadh). Ibn Sa'ud and his son 'Abd al-'Aziz—who proved a capable general—conquered much of Arabia. Medina fell in 1804 and Mecca in 1806 to Sa'ud, son of 'Abd al-'Aziz, but after his death in 1814 the Wahhabis were gradually broken by the armies of the Pasha of Egypt, Muhammad 'Ali, acting nominally on behalf of the Ottoman Sultan of Turkey. After varying fortunes in the 19th century the Wahhabis emerged as an Arabian power in the opening years of the 20th century. By the close of 1925 they held the Holy Cities and Jeddah and are today the strongest power in the Arabian Peninsula. Though Wahhabism remains the strictest of the Orthodox groups, Saudi Arabia has made some accommodation to modern times.

The Turuq or Religious Orders

In many Middle Eastern countries the religious orders (*turuq*) have important political-cum-religious roles in society. There are the widely spread Qadiriya who, with Tijaniya, are found in North Africa, the Khatmiya in Sudan, the Rifa'iya in Egypt and Syria, to pick out a few at random. The West has no organizations exactly equivalent to these Sufi orders into which an individual has to be initiated, and in which, by dint of ascetic exercises and study, he may attain degrees of mystical enlightenment—this can also bring moral influence over his fellow men. The Orders may be Sunni or Shi'a; some few Orders are even so unconventional as to be hardly Islamic at all. Although Sufism is essentially uninterested in worldly politics, the *turuq* have, nonetheless, at times been drawn into the political arena. It was the Orthodox reformist Sanusi Order that played the most significant role in our time. The Grand Sanusi, Muhammad b. 'Ali, born at Mustaghanem in Algeria of a Sharif family, founded the first *zawiya* or lodge of the Sanusis in 1837. The Sanusi *tariqa* is distinguished for its exacting standards of personal morality. The Sanusis set up a network of lodges in Cyrenaica (Libya) and put up strong resistance to Italian colonization. The Grand Sanusi was recognized as King Idris of Libya in 1951, but lost his throne in the military revolt led by Colonel Qaddafi in 1969.

The Muslim Brothers (al-Ikhwan al-Muslimun)

Founded in Egypt by Hasan al-Banna in 1928, the career of the Muslim Brothers in Middle East political history has been active and often violent. Al-Banna considered westernizing influences and intellectual emancipation in Egypt to be weakening Islam, itself in decline since the ideal age of the first four Caliphs. So, the movement has a rigidity and intolerant attitude towards Christians and Jews, but this may even extend to other Muslim groups. Al-Banna was a member of a *tariqa* and the Brothers (*Ikhwan*) were initially organized along *tariqa* lines with a graded membership. This membership is not restricted to particular social classes but finds support especially among Azhar students, particularly those graduates of the Azhar who hold teaching and minor religious office. By 1939 the Brothers were one of the most important political groups in Egypt.

In 1944 a 'secret apparatus' was formed, rationalized as for the *jihad* in defence of Islam but used to defend the movement against the government. The *Ikhwan* became involved in acts of terrorism and murder, but in 1949 al-Banna himself was murdered by the political police. At first the *Ikhwan* supported the Egyptian revolution but, falling out with the republican government, they attempted the assassination of Nasser in 1954 following which he put down the society with a stern hand. The society opened branches in other Arab states—one of their emissaries was implicated in the 1948 Revolution in Yemen—and the movement flourishes in these states.

Ideologically the *Ikhwan* seeks a return to Islam and the *Shari'a*; it accepts all orthodox Islamic groups but it is anti-Qadiyani and Bahá'í. In Egypt it provided certain welfare projects and it has been active in publishing its views. A section of 'Muslim Sisters' was set up in 1933.

Shi'a

The Legitimist Shi'a pay allegiance to 'Ali as mentioned above. 'Ali's posterity, which must number at least hundreds of thousands scattered all over the Muslim world, are customarily called Sharifs if they trace descent to his son al-Hasan, and Saiyids if descended from al-Husain, but while the Sharifs and Saiyids, the religious aristocracy of Islam, traditionally are accorded certain privileges in Islamic society, not all are Shi'a, many being Sunnis. By the ninth century many strange sects and even pagan beliefs had become associated with the original Shi'a or Party of 'Ali, but these extremist sects called *ghulat* have mostly vanished except for a few, often practising a sort of quietism or dissimulation (*taqiyya*) for fear of persecution. All Shi'a accord 'Ali an exalted position, the extreme (and heretical) Shi'a at one time even according him a sort of divinity. Shi'ite Islam does not in the main differ on fundamental issues from the Sunni Orthodox since they draw from the same ultimate sources, but Shi'a *mujtahids* have, certainly in theory, greater freedom to alter the application of law since they are regarded as spokesmen of the Hidden Imam.

The Ithna'asharis (Twelvers)

The largest Shi'a school or rite is the Ithna'ashariya or Twelvers, acknowledging a succession of 12 Imams. From 1502 Shi'ism became the established school in Iran under the Safavid ruler Sultan Shah Isma'il who claimed descent from Musa al-Kazim (see below). There are also Ithna'ashariya in southern Iraq, al-Hasa, Bahrain and the Indian sub-continent.

The last Shi'a Imam, Muhammad al-Mahdi, disappeared in 878, but the Ithna'asharis believe he is still alive and will reappear in the last days before the Day of Judgement as the Mahdi (Guided One)—a sort of Messiah—who will rule personally by divine right.

The 12 Imams recognized by the Twelver, Ithna'ashari Shi'a are:

(1) 'Ali b. Abi Talib, cousin and son-in-law of the Prophet Muhammad.

(2) Al-Hasan, son of 'Ali.

(3) Al-Husain, second son of 'Ali.

(4) 'Ali Zain al-'Abidin, son of Husain.

(5) Muhammad al-Baqir, son of 'Ali Zain al-'Abidin.

(6) Ja'far as-Sadiq, son of Muhammad al-Baqir.

(7) Musa al-Kazim, son of Ja'far as-Sadiq.

(8) 'Ali ar-Rida, son of Musa al-Kazim.

(9) Muhammad at-Taqi, son of 'Ali ar-Rida.

(10) 'Ali an-Naqi, son of Muhammad at-Taqi.

(11) Al-Hasan az-Zaki, son of 'Ali an-Naqi, al-'Askari.

(12) Muhammad al-Mahdi, son of al-Hasan b. 'Ali, al-'Askari, known as al-Hujja, the Proof.

Isma'ilis

This group of the Shi'a does not recognize Musa al-Kazim as seventh Imam, but holds that the last Imam visible on earth was Isma'il, the other son of Ja'far as-Sadiq. For this reason they are also called the Sab'iya or Seveners. There is, however, much disagreement among the Seveners as to whether they recognized Isma'il himself as seventh Imam, or one of his several sons, and the Fatimids of Egypt (10th–12th centuries) in fact recognized a son of Isma'il's son Muhammad. Schismatic offshoots from the Fatimid-Isma'ili group are the Druzes, the Musta'lians first settled in Yemen but now with their main centre in Bombay—where the Daudi section, under the chief 'missionary' (Da'i al-Du'a), is known as Bohoras, but who are properly called the Fatimi Taiyibi Da'wa, and the Nizari Isma'ilis of whom the Agha Khan is the spiritual head. These sects have a secret literature embodying their esoteric philosophies. Both groups are very active and a large Isma'ili Institute, sponsored by the Agha Khan, was opened in London in 1985. Small groups of Isma'ilis are to be found in north-west Syria, Iran, Afghanistan, East Africa and Zanzibar, and larger numbers in India and Pakistan.

'Alawis (Nusairis)

The 'Alawis believe Muhammad was a mere forerunner of 'Ali and that the latter was an incarnation of Allah. This Shi'a extremist sect established in the ninth century has also adopted practices of both Christian and pagan origin. Most of its members today live in north-west Syria.

Druze

The Druze are heretics, an offshoot of the Fatimid Isma'ilis (see above), established in Lebanon and Syria. Their name (Duruz) derives from ad-Darazi, a missionary of Persian origin who brought about the conversion of these Syrian mountaineers to the belief of the divine origin of the Fatimid Caliph al-Hakim. The origins of this sect and its subsequent expansion are still obscure. Hamza b. 'Ali, a Persian contemporary of ad-Darazi, is the author of several of the religious treatises of the Druze. This community acknowledges one God and believes that he has on many occasions become incarnate in man. His last appearance was in the person of the Fatimid Caliph al-Hakim (disappeared 1020). The Druze have played a distinctive role in the political and social life of their country and are renowned for their independence of character. They engaged ardently in *jihad* (holy war) against the Israeli invaders of Lebanon and their Christian

allies. Druze morale is reinforced by the inspiration of the Islamic revolution in Shi'ite Iran.

Zaidis

The Zaidis are a liberal and moderate sect of the Shi'a, close enough to the Sunnis to call themselves the 'Fifth School' (*al-madhhab al-khamis*). Their name is derived from a grandson of al-Husain b. 'Ali called Zaid b. 'Ali whom they recognize as fifth Imam. They reject religious dissimulation (*taqiyya*) and are extremely warlike. Zaidism is the dominant school of Islam in Yemen, its main centres being San'a and Dhamar, but Shafi'is form roughly half the population.

Ibadis

The Ibadis are commonly held to have their origins in the Khawarij who dissociated themselves from 'Ali b. Abi Talib when he accepted arbitration in his quarrel with Mu'awiya, but this is open to question. They broke off early from the main stream of Islam and are usually regarded as heretics though with little justification. Groups of the sect, which has often suffered persecution, are found in Oman where Ibadism is the majority religion, Zanzibar, Libya and Algeria, mainly in the Mzab.

THE ISLAMIC REVIVAL

In a number of Muslim countries revivalist or reactionary Islamic movements are taking place. Islam makes no essential distinction between religion and politics so this affects not only the whole Muslim community but also those of other faiths residing in an Islamic state. In one sense it may be said that there is a common basis to the revival in all the Islamic states in that people believe that a reversion to an idealized Islamic community, or the substitution of the principles embodied in *Shari'a* law for the practice of a secular state, will resolve current problems and tensions. Each country, however, seems to differ as to what it expects the Islamic revival to react against. Since imported ideologies like socialism, communism, etc., have not solved political, social and economic problems besetting the Islamic world, in the popular return to the indigenous cultural heritage, Islam has tended to become the ideology of political opposition to existing political establishments and to be regarded as the means to link current development with the traditions of the past.

Saudi Arabia, the heartland of Islam, has always maintained a strict formal adherence to traditional Islam. The late King Faisal, though tactfully curbing the extreme tendencies of Saudi Arabia's Mutawwa' 'clergy', initiated and financed a policy of promoting Islam to counter President Nasser's alignment with socialist propaganda to subvert monarchic regimes elsewhere. King Faisal's initiative took the form of subsidizing the building of mosques in Muslim countries (and, later, also in Europe and other parts of the world), the publication of Islamic books and religious tracts, and the founding or support of such institutions as the Islamic Council of Europe.

In general, the concept of a 'permissive society' as promoted by certain Western elements, is rejected with distaste by all Muslim countries. Saudi Arabia's financial and moral strength has enabled it to take practical steps to pressure other Islamic states to conform, sometimes if they fear only to be out of line, to such Islamic prescriptions as the prohibition of liquor. Even in Egypt alcoholic beverages are not served at public occasions or in public places. On the other hand banks and insurance companies which depend on taking interest on loans, seem to be regarded as earning profit (*ribh*), which is lawful to a Muslim, not taking usury (*riba*), which is unlawful. Since the recent wide revivalist trend that has reasserted itself in Islamic countries, the ethics of banking have troubled the conscience of certain Muslim states, and experiments have been made with Islamic banks which, formally at least, avoid interest. Colonel Qaddafi has also been making highly original experiments in the monetary field which he would regard as Islamic. To the West certain Islamic laws are repugnant, such as amputation of a hand for persistent theft, but the benefit in Saudi Arabia in compelling a high standard of honesty is undeniable—the penalty is probably not frequently inflicted. In Algeria the revival of conservative Islam was manifest in June 1990 with the success in the local elections in the main cities of the Front islamique du salut (FIS). In May and June 1991 demonstrations and riots in Algiers by supporters of the FIS led to the dismissal of the Algerian Government by President Chadli, the postponement of the general election (which had been scheduled for 27 June) and the deployment of the army to restore order. After the FIS achieved an unassailable position in the first round of voting of the rescheduled general election in December 1991, the Algerian armed forces voted to stem its success by suspending the second round of voting and imposing a form of military rule. Algeria subsequently fell into a state close to civil war between the FIS and other militant Islamist groups and their supporters on the one hand, and the security forces on the other.

In Iran the motivation of Islamic reaction, as was symbolized by the Ayatollah (a high religious office) Khomeini, was in part that of the conservative, even chauvinistic, provinces against a secular monarch who introduced foreigners who brought with them Western manners distasteful to Islamic society. This found expression in the destruction of bars, cinemas, etc., the banning of music on the radio, and the attempt, by imposing the veil, to reverse the tide of female emancipation. Persecution of the Bahá'ís was reminiscent of the late 19th century. In 1982, all courts established prior to the Islamic Revolution of 1979 were abolished, and all laws not conforming with Islam were revoked. Although interest-free banking is being introduced, there are difficulties in applying Islamic law to economic policy as there seems to be fundamental disagreement on how to apply it. In practice, too, *Shari'a* penalties are not easy to enforce.

In Iran Khomeini aimed to return to the ideal 'Islamic' state as conceived by the Shi'a mullahs. The emphasis on the concept that the *ulema* (mullahs) have had trusteeship over the entire community deputed to them by the invisible Imam, has led to rule by them of a theocratic type, but Khomeini maintained that they must share in the Islamic ideology as interpreted by his group. Khomeini considered Islam's contemporary state as decadent and deviating from Islamic principles. He was critical of other Muslim governments, in part, as they were affected by Western influences, and his dictum, 'we should try hard to export our revolution to the world', though he considered this 'revolution' a spiritual, not a nationalistic one, had an aggressive overtone. The actions and practice of the new state have often been of an extremity rejected by Muslims and non-Muslims alike. Yet, if, on the one hand, some Muslim countries criticized the Khomeini regime for actions difficult to reconcile with the spirit of Islam, on the other there has been a widespread sentiment of sympathy among ordinary Muslims for the 'Islamic' government of Iran in its opposition to the 'Great Satan' USA, as supporter of Israel, etc.

The Turkey of Mustafa Kemal Atatürk aimed at a complete separation of religion and state—in this secular state women were accorded equal rights with men. It is now clear that secularization did not penetrate deeply into the urban and (particularly) the rural population. After the Second World War resentment against the Government for financial hardship was fanned by religious leaders, and ever increasing religious freedom has had to be conceded within the secular state. Many women have, illegally, resumed the veil. The upper classes tend to favour a secular state, but religious feeling combined with chauvinism are behind the popular revival of Islam. In legislative elections which took place in December 1995 the pro-Islamic Refah Partisi (RP) won the largest number of seats in the National Assembly, though not sufficient for it to govern alone. Its success was widely regarded as an expression of the electorate's disillusionment with the established political parties rather than an endorsement of Refah's Islamic policies, however. Indeed, in mid-1996 the RP leader, Necmettin Erbakan, assumed the premiership of the country at the head of a coalition administration but was forced to resign 12 months later following repeated accusations (proceeding chiefly from the armed forces) that he was attempting to undermine the secular State through the promotion of Islamist interests.

In no way was the interdependence of religion and politics in Islam better illustrated than in the condemnation of Israel by 40 Islamic states, over the question of Jerusalem, a city sacred to Muslims from which the Prophet made his celebrated Night Ascent to Heaven. Intensity of feeling over the Palestine issue varies in degree from one Islamic country to another and is often

far overshadowed by local issues, but it remains everywhere a major obstacle to East–West understanding. Israel's invasion of Lebanon in 1982 and the horrific massacre perpetrated by a Christian Lebanese group at the Sabra and Chatila Palestinian refugee camps in Beirut, apparently with Israeli connivance, and the Israeli suppression of the Palestinian *intifada* (uprising) in the Occupied Territories, exacerbated an already tense situation, persuading the Islamic world at large of the West's underlying hostility. To many Muslims the attempt by President Saddam Hussain to link Iraq's occupation of Kuwait in August 1990 with the Israeli occupation of Arab territories was justifiable. The vigour with which Western governments reacted against the Iraqi occupation, having effectively condoned the Israeli occupations for so long, appeared to them to be blatant hypocrisy.

Arabs and Iranians frequently complain of the 'bad press' and distortion of their religion and politics in the West through ignorance or deliberate bias. Unfortunately, this has been compounded by the offence to Muslims caused by Salman Rushdie's novel *The Satanic Verses,* and by Western, and specifically American, actions against Iraq after the Gulf War. Muslims contrast the latter with the West's reluctance to halt Serbian aggression against the Bosnian Muslims in the former Yugoslavia in the 1990s.

A Muslim writer recently distinguished between 'Westernization' and 'modernization', describing the latter as broadly acceptable, except to a reactionary minority. If the distinction between the two is a little blurred, the idea has some validity. In general, however, the Islamic revival among ordinary Muslims is bound up with factors, simple conservatism apart, varying from country to country and class to class, and it may oppose either governments conducted on a secular basis, or those claiming to be 'Islamic'.

Christianity

DEVELOPMENT IN THE MIDDLE EAST

Christianity was adopted as the official religion of the Roman empire in AD 313, and the Christian Church came to be based on the four leading cities, Rome, Constantinople (capital from AD 330), Alexandria and Antioch. From the divergent development of the four ecclesiastical provinces there soon emerged four separate churches: the Roman Catholic or Latin Church (from Rome), the Greek Orthodox Church (from Constantinople), the Syrian or Jacobite Church (from Antioch) and the Coptic Church (from Alexandria).

Later divisions resulted in the emergence of the Armenian (Gregorian) Church, which was founded in the fourth century, and the Nestorian Church, which grew up in the fifth century in Syria, Mesopotamia and Iran, following the teaching of Nestorius of Cilicia (d. 431). From the seventh century onwards followers of St Maron began to establish themselves in northern Lebanon, laying the foundations of the Maronite Church.

Subsequently the Uniate Churches were brought into existence by the renunciation by formerly independent churches of doctrines regarded as heretical by the Roman Church and by the acknowledgement of Papal supremacy. These churches—the Armenian Catholic, the Chaldean (Nestorian) Catholic, Greek Catholic, the Coptic Catholic, the Syrian Catholic and the Maronite Church did, however, retain their Oriental customs and rites. The independent churches continued in existence alongside the Uniate Churches with the exception of the Maronites, who reverted to Rome.

HOLY PLACES

Bethlehem: Israeli-occupied West Bank. The traditional birthplace of Jesus is enclosed in the Basilica of the Nativity, revered also by Muslims. Christmas is celebrated here by the Roman and Eastern Rite Churches on 25 December, by the Greek Orthodox, Coptic and Syrian Orthodox Churches on 6 and 7 January, by the Ethiopian Church on 8 January, and by the Armenian Church on 19 January. The tomb of Rachel, important to the three faiths, is just outside the town.

Jerusalem: West Bank (but annexed by Israel). The most holy city of Christianity has been a centre for pilgrims since the Middle Ages. It is the seat of the patriarchates of the Roman, Greek Orthodox and Armenian Churches, who share the custodianship of the Church of the Holy Sepulchre and who each own land and buildings in the neighbouring area.

The Church of the Holy Sepulchre stands on the hill of Golgotha in the higher north-western part of the Old City. In the central chamber of the church is the Byzantine Rotunda built by 12th century crusaders, which shelters the small shrine of the traditional site of the tomb. Here the different patriarchates exercise their rights in turn. Close by is the Rock of Calvary, revered as the site of the Crucifixion.

Most pilgrims devoutly follow the Way of the Cross leading from the Roman Praetorium through several streets of the Old City to the Holy Sepulchre. Franciscan monks, commemorating the journey to the Crucifixion, follow the course of this traditional route each Friday; on Good Friday this procession marks a climax of the Easter celebrations of the Roman Church.

Outside the Old City stands the Mount of Olives, the scene of Jesus' Ascension. At the foot of its hill is the Garden of Gethsemane which is associated with the vigil on the eve of the Crucifixion. The Cenaculum or traditional room of the Last Supper is situated on Mount Zion in Israel.

Nazareth: Israel. This town, closely associated with the childhood of Jesus, has been a Christian centre since the fourth century AD. The huge, domed Church of the Annunciation has recently been built on the site of numerous earlier churches to protect the underground Grotto of the Annunciation. Nearby the Church of St Joseph marks the traditional site of Joseph's workshop.

Galilee: Israel. Many of the places by this lake are associated with the life of Jesus: Cana, scene of the miracle of water and wine, which is celebrated by an annual pilgrimage on the second Sunday after Epiphany; the Mount of Beatitudes; Tabgha, scene of the multiplication of the loaves and fish; and Capurneum, scene of the healing of the Centurion's servant.

Mount Tabor: Israel. The traditional site of the Transfiguration, which has drawn pilgrims since the fourth century, is commemorated by a Franciscan Monastery and a Greek Basilica, where the annual Festival of the Transfiguration is held.

Jericho: Palestinian autonomous enclave. The scene of the baptism of Jesus; nearby is the Greek Monastery of St John the Baptist.

Nablus (*Samaria*): Palestinian autonomous enclave. This old town contains Jacob's Well, associated with Jesus, and the Tomb of Joseph.

Qubaibah (*Emmaus*): Jordan. It was near this town that two of the Disciples encountered Jesus after the Resurrection.

'Azariyyah (*Bethany*): Jordan. A town frequented by Jesus, the home of Mary and Martha, and the scene of the Raising of Lazarus.

Mount Carmel: Haifa, Israel. The Cave of Elijah draws many pilgrims, including Muslims and Druzes, who celebrate the Feast of Mar Elias on 20 July.

Ein Kerem: Israel. Traditional birthplace of John the Baptist, to whom a Franciscan church is dedicated; nearby is the church of the Visitation.

Ephesus: Turkey. The city, formerly a great centre of pagan worship, where Paul founded the first of the seven Asian Churches. The recently restored Basilica, built by Justinian, is dedicated to John the Evangelist, who legend claims died here; a fourth-century church on Aladag Mountain commemorating Mary's last years spent here now draws an annual pilgrimage in August.

Judaism

There are two main Jewish communities, the Ashkenazim and the Sephardim, the former from east, central and northern Europe, the latter from Spain, the Balkans, the Middle East and North Africa. The majority of immigrants into Israel were from the Ashkenazim, and their influence predominates there, though the Hebrew language follows Sephardim usage. There is no doctrinal difference between the two communities, but they observe distinct rituals.

HOLY PLACES

Wailing Wall: Jerusalem. This last remnant of the western part of the wall surrounding the courtyard of Herod's Temple, finally destroyed by the Romans in AD 70, is visited by devout Jews, particularly on the Fast Day of the ninth of Av, to grieve at the destruction of the First and Second Temples which had once stood on the same site.

Mount Zion: Israel. A hill south-west of the Old City of Jerusalem, venerated particularly for the tomb of David, acknowledged by Muslims as Abi Dawud (the Jebuzite hill on which David founded his Holy City is now known as Mount Ophel, and is in Jordan, just to the east of the modern Mount Zion). Not far from the foot of the hill are the rock-cut tombs of the family of King Herod.

Cave of Machpelah: Hebron, West Bank. The grotto, over which was built a mosque, contains the tombs of Abraham and Sarah, Isaac and Rebecca, Jacob and Leah.

Bethlehem: Israeli-occupied West Bank. The traditional tomb of Rachel is in a small shrine outside the town, venerated also by Muslims and Christians.

Mount Carmel: Israel. The mountain is associated with Elijah, whose Cave in Haifa draws many pilgrims. (See Christianity section).

Safad: Israel. Centre of the medieval Cabbalist movement, this city contains several synagogues from the 16th century associated with these scholars, and many important tombs, notably that of Rabbi Isaac Louria.

Meiron: Israel. The town contains the tombs of Shimon bar Yohai, reputed founder in the second century of the medieval Cabbalist movement, and his son Eleazer. A yearly Hassidic pilgrimage is held to the tomb to celebrate Lag Ba'Omer with a night of traditional singing and dancing in which Muslims also participate.

Tiberias: Israel. An ancient city containing the tombs of Moses Maimonides and Rabbi Meir Baal Harness. Famous as an historical centre of Cabbalist scholarship, it is with Jerusalem, Safad and Hebron, one of the four sacred cities of Judaism, and once accommodated a university and the Sanhedrin.

Other Communities

ZOROASTRIANS

Zoroastrianism developed from the teaching of Zoroaster, or Zarathustra, who lived in Iran some time between 700 and 550 BC. Later adopted as the official religion of the Persian empire, Zoroastrianism remained predominant in Iran until the rise of Islam. Many adherents were forced by persecution to emigrate, and the main centre of the faith is now Bombay, where they are known as Parsees. Technically a monotheistic faith, Zoroastrianism retained some elements of polytheism. It later became associated with fire-worship.

Yazd: Iran. This city was the ancient centre of the Zoroastrian religion, and was later used as a retreat during the Arab conquest. It contains five fire temples and still remains a centre for this faith, of which some 35,000 adherents live in Iran.

BAHÁ'ÍS

Bahá'ísm developed in the mid-19th century from Babism. The Bab, or Gateway (to Truth), Saiyid Ali Muhammad of Shiraz (1821–1850), was opposed to the corrupt Shi'a clergy in the Iran of his day and was executed in 1850. His remains were later taken to Haifa and buried in a mausoleum on the slopes of Mount Carmel. Mirza Husain Ali Bahá'ullah ('Splendour of Allah', 1817–1892), a follower of Babism, experienced a spiritual revelation while in prison and, in 1863, declared himself to be 'he whom Allah shall manifest' as predicted by the Bab. A member of the Persian nobility, he devoted his life to preaching against the corruption endemic in Persian society and as a result spent many years in exile. He died at Acre in Palestine in 1892 and is buried in a shrine adjacent to the mansion in which the Bab died, at Bahji, some miles north of Acre on the road to Beirut.

It was in the will and testament of Abdul Bahá, the eldest son and successor of Bahá'ullah that after his death (in 1921) the head of the Bahá'í faith would be Shoghi Effendi known as the Guardian of the Bahá'í faith ('Guardian of Allah's Command') and that he would be the 'President' of the Universal House of Justice which would be elected in due course. In fact Shoghi Effendi died in London in November 1957 after 36 years as Guardian but the Universal House of Justice was not elected from the Bahá'í world until 1963. The presidency was never assumed and there is no possibility of a second Guardian being appointed.

In 1846 the Babis declared their secession from Islam, and the Bahá'ís claim independence from all other faiths. They believe that the basic principles of the great religions of the world are in complete harmony and that their aims and functions are complementary. Other tenets include belief in the brotherhood of man, the opposition to racial and colour discrimination, the equality of the sexes, progress towards world peace, monogamy, chastity and the encouragement of family life. Bahá'ísm has no priesthood and discourages asceticism, monasticism and mystic pantheism. Most of Bahá'ísm's Middle Eastern adherents live in Iran and—on a temporary basis—Israel, but since the Islamic Revolution those in Iran have suffered from severe official persecution. More than 1m. Bahá'ís live in India and in fact there are now Bahá'ís in every country of the world with more than 150 national administrative bodies.

Haifa: Israel. Shrine and gardens of the Bab on Mount Carmel, world centre of the Bahá'í faith. Pilgrims visit the Bahá'í holy places in Haifa and in and around Acre. The Pilgrimage lasts for nine days and the pilgrimage period extends over the whole year with the exception of the months of August and September.

SAMARITANS

ARAB–ISRAELI RELATIONS 1967–99

Updated for this edition by PAUL COSSALI

Based on an original article by MICHAEL ADAMS, with subsequent additions by DAVID GILMOUR, PAUL HARPER and STEVEN SHERMAN

Israel's decisive victory over the Arab states in the Six-Day War of 1967 raised hopes that at last it would be possible to reach a definitive settlement of the 19-year-old Arab–Israeli conflict. Instead it soon became apparent that the conflict had merely been complicated by the occupation of further Arab territory, the displacement of still more refugees and an aggravation of the sense of grievance felt by the Palestinians and now shared more widely than ever in the rest of the Arab world.

Once a cease-fire was in operation in June 1967, the UN Security Council's next step was to pass a resolution (No. 237, of 14 June 1967), calling on Israel to facilitate the return of the new refugees who had fled (and were still fleeing) from the areas occupied by Israel during the war. The resolution also called on Israel to ensure the safety, welfare and security of the inhabitants of the 'Occupied Areas'.

An emergency meeting of the UN General Assembly reiterated on 4 July the Security Council's call for the return of the refugees and on the same day it declared 'invalid' the Israeli annexation of the Arab sector of Jerusalem; but the Assembly failed to produce an agreed resolution for a settlement.

The deadlock became total when an Arab summit conference, held in Khartoum between 29 August and 3 September 1967, confirmed earlier decisions not to negotiate directly with Israel, not to accord it recognition and not to sign a peace treaty. The Israeli Government, for its part, announced its refusal to undertake any but direct negotiations; if no such negotiations developed, Israeli forces would maintain their occupation of the Arab territories conquered during the war.

RESOLUTION 242

In late 1967 the UN Security Council considered a number of draft resolutions which failed to gain approval, either because (according to supporters of the Arabs) they condoned the acquisition or occupation of territory by military force, or because (according to supporters of Israel) they contained no adequate guarantee of Israel's security. Finally, on 22 November 1967, the Security Council unanimously adopted Resolution 242 (see Documents on Palestine, p. 105), which was to be the basis of all peace initiatives during the next five years and which remains an important element in attempts to resolve the Palestinian question. By emphasizing the illegitimacy of the acquisition of territory by war, the resolution satisfied the demand of the Arabs and their supporter, the USSR, for an Israeli withdrawal. At the same time, by being less than categorical about the extent of that withdrawal, it was acceptable to the Israelis and their supporter, the USA. All the subsequent arguments which developed centred on the question of whether the Israelis, in return for a definitive peace treaty, should have the right to retain parts of the Arab territories occupied during the war.

PALESTINIAN RESISTANCE

In the immediate aftermath of the fighting, despite the Israeli Prime Minister's declaration on the eve of the war that Israel had no intention of annexing 'even one foot of Arab territory', the Israeli Knesset had legislated the 'reunification' of Jerusalem,* which in fact amounted to the annexation of the Arab sector of the city. This appeared to confirm Arab allegations of Israeli expansionism, and greatly encouraged the rise of a Palestinian resistance movement, already stimulated by the impotence of the Arab governments and the humiliation which the war had brought on the Arab world. When the Israelis began, as early as September 1967, to establish Jewish settlements in the Occupied Territories, support for the resistance movement became widespread in the Arab world. It was reinforced when the Israelis, after agreeing to allow the return of refugees (who were still streaming eastward), closed the border again after only 14,000 of the 150,000 who had filed applications with the Red Cross had been allowed to re-enter Palestine.

The situation, then, was deteriorating even before Dr Gunnar Jarring, whom the Secretary-General had appointed as his Special Representative in accordance with Resolution 242, went to the Middle East at the end of 1967. During the first half of 1968 there were increasingly frequent breaches of the cease-fire along the Suez Canal (which remained blocked to traffic), while Palestinian guerrilla raids prompted costly Israeli reprisals in the Jordan valley. In July 1968, guerrillas of the Popular Front for the Liberation of Palestine (PFLP) carried out the first hijack operation in the Middle East, diverting an Israeli airliner to Algiers.

LEBANESE INVOLVEMENT

Israel, while not rejecting Resolution 242, said it could not be a substitute for specific agreements between the parties. When the UN General Assembly met in late 1968, Israel put forward a nine-point plan for a Middle East settlement which made no mention of withdrawal, but rather of 'a boundary settlement compatible with the security of Israel and the honour of the Arab states'. This produced no response from the Arab governments, which were shocked when President Johnson, at the height of the US election campaign, announced that the USA was considering the sale of *Phantom* aircraft to Israel. A month later Richard Nixon was elected as President Johnson's successor. The sale of 50 *Phantoms* to Israel was confirmed at the end of December and marked an important stage in the escalation of the arms race in the Middle East.

The day after the sale of the *Phantoms* was announced, Israeli commandos raided Beirut airport, in reprisal for an Arab guerrilla attack on an Israeli airliner in Athens, and destroyed 13 aircraft. This incident brought Lebanon directly into the Arab–Israeli confrontation. After the Security Council had unanimously condemned Israel for the raid, the Soviet Government took up an earlier French proposal for talks between the USSR, the USA, the United Kingdom and France to obtain agreement between the major powers over the implementation of Resolution 242.

At the beginning of February 1969, President Nasser of Egypt declared his willingness to enter into direct negotiations once Israeli forces had withdrawn from Arab territory. Mr Eshkol, the Prime Minister of Israel, stated his readiness to meet President Nasser and declared that Israel was prepared to be flexible about all the Occupied Territories except Jerusalem and the Golan Heights (captured from Syria in 1967). But, as the year wore on, sporadic fighting continued along both the Suez Canal and the Jordan fronts, until in July 1969 President Nasser publicly gave up hope of a peaceful settlement, forecasting that a long 'war of attrition' would be necessary to dislodge Israel from the Occupied Territories.

THE ROGERS PLAN

The quadripartite talks were suspended while Soviet and US representatives met separately. There was optimism when it appeared that a formula had been found for 'Rhodes-style' negotiations (after the talks conducted in Rhodes which led to the armistice agreements between Israel and the Arab states in 1949), but an Israeli suggestion that this would amount to direct negotiations prompted the Arabs to reject the formula. Instead, on 9 December 1969, the US Secretary of State, William Rogers, produced a set of proposals which came to be known as the Rogers Plan. This was an attempt to steer a middle course between the Arab view, that the Security Council resolution should be implemented *in toto* and did not require negotiation, and the Israeli preference for direct negotiations which would decide where the new borders should be drawn. The most

* For a discussion of the Jerusalem issue, *see* p. 88.

important aspect of the plan was that it made clear the US view that there should only be minor modifications of the pre-June 1967 boundaries. This ensured Israeli hostility to the plan, since, despite the insistence of the Israeli Minister of Foreign Affairs, Abba Eban, that 'everything is negotiable', it had now become clear that his cabinet colleagues were deeply divided on this crucial question.

In January 1970 Israel initiated a series of bombing raids (using the new US *Phantom* aircraft) on targets inside Egypt. General Dayan, Israel's Minister of Defence, announced at the beginning of February that the Israeli bombing attacks had three aims: to force the Egyptians to respect the cease-fire along the Suez Canal front, to prevent Egyptian preparations for a new war and to weaken the Egyptian regime. In practice, the raids had three results: they strengthened Egyptian support for President Nasser, they damaged Israel's international reputation and they provoked the USSR into providing further assistance to Egypt.

International concern over these developments led to a renewal of diplomatic efforts. Israel's requests for more *Phantoms* in early 1970 were not granted and it appeared that the immediate US objectives were to renew the cease-fire and to extract from the Israeli Government an undertaking to withdraw from the greater part of the Occupied Territories as part of an overall peace settlement. Israel made no public commitment to withdrawal, but its response in private was sufficiently encouraging for Mr Rogers to relaunch his proposals, with the backing of the four major powers. In a speech on 23 July 1970 President Nasser announced Egypt's acceptance of the US proposal for a renewal of the cease-fire, followed by negotiations through Dr Jarring for the implementation of Resolution 242. A week later, the Israeli Government, after receiving assurances on the future supply of arms from the USA, also agreed to the US proposal, with the provisos that Israel would never return to the pre-war boundaries and that none of its troops would be withdrawn from the cease-fire lines until a binding peace agreement had been signed.

The renewed cease-fire along the Suez Canal front came into operation on the night of 7/8 August. It was to last 90 days, during which the two sides were to engage in indirect negotiations through Dr Jarring. However, after a single meeting with Dr Jarring in New York, the Israeli representative was recalled and the Israeli Government protested that the cease-fire had been violated by the movement of Soviet missiles behind the Egyptian lines. Negotiations had not been renewed when a serious crisis in Jordan distracted the attention of all the parties concerned.

KING HUSSEIN AND THE PALESTINE GUERRILLAS

On 6 September 1970, Palestinian guerrillas of the PFLP hijacked two airliners and diverted them to a desert airfield near Zerqa, in Jordan. A third airliner was taken to Cairo and destroyed there. Three days later a fourth aircraft was hijacked and joined the two in Jordan, where the guerrillas demanded the release of a substantial number of Palestinians held prisoner in Israel, in exchange for some 300 hostages.

This episode proved the last straw for the Jordanian Government. During the previous two years, as the strength of the guerrilla movement increased, it had faced a dilemma. By allowing the guerrillas freedom of movement in Jordan, it had invited (and would continue to invite) retaliation from Israel in the form of ground and air raids which had depopulated the East Bank of the Jordan and caused severe casualties. If, however, the Government tried to control or suppress the activities of the guerrillas, it faced the possibility of civil war in Jordan.

The Palestine resistance movement, whose declared objective was the reconstitution in Palestine of a democratic state open to Jews and Arabs alike, opposed the idea of a political settlement with Israel implying the recognition and perpetuation of a Zionist state. King Hussein had accepted the Rogers Plan and was thus committed to the principle of a political settlement. So long as this was not in prospect, it had been possible for the King and the guerrillas to pursue their diverse objectives without coming into open conflict, but as soon as such a settlement became a serious possibility the uneasy coexistence between them was threatened. On several occasions in 1969 and 1970 the Jordanian Government and the guerrillas had come close to a confrontation, and after the renewal of the cease-fire in August 1970 and the acceptance by the Jordanian Government of the Rogers Plan, a clash became inevitable.

On 16 September King Hussein appointed a military Government in Jordan which the next day set about the liquidation of the resistance movement. After 10 days of heavy fighting in Amman, mediation efforts by other Arab governments, and in particular by President Nasser, brought about a truce, which was signed in Cairo on 27 September 1970. On the following day President Nasser suffered a heart attack and died soon after.

PRESIDENT SADAT AND THE CEASE-FIRE

There was both surprise and relief when the new President of Egypt, Anwar Sadat, showed himself willing to take up the pursuit of a settlement. He agreed to renew the cease-fire for 90 days and, after intensive consultations between Israeli and US leaders and the extension of American credits worth $500m., Israel agreed to return to the Jarring talks. As the cease-fire was expiring on 5 February 1971, President Sadat once more agreed to its renewal, for 30 days, proposing that Israel should begin to withdraw its forces from the east bank of the canal, which Egypt would then be able to clear for navigation.

On 8 February Dr Jarring wrote to the Governments of Israel and Egypt, expressing his optimism about the desire of both parties for a settlement and inviting each of them to give firm commitments which would resolve the central deadlock. Israel, he suggested, should agree on certain stated conditions (providing guarantees for security and freedom of navigation) to withdraw to the international boundary between Egypt and the Palestine of the British Mandate. Egypt should give a parallel undertaking to conclude a peace agreement explicitly ending the state of belligerence and recognizing Israel's right to exist in peace and security. In other words, both parties were asked formally to accept the principal obligations imposed on them by Resolution 242.

The Egyptian reply gave the undertaking called for by Dr Jarring, provided that Israel did the same and agreed to withdraw its forces to the international border. Israel's reply stated firmly that, while it would be prepared to withdraw its forces to 'secure, recognized and agreed boundaries to be established in the peace agreement', it would in no circumstances withdraw to the pre-June 1967 lines. This embarrassed the US Government, which had first withheld and then granted military and economic assistance to Israel, in the attempt to persuade the Israeli Government to accept only 'minor rectifications' of the armistice lines. The USA made one further attempt when William Rogers urged Israel to accept international guarantees in place of territorial gains, adding that security did not 'necessarily require additions of territory' and that in the US view 'the 1967 boundary should be the boundary between Israel and Egypt'.

PROPOSAL FOR A 'PARTIAL SETTLEMENT'

The US Government took up instead President Sadat's suggestion of an Israeli withdrawal for some distance into Sinai to allow the reopening of the Suez Canal. But the new proposal for a partial settlement quickly became bogged down in arguments over the extent of the Israeli withdrawal and whether it should be seen as the first step to complete withdrawal. The arguments continued through most of 1971 until the proposal was finally dropped by the USA in November.

In December the UN General Assembly, in a resolution reaffirming the 'inadmissibility of the acquisition of territory by war' and calling for an Israeli withdrawal, also urged Israel to 'respond favourably' to the proposals made by Dr Jarring in February. Only seven states, including Israel, voted against the resolution and the USA, which had always voted in support of Israel on territorial questions, abstained, reflecting its view that Israel should withdraw from almost all of the Occupied Territories. The year ended with President Sadat in a dangerously weakened position. He had taken considerable risks in pursuit of a political settlement and had promised the Egyptian people that 1971 would be the 'year of decision'. He blamed the lack of progress on American 'political manoeuvring', and when 1972 (a US election year) began with the US Government promising Israel a further 42 *Phantom* and 90 *Skyhawk* aircraft,

it seemed unlikely that a fresh US suggestion of indirect talks between Israel and Egypt in New York would be fruitful.

In February 1972 the Israelis launched a large-scale incursion into Lebanon, stating that its aim was the elimination of guerrilla bases near Israel's northern border. In June a further Israeli raid on Lebanon was condemned by the Security Council after more than 70 civilians had been killed or wounded.

In July 1972 President Sadat unexpectedly requested the withdrawal from Egypt of the Soviet advisers engaged in the reorganization of Egypt's defence system. This was interpreted as a final appeal to the US Government to bring pressure to bear on Israel to accept a settlement involving an Israeli withdrawal from Sinai.

In Europe, however, a reappraisal of Middle Eastern policy was taking place. This found expression in the annual Middle East debate in the General Assembly of the UN, when all the members of the European Community (EC), except Denmark, followed the lead of the UK (which entered the Community on 1 January 1973) and France in voting for a resolution strongly critical of Israel. (The USA again abstained.)

TERRORISM AND COUNTER-TERRORISM IN THE MIDDLE EAST

The cease-fire along the Suez Canal was maintained, but along the northern borders of Israel and Israeli-held territory there was a renewal of violence in the second half of 1972, accompanied by a mounting series of terrorist attacks by both Israelis and Palestinians in various parts of the world. In mid-1972, a number of Palestinian leaders were killed or seriously injured by explosive devices sent to them in Beirut. In September, during the Olympic Games in Munich, Palestinian guerrillas captured Israeli athletes and held them hostage in an attempt to obtain the release of Palestinians held captive in Israel. West German police, after promising the Palestinians safe conduct out of Germany, opened fire on them at Munich airport, whereupon the guerrillas killed the hostages and were themselves either killed or captured.

The Munich attack was followed by Israeli ground and air raids into Lebanon, which the Israeli Government held responsible for the activities of guerrillas whose bases (since their expulsion from Jordan in 1970 and 1971) were in the refugee camps of Beirut and elsewhere in Lebanon. Letter bombs were subsequently posted to Israeli representatives in various countries and representatives of the Palestine Liberation Organization (PLO) were attacked in Rome, Stockholm, Paris and Nicosia.

At the beginning of 1973 Mr Hafez Ismail (President Sadat's political adviser), King Hussein of Jordan and Mrs Golda Meir (the Israeli Prime Minister) visited Washington for talks with President Nixon. However, the frail hopes aroused by this were dashed when an Israeli attack on guerrilla installations in a refugee camp in northern Lebanon was followed within 24 hours by the shooting down by Israeli fighters of a Libyan airliner which had strayed over occupied Sinai. The two incidents provoked an unprecedented wave of criticism of Israel on the eve of Mrs Meir's arrival in Washington.

STALEMATE

In the autumn of 1973, the Arab–Israeli conflict appeared to be further from resolution than ever. Israel, confident that its military supremacy over the Arabs had increased, remained in control of all the territories it had occupied in 1967 and had established in these territories some 50 civilian and paramilitary settlements. The Egyptian and Jordanian Governments—though not yet the Syrian—had long since modified their earlier refusal to negotiate a settlement and had indicated their willingness to recognize the State of Israel; but they still refused to envisage a peace settlement which did not provide for the return of all the Occupied Territories. The UN, despite the passage every year of resolutions calling for an Israeli withdrawal, found all its efforts to devise a settlement blocked by Israel's refusal to relinquish its 1967 conquests.

More than ever, the key to the situation rested in the hands of the USA, which found itself isolated in support of Israel while becoming increasingly dependent on petroleum produced by the Arab states. The USA's allies, for whom dependence on Arab petroleum was already a fact, were increasingly impatient with the US Government's Middle East policy, which seemed to be aimed at maintaining Israel's overall supremacy without seeking any concessions from the Israeli Government over the Occupied Territories. The isolation of the USA was emphasized in the Security Council in the summer of 1973, when it vetoed a resolution put forward by eight non-aligned members, which was strongly critical of Israel's continued occupation of Arab territory. All the other Council members except the People's Republic of China, which abstained, voted affirmatively.

RENEWAL OF THE WAR

A surprise attack was launched on two fronts by the Egyptian and Syrian forces on 6 October 1973. Unusual activity behind the lines had been observed by Israeli and US intelligence agencies west of the Suez Canal and east of the cease-fire line on the Golan Heights; but the Israelis were convinced that the Egyptian army was incapable of the elaborate operation required to cross the canal and breach the chain of Israeli fortifications, known as the Bar-Lev line, on the east bank. This element of surprise won for the Egyptian and Syrian forces a substantial initial advantage on both fronts. This was enhanced by the fact that 6 October was Yom Kippur, the Day of Atonement in the Jewish calendar, when all public services were suspended, making it unusually difficult for the Israelis rapidly to mobilize their forces. By midnight on the first day of the war, 400 Egyptian tanks had crossed the canal, the Bar-Lev line had been outflanked and a massive Syrian tank attack beyond the Golan Heights had only been stemmed by a masterly rearguard action by greatly outnumbered Israeli armour, aided by air strikes.

During the next three weeks (despite the declaration of a UN-sponsored cease-fire on 22 October), the Syrians were driven back beyond the old cease-fire line and counter-attacking Israeli forces effected a westward crossing of the Suez Canal. At the end of the war, the military advantage lay with the Israelis, who had occupied a further area of Syrian territory and were threatening Damascus, while their units west of the canal had isolated an Egyptian army in Suez. However, largely as a result of the intervention of the Arab oil-producing states, the political objectives of the Arabs had been achieved and the whole context of the confrontation decisively altered.

By making unexpectedly efficient use of new weapons the Arab armies demonstrated that since 1967 they had significantly narrowed the (military) technological gap between themselves and Israel. They had exposed the fallacy on which Israeli strategy had been based since the Six-Day War: that the control of wide buffer zones (the territories occupied since 1967), together with the military supremacy of which it felt assured, rendered Israel immune to Arab attack. This assumption had encouraged the Israeli leaders to disregard the mounting pressure of world opinion calling for an Israeli withdrawal as the essential condition of a negotiated settlement with the Arabs.

THE PETROLEUM FACTOR

Soon after the outbreak of the war, there were calls within the Arab world to deny Middle East oil to the supporters of Israel. In October 1973 a meeting in Kuwait of representatives of the Arab oil producers resulted in an agreement to reduce output, while Abu Dhabi took the lead in halting the export of oil to the USA. In adopting and then intensifying these measures, the Arab oil-producing states displayed unexpected unity. This had an evident effect on the governments of western Europe, conscious of their dependence on the free flow of oil from the Middle East. On 6 November the nine member states of the EC endorsed a statement calling for an Israeli withdrawal from the territories occupied in 1967 and asserting that, while all states in the Middle East should enjoy the right to secure boundaries, the legitimate rights of the Palestinians should be taken into account in any settlement (see Documents on Palestine, p. 109). Israel accused the Europeans of giving in to Arab 'blackmail', but for several years the Europeans had been dissociating themselves from US policy and registering their growing impatience with Israel's intransigence.

AMERICAN INITIATIVE

The USA, which alone possessed the influence that could induce Israel to withdraw—and which now found itself inconvenienced

much more by the oil embargo than it had anticipated—accepted its responsibility to bring about a settlement. The US Secretary of State, Dr Kissinger, now embarked on a dramatic series of visits to Middle Eastern capitals, from which emerged disengagement agreements between Egypt and Israel (signed on 18 January 1974) and between Syria and Israel (signed on 30 May 1974). In the middle of June 1974 President Nixon, whose domestic position had become dangerously insecure after the Watergate scandal, embarked on a triumphant tour of the Middle East, forecasting a new era of co-operation between the USA and the Arab world, while reassuring Israel of continuing US support. This US initiative was generally well received, except by some Israelis who foresaw mounting pressure on Israel to make concessions inconsistent with its security, and by the extreme wing of the Palestinian resistance movement, which engaged in a series of terrorist attacks on targets in northern Israel in an effort to frustrate a settlement which did not guarantee Palestine's total liberation. Otherwise, President Nixon's visit revealed a strong desire on the part of the Arab governments to restore friendly relations with the USA. Diplomatic relations between Washington and Damascus were re-established and the embargo on the export of Arab oil to the USA was lifted.

CHANGE IN THE BALANCE OF POWER

This reconciliation was one of the most striking results of the October War; it was a reminder of the greatly increased influence of the Arab states so long as they continued to act in concert. Conversely, Israel's international position had been much weakened by the failure of its pre-war policies and by the revelation of the extent to which the rest of the world was dependent on Arab goodwill. The Government headed by Golda Meir was widely blamed both for provoking the October War by its policy of 'creeping annexation' and for being caught unawares when the war came. After winning a narrow victory in a general election at the end of 1973, Mrs Meir finally abandoned the attempt to rebuild her coalition in April 1974. She was succeeded as leader of the Labour Party and Prime Minister by Gen. Yitzhak Rabin, who had been Chief of Staff at the time of the 1967 war and later Israeli ambassador in Washington. In the Arab world, the effect of the war was to strengthen the position of the regimes in Cairo and Damascus and to give new authority to King Faisal of Saudi Arabia, whose control of the greatest share of the oil reserves of the Middle East made him a dominant figure in Arab politics. The fact that the disengagement agreements involved small but significant Israeli withdrawals from Arab territory gave satisfaction throughout the Arab world, but the central problem of the future of the Palestinians remained unsolved. The difficulty of finding a solution acceptable both to Israel and to the PLO (which the Arab governments, meeting in Algiers in November 1973, had recognized as 'the sole legitimate representative of the Palestinian people') posed a continuing threat to the stability of the disengagement agreements of 1974.

Despite the new unity of the Arab world, the movement towards a settlement in the Middle East lost momentum during the second half of 1974 and a further outbreak of war seemed imminent at times. The disengagement agreements were honoured and UN forces were inserted between the combatants in Sinai and on the Golan front, but Syria and Israel exchanged mutual recriminations over the ill-treatment of prisoners and the destruction of the Syrian town of Quneitra by the Israelis on the eve of their withdrawal.

While the optimism generated by the disengagement agreements gave way to stalemate between the Arab governments and Israel, the Palestinians' central role in the conflict was strikingly endorsed. On 21 September 1974, the UN General Assembly voted to include 'the Palestine Question' on its agenda for the first time since the establishment of the State of Israel in 1948. (Only four Governments opposed this decision: Israel, the USA, the Dominican Republic and Bolivia.) On 14 October the General Assembly invited the PLO to take part in the debate and a month later the Chairman of the PLO, Yasser Arafat, outlined to the Assembly the PLO's design for a 'democratic, secular state' in Palestine in which Jews and Arabs would coexist on terms of equality, specifying that 'all Jews now living in Palestine who choose to live with us there in peace and without discrimination' were included in this design. At the end of October a meeting of Arab Heads of State in Rabat reiterated that the PLO was the 'sole legitimate representative of the Palestinian people', with the right to speak for the Palestinians at any future Middle East peace talks and to establish an independent national authority in any part of Palestine liberated from Israeli occupation.

These decisions greatly strengthened the hand of the Palestinians and the PLO. However, they also deepened the impasse over a settlement because the Israeli Government refused to have any dealings with the PLO, dismissing it as a terrorist organization. The PLO's position was also complicated by internal divisions over the objective which the organization should pursue. Although Yasser Arafat at the UN had spoken only of the PLO's goal of a unitary Palestine (which would mean the elimination of the State of Israel), he was under pressure from the Arab governments to accept the limited objective of a Palestinian state on the West Bank and the Gaza Strip, which could only be envisaged in the context of the recognition of Israel within its pre-1967 borders. A majority within the PLO appeared at the end of 1974 to be moving towards acceptance of this formula, but the minority rejected any thought of compromising the long-term goal of the total liberation of Palestine. This 'rejectionist front', with the backing of the Governments of Iraq and Libya, made it difficult for the PLO openly to align itself with those Arab governments (notably Egypt) which were prepared to exchange recognition of Israel for withdrawal from the territories occupied in 1967, including Arab Jerusalem, and the creation of a Palestinian state on the West Bank.

This was in effect the pattern for a settlement which had been envisaged in the Security Council's Resolution 242 and which had provided the basis for all the international initiatives undertaken between 1967 and 1973. These initiatives had failed because Israel, before October 1973, had felt confident of its ability to retain control of at least substantial parts of the Occupied Territories. The October War, by undermining this confidence, had highlighted Israel's dependence on US support; moreover, the initial efforts of Dr Kissinger immediately after the war had encouraged the Arabs to believe that US influence would at last be used to promote a settlement based on Israel's withdrawal.

ARAB IMPATIENCE

The Arab-US reconciliation, in which President Sadat had taken the lead and to which he totally committed himself during 1974, had failed by the end of the year to produce any results beyond the initial disengagement agreements. Apart from the tiny areas of territory conceded by Israel under those agreements, the Israeli occupation was maintained in Sinai, the Golan Heights (including the plateau up to the outskirts of Quneitra), the West Bank (including the Old City of Jerusalem) and the Gaza Strip, with no relaxation of the ban on political activity by the Arab population and other repressive measures. None of the Jewish settlements, of which about 50 had been established in the Occupied Territories before October 1973, had been given up; indeed the Israeli Government, under pressure from the right-wing opposition and the religious parties in the Knesset, continued to announce plans to extend Jewish settlement.

These developments caused growing impatience in the Arab world. When Dr Kissinger returned to the Middle East in March in an attempt to further the process of disengagement between Israel and Egypt, it was widely assumed that he had obtained prior assurances from both sides. However, after two weeks of intensive 'shuttle diplomacy' he had to admit failure when Israel refused to withdraw from the Mitla and Giddi passes in Sinai and from the oilfield at Abu Rudeis, without an explicit assurance of future non-aggression from President Sadat. The latter was clearly unrealistic, since it would have confirmed Arab suspicions that Egypt was prepared to abandon its allies for a separate peace with Israel. There was therefore little surprise when the US Secretary of State (and later President Ford) blamed Israeli obstinacy for the breakdown of the negotiations and announced that the USA would embark on a 'reassessment' of its Middle East policy. This was held to mean that Israel's latest request for increased military and economic aid from the USA would not be granted until Israel showed a more conciliatory attitude.

The breakdown of Dr Kissinger's mission coincided with the assassination in Riyadh of King Faisal of Saudi Arabia, whose prestige and authority had been greatly increased by his support for the Arab war effort during and after the October War. In May the Syrian Government unexpectedly agreed to renew for a further six months the mandate of the UN force separating the two sides on the Golan front, and on 5 June the Egyptian Government reopened the Suez Canal, eight years to the day after the outbreak of the war which had led to its closure in 1967.

FURTHER DISENGAGEMENT IN SINAI

On 21 August 1975 Dr Kissinger flew to Israel to promote a second disengagement agreement between Israel and Egypt. After two weeks of intensive negotiations Dr Kissinger persuaded Israel and Egypt to accept an agreement which was signed in Geneva on 4 September (see Documents on Palestine, p. 111). The new agreement provided for an Israeli withdrawal from the strategic Mitla and Giddi passes and the return to Egypt of the Abu Rudeis oilfields, on which Israel had depended for some 50% of its oil supplies since 1967. As in the first disengagement agreement, a UN buffer zone was established separating the Egyptian and Israeli forces. The most important new element was the provision for five electronic listening posts in this zone, of which one was to be manned by Egyptians, one by Israelis and the other three by a team of 200 US civilians who would monitor troop movements both east and west of the passes. Both sides undertook to respect the cease-fire and to resolve the conflict between them by peaceful means. Non-military cargoes in ships sailing to or from Israel were to be allowed through the Suez Canal and the agreement was to remain in force 'until superseded by a new agreement'.

The conclusion of this second agreement was considered a triumph for US diplomacy and it had significant effects on Egypt's relations with its Arab allies. Only Saudi Arabia, Sudan and (with reservations) Kuwait expressed approval of the agreement, which was criticized—most vehemently by the Syrians and the PLO—as a surrender to US and Israeli interests. The united Arab front presented during the October War was now seriously disrupted.

The agreement marked a further stage in the US-Egyptian *rapprochement* and the estrangement between Egypt and its former ally, the USSR. In October 1975 President Sadat made an official visit to Washington, while his repeated criticisms of the USSR led to a steady deterioration of relations culminating in Egypt's abrogation of the Soviet-Egyptian Treaty of Friendship in March 1976.

Syria now assumed the leadership of the Arab cause. President Assad found his position in the Arab world greatly strengthened and even succeeded in restoring close relations with King Hussein of Jordan, establishing a joint Syrian-Jordanian Command Council. In October 1975 he visited Moscow for talks with President Podgorny and other leaders and gained a promise of further arms supplies to counter the deliveries reaching Israel from the USA. At the end of November Syria's already considerable prestige as the most consistent defender of the rights of the Palestinians was enhanced when President Assad agreed to renew the mandate of the UN Disengagement Observer Force (UNDOF) on the Golan Heights, extracting in return a promise that the Security Council would hold a special debate on the Palestine question in January 1976, with the participation of the PLO.

PLO'S STANDING ENHANCED

This debate further strengthened the international position of the PLO. In November 1975 the UN General Assembly had adopted three resolutions concerning Palestine. The first had established a 20-nation committee to work out plans for the implementation of the Palestinian right 'to self-determination and national independence', the second invited the PLO to take part in all future UN debates on the Middle East, and the third denounced Zionism as 'a form of racism and racial discrimination'. (The last of these provoked an international storm of criticism in which the importance of the other two resolutions was widely overlooked.) A month later a US veto saved Israel from censure by the Security Council for a series of air raids on targets in Lebanon in which 75 people were killed. When the Security Council debated the Palestine question in January 1976, the USA again used the veto to prevent the adoption of a resolution affirming the Palestinians' right to establish a state of their own and calling for an Israeli withdrawal from all the territories occupied since June 1967.

In January 1976 Western press reports suggested that US officials were in secret contact with Palestinian representatives, and the impression that a major change in US policy was in the offing was reinforced in March when the UN Security Council debated the question of Israeli policies in the Occupied Territories. Although the USA again exercised the veto to defeat a resolution, on Israel's behalf, its delegate strongly condemned Israel's establishment of 'illegal' settlements in Jerusalem and other occupied areas.

Israel's persistence in establishing these settlements was a major factor in provoking serious rioting all over the occupied West Bank and in Gaza during mid-1976. The riots had a decisive effect on the outcome of municipal elections organized by the Israeli occupation authorities in the West Bank in April. Instead of producing, as the Israelis had hoped, 'moderate' Palestinian leaders who would accept a measure of autonomy under continuing Israeli occupation, the elections demonstrated the strength of Palestinian nationalism and widespread support for the PLO.

CIVIL WAR IN LEBANON

The disunity in the Arab camp was highlighted by events in Lebanon, where armed clashes between Palestinian guerrillas and Christian militiamen in April 1975 led to a civil war which threatened to destroy the Lebanese state and almost provoked another Arab–Israeli confrontation. Attempts at mediation by the Arab League and by French and American emissaries failed to reconcile the warring parties, which, in turn, were supported by rival Arab interests. In January 1976, after nine months of heavy fighting, in which Palestinian guerrillas were drawn into a leftist alliance against the defenders of the conservative Christian establishment, the Syrian Government employed Syrian-based units of the Palestine Liberation Army to impose a cease-fire which was to be followed by a reform of the Lebanese political system. However, the cease-fire broke down in March, when Christian extremists, supporting President Franjiya, prevaricated over the implementation of the reform programme and the Druze leader of the leftist alliance tried to force the President's resignation.

Faced with a victory for the leftists and their Palestinian allies, which might provoke an Israeli military intervention in southern Lebanon, Syria used its influence to restrain the leftists, sending Syrian troops across the border at the end of May 1976, with tacit US approval. At the same time President Assad renewed the mandate of the UN force on the Golan front for a further six months.

In late 1976 the obstacles which had prevented any movement towards an Arab-Israeli settlement were removed. After repeated failures on the part of the Arab League to play an effective mediating role in Lebanon, determined efforts by the Saudi Arabian and Kuwaiti Governments brought about a restricted Arab summit meeting in Riyadh in October, at which the leaders of Egypt, Syria, Lebanon and the PLO agreed to the terms of a cease-fire. These were confirmed at a further meeting in Cairo on 26 October, and provided for the creation of a substantial Arab peace-keeping force which, within a month, had halted the savage fighting in Beirut, reopened the Beirut–Damascus road and occupied the main towns in the north and south of the country.

NEW ADMINISTRATION IN WASHINGTON

In the USA the President-Elect, Jimmy Carter, had indicated his intention to take early action over the Middle East. Once more the Israelis found themselves under pressure both from the Arabs and from the USA. On 11 November 1976, the USA approved a unanimous 'consensus statement' by the Security Council which 'strongly deplored' Israel's actions in establishing settlements in the Occupied Territories and attempting to alter the demographic balance in Jerusalem. On 19 November the US ambassador to Israel, speaking to the annual convention of B'nai B'rith in Jerusalem, said that 'unless Israel's professed willingness to return occupied territory is seen as more than mere rhetoric, the vicious circle of mutual mistrust cannot be

broken'. On 24 November the USA joined 117 other nations in voting in the UN General Assembly (against the opposition of Israel and Costa Rica) to deplore Israel's refusal to allow the return of the Palestinian refugees who had left their homes in 1967.

In the occupied West Bank there was intermittent unrest throughout 1976. Demonstrations in Nablus, Ramallah and the Old City of Jerusalem in May and June were subdued by the Israeli security forces with exceptional violence. In October there were serious riots in Hebron over the respective rights of Jews and Arabs to pray in the mosque built over the Tombs of the Patriarchs. Israel's occupation policy was again condemned by the UN General Assembly on 20 December, following the publication of a report by the UN Special Committee for the Investigation of Israeli Practices in the Occupied Territories. The UN Human Rights Commission expressed 'grave concern' over the deteriorating situation in the Occupied Territories, and unanimously called on the Government of Israel to adhere to the terms of the Fourth Geneva Convention in its treatment of civilians.

Conscious of the growing tension in the Middle East and of the steadily increasing dependence of the Western world on Arab oil, the new US Administration moved swiftly to revive the Arab-Israeli peace process. In February President Carter dispatched his Secretary of State, Cyrus Vance, on a tour of the Middle East and invited Israeli and Arab leaders to visit him in Washington. During an interim period and as the prelude to a final peace agreement, the US President indicated that arrangements might be made to extend Israel's defence capability beyond its eventual legal frontiers. A week later President Carter stated, unexpectedly, that the final element in an Arab-Israeli settlement should be the creation of a 'homeland' for the dispossessed Palestinians.

ISRAELI GOVERNMENT RESIGNS

The renewed emphasis on the Palestinian aspect of the problem was unwelcome to the Israelis. The governing coalition was already under considerable internal pressure as a result of the difficult economic situation and the failure to devise any constructive policy for achieving peace with the Arabs; in addition, it had been undermined by a series of scandals involving leading figures in the Labour Party, which had dominated every government since the creation of the state. The most crucial issue facing the Government concerned the Occupied Territories and in particular the extent to which it should allow—or could control—Jewish settlement on the West Bank. The right-wing Likud coalition opposed any withdrawal from the West Bank, and Mr Rabin's Cabinet was divided on the issue; following a dispute with one of his coalition partners, Mr Rabin announced the Government's resignation. A general election was fixed for 17 May 1977.

ARAB GOVERNMENTS AND THE PLO

Once they had achieved a reconciliation between themselves and put an end to the war in Lebanon in late 1976, the Arab governments enlisted the help of the new US Administration in working towards a peace settlement with Israel. Their common position was that the Geneva Conference should be reconvened, with the Palestinians participating, and that an overall settlement should be negotiated on the basis of an Israeli withdrawal to the 1967 borders and the establishment of a Palestinian state on the West Bank and the Gaza Strip. However, the PLO refused to renounce its objective of a unitary, 'secular, democratic state' in the whole of Palestine (which would replace the existing State of Israel), although PLO spokesmen did indicate their willingness to establish a state 'on any part of Palestine' from which the Israelis would withdraw.

Since the Israelis refused either to entertain the idea of an independent Palestinian state or to negotiate under any circumstances with the PLO (whether or not the PLO agreed to recognize the State of Israel), no accommodation appeared possible unless the US Government brought pressure to bear on Israel. This the Carter administration was reluctant to do in the run-up to the Israeli general election, although there were indications that the USA was in contact with the PLO in an effort to persuade the Palestinians to modify their attitude.

RIGHT-WING VICTORY IN ISRAEL

The prospects for a negotiated Arab-Israeli settlement received a severe setback in May, when the elections in Israel resulted in an unexpected victory for the right-wing Likud grouping. The elections were fought mainly on domestic issues and the defeat of the ruling Labour Party was widely attributed to discontent over the economy and the series of scandals involving senior figures in the former administration. Likud, led by Menachem Begin (who, pre-1948, had been the leader of the terrorist organization, Irgun Zvai Leumi), was committed to maintaining Israeli rule over the whole of the occupied West Bank, on the grounds that it constituted part of Israel's divinely-ordained inheritance.

Faced with this challenge, President Carter invited the new Prime Minister of Israel to Washington and took steps to restate his own view of the prerequisites for a peace settlement in the Middle East and to obtain the acceptance of these by the USA's allies in Europe. A statement published at the end of June by the State Department reaffirmed US adherence to Security Council Resolution 242, stressing that a settlement had to involve Israeli withdrawal 'on all three fronts of the Middle East—that is, Sinai, Golan, West Bank and Gaza—and reiterating President Carter's belief in 'the need for a homeland for the Palestinians, whose exact nature should be negotiated between the parties'.

The theme of a Palestinian 'homeland' was taken up at a meeting of the heads of government of the EC in London. In a declaration published on 29 June 1977, the leaders of the nine members restated 'their view that a peace settlement should be based on Security Council Resolutions 242 and 338', adding that a solution to the Middle East conflict would be possible 'only if the legitimate right of the Palestinian people to give expression to its national identity is translated into fact, which would take into account the need for a homeland for the Palestinians'. The Declaration also said that representatives of 'the Palestinian people' must be included in peace negotiations.

When Mr Begin arrived in Washington in July 1977, he achieved an unexpected success with the US public, but it was clear that no serious attempt had been made in the talks between the two leaders to examine the basic conditions for a peace settlement. The US Administration was now intent on securing Palestinian participation in any peace negotiations, to which the Israeli Government was strenuously opposed. When the Secretary of State, Cyrus Vance, in the course of a tour of Middle Eastern capitals in August, was told by the Saudi Arabian Government that the PLO would accept Resolution 242 if it were amended to include provision for Palestinian self-determination, there was a moment of optimism in which Mr Carter spoke of the possibility that acceptance by the PLO of Resolution 242 might open the way to PLO participation in a reconvened Geneva peace conference. But Mr Vance's visit ended discouragingly in Israel, where Mr Begin's Government refused categorically to negotiate under any circumstances with the PLO or to consider the idea of a Palestinian 'homeland'. In any case, the PLO, sceptical about the terms of the proposed bargain, finally refused to amend its stance over Resolution 242 without firm assurances that it would receive in return something more substantial.

Within days of Mr Vance's departure, Israel announced that social services in the fields of education, health and welfare were to be extended to the Arab population of the West Bank and the Gaza Strip, which was widely interpreted as a step towards the annexation of these areas. This, and the decision to authorize three new Jewish settlements on the West Bank, caused an immediate consolidation of the PLO attitude and complicated still further the task of the USA in bringing the Israelis and the Arabs—including, if possible, the Palestinians—to the negotiating table.

When the Israeli Foreign Minister, Moshe Dayan, went to Washington in September 1977, he took with him draft proposals for a territorial settlement which envisaged the maintenance of the Israeli occupation throughout the West Bank and the Gaza Strip. These proposals expressed the continuing resolve of Mr Begin's Government not to agree to any step which could lead to the creation of an independent Palestinian state. The USA, by contrast, was apprehensive that anything which appeared to extinguish all hope of that ill-defined Palestinian

'homeland', would not merely ensure the continuation of Palestinian resistance but would also alienate those Arab governments on whose goodwill the USA was increasingly dependent.

Towards the end of September there was a fresh outbreak of fighting in southern Lebanon, with Israeli troops openly intervening across the border in support of right-wing forces and against the Palestinians. This prompted a US initiative, reluctantly accepted by the Israeli Government, to include Palestinian representatives in a joint Arab delegation to the peace conference in Geneva. Moshe Dayan emphasized that this did not mean that Israel was ready to abandon its attitude towards the PLO or its rejection of a Palestinian state. A joint Soviet-US statement published on 1 October 1977 called for a Middle East settlement that would ensure 'the legitimate rights of the Palestinians'. The use for the first time of this phrase by the US Government alarmed Israel and was taken by the Arabs as an indication that President Carter was prepared for the confrontation that had long been threatening with the Israeli Government and its powerful supporters in the USA. The prospect raised by the joint statement, however, that the two superpowers were prepared to collaborate again made a renewal of the Geneva Conference more likely and encouraged diplomatic activity, with even the PLO expressing its qualified acceptance of the Soviet-US statement as the basis for a reconvened peace conference.

PRESIDENT SADAT'S VISIT TO JERUSALEM

On 9 November 1977, in the course of a speech to the Egyptian Parliament in which he expressed impatience with the endless debates over procedural questions, President Sadat said that he would be willing to go to Jerusalem and to the Knesset itself to negotiate with Israel. Despite widely expressed scepticism, the suggestion was immediately taken up by the Israeli Prime Minister and pursued through intermediaries in the US embassies in Cairo, Beirut and Jerusalem. Resisting a rising tide of Arab disapproval, and despite the last-minute resignation of his Minister of Foreign Affairs, President Sadat flew to Jerusalem on 19 November 1977, and the next day made a dramatic appeal for peace in the Knesset and before the television cameras of the world.

This unexpected initiative was greeted with enthusiasm in the West, where it was regarded as a constructive break with the sterile attitudes of the past, and with incredulous delight by Israel, which glimpsed the prospect of an end to its dangerous isolation. Among the Arabs, however, while there were scattered expressions of approval and optimism, the general reaction of furious resentment left the Arab world in a state of unparalleled disunity, making it harder than ever to achieve a common platform on which to negotiate with Israel.

Nor did the euphoria which surrounded President Sadat in Jerusalem long survive his return to Cairo. It soon became apparent that his Israeli hosts had assumed—like his Arab critics—that President Sadat had despaired of achieving an overall settlement and had set himself the more limited objective of an Egyptian-Israeli peace treaty. The Israeli leaders were ready to withdraw from almost all Egyptian territory but they were not prepared to meet Mr Sadat's other demands for a complete withdrawal from all Arab territory occupied in 1967 and recognition of the Palestinian right to self-determination.

Serious negotiations were postponed until 25 December 1977, when Mr Begin flew to Ismailia for a summit meeting with President Sadat, at which the Israeli Prime Minister produced a set of proposals for the future of Sinai, the West Bank and the Gaza Strip. On the crucial question of the future of the Palestinians, Mr Begin offered only a limited form of self-rule for the population of the West Bank and the Gaza Strip, with Israel remaining in control of 'security and public order'. This was criticized in the Arab world as being merely a formula for the maintenance of the Israeli occupation.

President Sadat's position was made more difficult by a statement from President Carter apparently approving the Begin proposal for Palestinian 'self-rule'. When Mr Carter, in an evident attempt to repair the damage, altered the schedule of a foreign tour in order to meet Mr Sadat at Aswan, he took the opportunity to reiterate the need to recognize 'the legitimate rights of the Palestinian people' and to enable the Palestinians 'to participate in the determination of their own future'. Elsewhere in the Arab world, however, cynicism about an overall Arab-Israeli settlement was deepened by mistrust of Sadat's motives and by the apparent inconsistency of US policy.

The Ismailia summit meeting produced a commitment to bilateral talks on political and military questions affecting a settlement. The military talks opened in Cairo on 11 January 1978 and were at once complicated by a dispute over Israeli settlements in Sinai, which had been criticized as illegal by the International Commission of Jurists. This criticism was echoed by President Carter a week later and when the political talks opened in Jerusalem on 16 January they were interrupted after only 24 hours when President Sadat recalled the Egyptian delegation, saying that in view of Israel's insistence on retaining the settlements he saw no hope of reaching agreement.

ISRAELI INVASION OF SOUTH LEBANON

A visit by Mr Begin to Washington in March 1978 was delayed for a week after a terrorist raid near Tel-Aviv by Palestinian guerrillas operating from south Lebanon, in which 36 Israelis were killed. Israel mounted a major cross-border attack into southern Lebanon, initially to wipe out Palestinian guerrilla bases and establish a security belt along the Lebanese side of the frontier. After the USA hurriedly introduced a resolution in the UN Security Council calling for an Israeli withdrawal to be supervised by a UN force, the Israelis advanced further, and by the time a cease-fire finally came into effect on 20 March their forces were in occupation of the whole of south Lebanon as far as the Litani river, with the exception of the port of Tyre.

The Israeli invasion, which was accompanied by heavy and indiscriminate land, sea and air bombardments, provoked world-wide denunciation, especially as it became clear that an estimated 1,000 Lebanese civilians had been killed, in addition to some 200 guerrillas, and more than 200,000 refugees had been driven from their homes. When Mr Begin finally met President Carter on 20 March, the differences between them over the basic prerequisites of a Middle East peace settlement led to a confrontation which was barely masked by diplomatic protocol. Mr Begin returned from Washington to face a threat to his leadership in Israel, where there was dissension within the Cabinet.

There was friction over the role of the UN Interim Force in Lebanon (UNIFIL), whose mandate was to supervise the withdrawal of the Israeli army from southern Lebanon and to restore the authority of the Lebanese Government. The Israelis carried out a partial withdrawal at the end of April but insisted that they would maintain an armed presence in Lebanon until the UN force could ensure the security of northern Israel against attacks by Palestinian guerrillas. The PLO, which was determined not to relinquish its last area of operations, promised to co-operate with UNIFIL.

In May 1978 Mr Begin again visited Washington, where President Carter assured him that 'we will never waver in our absolute commitment to Israel's security'. However, two weeks later the US Senate authorized the sale of advanced fighter aircraft to Saudi Arabia. This decision clearly reflected US impatience with Mr Begin's stand on peace negotiations, and the importance the USA attached to retaining the friendship of Saudi Arabia, the leading oil producer in the Middle East.

When the Israelis withdrew the last of their forces from south Lebanon on 13 June, they refused to hand over their positions to UNIFIL but left them in the hands of Lebanese Christian militia units which had been collaborating with the Israelis against the Lebanese Government. This contributed to a crisis in Beirut at the beginning of July, when the Syrian-dominated Arab peace-keeping force attempted to impose its authority on the right-wing Christian militias.

The US Government, alarmed at the prospect of renewed Israeli intervention and of the final breakdown of the peace initiative launched by President Sadat in November 1977, exerted its influence to restrain both sides in Lebanon and persuaded the Israeli and Egyptian Governments to send their ministers of foreign affairs to a meeting in the United Kingdom, which took place at Leeds Castle in July. When this meeting failed to narrow the gap between the two sides, President Sadat announced that he would not engage in further negotiations with Israel unless the Israeli Government changed its position. Faced with a deteriorating situation, President Carter took the

unexpected step of inviting the Egyptian and Israeli leaders to meet him in a final attempt to break the deadlock at Camp David at the beginning of September 1978.

CAMP DAVID SUMMIT AND REACTIONS

The Camp David meeting, which lasted for 12 days and appeared more than once to be on the point of breaking down, ended on 17 September when President Carter made a triumphant appearance on television to announce that Mr Begin and President Sadat had signed two documents which together provided a framework for peace in the Middle East (see Documents on Palestine, p. 111). One of these dealt with the bilateral problems between Egypt and Israel, which the two leaders undertook to resolve by concluding within three months a peace treaty providing for an Israeli withdrawal from Sinai and the establishment of normal relations between the two countries. The other dealt with the wider question of the future of the West Bank and Gaza and provided for the election of a self-governing Palestinian authority to replace the existing Israeli military Government; once the authority was in being, there should be a transitional period of not more than five years, during which the inhabitants of the West Bank and Gaza would exercise autonomy; and finally, 'as soon as possible, but not later than the third year after the beginning of the transitional period', there should be negotiations to determine the final status of the West Bank and Gaza and to conclude a peace treaty between Israel and Jordan.

The Camp David agreements were greeted with a mixed reception by the participants. President Carter's own standing was greatly enhanced in the USA, where it was felt that his daring personal diplomacy had forced the Israeli and Egyptian leaders to make concessions. In Israel the agreements were greeted with more cautious approval, in the belief that Mr Begin had realized Israel's long-standing ambition to conclude a separate peace with Egypt without making any substantive concessions over Israel's right to maintain control of the West Bank and Gaza. In the Arab world, however, the agreements were regarded as proof that President Sadat had abandoned the Palestinians and his Arab allies. Even the Government of Saudi Arabia commented that the Camp David agreements constituted 'an unacceptable formula for a definitive peace', while the resignation of the Egyptian Minister of Foreign Affairs (who was at Camp David with President Sadat) showed that not even Egyptian opinion was whole-heartedly in favour of the Camp David formula.

The controversy within the Arab world centred on whether or not the agreements offered any real promise of eventual self-determination for the Palestinians. The advocates of the Camp David 'framework for peace' argued that if the Palestinians co-operated in the arrangements for a transitional period of self-rule they would set in motion a process which would be irreversible; that the end result of this process would be an independent Palestinian state; and that, if the Palestinians refused to co-operate, they would provide Israel with an excuse to perpetuate its occupation of the West Bank and Gaza. Critics argued that it was futile for Egypt to negotiate on behalf of the Palestinians over an issue on which the Palestinians themselves had not been consulted; that the arrangements for Palestinian autonomy outlined at Camp David were so imprecise as to be useless; that in any case Israel would hold a power of veto over their implementation and over the eventual future of the West Bank; and that Israel had no intention of ending its occupation or of allowing any development which might lead to Palestinian independence.

The last of these arguments was given greater credence in the immediate aftermath of the Camp David meeting by the actions of Mr Begin. On his return to Israel, he declared emphatically in the Knesset that Israel would not 'under any conditions or in any circumstances' allow the establishment of an independent Palestinian state, and that Israel would continue to create new settlements on the West Bank and would expect to maintain an armed presence there even after the end of the five-year transitional period.

ARAB OPPOSITION INTENSIFIES

In the circumstances it was not surprising that the US Secretary of State, Mr Vance, whom President Carter dispatched to the Middle East to enlist Arab support for the Camp David agreements, met with a frosty reception. The Governments of Jordan (whose co-operation would be necessary if the provisions for the West Bank were to be put into effect) and of Saudi Arabia (whose influence was important in shaping Arab opinion) both expressed serious reservations, while the more radical Arab governments, led by Syria acting in co-operation with the PLO, declared their rejection of the agreements.

So strong were the feelings aroused in the Arab world that they led to a reconciliation between the rival Baathist Governments of Iraq and Syria, and to a summit conference of all the Arab states (apart from Egypt) in Baghdad at the beginning of November 1978 to consider means of preventing the implementation of the Camp David agreements. After a fiery debate in which various proposals were aired for isolating Egypt and denying it economic aid, the Arab leaders agreed, at the insistence of Saudi Arabia, to delay implementation until Egypt should actually sign a peace treaty with Israel, thus allowing President Sadat the opportunity to reconsider a policy which would leave him totally dependent on the support of the USA. Further decisions by the Israelis to press ahead with their settlements in the West Bank led President Sadat to press for a revision of the Camp David agreements in order to link the provisions concerning the future of the West Bank more closely to those for a bilateral peace treaty between Egypt and Israel. In addition, President Sadat demanded that a specific timetable be adopted for the introduction of autonomy in the West Bank. This brought the peace-making process once again to a standstill, and the target date of 18 December (by which time the two sides had agreed at Camp David to sign a peace treaty) passed with the outstanding issues unresolved.

REVOLUTION IN IRAN

The disintegration of the Shah's regime in Iran at the end of 1978 had important repercussions throughout the Middle East. The suspension of oil exports from Iran, as a result of a strike in the oilfields, threatened an international energy crisis and cut off the most important source of Israel's oil supplies. It also became clear, even before the Shah went into exile on 15 January 1979, that whatever government might succeed him would give strong backing to the Palestinians.

These developments gave added urgency to the US desire to achieve at least a partial Arab-Israeli settlement, but reinforced the positions of all the possible participants. Israel insisted on an Egyptian undertaking in the draft peace treaty to guarantee them access to oil from Sinai after their evacuation of the peninsula. For President Sadat it became more necessary than ever to obtain some concession over the West Bank. Without such a concession it was less likely that Saudi Arabia or Jordan—let alone the other Arab states—would moderate their opposition to the Camp David peace formula.

PRESIDENT CARTER VISITS THE MIDDLE EAST

When a further ministerial meeting in Washington between Egypt and Israel failed to remove the remaining obstacles to an agreement, President Carter flew to the Middle East on 7 March 1979 in a final effort to persuade Egypt and Israel to sign the long-deferred peace treaty. Mr Carter returned to Washington to announce that 'we have now defined the major components of a peace treaty'; but before the treaty could be signed there were further acrimonious arguments about Israeli settlements on the West Bank, while opposition to the peace treaty on the part of even the most moderate Arab governments emphasized the isolation of Egypt.

ARAB BOYCOTT OF EGYPT

The attitude of Saudi Arabia was crucial, and the euphoria in the USA over the signing of the peace treaty—which finally took place in Washington on 26 March 1979 (see Documents on Palestine, p. 112)—was dispelled when Saudi Arabia made plain its opposition by attending a meeting of the Arab League in Baghdad at which a decision was taken to impose a political and economic boycott against Egypt. Arab ambassadors were recalled from Cairo, economic aid to Egypt was suspended and it was announced that the headquarters of the Arab League

would be transferred from Cairo to Tunis. In agreeing to these measures and in subsequently severing diplomatic relations with Egypt, the Government of Saudi Arabia in effect chose to maintain solidarity with the rest of the Arab world at the expense of an open breach with the USA.

Arab opposition to the peace treaty focused on its failure to make any clear provision for Palestinian self-determination. President Sadat maintained that the treaty was the first step towards a comprehensive settlement which would restore Palestinian rights; but to the other Arabs it appeared to be a separate peace between Egypt and Israel which would restore Sinai to Egypt but would leave Israel in control of the rest of the Occupied Territories. That this was also the view of the Israeli Government seemed to be confirmed when Mr Begin, in a broadcast on Israel's Independence Day, reiterated that no border would ever again be drawn through 'the land of Israel' and that 'we shall never withdraw from the Golan Heights'.

THE AUTONOMY TALKS

Soon after the signing of the Egyptian-Israeli peace treaty the two countries began negotiations on the question of autonomy for the Palestinians in the Occupied Territories. The principal issue on which the two sides differed was the establishment of Israeli settlements in the Occupied Territories, which the Israeli Prime Minister, Mr Begin, insisted were in no way contrary to the Camp David accords. When the Israeli Minister in Charge of Settlements, Ariel Sharon, announced plans at the end of May 1979 to build new settlements on the West Bank and in the Gaza Strip, the Egyptian Prime Minister, Mustapha Khalil, warned Israel that this would jeopardize the peace process. Shortly afterwards, on 12 June, the second round of talks ended with the two sides unable to agree on even the first principles of the autonomy plan.

On 4 September President Sadat went to Haifa to begin new talks with Mr Begin and announced that he was 'determined to spread the umbrella of peace to include the Palestinian people'. Bilateral agreements were made on the issues of border patrols, oil sales from Egypt to Israel, and the return of the Santa Caterina monastery to the Egyptians, but no progress was registered on the autonomy question. The two countries drifted still further apart a week later when the Israeli Government withdrew its ban on the purchase by Israeli citizens of Arab land in the Occupied Territories, an action immediately condemned by the US Government.

ISRAEL'S INTERNAL DISPUTES

In Israel, although the opposition movement, Peace Now, organized demonstrations against the establishment of more settlements in the Occupied Territories, a parliamentary committee in July 1979 approved plans to build 13 new settlements during the forthcoming 12 months. However, the Israeli Supreme Court ruled that the Elon Moreh settlement near Nablus was illegal. The ruling denied that the settlement served a necessary military function and ordered the expropriated land to be restored to its Arab owners. At the end of October an extremist nationalist party, Tehiya, was founded, its principal objective being the construction of Jewish settlements throughout the West Bank.

PALESTINIAN DIPLOMATIC GAINS

In mid-1979 there was speculation that the USA was making overtures to the PLO in order to bring it into the peace process. Although this was repeatedly denied by President Carter, the US Ambassador to the UN, Andrew Young, met the PLO observer, Zehdi Labib Terzi, in September. After strong protests from the Israelis, Young resigned, declaring that the USA's refusal to talk to the PLO was ridiculous.

Meanwhile, the PLO was making significant diplomatic headway in western Europe. In July Yasser Arafat had talks with Chancellor Kreisky of Austria and in September he was officially received by King Juan Carlos of Spain and his Prime Minister, Adolfo Suárez. At the UN General Assembly meeting later in the month, the Irish Minister of Foreign Affairs, Michael O'Kennedy, speaking on behalf of the EC, voiced strong criticism of current Israeli policy and mentioned, for the first time, the role of the PLO. In the same debate the British Foreign Secretary, Lord Carrington, called for an end to Israel's policy of settlement in the Occupied Territories and for a reversal of the decision to allow Israeli citizens to buy land there. In November the PLO was accorded 'political recognition' by the Italian Government and at the same time Arafat was received by the President and Prime Minister of Portugal. In addition, the PLO's spokesman on foreign affairs, Farouk Kaddoumi, held talks with the foreign ministers of Belgium, Italy and Greece.

UNREST IN THE WEST BANK

While Egypt and Israel made little progress on the autonomy question, the Palestinian population of the West Bank grew increasingly restless and frustrated. In February 1980 a new crisis arose when the Israeli Cabinet decided in principle to allow Jews to settle in the town of Hebron. This action was widely condemned in Israel and abroad and led to increased tension throughout the West Bank. Riots and demonstrations took place in a number of towns and in April a group of Jewish extremists mounted attacks in Ramallah. On 1 May a Palestinian youth was shot dead by an Israeli officer in Anabta, and the following day PLO guerrillas struck in Hebron and killed six Jewish settlers. The Israeli authorities reacted by destroying a number of houses near the scene of the ambush and deporting the mayors of Hebron and Halhul and the Qadi (religious leader) of Hebron.

NO PROGRESS TOWARDS REAL PEACE

The seizure of US embassy officials in Iran and the Soviet invasion of Afghanistan at the end of 1979 diverted international attention from the Arab–Israeli conflict and the USA concentrated its attention on the recovery of the hostages in Teheran. On 1 March 1980, however, the UN Security Council unanimously adopted a resolution (465—see Documents on Palestine, p. 114) calling upon Israel to 'dismantle the existing settlements' and 'to cease, on an urgent basis, the establishment, construction and planning' of new ones. Two days later President Carter astonished the international community by retracting the affirmative US vote and announcing that it had been a mistake. The US vote, he said, had been 'approved with the understanding that all references to Jerusalem would be deleted', and he added: 'While our opposition to the establishment of the Israeli settlements is long-standing and well known . . . the call for dismantling was neither proper nor practical.' This retraction was widely seen as a surrender to the Zionist lobby by a US president needing votes in an election year.

As the autonomy negotiations showed little sign of progress, the EC sought new ways to break the deadlock. One idea was the suggestion that Resolution 242 should be amended to include a reference to the right of self-determination for the Palestinians. In February, during a visit to Bahrain, the Irish Minister of Foreign Affairs recognized the PLO and called for the establishment of a Palestinian state. In the course of an important tour of the Middle East in the following month, President Giscard d'Estaing of France supported the principle of self-determination for the Palestinians and spoke of the need to include the PLO in peace negotiations. In April the PLO's diplomatic success in Europe continued when Chancellor Kreisky of Austria officially recognized the PLO as the representative of the Palestinian people.

The USA made it clear that it disapproved of European attempts to intervene in the peace process. In March President Carter, under attack from the other presidential candidates for his inept handling of the Security Council vote, decided to make yet another attempt to mediate between Israel and Egypt. Although the two countries had exchanged ambassadors and some successes had been achieved on bilateral relations, their positions on the autonomy issue were as far apart as ever. Determined to make some progress before 26 May (the target date for the completion of the autonomy talks), President Carter invited President Sadat and Mr Begin to visit him separately in Washington during April. Nothing was achieved and at the beginning of May President Sadat announced that Egypt was suspending the negotiations indefinitely.

THE EUROPEAN INITIATIVE

Despite the opposition of Israel, Egypt and the USA, the EC countries finally produced their Middle East statement at a

meeting in Venice on 13 June (see Documents on Palestine, p. 115). After criticism from the new US Secretary of State, Edmund Muskie, and a warning from President Carter that the USA would not hesitate to use its veto in the Security Council, the EC abandoned any attempt to introduce a resolution on Palestinian rights at the UN. However, they did go further than ever before in their support of Palestinian aspirations.

In the Venice statement, the EC declared, for the first time collectively, that the Palestinian people must be allowed 'to exercise fully its right to self-determination', and called for the PLO 'to be associated with the negotiations'. It also repeated its condemnations of Israeli settlements and any attempt to change the status of Jerusalem. Finally the EC announced its intention of consulting all the parties concerned, in order to determine the form of a European initiative.

EGYPTIAN–ISRAELI RELATIONS

The negotiations over Palestinian autonomy, which President Sadat had postponed in May 1980, were reopened in Washington in July. However, the parties' positions were as firmly entrenched as ever, and there was speculation that President Sadat had decided to resume the talks only in order to increase the chances of President Carter's re-election in the forthcoming US elections.

Meanwhile the so-called 'normalization' of relations between Egypt and Israel was moving forward at a slow pace. Although both countries had established embassies in each other's capitals and there were regular air-flights between the two, other agreements were taking a long time to implement.

WEST BANK NATIONALISM

Only a month after the mayors of Hebron and Halhul had been deported by the Israeli authorities, Jewish extremists placed bombs in the cars of three other West Bank mayors. Two of them were severely injured, including Bassam Shaka, the Mayor of Nablus, who lost both his legs. The attacks revealed the existence of a militant underground movement among Jewish settlers in the West Bank, which, in the ensuing weeks, issued death threats to Arabs and moderate Israelis, including Knesset members and prominent journalists. Tension increased as leading Palestinians, including Mayor Shaka, accused the Israeli Government of having links with the extremists. The Government's failure to investigate the crime properly, and the allegation that the head of the Shin Bet (Israel's internal security and intelligence service) had resigned because Mr Begin had refused to allow him to carry out an investigation of members of Gush Emunim (the main West Bank settlement organization), added substance to these suspicions.

PARTY RIVALRY IN ISRAEL

Opinion polls in Israel had long been predicting a disastrous defeat for Mr Begin's Government at the next general election, which had to be held before November 1981. Likud's unpopularity stemmed largely from its failure to solve the country's economic problems but during the early months of 1981 attention in Israel and abroad was focused on the parties' conflicting policies towards the Occupied Territories.

For electoral and other reasons, the Labour Party refused to define its policy towards the West Bank but it emphasized that it did not plan to annex the area. The Labour leader, Shimon Peres, seemed to favour the so-called 'Jordanian option', involving the return of the populated areas to Jordan but the retention of the Jordan Valley and various blocks of settlements. Although King Hussein of Jordan repeatedly declared that no such option existed and that he was not empowered to speak for the Palestinians, Labour politicians continued to think in terms of a partition of the West Bank.

The Likud Government was determined to make it impossible to implement this policy. In the months before the election, which was to be held in June 1981, the Likud coalition decided to launch a vast new settlement programme which an incoming Labour government would be unable to dismantle.

REAGAN ELECTED IN THE USA

The election of Ronald Reagan as President of the USA in 1980 was greeted enthusiastically in Israel but caused dismay in the Arab world. During the campaign Mr Reagan had made pro-Israeli statements that seemed excessive even for a US presidential candidate and his early appointments reflected the influence of his team of Zionist advisers. Nearly all of the Reagan appointees shared the feelings of the new Secretary of State, Alexander Haig, and the National Security Adviser, Richard Allen, who judged the Arab–Israeli conflict not on its own terms but in the context of the East–West confrontation. Dismay in the Arab world was increased by the new President's apparent ignorance of the issues; in an interview soon after taking office, Mr Reagan declared that the Israeli settlements were 'not illegal', thereby contradicting what had long been official US policy.

The US Administration soon made it clear that it regarded the European initiative as a hindrance to its own efforts in the Middle East. The USA's main preoccupation was not with the Palestinian question, but with the threat which it believed the USSR posed to the oil-rich Gulf. To counter this threat, the USA created a rapid deployment force able to intervene where necessary in the Gulf area. Although the Gulf Arabs denied the existence of a Soviet threat and declared their opposition to such a force, the USA went ahead with its plans to establish bases in Oman, Somalia and Kenya. In April 1981 Mr Haig visited Egypt, Israel, Jordan and Saudi Arabia, intent on convincing the conservative Arab regimes of the Soviet threat. Both Jordan and Saudi Arabia, two of the USA's closest allies in the Arab world, showed themselves to be highly sceptical about the Reagan administration's new priorities, while Syria, the PLO and other forces in the region were even more critical of US policies.

FIGHTING ESCALATES IN LEBANON

At the beginning of March 1981 the Syrian and Lebanese Governments agreed to send regular units of the Lebanese army to join UNIFIL forces in southern Lebanon. This move was opposed by the Israeli-backed Lebanese rebel leader, Maj. Sa'ad Haddad, whose troops subsequently opened fire on UNIFIL positions. It was in response to this action and to attempts by the Phalangist Christian militia to strengthen its positions around the Lebanese town of Zahle that Syrian troops of the Arab Deterrent Force moved against the Maronite Christian positions in central Lebanon.

In early April Lebanon experienced its most serious fighting since the end of the civil war in 1976. The battles around Zahle were followed by fighting in Beirut and Baalbek and in the south between Haddad's forces and the Palestinians. After a truce during the week before Easter, Israel launched a series of attacks against the south. Renewed fighting broke out between the Syrians and the Phalangists on 27 April and the following day the Israeli air force shot down two Syrian helicopters. In response to this attack Syria deployed a number of SAM-6 anti-aircraft missiles to defend its positions in the Beka'a valley.

THE SYRIAN MISSILE CRISIS

Although the Syrian missiles were stationed deep inside Lebanon, far from the Israeli border, and fulfilled a defensive function, Mr Begin demanded their withdrawal because they limited Israel's ability to fly over its northern neighbour. Philip Habib, the US Special Envoy to the Middle East, made a series of visits to Jerusalem and Damascus during May in an attempt to draft a compromise formula to persuade Saudi Arabia to encourage the Syrians to modify their position. Instead, Saudi Arabia opened a round of inter-Arab negotiations aimed at reaching agreement on the main points of a comprehensive Lebanese settlement, which would then make it easier to solve the crisis caused by the missiles. The settlement envisaged was to be based on the conclusions of the Beiteddine conference of 1978 with provisions for the future relations between the Lebanese factions, between Syria and Lebanon, and between the Palestinians and the Lebanese Government. Meanwhile, inter-Arab relations, which had deteriorated since the beginning of the Iran–Iraq War, improved, and at a meeting of Arab ministers of foreign affairs, in Tunis on 23 May, Syria received the almost unanimous backing of the Arab world.

Hopes that Syria might accept a formula offered by the USA were frustrated by a new wave of Israeli attacks on Lebanon and by the further demands of Mr Begin, who insisted on the

removal of anti-aircraft missiles inside Lebanon and a Syrian guarantee that Israeli aircraft would not be targeted while they were 'patrolling' Lebanon. In June Mr Begin warned that, if the USA failed to arrange the withdrawal of the missiles through diplomacy, Israel would remove them by force.

ISRAEL ATTACKS IRAQ

On 7 June 1981, with the Syrian missile crisis still unresolved, the Israelis bombed and destroyed the Iraqi nuclear plant near Baghdad. Mr Begin immediately claimed that the attack was justified on the grounds of self-defence, as Iraq would soon have had the capacity to produce nuclear bombs. However, the International Atomic Energy Agency (IAEA) in Vienna, which had recently inspected the plant, said that Iraq would not have had the means to make nuclear weapons for many years, a view supported by the Congressional research service in Washington. The IAEA pointed out that Iraq, unlike Israel, was a signatory of the Nuclear Non-Proliferation Treaty and that it had co-operated with the agency over safeguards.

The raid was criticized by governments all over the world, while in the UN Security Council, the United Kingdom and France demanded a 'firm resolution' condemning Israel. Even the Israeli opposition leader, Shimon Peres, accused Mr Begin of 'acting out of electoral considerations which ignore the national interest'. President Reagan responded by suspending the delivery of four F-16 aircraft to Israel until the US Congress had decided whether or not Israel had violated an agreement whereby US weapons were sold on condition they were not used in 'an act of aggression against any other state'. Nevertheless, the President made it clear where his sympathies lay when he stated that Israel had 'reason for concern' about Iraq's nuclear capacity.

BEGIN RETAINS POWER

The Israeli general elections, which took place on 30 June 1981, were the most violent in the country's history. The campaign was characterized by the Prime Minister's demagogic performances in front of huge crowds and by the physical attacks of his Likud supporters against members and property of the opposition Labour Party. Mr Begin's aggressive foreign policy obscured his Government's failures in tackling domestic problems and, in the elections, the Labour Party failed to gain the predicted huge victory. The results showed the two main parties to be evenly balanced, but it was soon clear that the Prime Minister would remain in power if he could persuade the various religious parties to join him in a coalition. This he achieved and a new Cabinet emerged, more homogeneous and uncompromising than its predecessor. The most significant appointment was that of Ariel Sharon, one of Israel's leading 'hawks', to the defence ministry.

Ten days after the elections, Israel launched a series of air strikes against Palestinian targets in southern Lebanon. Guerrillas belonging to the PLO retaliated with rocket and artillery attacks against settlements in Galilee, and Israel, in turn, responded with further air strikes and with raids by seaborne commandos. This time the targets included urban areas and in one strike against Beirut on 17 July more than 150 people were killed and 600 wounded. The international community was shocked by the action and the USA reacted by again suspending the delivery of F-16 aircraft to Israel and by making intensive attempts to bring about a cease-fire. While President Reagan's special envoy, Philip Habib, was trying to persuade Israel to accept a truce, Saudi Arabia was putting similar pressure on the Palestinians. A cease-fire finally came into effect on 24 July.

THE DEATH OF SADAT

In August 1981 President Sadat visited Washington for the first time since the election of President Reagan. Although the USA did not accept his suggestion that it should negotiate with the PLO, the visit was considered to be a diplomatic success. Yet, for all his popularity in the West, Sadat faced major problems inside Egypt.

During the summer there had been serious clashes between Copts and Muslim fundamentalists, and at the beginning of September some 1,700 people were arrested, a number of newspapers closed down and several foreign journalists expelled. Among those arrested were a large number of the President's political opponents who were neither Copts nor Muslim fundamentalists, which suggested that Sadat was using the religious clashes as a pretext to purge the opposition. A month after the arrests, however, President Sadat was assassinated by Muslim extremists at a military parade in Cairo. The large Western attendance at his funeral, which included three former US Presidents, presented a stark contrast to the lack of grief in evidence on the streets of the capital and indicated how much Sadat's popularity in his own country had declined as a result of his pro-Western stance on foreign policy.

EUROPE AND THE FAHD PLAN

The major diplomatic initiative of the second half of 1981 came from Saudi Arabia. The so-called 'Fahd Plan' was put forward by Crown Prince Fahd (see Documents on Palestine, p. 115). Although the USA reacted cautiously to the plan, European ministers of foreign affairs described it as 'extremely positive' and particularly welcomed Point Seven which, by guaranteeing 'the right of all states in the region to live in peace', indicated that Saudi Arabia was prepared to recognize Israel in return for a complete withdrawal from the Occupied Territories and the establishment of an independent Palestinian state.

Although Mr Begin described the Fahd Plan as a recipe for the destruction of Israel, the Europeans were quick to note its similarities to their own Venice Declaration of June 1980. By the end of the year, however, both plans had been virtually abandoned. Europe's initiative was wrecked when the French Minister of Foreign Affairs, Claude Cheysson, dissociated his Government from it during a visit to Israel and the Saudi plan collapsed at the end of November. Since its publication in August no member of the Arab League, apart from Libya, had rejected the Fahd Plan outright and even the PLO Chairman, Yasser Arafat, had expressed approval. The Saudi delegation went to the first Fez Arab summit in November confident, therefore, that it could win broad support for its proposals. However, a number of Arab states, led by Syria, were opposed to the plan, not so much for its content as for its timing. At Fez the opposition hardened and, rather than allow the summit to degenerate into a lengthy public quarrel, King Hassan of Morocco closed the meeting after only a few hours.

THE GOLAN ANNEXATION

In December 1981, while international attention was concentrated on the crisis in Poland, the Israeli Government decided to annex the Syrian Golan Heights. Overruling the more cautious minority in his Cabinet, on 14 December Mr Begin pushed through the Knesset a bill which extended Israeli laws, jurisdiction and administration to the territory Israel had occupied since 1967. The UN Security Council unanimously condemned the action and gave Israel two weeks to rescind its decision. When the Israeli Government refused to comply, the Security Council reconvened at the beginning of January 1982 in order to study what measures should be taken against Israel. Syria advocated a resolution calling for mandatory sanctions under Chapter Seven of the UN Charter but, in a bid to attract wider international support, Jordan introduced a milder resolution calling merely for voluntary sanctions against Israel. Even this was too harsh in the opinion of the USA, which vetoed the resolution, although at the same time stressing its opposition to the annexation.

THE USA WITHOUT A POLICY

After more than a year in office, the Reagan administration, which had been lukewarm to the Fahd Plan and hostile to the European initiative, had still not made any proposals of its own. While ostensibly working towards a resumption of the autonomy talks between Egypt and Israel, and hoping that the Israeli withdrawal from Sinai in April 1982 would take place smoothly, the US Administration's main concern remained the so-called 'Soviet threat'. It was primarily for strategic reasons that the USA made its two most important moves in the autumn of 1981: the sale of sophisticated radar aircraft (AWACS) to Saudi Arabia, which was endorsed by Congress after strong opposition from the Zionist lobby in October, and the signing of a 'memorandum of understanding' on defence co-operation with Israel on

30 November. However, this last agreement was suspended by the USA a fortnight later to show its disapproval of Israel's annexation of the Golan Heights; Begin reacted by verbally attacking the USA and repudiating the memorandum altogether.

ISRAEL WITHDRAWS FROM SINAI

Although President Mubarak of Egypt indicated soon after he succeeded Sadat that he wanted to improve his country's relations with the rest of the Arab world, it was clear that his immediate goal was the return of the last third of Sinai, which Israel was due to hand back in April 1982. Consequently, he was anxious to avoid any action which might offer Israel a pretext to continue the occupation. Within Israel there was much apprehension over the evacuation of Sinai and fears that it might lead to violence among the Jewish population.

In March, after months of hesitation, the Government finally ordered the army to move into the Yamit area and evict illegal settlers who had recently entered it. The withdrawal took place as scheduled on 25 April, and, in order not to antagonize Israel, Egypt recovered the key areas of Rafah and Sharm esh-Sheikh with as little ceremony as possible.

THE WEST BANK REVOLTS

For several months Israel had been trying to create an 'alternative' leadership among the inhabitants of the West Bank which would collaborate in imposing some form of limited autonomy on the Palestinians. With financial aid and military protection from Israel, a small number of 'village leagues' were established in a move to counter the radical nationalism of the urban leadership. Although the attempt was largely unsuccessful, it did provoke several of the West Bank's more radical mayors into refusing to collaborate with the Israeli administration. In response, on 18 March, the occupation authorities dismissed the Mayor of al-Bireh, Ibrahim Tawil, as well as the town's council.

The dismissals caused a three-day strike in East Jerusalem and the rest of the West Bank, which was later extended as a result of the harsh manner in which the Israeli army dealt with Palestinian demonstrators. Rioting took place in most West Bank towns and spread to the Gaza Strip. A week after the action taken against the al-Bireh town council, Israel issued summary dismissal orders against the Mayor of Ramallah, Karim Khalaf, and the Mayor of Nablus, Bassam Shaka. These dismissals provoked two weeks of the worst rioting the West Bank had yet seen, in which several Palestinians were killed.

ISRAEL'S 1982 INVASION OF LEBANON

The cease-fire on the Israel-Lebanon border, which had been arranged by the US Special Envoy, Philip Habib, in July 1981, held for less than a year. In May 1982 the Israeli air force struck at Palestinian positions inside Lebanon and PLO guerrillas retaliated by shelling Galilee. On 4 June, anti-PLO Arab gunmen shot and wounded the Israeli Ambassador to London, Shlomo Argov, and Israeli aircraft bombed targets in southern Lebanon and west Beirut. The PLO's subsequent bombardment of northern Israel—which did not result in loss of life—was the official pretext for an invasion the Israelis entitled 'Operation Peace for Galilee'. However, Gen. Sharon subsequently revealed that he had been planning the operation since becoming Minister of Defence in July 1981 and he had even visited Beirut secretly in January 1982, in preparation.

On 6 June the Israeli army, numbering some 30,000, brushed aside the UN forces in southern Lebanon and attacked Palestinian positions around Beaufort Castle and along the coast road to Tyre. While Israel's air force, with naval support, bombed Beirut and other towns, infantry units were landed along the Lebanese coast. The Israelis captured Nabatiyah, Tyre, Sidon and Damour after massive bombardments which resulted in severe damage and thousands of civilian casualties. By 10 June Israeli troops had reached positions overlooking Beirut.

Syria, which had maintained some 30,000 troops in Lebanon since its intervention in 1976, tried to avoid being drawn into the war but on the fourth day of the invasion its forces clashed with the advancing Israelis. Although the battles on the ground never became as serious as in the 1973 war, Syria committed its air force against the Israelis and suffered a heavy defeat. On 11 June, under diplomatic pressure from the USA, Israel agreed to a cease-fire with Syria. However, fighting continued between Palestinian guerrillas and Israeli forces. During the siege of Beirut Sharon announced that the PLO should be expelled from the country and, if possible, destroyed altogether. As for Lebanon, Sharon's intention was to clear the Syrian troops out of Beirut and the centre of the country and to install a client regime drawn from the right-wing Phalangist Party.

THE SIEGE OF BEIRUT

The siege of Lebanon's capital began a week after the invasion and lasted almost two months. It was bombed almost continuously from land, sea and air from 13 June to 12 August. When the siege had ended two Lebanese newspapers, quoting government sources, calculated that since the beginning of the invasion 18,000 people had been killed and 30,000 wounded. About 85% of the casualties were civilians.

Israel's terms for ending the siege were that PLO forces in Beirut, numbering some 9,000 combatants, should surrender or leave the country, along with those Syrian troops still in the city, otherwise the Israeli army would force its way into Beirut and forcibly expel them. While US officials tried to negotiate an agreement with the PLO, the Israeli armed forces continued to bombard the city. They also cut off water and electricity supplies to west Beirut and prevented food and medical supplies from reaching its beleaguered population. Finally the PLO agreed to leave and on 21 August its guerrillas began their evacuation. By the end of the month the last Palestinian units had left the city that had been their headquarters since the Jordanian civil war 12 years earlier. Israel had achieved one of its principal objectives. A second goal was attained almost immediately when, on 23 August, the Lebanese National Assembly was persuaded to choose the right-wing, pro-Israeli, Phalangist commander, Bachir Gemayel, as the new President of Lebanon.

THE SABRA/CHATILA MASSACRE

The agreement governing the evacuation of the PLO from Beirut provided for the deployment of a multinational force to supervise the Palestinian withdrawal and to protect the inhabitants of Muslim west Beirut. On 25 August 1982 this force, composed of US, French and Italian soldiers, disembarked at Beirut. Only two weeks later, they began to withdraw, a fortnight earlier than provided for in the agreement.

On 14 September the President-Elect, Bachir Gemayel, was killed by a bomb explosion at the Phalangist Party headquarters and a few hours later, in contravention of the evacuation agreement, the Israeli army moved into west Beirut. The day after the assassination Israeli officers held a meeting with local Phalangist commanders in which they agreed to help a force of Phalangist militiamen 'clean up' the Palestinian refugee camps of Sabra and Chatila. On the evening of 16 September the Phalangists entered the camps and began a massacre which resulted in the deaths of as many as 2,000 refugees.

The outrage which the atrocity caused throughout the world eventually forced the Israeli Prime Minister to order an inquiry. In its report published in February 1983, the Israeli Commission of Inquiry criticized a number of leading Israelis including Begin, Sharon, the Minister of Foreign Affairs, Shamir, as well as high-ranking officers, such as the Chief of Staff, Eitan. Sharon was considered principally responsible for planning the operation; he resigned as Minister of Defence but Begin allowed him to remain in the Cabinet as a minister without portfolio.

TWO PEACE PLANS

On 1 September 1982 President Reagan announced a new plan to settle the Arab–Israeli conflict (see Documents on Palestine, p. 116). It was widely considered to be the work of the new Secretary of State, George Shultz, and it represented a significant change in US policy. While the Camp David accords had been ambiguous about the future of the territories occupied by Israel since 1967, the Reagan Plan envisaged their restoration to the Arabs. Nevertheless, at the same time the USA reaffirmed its opposition to the creation of a Palestinian state and proposed 'self-government in association with Jordan'.

The Reagan Plan was rejected by the Israeli Government, which immediately embarked on a new and more intensive

programme of building settlements on the West Bank. A week after the announcement of the Reagan Plan, the Arab states, meeting again in Fez, countered with their own proposals (see Documents on Palestine, p. 116), which were almost identical to the Fahd Plan of the year before and called for the creation of a Palestinian state in the Occupied Territories. Point Seven of the proposals, which called on 'the United Nations Security Council to provide guarantees for peace between all states of the region . . .', implicitly recognized Israel's right to exist.

At the end of October King Hassan of Morocco led a delegation of Arab ministers of foreign affairs to Washington to explain their proposals to President Reagan. Although the US and Arab plans both envisaged the restoration of Arab rule over the Occupied Territories, they disagreed over the issue of who exactly would govern them. The crucial figure in the US strategy was King Hussein of Jordan, who visited Washington in December. Hussein was prepared to negotiate with the USA on the basis of the Reagan Plan only if he received a mandate to do so from the Palestinians. In January 1983 the King held talks with the PLO leader Yasser Arafat, aimed at establishing a joint Jordanian-Palestinian position and the following month the Palestine National Council (PNC) debated the matter in Algiers.

Although it was clear that Arafat and the Palestinian moderates were anxious to give Hussein the mandate he needed, there was strong opposition from some sections of the PNC, particularly from those groups backed by Syria. The PNC duly endorsed the Fez proposals and criticized the Reagan Plan without rejecting it outright. Although Arafat failed to achieve his objectives, discussions between Jordan and the PLO continued until King Hussein brought them to an end in April.

AMERICAN DIPLOMATIC EFFORTS

On 24 April 1983 the US Secretary of State George Shultz left for the Middle East, shortly after a bomb attack, apparently carried out by an unknown Shi'ite group, had destroyed the US Embassy in Beirut and left a large number of dead, including 17 US citizens. After a series of consultations with Arab and Israeli leaders, Shultz was able to persuade the Lebanese and Israeli Governments to sign an agreement on 17 May providing for the withdrawal of Israeli troops from Lebanon. Although Israel did not manage to secure some of the ambitious security demands it had been making earlier, the agreement did provide for the establishment of joint Israeli-Lebanese patrols operating inside the Lebanese border.

The Israeli Government had made clear at the time that any agreement to withdraw its troops from southern Lebanon was conditional on a commitment by Syria simultaneously to withdraw its army from the Beka'a valley. The Syrian Government, however, which had recently entered into a closer alliance with the USSR, quickly denounced an agreement that seemed to benefit only the USA and its allies, Israel and the Lebanese Government of Amin Gemayel (the brother of the late President-Elect). Negotiations had neglected consideration of an Israeli withdrawal from the Syrian Golan Heights and the Occupied Territories of Palestine and President Assad, therefore, adopted an intransigent attitude. As an indication of Syrian policy, Assad supported a revolt by Palestinian dissidents inside Fatah (the militant Palestine National Liberation Movement) who were opposed to their leader Yasser Arafat's moderate, diplomatic approach. With the help of the Syrian army, the Fatah rebels under their extremist commander, Abu Musa, captured Palestinian loyalist positions in the Beka'a valley and in June Assad expelled Arafat from Syria.

The Israeli Government, meanwhile, was refusing to pull its army out of Lebanon without a simultaneous withdrawal by the Syrians—yet it was reluctant to leave its troops in occupation of so much Lebanese territory because of the toll being taken on them in attacks by Lebanese and Palestinian guerrillas. In Israel, demonstrations were held to demand the immediate withdrawal of Israeli troops. A year after the invasion the Government admitted that 500 soldiers had been killed in Lebanon and people began to question whether the war's objectives could justify such losses. It was in this atmosphere that the Israeli Government began to discuss proposals for a limited withdrawal to the Awali river, north of Sidon.

THE ISRAELI WITHDRAWAL FROM BEIRUT

Growing factional violence in Lebanon during the summer of 1983 underlined the impracticability of both Israel's and the USA's plans for that country. A principal aim of Israel's invasion—the establishment of a strong central government closely allied to Israel—had clearly been abandoned when on 20 July the Israeli Cabinet decided, unilaterally, to pull back its forces behind the more easily defensible line of the Awali river. Simultaneously, a visit to Washington by President Gemayel left the US Administration with few illusions that the 17 May Lebanon/Israel agreement, which it had brokered, would ever be ratified, far less implemented. The sense of failure provoked the replacement of Philip Habib as special Middle East envoy by Robert McFarlane, and the announcement by Menachem Begin, on 28 August, of his intention to resign as Prime Minister. The situation in Lebanon deteriorated further (on 23 July the Druze leader Walid Joumblatt had announced the formation of a pro-Syrian coalition, the National Salvation Front, in opposition to the Gemayel Government). Any hope that without external support Gemayel's authority could be extended beyond the capital itself was dashed following Israel's sudden withdrawal to the Awali on 4 September, which precipitated a war between the Druze and the right-wing Christian forces. With Syrian logistical support, the Druze quickly gained the upper hand; their advance was checked only at Souk el-Gharb, a strategic mountain town overlooking Beirut, at which point the USA took the decision to intervene directly in the conflict with shelling by its offshore fleet of Druze- and Syrian-controlled territory.

AMERICAN INVOLVEMENT

The growing US involvement in the Lebanese conflict, with the concomitant danger of 'superpower' confrontation, alarmed not just the USA's European partners in the UNIFIL multinational force (MNF) but all levels of opinion in the USA itself, which was for the first time paying the price in American lives for its Middle East policy. The longer-term worry was that such involvement would destroy US credibility as the broker of a wider settlement of the Arab–Israeli conflict. On 26 July 1983 masked gunmen killed 3 Palestinian students and wounded 38 others in an attack on Hebron University. Then, on 2 August the US vetoed a UN Security Council resolution declaring the West Bank settlements illegal and condemning the violence against Palestinian civilians. Although, on 27 August, President Reagan declared the establishment of new Israeli settlements in the Occupied Territories to be 'an obstacle to peace', two days later the USA boycotted the UN International Conference on the Palestinian Question in Geneva, which was attended by 137 states, including its NATO allies in Europe.

BEGIN'S RESIGNATION

Any hopes that the resignation of Menachem Begin as Prime Minister on 30 August 1983 heralded a change in Israeli policies were banished when the Herut Party chose the even more uncompromising Minister of Foreign Affairs, Itzhak Shamir, to be his successor as leader of the party. Shamir, a veteran of the Jewish underground group, Lehi, allegedly gave the order for the assassination of UN mediator Count Folke Bernadotte in 1948, and had opposed the Camp David accords. Begin withheld his formal resignation until 15 September, giving Shamir time to form a viable Likud coalition. Sure of a narrow majority in the Knesset, Shamir was asked to form a government on 21 September.

THE INFLUENCE OF SYRIA

If Lebanon was the key to progress towards a wider settlement, it appeared to many observers that President Reagan believed that the civil war there could be settled in President Gemayel's favour through the exercise of US military might. This was despite efforts in the US Congress to invoke the 1973 War Powers Act requiring presidential consultations with Congress if US forces abroad faced 'imminent hostilities'. The impossibility of a force of 1,600 marines with naval support sustaining the authority of Gemayel's Government, whose pleas to Israel for help against the Druze offensive had been dismissed, became increasingly clear in the aftermath of the fragile cease-fire agreed on 25 September 1983 through Saudi Arabian mediation.

The terms of the cease-fire provided for a dialogue of national reconciliation with Syrian participation, in recognition of Syria's effective power of veto over decisions relating to the future of Lebanon.

There were signs too that Syria was seeking to extend its control over another key area of the Middle East conflict. On 29 July Yasser Arafat declared that Syrian and Libyan troops were involved in continuing clashes between pro- and anti-Arafat Palestinian factions in the Beka'a valley. Prolonged meetings of the PLO's Executive Committee and Central Council in Tunis in early August were unable to heal the rift in Palestinian ranks. Arafat managed to retain the loyalty, or at least the neutrality, of the more radical groupings such as the People's Front for the Liberation of Palestine (PFLP), led by George Habash, and the Democratic Front for the Liberation of Palestine (DFLP), led by Naif Hawatmeh, but was obliged in return to submit to the Central Council's denunciation of the Reagan Plan, something which the last PNC meeting had carefully avoided. The remaining pro-Arafat forces in Syrian-controlled northern Lebanon were steadily losing ground, and Arafat seemed to have decided to make his last stand with them when in mid-September he returned to the loyalist stronghold in the northern Lebanese port of Tripoli. This soon came under siege from Syrian and Palestinian forces.

With Syria dominating events in Lebanon and with the pro-Syrian Fatah dissidents led by Abu Musa apparently poised to inherit Arafat's leadership of the PLO, it seemed that any solution of the crisis must be acceptable in Damascus. The US Administration was forced belatedly to recognize Syria's influence and negotiations were initiated by special envoy Robert McFarlane through the Saudi Arabian Ambassador to the USA, Prince Bandar ibn Sultan. Much to the consternation of its European allies, however, the USA appeared unwilling to alter its perception of the conflict in Lebanon in terms of a Soviet threat to its interests in the region, a view in which it was encouraged by Syria's acquisition of Soviet long-range SS-21 missiles in early October. There was, equally, no hint of US readiness to put pressure on Israel over the issues necessary for Syrian acceptance of a peace settlement: Israeli withdrawal from southern Lebanon and, crucially, the inclusion of the Syrian Golan Heights, annexed by Israel in 1981, in any talks aimed at a wider settlement. Israel in turn applied its own leverage, threatening to close the bridges over the Awali river, now Lebanon's *de facto* line of partition. President Reagan's domestic position improved somewhat on 30 September 1983 with a Senate vote approving the deployment of US forces in Beirut for a further 18 months, but the precarious position of these forces made their withdrawal imperative before the 1984 presidential election campaign began in earnest.

SUICIDE BOMBINGS IN LEBANON

All the Reagan administration's calculations were overturned on 23 October 1983 when simultaneous suicide bomb attacks destroyed the headquarters of the US and French contingents of the MNF in Beirut, killing 241 US marines and 58 French soldiers. Two extremist Shi'ite groups thought to have had links with a detachment of Iranian revolutionary guards stationed in Baalbek in eastern Lebanon claimed responsibility for the atrocities. Responsibility for the attacks, initially ascribed by the USA to Iran, was widened to include Syria and the USSR, all of whom vigorously denied any involvement. Although President Reagan was quick to reaffirm America's commitment to maintaining the marines in Lebanon—a determination echoed at a meeting of the ministers of foreign affairs of all four countries contributing to the MNF in Paris on 27 October—domestic opposition to his Middle East policy inevitably increased. In the case of the attack on the French forces, there was reason to believe it was linked with France's support for Iraq in the Iran–Iraq War; in the case of the USA the marines' deaths could not help but be attributed to its decision to intervene, as it appeared, directly on the side of Lebanon's Christian President against the largely Muslim opposition, and to the antipathy which US support for Israel had provoked among the Arabs at large. Israel's distancing itself from the US involvement in Lebanon, as reaction to the bombings set in, was evidence of its sensitivity to the charge that by invading Lebanon it had set in motion the chain of events leading to the disaster. US resentment was evinced by the rejection of Israel's offer to help in treating the victims of the attack. Ten days before the Beirut attacks Israel had leaked secret US plans to arm and equip a Jordanian military force for possible intervention in a Gulf crisis. The leak led to the Senate Appropriations Committee vetoing the idea on 2 November and was a grave setback to the US-Jordanian dialogue, which was focused on King Hussein's willingness to revive talks with the Palestinians on the basis of the Reagan Plan.

The USA forged closer links with Israel after a bomb attack on Israel's military headquarters in Tyre which killed 60 people, including 32 Palestinians and Lebanese held captive there. Israeli planes immediately bombed Palestinian and Druze positions in the Chouf, and a 72-hour blockade of the occupied south was imposed. The USA seemed to be convinced by the Israeli Minister of Defence, Moshe Arens, that US setbacks in Lebanon were due to lack of co-ordination with Israeli forces there and it decided on a policy of 'strategic co-operation' with Israel. Syria, which Israel publicly held ultimately responsible for the Tyre attack, warned of 'aggressive US and Israeli intentions' and ordered a general mobilization of its forces on 7 November.

THE LEBANESE NATIONAL RECONCILIATION CONFERENCE

Despite the relative success of the organizers of the national reconciliation conference—which was convened in Geneva at the beginning of November—in persuading the protagonists, including the Syrian Minister of Foreign Affairs, Abd al-Halim Khaddam, to participate, Lebanon's internal strife persisted. The demand by the Syrians and their allies in the National Salvation Front for the abrogation of the 17 May agreement with Israel had prompted a compromise proposal whereby President Gemayel was to seek a substitute arrangement with the USA for securing Israeli withdrawal. The new US strategy (which coincided with the appointment on 3 November of a new Special Envoy for the Middle East, Donald Rumsfeld) of ever closer identification of its interests with those of Israel dictated the joint US-Israeli refusal to reconsider the unratified accord. President Gemayel's Christian constituency still had sufficient faith in US support and in the possibility of further Israeli military intervention on its side to resist changes to its constitutional privileges, and internal reconciliation made no progress. That US and Israeli strategies were coinciding more and more was demonstrated by a massive increase in US military aid to Israel, and in Lebanon, by further Israeli air raids on Syrian-controlled territory and a direct US–Syrian clash on 4 December in which two US planes were shot down.

ARAFAT'S DEPARTURE FROM TRIPOLI

The prestige which Syrian President Assad won in the Arab world as a result of his policy of confrontation with the USA was enhanced by Arab dismay at the US-Israeli accord. President Mubarak of Egypt, the USA's closest ally in the Arab world, described the accord as catastrophic and King Hussein of Jordan considered it a reward for Israeli intransigence. President Assad's apparent propaganda success in defying the USA was partly vitiated, however, by the bloody assault against forces loyal to Yasser Arafat in Tripoli, which by the end of November 1983 had claimed at least 500 lives. His evident determination to prevent Yasser Arafat from leaving the country alive was conditioned by the knowledge that, freed from the influence of hardline dissidents backed by Syria, the PLO Chairman would be in a position to try to forge a joint Jordanian-Palestinian alliance based on the Reagan Plan, a move repeatedly advocated by King Hussein. Although the PLO dissidents had initially attracted considerable sympathy, their collaboration with Syria against the loyalists swung opinion behind Arafat, especially in the Occupied Territories, and the struggle was increasingly seen as one for PLO independence from external control. Arafat's standing was enhanced on 24 November when six Israeli prisoners held by his forces in Tripoli were exchanged for 4,800 Palestinians and Lebanese imprisoned by Israel in southern Lebanon. Support for Arafat from many quarters, including the USSR, but especially from the Arab Gulf states, helped to secure a Saudi-Syrian-sponsored agreement to end the fighting on 24 November, in accordance with which Arafat and his supporters were to withdraw from Lebanon within two weeks. The UN

Security Council agreed on 4 December to grant the ships evacuating Arafat's 4,000 supporters the protection of the UN flag, but naval attacks on Tripoli by Israel, and its refusal to guarantee the evacuation fleet safe passage, delayed its departure until 20 December.

ISRAEL'S DOMESTIC PROBLEMS

Israeli bombing raids continued against what were termed terrorist bases in Syrian-controlled Lebanon, inflicting heavy civilian casualties. Losses were also mounting from almost daily guerrilla attacks on Israeli forces in occupied southern Lebanon, where the overwhelmingly Shi'ite population had built up an increasingly effective military resistance movement. In addition, Israel was experiencing an economic crisis and record rates of inflation, which threatened the new Government of Itzhak Shamir. Huge debts had brought the country to the verge of bankruptcy and forced the new Minister of Finance, Yigal Cohen-Orgad, to devalue the shekel, slash subsidies on basic commodities and draw up an austerity package which included cuts in the hitherto sacred areas of defence and settlement. This, in turn, further endangered the ruling coalition's narrow majority in the Knesset, as the religious parties threatened to withdraw their support if the rapid colonization of the Occupied Territories was not sustained.

ARAFAT'S DIPLOMATIC INITIATIVES

On leaving Tripoli Arafat went to Egypt for a meeting with President Mubarak, becoming the first prominent Arab leader to go there since the signing of the Camp David accords. However, Egypt's continued commitment to the treaty was emphasized immediately after the meeting by the visit of a senior Egyptian official to Israel, the first of its kind since the 1982 invasion of Lebanon. Nevertheless, Arafat's visit was followed by the signing of an Egyptian-Jordanian trade protocol, a visit to Cairo by the Saudi Prince Talal ibn Abd al-Aziz, and, on 19 January 1984, by the decision of the Organization of the Islamic Conference to readmit Egypt to its ranks. The *de facto* ending of the Arab boycott of Egypt could, it was felt, provide the bridge for possible Arab–Israeli negotiations and the emergence of a moderate Arab alignment between Egypt, Jordan, the PLO and possibly Iraq. Syria, Libya and the PLO's left-wing factions vehemently denounced the *rapprochement* with Egypt and the burgeoning Jordan-PLO relationship. Although the Israeli Prime Minister, Itzhak Shamir, also denounced the Arafat-Mubarak meeting as a 'severe blow to the peace process', the US Administration welcomed it as a boost for the Reagan Plan.

In a move which was interpreted as preparing the constitutional ground for a joint Palestinian-Jordanian initiative, King Hussein decided on 5 January to reconvene the Jordanian Parliament (its representation theoretically divided between the East and the (occupied) West Banks of the Jordan), which had been suspended since 1974, (when the Rabat Arab summit accorded the PLO the status of sole representative of the Palestinian people), and had not actually convened since 1967.

DISQUIET AT THE USA'S ROLE IN LEBANON

The Reagan administration in the USA refused to acknowledge the untenability of the position of US forces in Lebanon, despite warnings from US marine commanders in Beirut, mounting dissent on Capitol Hill, and public disquiet among the USA's European partners in the MNF, who in January 1984 announced partial withdrawals of their contingents. The difference between US and European perceptions of the Arab–Israeli conflict was illustrated on 11 January when the British Foreign Secretary, Sir Geoffrey Howe, called for a radical change in Israeli policies and urged Israel to negotiate with the PLO. The influence of the 1984 US presidential election campaign was already evident in dissuading the Reagan administration from responding to the Arab peace initiative. A formal request from Egypt that 160 members of the PNC from the Occupied Territories be allowed to attend a proposed session of the Jordanian Parliament, aimed at securing a mandate for Arafat's progress towards a joint position with Jordan, was rejected by Israel, with no sign of US opposition.

THE WITHDRAWAL OF THE MULTINATIONAL FORCE FROM BEIRUT

Meanwhile US naval bombardments of anti-Gemayel forces in the hills overlooking Beirut prompted renewed attacks on the US contingent. At the beginning of February more than 200 people died in three days of continuous heavy fighting, the Lebanese Government resigned, and the Lebanese army disintegrated along sectarian lines. Druze militiamen from the mountains linked up with their Shi'ite allies in the southern suburbs of Beirut on 15 February 1984. The USA still refused to consider the one thing that might have halted the onslaught against Gemayel—the abrogation of the 17 May agreement—but it had clearly lost all control of events. Despite public avowals of support for the Gemayel Government and promises to keep US forces in the country, the decision had already been taken to 'redeploy' the marines even before President Reagan announced their withdrawal on 7 February. The next day the United Kingdom announced and completed the withdrawal of its token contribution to the MNF, followed by the Italian force on 20 February. The last US marines were evacuated from Beirut on 26 February, to be followed by the French in March, leaving the western sector of the city, as in the days before the Israeli invasion, under the control of Muslim and left-wing militias. On 5 March, bowing to Syrian influence, President Gemayel abrogated the 17 May Lebanon-Israel agreement in return for guarantees of internal security from President Assad.

THE CONSEQUENCES OF ISRAEL'S INVASION

The failure of Israel's 1982 invasion now became fully apparent. Far from securing a 'client regime' in Beirut, it had brought about the defeat of Israel's Christian allies, who had been forced to retreat into their traditional enclaves in east Beirut and around Jounieh. Abandoned by the USA, and with little prospect of further military support from Israel, there seemed little alternative to cantonization or a power-sharing deal with the Muslim majority. Meanwhile, the enormous cost of the Lebanese campaign in lives and resources appeared to have undermined Israel's security, rather than consolidate it. The death of the pro-Israeli militia commander, Maj. Sa'ad Haddad, on 15 January 1984, further disappointed Israel's hopes of creating a security zone along the Lebanese side of its northern border, and despite the setbacks suffered by the PLO in Lebanon, armed attacks against Israelis in Israel continued. In addition, the growth and increasing sophistication of a Jewish anti-Arab terrorist underground was both embarrassing the Government and threatening a backlash throughout the Arab and Muslim world. The Karp report, drawn up by a Ministry of Justice commission in May 1982, but suppressed until 8 February 1984, detailed the Government's failures to curb Jewish terrorism against Arab civilians. At the end of April Israeli security services finally acted, arresting some 30 people suspected of planting bombs on Arab buses. By that time the defection of the small Tami party from the ruling Likud coalition had led to the defeat of the Government in a vote to dissolve the Knesset and hold early elections, which were subsequently scheduled for 23 July. The lengthy trial of members of the Jewish terrorist underground, arrested in April, distracted attention from the election campaign, especially after it became known that some of the suspects, who were mainly Gush Emunim settlers but also included two army officers, had confessed to the 1980 assassination attempts on three Palestinian mayors in the West Bank and the previous year's attack on the Islamic college in Hebron. Their stated aim was to force a mass exodus of Palestinians from the Occupied Territories. The Government's own attitude toward the underground movement was called into question by a statement by a cabinet minister, Yuval Ne'eman, of the Tehiya party, who cited the bombing of the Palestinian mayors as having 'effectively paralysed the leading agitators' in the West Bank.

Abroad, Lebanon remained a cause for concern. On 4 April, a new commander, ex-Lebanese Army Col Antoine Lahad, was installed at the head of the militia in southern Lebanon, formerly led by Maj. Haddad, which the Israelis had reinforced and renamed the 'South Lebanon Army' (SLA). Israel's strategy was to remain in occupation of southern Lebanon until the SLA was capable of maintaining control there. However, neither Israel

nor its surrogate force seemed capable of preventing a growing number of guerrilla attacks against the occupying army.

LEBANON'S GOVERNMENT OF NATIONAL RECONCILIATION

In Beirut, a new government of national unity installed at the end of April 1984 had resolved to secure Israel's complete and unconditional withdrawal. Comprising a delicate balance of Christians and Muslims achieved after a year's painstaking mediation on the part of Syria, the new Lebanese Cabinet included the Shi'ite leader Nabih Berri—an indication both of the rising influence of the Shi'ites and of how far the balance of power had shifted in favour of Lebanon's non-Christian communities (though Amin Gemayel retained the presidency). Berri, leader of the Shi'ite Amal movement, which was spearheading the resistance to Israel in the south, joined the Government on the condition that he be made minister for the south, and his appointment signalled the first test of President Gemayel's pledge of 'support for the national resistance' given at the reconvened national reconciliation conference in Lausanne, Switzerland, in March. The new Prime Minister, Rashid Karami, a Sunni Muslim, confirmed the Government's intentions on 3 June by calling for the removal of Israel's 'liaison office' at Dbayye, in the Christian enclave north of Beirut. Israel's Likud Government was adamant that it would not leave southern Lebanon in the hands of a Syrian-influenced government in Beirut. The USA was unwilling to mediate between Lebanon and Israel to secure a withdrawal, even assuming that its participation would have been countenanced by Syria. On 10 June, during a tour of the Middle East, the UN Secretary-General, Javier Pérez de Cuéllar, quashed Israeli hopes that UN forces could act as a buffer north of Israel's lines, on the grounds that this would reinforce Lebanon's *de facto* partition. Israel, in turn, rejected the suggestion that UNIFIL could police Israel's northern border and ensure its security after an Israeli withdrawal. By the second anniversary of the invasion, the war in Lebanon had cost almost 600 Israeli lives, with 3,049 wounded—more than the total number of military and civilian casualties in the Six-Day War of 1967.

ISRAEL'S INCONCLUSIVE GENERAL ELECTION

In his election manifesto, Shimon Peres, who had been unanimously re-adopted on 12 April as leader of the opposition Labour Party, pledged to bring Israel's troops home within 'three to six' months of gaining power, and this appeared to be a crucial factor in his party's favour. However, the immediate concern of the Israeli voter as the election approached was the economy. With inflation reaching 15% a month, a balance-of-payments deficit of $5,000m., foreign debt of $23,000m. and a chronic shortage of foreign currency reserves, Israel was on the verge of bankruptcy; the occupation of Lebanon alone was costing the country an estimated $1m. a day.

At the election on 23 July, the major party groupings, Likud and the Labour Alignment, each secured just over one-third of the Knesset's 120 seats. The balance of power lay once again with the minority parties, which won the remaining 35 seats. The result confirmed the trend towards polarization in Israeli politics: the extreme right-wing Tehiya party increased its representation from three to five seats, and was joined on the far right by two members of the religious-nationalist Morasha party, which drew its support from the Gush Emunim movement, and by Rabbi Meir Kahane of the Kach party, who had campaigned on an openly racist platform. At the other political pole, Reserve General Matti Peled and Muhammad Mv'ari were elected as representatives of a newly formed Arab-Jewish coalition, the Progressive List for Peace, which called for dialogue with the PLO and the establishment of an independent Palestinian state in the Occupied Territories. The deadlock was resolved when Labour leader Shimon Peres was entrusted with forming the new Government after the factions in the political centre, Yahad and the National Religious Party, agreed to lend their support to Labour on condition that Peres formed a 'national unity' government with Likud. On 30 August Labour and Likud agreed to such an arrangement, with Peres as Prime Minister and Shamir as Minister of Foreign Affairs, their posts to be exchanged every two years. On 13 September the Knesset approved a bi-partisan Cabinet, completing the political rehabilitation of Ariel Sharon, who was appointed Minister of Industry and Trade.

SYRIAN INFLUENCE IN LEBANON

In Lebanon, Syria was exercising unprecedented control over the Government in Beirut. On 18 June 1984 President Assad succeeded in sponsoring a Christian-Muslim power-sharing agreement, which included the implementation of a balanced security plan throughout Beirut, where local militias were to be disbanded and the port and airport re-opened. The plan was executed on 4 July, the army taking over positions in the city from the militias, including the hitherto intransigent Lebanese Forces (LF, the military wing of the Christian Phalangist Party), within hours. However, despite Syria's efforts, plans to extend the Lebanese army's deployment throughout the rest of the country made no headway, and renewed sectarian clashes threatened to reverse the progress that had been made, exposing Syria's inability to control its Druze and Shi'ite allies. Israel demonstrated its determination to thwart Syria's designs in Lebanon by a series of air raids on Druze- and Syrian-controlled areas and, on 10 September, an armoured column was deployed north of its lines on the Awali river into the Kharroub region to support Christian militias under attack from the Druze.

MOVES TOWARDS AN ISRAELI WITHDRAWAL FROM LEBANON

The new Government in Israel gave the first public indication that Israel had lost the political struggle for Lebanon; the hitherto rigid insistence on a simultaneous withdrawal of Syrian troops from the country was abandoned, and the Minister of Foreign Affairs, Shamir, said that Israel wanted the USA to mediate with Syria on a procedure for Israeli withdrawal. The US Assistant Secretary of State for Near East Affairs, Richard Murphy, visited Lebanon, Syria and Israel in September 1984, holding two rounds of talks with President Assad in Damascus, the first such US-Syrian contact and the first display of active US diplomacy in the region since the withdrawal of US forces from Beirut in February. Murphy followed in the footsteps of the UN Assistant Secretary-General, Brian Urquhart, who returned assured by all parties of their desire for UNIFIL to play a larger part in any settlement. However, Israel insisted that, though a withdrawal of forces need not be simultaneous, it should not be unilateral. Nevertheless, talks began under UN auspices on 8 November, at UNIFIL's headquarters in the Israeli-Lebanese border town of Naqoura, between military delegations from Israel and Lebanon, within the framework of the 1949 Armistice Commission.

DIPLOMATIC INITIATIVES ON PALESTINE

The new Israeli Government had also to contend with the nascent Arab 'peace alliance' between Yasser Arafat's wing of the PLO, Jordan and Egypt. Egypt's credibility in the Arab world and non-aligned movement was strengthened by its decision to restore full diplomatic relations with the USSR. However, it was King Hussein of Jordan's surprise decision on 25 September 1984 to restore diplomatic ties with Cairo, which first raised the possibility of talks between the new Israeli Government and a joint Jordanian-PLO delegation supported by Egypt. Yasser Arafat had been preoccupied by a long and difficult struggle to win the agreement of the various PLO factions to convene the PNC, which Arafat hoped would supply the Palestinian consensus for a joint peace strategy with Jordan. Amid signs of a thaw in relations between Syria and Arafat's mainstream PLO, and after mediation efforts by the USSR, the People's Democratic Republic of Yemen and Algeria, leaders of Fatah and the quadripartite Damascus-based Democratic Alliance, including the Popular Front for the Liberation of Palestine (PFLP) and the Democratic Front for the Liberation of Palestine (DFLP), met in Algiers on 18 April. Subsequently it was declared that the PFLP and DFLP had abandoned their opposition both to Arafat's leadership and to the dialogue with Jordan. Syria, however, remained opposed to any Damascus-based group attending a PNC meeting, and warned that those who did attend would not be allowed to return to Syria. The stalemate was finally broken on 14 October at a meeting in Tunis of the PLO Executive Committee, Fatah's Central Council and about 80

representatives of other Palestinian organizations, at which it was declared that the PNC must be convened before the end of November, and that 'the minority must accept the decision of the majority'. The 17th session of the PNC was duly scheduled for 22 November in Amman. On 9 October, President Mubarak visited the Jordanian capital, where a joint Egyptian-Jordanian strategy on Palestine was announced. Israel welcomed the new Egyptian-Jordanian relationship as helpful to peace, but Egypt, while welcoming the inauguration of Shimon Peres as Israel's Prime Minister, made it clear that its primary commitment was to the Arab world, and that it stood by its conditions for normalizing the frosty relations between them that had prevailed since Israel's invasion of Lebanon: namely, the initiation of steps to gain the confidence of the Palestinians living in areas under Israeli occupation, and talks on the disputed border strip of Taba on the Red Sea, which Israel continued to occupy after vacating Sinai in 1982. For his part, King Hussein dismissed speculation that a US-sponsored peace initiative along the lines of Camp David was in prospect when, on 10 October, he denounced Israeli Prime Minister Peres' call for direct negotiations between Jordan and Israel, explicitly excluding Palestinian involvement, as 'subterfuge and deception'.

REAGAN IS RETURNED TO THE WHITE HOUSE

In the USA the Administration concentrated on advancing the US-Israel strategic relationship. An unprecedented military exchange agreement between the countries' air forces was announced in early September 1984, and, during a visit to Israel in mid-October by the US Defense Secretary, Caspar Weinberger, details were released of the transfer of hitherto restricted US technology crucial to the development of Israel's *Lavi* fighter aircraft. To help Israel address its economic crisis the US also consented to transfer the whole of its $1,200m. annual civilian aid grant immediately, rather than in instalments.

As far as the Arab world was concerned, the US Administration appeared to be retreating into a defensive posture, as evinced by 'anti-terrorist' legislation drafted by the State Department in April. It was indisputable that the Reagan administration had attracted an unprecedented degree of hostility in the Middle East. Threats of violence against and kidnappings of US citizens had led on 28 May to the recall of marines to protect the US Embassy in Beirut. Nevertheless, on 20 September a suicide bomb attack, responsibility for which was claimed by the Shi'ite Islamic Jihad (Holy War) organization, killed more than 20 people and accelerated the steady exodus of American diplomats, journalists and relief workers from Lebanon. Although, as a result of the intervention in Lebanon, more US citizens had been killed in international conflict than at any time since the Viet Nam war, seemingly no blame was attached to President Reagan, who was re-elected by a massive majority on 5 November.

FAILURE OF TALKS ON ISRAELI WITHDRAWAL

At the talks in Naqoura on Israel's withdrawal from Lebanon, Lebanon's demands included an unconditional Israeli withdrawal, the abolition of the SLA and $10,000m. in war reparations. Israel responded by threatening to withdraw unilaterally, without making provision for local security. The talks remained deadlocked, with Syria evidently refusing to give Israel any assurance of its security once its forces had withdrawn. The pressure was, nevertheless, increasing on Israel to withdraw. Guerrilla attacks on the Israeli army, the Israeli Defence Force (IDF), continued during the negotiations, and both the troops and the Israeli public were becoming increasingly frustrated at the high casualty toll. On 8 January 1985 Israel announced its withdrawal from the Naqoura talks; a week later, the Israeli Cabinet approved a three-phase unilateral withdrawal from Lebanon, which, Prime Minister Peres pledged, would be completed by July. Israel remained committed to intervening in Lebanon if it perceived a threat to its security, and to aiding 'friendly' militias and maintaining a security zone patrolled by the SLA on the Lebanese side of the border.

JORDANIAN-PALESTINIAN PARTNERSHIP

Matters elsewhere looked more promising in the wake of Arafat's success at the PNC meeting in Amman in late November 1984. Although the PFLP and DFLP did not attend, they undertook not to approve the formation of an alternative organization, and the PLO succeeded in demonstrating its independence from Syria. In his address to the PNC, King Hussein laid down the guidelines for a new Arab approach to the peace process, consisting of a joint Jordanian-PLO initiative, based on UN Resolution 242 and the right of the Palestinian people to self-determination, in accordance with the principle of an exchange of territory for peace with Israel. The PNC, however, reiterated its rejection of Resolution 242, which refers to the Palestinians only as refugees, implicitly denying their right to self-determination and recognizing the State of Israel. Israel, which had always prohibited Palestinians living in areas under its occupation from attending the PNC, ignored King Hussein's proposals, nor did it respond to a statement by the Egyptian Minister of State for Foreign Affairs, Boutros-Ghali, expressing Egypt's willingness to back a new initiative in which Jordan and a delegation of West Bank and Gaza Palestinians would enter peace talks with Israel under a mandate from the PLO. In this, however, Egypt was not supported by either Jordan or the Palestinians, who made it clear that the PLO should be a full partner in any future peace negotiations. PLO-Jordanian relations were strengthened by a series of meetings between King Hussein and Yasser Arafat, culminating on 11 February in the signing in Amman of a PLO-Jordanian accord, which provided for Palestinian self-determination within the framework of a Jordanian-Palestinian confederation and for peace negotiations between all parties to the conflict, including the PLO, and the five permanent members of the UN Security Council. Israel promptly rejected the agreement.

The Amman agreement, which drew strong opposition from Syria and Arafat's PLO opponents and was clearly a source of contention within the PLO Executive Committee itself, illustrated the urgency with which King Hussein and Yasser Arafat viewed the need to salvage the Occupied Territories for a future Palestinian homeland before Jewish settlement established a *de facto* extension of Israel. Despite pledges from the new Israeli Government to raise the quality of life for the Palestinians in the Occupied Territories, violence against the Arab population there persisted. Nor did the Labour component of the Government of national unity seem able or willing to halt the continued seizure of Palestinian land for Israeli settlement. On 10 February, a study by the US-financed West Bank Data Project found that, as of 1 January 1985, there were 42,500 Israeli settlers living on the occupied West Bank, double the figure of just two years earlier.

ISRAEL'S ECONOMIC CRISIS

The decision to spend more on colonizing the Occupied Territories drew protests from Israelis alarmed by soaring inflation and, for the first time in the country's history, widespread unemployment. A wages and prices 'freeze' agreed on 2 November 1984 between the Government and trades unions and employers temporarily checked the rise in inflation, but did not tackle the deep-rooted crisis in the economy. The Israeli shekel, having fallen to less than one five-hundredth of its 1977 value, was replaced for most practical purposes by the US dollar. An Israeli economic delegation went to Washington at the end of December to request $4,100m. in aid in 1986, an increase of $1,500m. on the 1985 total approved by the US Congress just three months previously. Initially, the US Government insisted that any increase in aid should be conditional on the introduction of more rigorous measures to tackle the crisis. On 17 January, Israel and the USA finalized a free-trade agreement, and on 30 January President Reagan agreed to increase US military aid to Israel by $400m. to $1,800m. for the 1986 fiscal year. The same day, the Administration bowed to pressure from the pro-Israel lobby and delivered what appeared to be a deliberate snub to Saudi Arabia, its most important Arab ally. Less than two weeks before King Fahd was to pay a state visit to Washington, it was announced that the sale of 40 F-15 fighter bombers to Saudi Arabia had been postponed pending a review of US arms sales to the Middle East. King Fahd's appeal to the USA to revive the peace process was made in Washington on the same day (11 February) that Yasser Arafat and King Hussein signed the Amman agreement, but the USA continued to insist that the PLO explicitly accept UN Resolution 242 to secure

participation in negotiations. The Arab initiative was complicated shortly afterwards when President Mubarak of Egypt launched proposals for direct talks between Israel and a Jordanian-Palestinian delegation, following preliminary discussions between the latter and the USA, a suggestion which clearly went beyond anything envisaged by King Hussein and Yasser Arafat. Mubarak's move, which drew sharp opposition from Syria and many Palestinians, as well as from the USSR, was cautiously welcomed by Israeli Prime Minister Peres, who said on 25 February that Israel would be willing to meet such a delegation provided it did not contain PLO members.

ISRAEL'S WITHDRAWAL FROM LEBANON

The first phase of Israel's withdrawal plan, the evacuation of the western seaboard from the Awali to the Litani, was accomplished peacefully in February 1985. Almost immediately, however, Shi'ite guerrillas stepped up their attacks. Israel launched a policy of 'Iron Fist' reprisal against villages suspected of harbouring guerrillas, storming scores of townships, killing and wounding their inhabitants, destroying houses and taking away hundreds of men to prison camps. The IDF clashed with UNIFIL forces protesting against the destruction of Shi'ite homes, and on 12 March, the USA vetoed a UN Security Council resolution, proposed by Lebanon, which condemned Israel's behaviour in southern Lebanon.

Israel's reprisal tactics did not have the desired effect: UN figures showed that in the first month in which the 'Iron Fist' policy operated, attacks on the IDF in Lebanon actually doubled. On 17 March, Israeli Prime Minister Peres announced that the withdrawal was to be accelerated and completed in 8–10 weeks. In late March elements of the LF, determined to salvage what they could from the retreat and the increasingly pro-Syrian policies pursued by the Gemayel Government, staged a revolt. Fighting in the capital and in the south between the Lebanese army and the Christian rebels soon degenerated into a general conflict between Christians and Muslims, which was accompanied by a fresh Israeli onslaught against Shi'ite villages in the occupied southern area. Israeli–Shi'ite antagonism was exacerbated by the news that, in contravention of the Geneva Convention, Israel had secretly transferred more than 1,000 Lebanese Shi'ite detainees to Israel, where the army Chief of Staff, General Moshe Levi, said they would remain imprisoned until 'the security situation improved'. The second phase of Israel's withdrawal (from the central and eastern sectors of southern Lebanon) was completed during April, as the sectarian fighting north of its lines intensified. Druze and Muslim militias took control of the main Sidon–Beirut highway on 28 April, overrunning many Christian villages whose inhabitants fled in their thousands towards the new Israeli lines. Israel, which at the beginning of May began fortifying its international border with Lebanon, made it clear that it would not intervene again to help the beleaguered Christians.

THE SUPPRESSION OF THE PLO IN BEIRUT

Meanwhile, in Beirut, Syria's two main militia allies in Lebanon, the Druze and the Shi'ite Amal, unleashed a violent *putsch* against the Sunni Murabitoun militia. The Sunni Prime Minister, Rashid Karami, resigned in protest on 17 April but was persuaded to remain in office. Significantly, the Murabitoun were the only force in Lebanon still supportive of Yasser Arafat's PLO. The determination of Syria and its Lebanese allies to prevent the resurgence of pro-Arafat Palestinian forces in Lebanon after the Israeli withdrawal, was ruthlessly demonstrated when troops of the Shi'ite Amal movement attacked the Palestinian refugee camps in Beirut on 20 May. The savagery of the assault, which claimed hundreds of Palestinian lives, led the hitherto pro-Syrian Palestinian factions in the camps to join forces with pro-Arafat fighters. As the third anniversary of Israel's invasion approached it appeared that a *pax Syriana* could be established in Lebanon after the Israelis had withdrawn if Syria could control its Lebanese allies and prevent the country dividing along sectarian lines into religious cantons.

ISRAEL'S CONTINUED REFUSAL TO NEGOTIATE WITH THE PALESTINIANS

On the wider front, the refusal of Israel and the USA to deal directly with the PLO remained the single greatest obstacle to all negotiations, including those on the basis of 'territory for peace' involving Israel, the Palestinians, Jordan and Egypt, proposed by King Hussein and President Mubarak. However, on 5 April the US Administration finally took a more active role, with visits to the Middle East by Assistant Secretary of State Richard Murphy and Secretary of State George Shultz. Neither Murphy nor Shultz, who toured the Middle East in April and May respectively, succeeded in resolving the central issue of Palestinian representation at peace talks, despite reports that, while in Jordan, the US Secretary of State had been presented with a list of Palestinians who were not PLO members for possible inclusion in a joint Jordanian-Palestinian delegation. Shultz was denied the economic pressure, which he could have brought to bear on Israel over the issue of Palestinian representation, when the US Administration finally decided to recommend to Congress, shortly before he left Washington, that Israel receive the additional $1,500m. in emergency aid which it had requested. Israel's position hardened on 12 May when it announced that members of the PNC were also unacceptable as negotiating partners.

On 20 May three Israeli prisoners of war who had been held since the invasion of Lebanon by the hardline PFLP General Command, led by Ahmad Jibril, were exchanged for 1,150 Palestinians detained in Israel. The release of the Palestinian prisoners, some of them convicted terrorists, sparked a political storm in Israel, generating intense pressure on the Government to release Jews convicted of, or awaiting trial for, terrorist offences against Arabs. In an attempt to lend momentum to the peace initiative launched by the Jordan-PLO agreement, King Hussein went to Washington at the end of May 1985 to establish some form of international framework for his proposals. Radical quarters of the Arab world had already accused Jordan of seeking a separate deal with Israel, and King Hussein was clearly anxious to avoid the ostracism suffered by Egypt as a result of the Camp David treaty, preferring an international conference co-sponsored by both superpowers. By far the greatest obstacle to talks remained the issue of Palestinian representation. It was not until July that the PLO submitted to Jordan a list of names of 22 leading Palestinians for inclusion in a joint Jordanian-Palestinian delegation to meet US officials prior to the opening of wider negotiations involving Israel. Israel rejected the list (with two exceptions), calling for 'authentic Palestinian representatives' from the Occupied Territories, who had no direct links with the PLO.

ISRAEL COMPLETES ITS WITHDRAWAL

Israel announced the completion of its withdrawal from Lebanon on 10 June 1985, but its retention of an 8–10 km wide 'security zone' along the border inside Lebanon, policed by the Israeli-sponsored SLA and supported by smaller numbers of Israeli troops, proved a constant source of friction with UNIFIL, to the north.

Syria succeeded in sponsoring a cease-fire of sorts on 31 May in the battle for control of the Palestinian refugee camps in Beirut, after Shi'ite Amal militiamen had failed to subdue stubborn Palestinian resistance, but there was no foreseeable end to the sectarian violence. The rise of Lebanon's Shi'ite factions in particular (supported by Iran in certain cases), with their associated underground guerrilla groups, compounded the descent into anarchy, which extreme Islamic and anti-Western groups began increasingly to exploit. On 11 June a Jordanian airliner with 65 passengers on board was diverted by Shi'ites to Beirut, where the hostages were later released and the plane destroyed. Less than 48 hours later a US TWA airliner carrying 153 passengers including 43 US citizens was also hijacked, and flown between Beirut and Algiers (where 100 hostages were released) before landing for the third time in Beirut on 16 June. The USA responded with a build-up of naval forces off Lebanon, but the dispersal of the hostages in Shi'ite-controlled west Beirut precluded any US attempt to free them by force, putting pressure instead on Israel to accede to the hijackers' demands and release over 700 Lebanese Shi'ites being held in Israel. The intervention of President Assad of Syria resulted in the US hostages being freed unharmed (with the exception of one who had been killed when the plane was first seized) on 30 June. In return Israel released its Shi'ite prisoners in stages to avoid the impression of a surrender to terrorism. For the USA, the TWA hijacking

was instrumental in diverting attention from a Middle East peace settlement to the immediate problem of combating terrorism.

Further Arab–Israeli violence on the occupied West Bank also threatened the prospects for negotiations. After the killing of two Israeli teachers, and of an occupation official, reprisal actions by Jewish settler groups were accompanied by additional security measures, including curfews, the closure of universities and newspapers, and detention without trial. Palestinians were also deported (a total of 26 in 1985)—a practice which Israel had discontinued in 1980 after widespread international criticism. The result was an escalation of violence by Arabs and Jews throughout August and September, at the end of which regular army troops were sent into occupied areas. The harassment of Palestinians by both the Israeli army and settler vigilantes was widespread, and there were signs that the Israeli coalition Government's right-wing Likud component was exploiting the unrest to sabotage the prospect of talks with a joint Jordanian-Palestinian delegation. Blaming PLO 'command centres' in Jordan for co-ordinating Palestinian resistance in the Occupied Territories, the Likud leader and Minister of Foreign Affairs, Itzhak Shamir, urged that Israel suspend diplomatic contacts so long as the PLO was allowed to maintain 'forward headquarters' on Jordanian soil. The future of the proposed talks was already in serious doubt after the failure of US Assistant Secretary of State Richard Murphy to meet members of a Jordanian-Palestinian delegation during his tour of the Middle East in mid-August.

Jordan was increasingly fearful of isolation within the Arab world, a fear heightened by the refusal of the Arab summit held in Casablanca on 7 August to endorse the aims of the Jordanian-Palestinian accord. This fear was somewhat allayed by the US decision, prior to King Hussein's visit to Washington on 30 September, to submit to Congress a $1,900m. arms deal with Jordan despite intense opposition to it from the Zionist lobby. Moreover, although US opposition to a meeting with PLO or PLO-associated Palestinians was as firm as ever, Jordanian hopes of progress were boosted in late September when the British Prime Minister, Margaret Thatcher, following her visits to Amman and Cairo, invited a Palestinian-Jordanian delegation (including two members of the PLO Executive Committee) to London for talks with the British Foreign Secretary, Sir Geoffrey Howe. Nevertheless, King Hussein was clearly insuring against the initiative's failure when, before leaving for the USA, he sanctioned the initial approaches in a *rapprochement* between Jordan and its main opponent in the Arab world, Syria.

ESCALATION OF VIOLENCE

On 1 October 1985, three days after King Hussein had arrived in the USA to address the UN General Assembly with an appeal for Arab–Israeli peace, Israeli jets bombed the PLO's headquarters in Tunis, killing 75 people, in retaliation for the killing of three Israelis by the PLO's élite Force 17 in Cyprus. The Israeli raid was condemned by the UN and by European leaders, but support for it from the White House as a 'legitimate response' to terrorism was a serious blow to US–Arab relations and to the USA's credibility as a peace-broker. Despite Jordanian and PLO pledges of continued commitment to the peace process, Arab anger over the affair clearly led to increased violence in the Israeli-occupied territories. Also on 7 October, four Palestinians succeeded in hijacking an Italian cruise liner, the *Achille Lauro,* with over 400 passengers and crew on board. The action was condemned by the PLO, which swiftly persuaded the hijackers to surrender themselves to the Egyptian authorities, but not before one passenger, an elderly American Jew, had been murdered. Egypt had agreed with the PLO that the hijackers would be flown to PLO headquarters in Tunis to stand trial, but the Egyptian airliner carrying them was intercepted *en route* by US fighter-planes and forced to land at a NATO base in Sicily. The US plan to take the hijackers, who were accompanied by the alleged mastermind of the operation, the leader of the Palestine Liberation Front, Muhammad Abu al-Abbas, to the USA for trial was thwarted by the Italians, who prevented the Americans from taking custody of the Palestinians and subsequently allowed Abu al-Abbas to leave the country on the grounds that he had not been actively involved in the hijack.

The political repercussions of the *Achille Lauro* affair set back the prospect of peace talks. In US and Israeli eyes, it further justified the exclusion of the PLO from the peace process for as long as it was involved in terrorism. On 21 October Jordan signed a three-point agreement with Syria which included a pledge not to seek a separate peace with Israel and was seen as a clear move away from the peace process based on Jordan's collaboration with Yasser Arafat, towards whom Syria and the Damascus-based PLO factions remained hostile.

With the peace process deadlocked, attention focused on the summit meeting between President Reagan and Mr Gorbachev on 19 November in Geneva. There was speculation that a new approach based on US-Soviet co-operation might result, but the summit meeting passed with no sign of any agreement on the Middle East, and the prospect of an international conference began to recede. One reason was the PLO's continued refusal to accede to the USA's precondition that it accept UN Resolution 242, renounce terrorism and recognize Israel. Jordanian impatience with the PLO mounted, as the reconciliation between King Hussein and President Assad of Syria proceeded apace; on 10 November King Hussein issued a statement accepting responsibility for the long period of poor relations with Syria and pledging an end to the activities of anti-Syrian elements based in Jordan. Syria did not conceal its view that the *rapprochement,* which continued with a meeting in Damascus between King Hussein and President Assad on 30–31 December, foreshadowed the end of the Jordan-PLO agreement. Yasser Arafat, despite warm support from Egypt during a visit to Cairo in mid-November, in the course of which the PLO leader renounced terrorist violence outside the Occupied Territories and against civilians, was becoming increasingly isolated. His position and the credibility of the PLO as a participant in peace talks was not improved by simultaneous terrorist attacks by Palestinians at Rome and Vienna airports on 27 December which killed 19 people (including five US citizens) and injured more than 100. Yet in the aftermath of the atrocities the US Administration, and the Government of Israel, whose El Al airline facilities had been the target of the attacks, for the first time made a distinction between the PLO, led by Arafat, and the dissident PLO splinter group (the Fatah Revolutionary Council), led by Abu Nidal, which was widely held to be responsible for the attacks. US and Israeli anger, and the threat of military retaliation, was directed almost exclusively toward Abu Nidal's alleged sponsor and protector, Libya, despite the more prominent links between the Abu Nidal group and Syria. The US Sixth Fleet was deployed off the Libyan coast, and on 7 January 1986 a package of anti-Libyan political and economic sanctions was announced by President Reagan, though European Governments refused to adopt them.

JORDAN RENOUNCES ITS AGREEMENT WITH THE PLO

During the first few weeks of 1986 it became clear that there was little prospect of progress in the Jordan-PLO peace initiative. A 12-day session of talks in January between King Hussein and Yasser Arafat, who came to Amman to reply to 'final' US terms for Palestinian participation in peace negotiations, collapsed without agreement. Although these terms represented a concession on the long-established US-Israeli position in that they entailed an invitation to the PLO to attend an international peace conference in return for the organization's acceptance of Resolution 242, this the PLO refused to do, unless the USA first recognized the Palestinian right to self-determination. No sooner had the Jordanian-Palestinian talks ended than the US Administration notified King Hussein that it was postponing indefinitely its request to Congress to sell advanced weaponry to Jordan, a sale which President Reagan had earlier said was 'essential to create the conditions for a lasting Middle East peace'. The Jordanian-PLO peace initiative was formally dissolved on 19 February, when King Hussein announced the end of political collaboration with the PLO leadership, strongly hinting that he would now seek a new partner in peace moves in the form of alternative representatives of the Palestinians. The principal reason given by King Hussein for the breakdown was the PLO's preoccupation with Palestinian self-determination at the expense of the 'liberation of the land' and its refusal to accept Resolution 242. The immediate effect was to raise

Arafat's standing among the considerable body of Palestinians who had suspected him of giving up the Palestinians' 'last card', by acknowledging Resolution 242, with its implicit recognition of Israel, in return for vague US promises of participation in peace talks. King Hussein's chances of finding alternative Palestinian representatives, who would have the backing of the majority of Palestinians and the Arab world at large, seemed slight.

THE TABA ISSUE

Israel's reaction to the collapse of the Jordan-PLO initiative was one of relief at avoiding a US-PLO dialogue and with it the threat of a split in the Government between the Labour bloc and the Likud faction, which was militantly opposed to any form of territorial concession. The fragile Israeli coalition Government had already been seriously threatened by the issue of Taba, the tiny coastal enclave claimed by both Egypt and Israel and outwardly the principal cause of the discord between the two, which had begun with the 1982 Israeli invasion of Lebanon. Prime Minister Peres, keen to improve relations with Egypt, was in favour of acceding to Egypt's demand to submit the issue to international arbitration, a course bitterly opposed by Likud leader Itzhak Shamir, a veteran critic of the Camp David treaty. Israel's overtures to Egypt were, however, undermined by its bombing of Tunis on 1 October, which President Mubarak denounced as a 'fatal blow' to peace; five days later seven Israeli tourists, including four children, were murdered by an Egyptian policeman in Sinai. Israeli-Egyptian contacts resumed in December, and on 14 January 1986 Peres succeeded in obtaining the Likud's approval to submit the Taba issue to arbitration. In return Egypt agreed to a series of measures to improve bilateral relations, including the return of Egypt's Ambassador to Tel-Aviv. However, the expected improvement quickly became bogged down in low-level talks and Peres' hopes of a summit meeting with President Mubarak were not realized.

US-ISRAELI TIES

During his visit to Washington in early April the Israeli Prime Minister, Shimon Peres, proposed that the USA should support a 'Marshall Plan' (such as was employed to assist European recovery after World War II) for the Middle East—a \$20,000m.-\$30,000m. development fund, primarily designed to help Arab states affected by the sharp drop in the price of oil. The proposal was welcomed by US officials as worthy of serious consideration, despite the unlikelihood that Arab states would co-operate in any plan involving Israel, while the latter was in occupation of Arab territory. The positive US response to Peres' proposals underlined the strength of the US-Israeli alliance, despite two developments which were outwardly damaging to the relationship. First, on 24 November 1985 a US naval intelligence officer, Jonathan Pollard, was arrested by the FBI and charged with supplying classified documents to Israel. Then, in April 1986 a licensed Israeli arms dealer, retired Gen. Avraham Baram, was indicted in the USA for his part in a conspiracy to smuggle \$2,500m. worth of advanced US weaponry, including tanks, missiles and fighter planes, to Iran. The indictment listed, among the items in the attempted sale, \$800m. worth of arms that had been delivered to Israel as part of the US military aid programme.

On 17 January 1986 the USA invoked its veto in the UN Security Council to prevent the adoption of a resolution deploring Israel's behaviour in southern Lebanon, where the presence of Israeli troops remained a source of conflict. On 30 January the USA vetoed a draft resolution, which had won the support of all Council members with the exception of Thailand, condemning Israel's actions over Islamic holy places in Jerusalem, where religious extremists had provoked Palestinian rioting by attempting to establish a Jewish foothold in the compound of the al-Aqsa mosque (see article on The Jerusalem Issue, p. 88).

Shimon Peres was keen to gain credit for some progress in Arab-Israeli relations before surrendering power to Itzhak Shamir under the terms of their power-sharing agreement. With Egypt proving unco-operative, and King Hussein ignoring repeated Israeli appeals to proceed to peace talks independently of the PLO, in February Peres resorted to the idea of 'imposing' a limited autonomy on the Palestinian inhabitants of the Occupied Territories. As with similar attempts in the past, the 'unilateral autonomy' plan quickly foundered in the face of Palestinian opposition that united pro-Jordanian and pro-PLO leaders in the West Bank, who refused to countenance anything short of an end to Israeli occupation.

SYRIA REARMED

The dashing of peace prospects was followed by rising tension between Israel and Syria, which had been re-equipped militarily by the USSR to the point where its forces threatened Israel's long-standing military supremacy. On 19 November the Israeli air force had shot down two Syrian MiG fighters, reportedly in Syrian airspace. In response, Syria deployed SAM missiles in eastern Lebanon, a move denounced by Israel as a threat to its reconnaissance flights over that country. Its own threat to destroy the missile sites provoked a crisis which could have escalated into armed conflict, and which was only defused by US mediation. The underlying tension between the two countries remained and President Assad of Syria made a defiant speech reasserting Syria's determination to recover the Golan Heights 'annexed' to Israel in 1981. In turn, Israeli military analysts began to discuss the possibility of a pre-emptive Israeli attack to prevent Syria achieving military parity with Israel. In mid-April the Syrian Government accused Israel of responsibility for a series of terrorist bomb attacks inside Syria, which claimed many lives, while Israel charged Syria with sponsoring Arab terrorism in Europe.

THE USA CLASHES WITH LIBYA

US mediation in the Middle East was effectively ruled out by the Reagan administration's preoccupation with combating terrorism, at the expense of tackling the fundamental causes of regional violence and instability. This narrowly-focused policy led to a military exchange between the USA and Libya, whose alleged sponsorship of international terrorism was apparently regarded by US policy-makers as the root cause of Middle East tension. On 24 March 1986, after SAM-5 missiles had been fired at US aircraft, fighter planes from the US Sixth Fleet in the Mediterranean sank four Libyan patrol vessels in the Gulf of Sirte and destroyed shore-based missile and radar facilities near the town of Sirte. The pretext for the incident was a US challenge to Libya's claim that the entire Gulf constituted Libyan territorial waters. Two weeks later a bomb exploded at a nightclub in West Berlin frequented by US servicemen, killing two people and injuring more than 200, in what the US Administration claimed was a Libyan-sponsored attack. In response US aircraft, including US air force bombers based in the United Kingdom, carried out air raids on Tripoli and Benghazi, which resulted in many civilian casualties, including members of Qaddafi's own family. The confrontation destroyed what little credibility the USA still had as a potential mediator in the Middle East conflict and many feared that, far from discouraging terrorism, the US action would encourage it.

THE VANUNU AFFAIR

The international media focused on Israel's nuclear weapons capability with the arrival in London, in October 1986, of Mordechai Vanunu, a former employee at the so-called 'textile factory' at Dimona in the Negev Desert in southern Israel. Vanunu claimed that he had worked as a technician at Dimona and that Israel had succeeded in developing thermonuclear weapons, and was stockpiling them there. The true nature of the Dimona plant had long been common knowledge in the West, in spite of official Israeli denials, yet the Israeli Government's first reaction to Vanunu's 'defection' was to prohibit Israeli papers from reporting the affair. Subsequently, Vanunu was lured to Rome by a female agent of Mossad, the Israeli external security service, which then kidnapped him and took him back to Israel to stand trial for treason.

SUPPORT FOR AN INTERNATIONAL PEACE CONFERENCE

Hopes of a revival in the peace process had been rekindled on 12 September 1986 when the Israeli Prime Minister, Shimon Peres, only a month before the scheduled transfer of power to coalition partner Itzhak Shamir, met President Mubarak of

Egypt in Alexandria. In a two-day summit, staged with the US and Israeli media very much in mind, the two leaders agreed, in principle, on the formation of a preparatory committee for an international conference to discuss the Arab–Israeli conflict. Such a conference, they agreed, should include the five permanent members of the UN Security Council, but the thorny issue of Arab, and particularly Palestinian, representation was left untouched. Support for an international conference grew to include King Hussein and the ministers of foreign affairs of the EC; the fact that clear backing, at least in principle, for such a conference had also been forthcoming from the USSR and the PLO, was a sign of both the range of possible delegates envisaged by the various parties concerned, and of how far the project was from becoming a reality since the two main protagonists, Israel and the PLO, were no nearer the required goal of mutual recognition.

SHAMIR ASSUMES THE PREMIERSHIP OF ISRAEL

In Israel, the major obstacle to an international conference was the assumption of power, on 16 October 1986, of Likud leader Itzhak Shamir, in accordance with the rotation agreement of September 1984 between the two main parties. Shamir unequivocally opposed such a conference. Shimon Peres, however, who became Minister of Foreign Affairs, made it quite clear that he had no intention of relinquishing the conference idea. Peres continued to promote the idea of an international conference, causing great embarrassment to Shamir. Indeed, Peres went to Egypt on 22 February to meet President Mubarak, and both leaders made repeated visits to Washington to secure the support of the US Administration. The coalition Government repeatedly teetered on the brink of disintegration, but Shimon Peres failed to secure the necessary support in the Knesset for his Labour bloc to carry a motion of 'no confidence' in the Government, which would have precipitated a general election. From Peres' point of view, however, the danger inherent in forcing a general election was that it might leave Likud in a position to form a coalition government which excluded Labour.

THE 'IRANGATE' SCANDAL

Having already seen its standing in the region plummet after a series of foreign-policy miscalculations, the final blow to the USA's credibility in Arab opinion came with the revelation, in November 1986, in the Lebanese magazine *Ash-Shira'*, of secret arms deals between Iran and the USA. The progressively more damaging disclosures which followed the publication of the article seriously undermined President Reagan's domestic popularity. It transpired that the arms contracts were brokered by Israeli arms merchants acting with the backing of the Israeli intelligence services and Government. From the perspective of links between Israel and Iran, the deal was not very unusual, Israel having been a major source of arms for Iran since the 1950s. On the other hand, the active part played by the USA, through its National Security Agency and with the clear knowledge and connivance of both President Reagan and many of his senior aides, was a stark contradiction of the USA's stated policy of not negotiating with regimes it held responsible for international terrorism. Israel originally convinced the USA of the desirability of the arms sales by claiming that they would help to bring about the release of a number of Western hostages held by Iranian-backed groups in Lebanon. An additional incentive was that the profits from the transaction could be used to circumvent US Congressional restrictions on aiding the Contra guerillas who were waging, by their own admission, a campaign of terror against the legitimate, but socialist, Government of Nicaragua.

The USA's traditional allies in the Arab world were dismayed by this further demonstration of the way in which supporters of Israel seemed to be able to sway US foreign policy so easily, even against the USA's own stated interests. Israel's success in persuading the USA to sell to Iran the very weapons systems that it had only recently refused to sell to Jordan, a staunch ally, made the Arab states' sense of betrayal even more acute.

THE POLLARD SPY CASE

At the beginning of March 1987, after a presidential commission had strongly criticized both President Reagan and Israel for their parts in the 'Irangate' affair, more pressure was brought to bear on the Israeli-US relationship in the aftermath of the trial of Jonathan Pollard, a US citizen, and his wife. The couple were arrested in November 1985 and charged with spying for Israel. Although their conviction was widely expected, the severe sentences, announced on 4 March, were received with surprise. Jonathan Pollard was sentenced to life imprisonment, in spite of the expectation that, having spied for an ally of the USA, he would be treated more leniently. Pollard was a committed Zionist who was recruited as a spy during a visit to Israel. His work in US naval intelligence gave him access to vast quantities of classified information. Of particular interest to Israel was material concerning the defence facilities of the USA's allies in the Middle East and North Africa, including, it is believed, data which enabled the Israelis to carry out the bombing of the PLO headquarters in Tunis in October 1985. These revelations caused both astonishment and disillusionment in the pro-US Arab states. Although the deep-rooted and far-reaching nature of Israel's alliance with the USA had long been understood, and the support enjoyed by Israel in the US legislature and in successive administrations widely acknowledged, few of the Arab states were aware to what extent Israel had also succeeded in penetrating the upper echelons of the US intelligence establishment.

DEVELOPMENTS IN THE OCCUPIED TERRITORIES

In the Occupied Territories the cycle of repression and protest continued. The appointment by the Israeli military authorities of Arab mayors in three West Bank towns was interpreted as part of a policy to isolate the PLO in the territories by fostering a more moderate Palestinian constituency and an alternative, 'acceptable', Palestinian leadership, and coincided with Jordanian efforts to the same end. These included the announcement in August of a five-year development plan for the West Bank and the Gaza Strip involving projected expenditure of US $1,300m. This apparent coincidence of interests resulted in the arrest and deportation of Akram Haniya, Editor of the Jerusalem daily newspaper, *Ash-Sha'ab*. This action was regarded as a sop to Jordanian wishes—Haniya's hostility to Israel was no more threatening than that of any other newspaper editor in the Occupied Territories, but his aversion to King Hussein's plans in the West Bank clearly rankled with the Jordanian authorities. This episode was the prelude to a series of demonstrations by Palestinians and arrests by the military authorities, interspersed with acts of violence against Palestinian communities by Israeli settlers. December began with a number of clashes between the Israeli army and Palestinian demonstrators, the worst occurring at Bir Zeit University, where two students were shot dead. The subsequent closure of Bir Zeit, as well as an-Najah University in Nablus, brought no reduction in the level of Palestinian protests or in the consequent level of Israeli reprisals.

THE 'WAR OF THE CAMPS' SPREADS IN LEBANON

Lebanon continued to stumble from crisis to crisis in the second half of 1986. With sporadic fighting in the south between Israel's proxy SLA and the various Lebanese, mainly Shi'ite, forces opposing it, elements of the Maronite Lebanese Forces (LF) militia, opposed to President Gemayel, attempted a coup in east Beirut, which would have succeeded, but for the intervention of the Lebanese army. The failure of the coup was a blow to Syria's plans for a reconciliation of the many opposing forces in the country, for the Maronite forces loyal to President Gemayel remained the major stumbling block to a Syrian-brokered peace plan. In the south violent clashes flared up between Amal and PLO forces in and around Tyre and Sidon. Paralleled by the so-called 'war of the camps' in south Beirut, these clashes, which ushered in a prolonged period of conflict between the two forces, were a clear indication of the extent to which armed Palestinians from various PLO factions had re-established themselves in Lebanon, particularly in the Palestinian refugee camps. To the Syrians, this PLO revival, particularly in the number of fighters loyal to Yasser Arafat, was another challenge to their hegemony over the country and to their bid to create an alternative PLO, independent of Arafat. Amal, as Syria's closest ally in Lebanon,

was the only Lebanese militia involved in this conflict, and Damascus relied on its ability to crush the resurgence of Palestinian military strength. Another source of concern for Syria was that pro- and anti-Arafat fighters made common cause in the defence of the camps, and their shared resentment of the Syrian role in suppressing the PLO threatened to cause a reconciliation. By December, with over 500 dead, there was no sign of any respite in the fighting in Tyre, Sidon and Beirut. The refugee camps at the core of the conflict were besieged, with essential supplies from outside effectively cut off.

THE WAVE OF ABDUCTIONS IN LEBANON

It was not until January 1987, however, that the Western news media turned its attention back to Lebanon, with the return to Beirut on 12 January of the Archbishop of Canterbury's special envoy, Terry Waite. The purpose of Waite's mission, against which he was strongly warned by both the British ambassador to Lebanon and the Archbishop himself, was to negotiate the release of the 20 remaining Western hostages being held in Beirut. The kidnapping of foreigners had begun in Beirut in early 1984, and by the time of Waite's second visit more than 60 abductions had taken place, several of the hostages having been killed by their captors. No reliable figures are available for the numbers of Lebanese who had been kidnapped, many never to be seen again, since the civil war began. Waite himself disappeared on 21 January 1987 and remained in captivity until the end of 1991. Shi'a Muslims in the pay of Iran were believed to be responsible for his kidnapping.

Waite's disappearance, which was followed three days later by that of three US lecturers from the Beirut University College, provoked a strong response from the USA, whose Sixth Fleet was increasing its strength off the Lebanese coast. This deployment was backed up by calls for Westerners remaining in west Beirut to leave, as well as by strong criticism of the Iranian Government, which many held to be ultimately responsible for the kidnappings. Significantly, however, the group which held the three lecturers called itself 'Islamic Jihad for the Liberation of Palestine', and made its hostages' safe return dependent on Israel's release of 400 Arab prisoners. Whatever the true identity and motivation of the kidnappers, they drew attention to Israel's role in the Lebanese crisis, to the complexity of the problems affecting the Middle East, and the need to address the fundamental problem of Palestine, as a precondition of a wider settlement.

Israel's involvement in Lebanon was by no means confined to the security zone that it had established to the north of its northern border, policed by the SLA with support from Israeli troops. Israeli air raids on Palestinian targets around Tyre and Sidon continued, and were usually claimed to be retaliation for mortar and *Katyusha* rocket attacks from south Lebanon into Galilee. On 2 January 1987 the Israelis intercepted a passenger ferry bound for the Maronite port of Jounieh from Larnaca, in Cyprus, accusing the LF of allowing PLO fighters to use the ferry to reach Lebanon and the Palestinian camps. This was neither the first time the Israelis had held up a Cyprus–Lebanon ferry, nor the first evidence of clandestine collaboration between Fatah and the Maronites loyal to President Gemayel. The Maronite leadership, presumably seeing little immediate prospect of relief from its traditional ally, Israel, sought instead to strengthen anti-Syrian forces in west Beirut.

SYRIAN TROOPS ASSERT THEIR AUTHORITY IN BEIRUT

Throughout January 1987, however, it became clear, as the 'war of the camps' continued, that the pro-Syrian nexus of Muslim forces in west Beirut was about to crumble. The Druze militia, the Sunni-dominated PSP militia and the Shi'ite-dominated Hezbollah and Lebanese Communist Party militias, had never shared Amal's enthusiasm for fighting the Palestinians. On several occasions the PSP had sent supplies into the camps and actively supported the besieged Palestinians. As a result, in February, open fighting broke out in Shi'ite areas between Amal and the Communists, supported by the PSP. Amal suffered a heavy defeat and this, coupled with increasingly heavy casualties sustained in the siege of Chatila and Bourj el-Barajneh, threatened Syria's position of influence in west Beirut, raising the prospect of an alliance of PLO and leftist forces in control of the city. With Western media attention arousing widespread international sympathy for the plight of the besieged Palestinians, President Assad of Syria decided to act. On 22 February some 4,000 Syrian troops occupied west Beirut, put an end to the clashes between the rival militias and lifted the siege of the Palestinian camps in Beirut, though Syrian influence failed permanently to relieve those in the south of Lebanon, and Syrian troops stopped short of precipitating a confrontation with Hezbollah by entering the Shi'a-dominated southern suburbs of Beirut.

PLO REUNIFICATION

The 'war of the camps' in Beirut resulted in another serious blow to President Assad's regional plans. Faced with Amal's onslaught and besieged in poorly fortified refugee camps, the disparate factions of the PLO had no choice but to unite on the ground in order to protect the Palestinian population whose defence was their ultimate *raison d'être* in Lebanon. After months of mediation by Algeria, Libya and, perhaps most significantly, the USSR, factions representing the majority of the PLO were finally brought together in March 1987. The principal rebel groups, the Democratic Front for the Liberation of Palestine (DFLP), the Palestine Communist Party (PCP), the two wings of the Palestine Liberation Front and the largest left-wing group, the Popular Front for the Liberation of Palestine (PFLP), agreed to attend a session of the PNC, after agreement on key issues had been reached with Yasser Arafat. The PLO's reunification at the 18th session of the PNC in Algiers from 20–25 April appeared to signal an end to the post-1982 alignments within the movement. Resolutions adopted by the PNC confirmed the agreements between the factions made prior to the session. Under the agreements, Arafat undertook to abrogate the Amman accord between Jordan and the PLO and to downgrade co-operation with Egypt until that country formally rejected the Camp David agreements with Israel (the PFLP had initially demanded the immediate severing of links with Egypt); while the left-wing factions (principally the PFLP and the DFLP) endorsed Arafat's continued leadership of the movement, effectively emasculating the Syrian-backed Palestine National Salvation Front, based in Damascus.

The reunification caused genuine celebration among the Palestinians under Israeli rule, whose attempts at resistance had been severely limited by years of factional wrangling. It alienated the Arab front-line states, Jordan, Egypt and Syria, each of whom saw their future ability to manipulate the PLO seriously undermined. The Israeli leadership was evidently dismayed at the PNC's failure to relapse into internal division but, with the PLO thus isolated from the most important Arab states, Peres was able to predict a decline in its relevance to a solution of the Middle East conflict. Indeed, as far as the much-vaunted idea of a Middle East peace conference was concerned, the reunification of the PLO, which urged the rejection of the USA's terms for negotiation, specifically Resolution 242, if taken in isolation, underlined the problem of accommodating the PLO at such a conference. However, the PNC explicitly supported the idea of a conference, with the PLO as the sole representative of the Palestinians, a suggestion which remained unacceptable to Israel.

POLITICAL DEADLOCK IN ISRAEL

Frustration at Palestinian unity was reinforced by the bitter deadlock within Israeli politics. The Labour-Likud coalition Government of national unity had only managed to survive thus far because each party feared the consequences of fresh elections. Despite indications of a significant lead for Labour in opinion polls in early 1987, the party was unable to rally enough support in the divided Knesset to be sure of winning a vote to dissolve Parliament and force new elections. With the political parties divided on the fundamental issue of peace moves, polarization within Israeli society over the same issue was increasing. While Labour supporters became more and more frustrated with Prime Minister Shamir's dogged refusal in mid-1987 even to contemplate the possibility of an international conference, the Right grew increasingly contemptuous of what it saw as pandering to the Arabs with talk of 'land for peace'. The Labour leader Shimon Peres' visit to Washington in May confirmed the isolation of his Likud rival in the international arena. Peres'

opinion of the form which a peace conference should take was given strong backing by US Secretary of State George Shultz, who, however, was unwilling to bring pressure to bear on the Israeli Prime Minister to take a more flexible line.

September 1987 brought a direct attack on the PLO's status in the USA. Bowing to congressional pressure the US State Department arrogated to itself the right to close the PLO's observer mission at the UN, in New York, and the Palestine Information Office in Washington, in spite of objections from US human rights groups protesting against what they believed to be a denial of freedom of speech. The move came as a surprise to US allies in Europe, who saw it as counterproductive to a proposed peace conference. With increased diplomatic activity by the USSR, which led to an improvement in Soviet relations with Israel, the proposed international conference was beginning to gather momentum again. The crucial obstacle remained the position of Shamir's Likud party, which remained doggedly opposed to any form of conference conducted on the basis of an exchange of land for peace, and had not even conceded the notion of a conference with 'superpower' or UN Security Council participation, whatever the terms of negotiation. With George Shultz's visit to Moscow in October expected to cover the Middle East, it was widely hoped that he might bring some pressure to bear on Shamir during a brief visit to Israel. In the event, however, his views failed to make any impression on Shamir. Besides, the USA's Middle East preoccupations were, at this time, focused on developments in the Iran–Iraq War, with the Arab–Israeli conflict of secondary importance.

ARAB PRIORITIES

Such preoccupations were also troubling the Arab states themselves. The Arab League summit meeting in Amman, in November 1987, had been convened primarily to consider the Iran–Iraq War, and the Palestine issue had been shuffled well down the agenda. Faced with the deepening involvement of Saudi Arabia and Kuwait in the war, it was hoped that the Amman summit would unite the Arab nations against Iran. In fact the summit was the first such gathering not to give the Palestine issue priority. Although the PLO's status as sole Palestinian representative was upheld, in spite of Syrian efforts to undermine it, it was only entrusted with joint responsibility, with Jordan and Syria, for drafting the meeting's Palestine resolution. With peace moves baulked and the Israelis seemingly entrenched in the Occupied Territories, there appeared to be little to distract Arab attention from Iran's perceived belligerence.

THE PALESTINIAN UPRISING

The events of the second week of December 1987 in the Gaza Strip and the West Bank took the international community by surprise. Thirteen Palestinian civilians were killed, 50 wounded and hundreds arrested in the most serious and sustained clashes between Palestinian youths and the Israeli army for many years. These clashes proved to be the beginning of what has become known as the *intifada* (uprising), a mass Palestinian demonstration against Israeli rule, which surprised none more than the Palestinians themselves by continuing into the 1990s. A number of factors clearly played a part in creating the conditions that led to a revolt on such a scale.

Ten days of serious clashes took place in Gaza in October, in which seven supporters of a resistance group new to the Occupied Territories, calling itself 'Islamic Jihad', were killed by the security forces. The very emergence of a radical fundamentalist group in Palestine was significant in itself; three of those killed had escaped from prison and returned to lead attacks on the Israelis and thereby greatly enhanced their popularity. As a result of this, the demonstrations which followed their deaths were particularly ferocious, but the Israelis were able eventually to restore order in the Strip. Indeed, the level of repression in the Occupied Territories was at its highest level for many years: a large number of Palestinians had been 'administratively' detained (i.e. without trial) during 1987, and deportations, house demolitions, and other repressive measures were beginning to try the Palestinians' collective patience. The Amman summit itself was, doubtless, another factor in driving the Palestinians to revolt. At the time it was being held, widespread demonstrations were taking place in the Occupied Territories to protest at Arafat's cold reception in the Jordanian capital. The heavy-handed Israeli response provoked further clashes.

The spark that actually ignited the *intifada*, however, appears to have been a traffic accident. On 8 December an Israeli army lorry crashed into a car queuing at the road-block on the Gaza Strip's northern frontier, crushing four Palestinians to death. Few people believed it was an accident, and the Gaza Strip erupted in violent demonstrations. Quickly spreading to Nablus, the West Bank's largest town, the scale of the uprising caught the Israelis quite unprepared. A panicked Israeli response—shooting on sight, harassing Muslim worshippers, attacking hospital patients and staff—was probably crucial in establishing and then maintaining the uprising's momentum. By the end of 1987, 28 Palestinians had been killed, the great majority in the Gaza Strip.

INTERNATIONAL REACTION TO THE INTIFADA

By mid-January 1988 it had become clear that what was under way in the Occupied Territories was a mass popular revolt. The Israelis had adopted a series of severely repressive measures (including curfews and travel bans), none of which had brought the recalcitrant Palestinians to heel. One of the uprising's most notable achievements in its earlier stages was to attract international press, particularly television, coverage which was unprecedentedly hostile to Israel. Western TV viewers were shown footage of Israeli troops firing live bullets and tear gas at Palestinian demonstrators; most spectacularly on 15 January, when the security forces invaded the precincts of the al-Aqsa mosque in Jerusalem, and attacked worshippers. Israel's attempts to restrict press access to areas of unrest merely provoked media fury, attracting further criticism from the Western press, which previously had generally been sympathetic towards Israel. Other Israeli countermeasures included the imposition of a curfew in towns, villages and refugee camps, which caused serious absenteeism of Palestinian workers from their jobs in Israel (an estimated 120,000 Palestinians from the Occupied Territories worked in Israel), adding economic hardship to Israel's difficulties. But the most disturbing aspect of the *intifada*, from Israel's viewpoint, was the emergence, as early as January 1988, of an underground leadership (the Unified National Leadership of the Uprising—UNLU). The UNLU was composed of representatives of the various PLO factions and co-ordinated strikes and demonstrations. It issued regular, serialized communiqués which detailed day-to-day protest activities.

Lacking a coherent strategy in response to the uprising, the Israelis attempted various ways of undermining it. Apart from shooting at demonstrators (46 had been shot dead by 15 January), mass arrests and other collective punishments, nine Palestinians were served with deportation orders on 3 January (in the face of international opposition), and a concerted campaign against the Palestinian press was launched, including the arrest and detention of many journalists, the closure of newspapers and press bureaux, and the imposition of stricter-than-usual military censorship.

Faced with mounting international censure over the high number of Palestinian casualties, the Israeli Minister of Defence, Itzhak Rabin, issued new instructions to his troops in the Territories at the end of January. Firing live ammunition at demonstrators was to be superseded by the widespread use of CS tear-gas and indiscriminate, pre-emptive, beatings. The spate of savage assaults by club-wielding Israeli soldiers on unarmed Palestinians recorded by television cameras were merely part of a campaign that lasted three weeks.

Israel's reputation was suffering particular damage in the USA, most significantly among the American Jewish community, its staunchest and most crucial source of support. Shocked by extensive TV coverage of violent scenes, American Jewish leaders began to voice the community's discontent to their Israeli counterparts and to the US Government. The Reagan administration was further spurred to action by the visit of President Mubarak of Egypt to Washington at the end of January. Mubarak emphasized the need for the US to re-engage itself in the peace process. As a result, the USA prepared for a foreign policy initiative in an area from which it would normally have remained aloof at the start of an election year.

Special envoy Philip Habib was dispatched to Amman on 30 January to seek consultation with King Hussein.

The Arabs too were by now keenly aware of the *intifada*. An extraordinary meeting of Arab ministers of foreign affairs in Tunis, in January, effectively reversed the previous deprioritization of the Palestine question, putting it back at the top of the Arab world's agenda. Such was the response to the uprising in the Occupied Territories that a special fund was set up, under PLO supervision, to which member states of the Arab League were to be obliged to contribute to 'ensure the continuation of the uprising'. EC Commissioner Claude Cheysson publicly condemned Israel's actions as 'shameful' and called for its 'evacuation' of the Occupied Territories. The incoming Chairman of the EC Council of Ministers, the West German Minister of Foreign Affairs, Hans Dietrich Genscher, caused further embarrassment to Israel by stating his intention to make the Middle East the priority of his foreign policy during his six-month 'presidency'. He made clear, with full EC backing, his intention to seek a role for Europe in pushing forward plans for an international peace conference under UN auspices.

THE SHULTZ PLAN

Herr Genscher's initiative (which led him to undertake visits to various regional capitals during his 'presidency') was, however, overshadowed by that of his US counterpart, Secretary of State George Shultz. Shultz made his first visit of the year to the Middle East on 25 February 1988, impelled not so much by an overriding desire to settle the region's problems as equitably as possible (his record in office contained no previous diplomatic successes of any note, relating to the Arab–Israeli conflict), as by pressure from within the USA, particularly the Jewish community, to do something to relieve the pressure on Israel which the *intifada* had brought about. His plan was outlined by the US Under-Secretary of State for Near Eastern and South Asian Affairs, Richard Murphy, on a preliminary visit to the region between 5 and 11 February. The plan proposed: a six-month period of negotiations, beginning on 1 May 1988, on the basis of UN Security Council Resolutions 242 and 338, between Israel and a joint Jordanian-Palestinian delegation, to determine a form of interim autonomy for the Occupied Territories, which would last for three years pending a permanent negotiated settlement; the provision in the interim agreement for an Israeli military withdrawal from the West Bank, and for municipal elections of Palestinian officials to be held during 1989; and negotiations on a final settlement, to be started by the end of 1988; both sets of negotiations to run concurrently with an international conference, involving the five permanent members of the UN Security Council and all other parties to the conflict, proceeding on the basis of UN Security Council Resolutions 242 and 338, but having no power to impose a settlement or veto any agreement reached in the separate Israeli-Jordanian-Palestinian negotiations. (See Documents on Palestine). The plan was fatally flawed. Some form of interim arrangement would clearly be a requirement of any peace plan, but the absence of PLO representation and the 'toothless' nature of the international conference would not endear Shultz's proposals to Arab governments, and the Israeli obstacle was well known. The time-scale for the plan's operation was an indication of the importance Washington attached to the peace process. However, another fundamental obstacle to the plan's acceptance was the Reagan administration's lack of credibility in the Arab world. In the Arab view, the USA had done little or nothing in recent years to bring pressure to bear on Israel to reconsider its stance on peace negotiations—was it prepared to act differently now?

When Shultz visited the Middle East at the end of February to consult regional leaders, Israel's response to his plan, or, rather, the divided response of its two main leaders, was all too predictable: general endorsement, after some initial reservations, from Shimon Peres; outright rejection, after initial, hesitant interest, from Itzhak Shamir. For Shamir, the US plan had 'no prospect of implementation'; if Shultz pushed too hard for its implementation, Shamir believed, the Israeli Government would fall, and, given the new political climate engendered by the Palestinian uprising, Likud would win the ensuing election outright. Egypt and Syria stopped short of an outright rejection of the plan but Syria, in particular, gave no cause to suggest that it would in any way support its implementation. Jordan pronounced itself sceptical that Israel would relinquish control over the Territories and reiterated its opposition to 'partial or interim solutions', though it welcomed the USA's acceptance on 1 March of the concept of the Palestinians' 'legitimate rights'. The UNLU interpreted the Shultz plan as an attempt to abort the uprising and halt the political momentum it was generating world-wide in favour of Palestinian national rights. The PLO rejected the plan outright, as it made no provision for the creation of a Palestinian state and did not recognize the PLO's right to be involved in the peace negotiations. So, when Shultz returned to the USA, following another visit to the region at the beginning of March, it was with virtually nothing to show for his peace initiative. In his absence US TV cameras had continued to record Israel's repressive measures to put down the uprising and the climate of sympathy for the Palestinians had not faded.

THE INTIFADA CONTINUES

In the Territories themselves, there had been no slackening in the intensity of the *intifada*. A total of 76 Palestinians had been shot dead by the end of February; others were beaten to death or killed by exposure to CS tear-gas. Fifteen were victims of the gas (over 80 aborted pregnancies were also attributed to the exposure of the mothers to the gas) following its use in confined spaces (narrow alleyways or even inside people's homes), in contravention of the manufacturer's recommendations. (The chemical was sold, and is used elsewhere, as a means of crowd dispersal in open areas. At the beginning of May the manufacturers eventually agreed to ban its sale to Israel.) Meanwhile, arrests, beatings, press restrictions, deportations, prolonged curfews, the forced opening of shops (closed according to strike instructions issued by the Palestinian underground leadership), and the closure of schools and colleges, all continued to be employed by the Israelis to contain the uprising.

NEW LEADERSHIP IN THE OCCUPIED TERRITORIES

In response, the Palestinians used a surprise weapon: unity. After its apparently spontaneous beginnings, it became clear to the Israeli authorities that the uprising was being carefully orchestrated. The degree of cohesion and co-ordination this gave to the various components of Palestinian society was unprecedented in its recent history. The solidarity engendered among Palestinians was the key factor in making the uprising viable on a prolonged basis. With clear support from Palestinians and Arabs inside pre-1967 Israel, and from many groups and individuals on the left of Israeli politics, the uprising had already made an indelible mark on Israeli society by March 1988.

Palestinian politics were also greatly affected. That the uprising was a spontaneous expression of popular frustration with Israel's rule and of the solidarity between Palestinian Christians and Muslims against Israel's oppression, was undeniable, but it marked a new departure in that the PLO leadership outside the Occupied Territories was not instrumental in organizing and sustaining it. After initial reports of differences between the PLO in Tunis and the underground leadership in the Territories, a working relationship between the two was quickly established, principally to ensure the passage of funds from outside into the Territories, but also to co-ordinate, as far as possible, the political strategy of the PLO as a whole. (The new leadership in the Territories was unequivocal in its allegiance to the PLO.)

At the end of March, the Israelis intensified their crackdown on the rebellion. Telephone links between the Occupied Territories and the outside world were severed; restrictions were placed on movement between districts within the Territories, and between the Territories and Israel and Jordan; a 24-hour curfew was imposed on the entire Gaza Strip for three successive days. The restrictions, which were primarily intended to prevent a massive Palestinian demonstration planned for Land Day on 30 March (commemorating the killing in 1976 of six Israeli Arabs demonstrating against Israeli land seizures), also included the suspension of fuel supplies and severe restrictions on press and media access. The arrest and detention without trial of suspected ringleaders was also stepped up. However, these measures only hardened Palestinian resolve. Local com-

mittees organized the distribution of food, fuel and other resources (as they also supervised strikes and the closure of shops, which the Israelis attempted to keep open by force, to preserve an appearance of normality), as well as taking responsibility for security after a mass resignation of Palestinian policemen, who had been threatened with reprisals for co-operating with the occupying power. Solidarity between Palestinian communities on both sides of the pre-1967 frontier was, if anything, strengthened.

With battle-lines thus, uncompromisingly, drawn, George Shultz returned to the Middle East in mid-April. However, his efforts were obstructed by Shamir's obstinacy, and hamstrung by his own unwillingness to bring pressure to bear on the Israeli Prime Minister. Despite a loss of interest in the Western media, engendered chiefly by the restrictions Israel had imposed on reporting in the Occupied Territories, the *intifada* continued. Shootings, beatings, tear-gassing and other less 'telegenic' acts of violence remained the Israelis' most visible means of combating the uprising. In addition, universities and schools were closed for four months, from April until the end of July; petrol supplies were periodically suspended; there were weeks of continuous night-time curfew throughout the Gaza Strip, and thousands of Palestinians were detained, many without trial, for six months, under martial law. By the end of July more than 290 Palestinians had been killed in the uprising and 28 deported. Fundamental changes had taken place in Palestinian society since the *intifada* began; old class divisions had begun to break down, as the West Bank's urban élite found itself as dependent on home-produced food as the poorest peasant families. In such a climate, Israeli repression alone could not break the popular will to continue the uprising, which was now a central fact in the life of every Palestinian in the Occupied Territories, and a rallying point for Palestinians throughout the diaspora.

THE ASSASSINATION OF 'ABU JIHAD'

On 16 April 1988, in Tunis, an Israeli assassination squad murdered Khalil al-Wazir (alias 'Abu Jihad'), Yasser Arafat's deputy as commander of the Palestine Liberation Army. In the wave of ensuing demonstrations in the Occupied Territories, 16 Palestinians were killed in a single day. The assassination prompted a *rapprochement* between Arafat and President Assad, who had been at odds since 'Abu Musa', a Fatah dissident, led a Syrian-backed revolt in Lebanon against Arafat's leadership of the PLO in 1983. On 25 April 1988 Arafat and President Assad met in Damascus, where 'Abu Jihad' was buried, to discuss their differences. It was Arafat's first visit to Syria since his expulsion in June 1983. However, any prospect of a further improvement in relations was nullified by the renewal, in May 1988, of attempts by Syrian-backed PLO guerrillas, led by 'Abu Musa', to drive Arafat loyalists out of the Palestinian refugee camps in Beirut.

At the beginning of June 1988 an extraordinary summit meeting of the Arab League was held in Algiers to discuss the *intifada* and Middle East peace moves. The final communiqué of the summit, endorsed by all 21 League members, effectively rejected the Shultz plan by demanding PLO participation in the proposed international peace conference and insisting on the Palestinians' right to self-determination and the establishment of an independent Palestinian state in the Occupied Territories (i.e. the principles of the 1982 Fez plan). The summit hailed the 'heroic' Palestinian uprising and pledged all necessary assistance (including an unspecified amount of financial aid) to sustain it.

JORDAN SEVERS TIES WITH THE WEST BANK

On 28 July 1988 Jordan cancelled a $1,300m. five-year development plan for the Occupied Territories, which had been launched in November 1986 but had failed to attract sufficient foreign funds. Then, two days later, King Hussein severed Jordan's 'administrative and legal links' with the West Bank, dissolving the House of Representatives (the lower house of the Jordanian National Assembly), where West Bank Palestinians occupied 30 of the 60 seats. The King explained that his actions were taken in accordance with the wishes of the PLO and the Arab League, as expressed in the resolutions of the Rabat summit of 1974, which recognized the PLO as the sole legitimate representative of the Palestinian people and which advocated the establishment of an independent Palestinian state in the West Bank, and in the peace plan proposed at the Fez summit of 1982. Commentators were quick to point out that King Hussein stopped short of actually repealing the annexation of the West Bank, which would have constituted a formal and irrevocable abrogation of Jordan's 38-year old ties with the region, while the dissolution of the House of Representatives would have little effect, as the Jordanian legislature had exerted little practical influence over affairs in the West Bank since the Israeli occupation in 1967.

King Hussein's decision to reduce Jordan's links with the West Bank was interpreted as partly a response to the Palestinian *intifada*, which had encouraged support amongst Palestinians for an independent Palestinian state, and partly as an attempt to persuade the PLO to accept responsibility for the Palestinian people and the peace process. It was suggested, however, that King Hussein considered the PLO constitutionally incapable of making the concessions necessary to the progress towards peace, and that the necessity of involving Jordan in any settlement would inevitably become apparent. In the short term, however, the effect of Jordan's actions was to strengthen the position of the Likud bloc (which had always ridiculed the Labour party's support for a Jordanian-Palestinian federation in the West Bank) in the period preceding the Israeli general election in November 1988. They also isolated the USA, whose peace initiatives, because they would not countenance negotiations involving the PLO, depended on Jordan's acting as interlocutor and forming part of a delegation representative of the Palestinians in any future peace talks.

To the PLO, King Hussein's move represented a considerable challenge. The Occupied Territories, with the exception of East Jerusalem, were now claimed *de jure* by no state as part of its sovereign territory, providing the PLO with an historic opportunity to assert sovereignty over a specific area. The PLO immediately began to make preparations regarding the issues of a provisional government and Palestinian statehood to be included on the agenda at the next session of the Palestine National Council in the autumn of 1988. In the Occupied Territories themselves, Jordan's severing of its ties with the West Bank was widely applauded. Communiqué No. 24 of the UNLU described the move as the *intifada's* 'greatest accomplishment'.

With Jordan's disengagement leaving the PLO the exclusive voice of Palestinian national aspirations, Yasser Arafat began to seek diplomatic support for a 'two-state' solution to the Arab–Israeli conflict. Addressing the European Parliament in Strasbourg on 12 September 1988, he sought the EC's active endorsement for the PLO's strategy. In his speech, he made a number of new concessions, stating that the PLO was ready to negotiate with Israel at an international peace conference on the basis of the UN Security Council's Resolutions 242 and 338, and to seek 'reciprocal recognition', whereby, in return for Israeli recognition of an independent Palestinian state, the PLO would accept Israel's right to security. Arafat also repeated his declaration, made in Cairo in 1985, which eschewed armed action outside the Occupied Territories. Armed struggle within the Territories remained, Arafat said, a justifiable option for the Palestinians, although firearms were only used in isolated instances.

POPULAR COMMITTEES OUTLAWED

However, the general tactic of demonstrations and stone-throwing continued unabated, as did the Israelis' counter-measures. Widespread demonstrations in Gaza on 14 August 1988 led to the imposition of a curfew throughout the Strip, and the protests spread to the West Bank during the following week. Here the two most immediate grievances were the deaths, by shooting, of two Palestinian political prisoners, and the deportation orders served on 25 activists on 17 August. The deportation orders provoked a spontaneous appeal for a three-day general strike in Nablus, Ramallah and Bethlehem. A military order (issued on the same day), outlawing the 'popular committees' (*lijan ash-sha'biya*), was of more far-reaching significance. Membership of the committees was declared to be an imprisonable offence, thus providing Israel with 'a more convenient legal means to deal with the institutionalization of the uprising', according to the Israeli Minister of Defence, Itzhak Rabin. The popular committees had been established at a very

early stage of the uprising to organize day-to-day activities, such as the distribution of food and other supplies, agriculture, medical care, education and security. When the committees were forced underground, it became more difficult both for them to function and for the authorities to monitor and suppress their activities. The Israeli intelligence services therefore increased their efforts to infiltrate Palestinian organizations, while the Palestinians, in turn, intensified their campaign of exposing, and often executing, people known to have collaborated with the Israelis.

THE EFFECT OF THE INTIFADA ON PLO POLICY

Mass popular participation in 'grass-roots' organizations in the West Bank and Gaza had a major impact on PLO policy. The growth of the popular committees and the gradual, although partial, abrogation by Israeli state institutions of their role in the Territories encouraged Palestinian intellectuals to formulate ideas for the establishment of a provisional government for an independent Palestinian state. Despite the occupation, many national institutions had been established over the years, and, with the widening participation in the management of Palestinian society that was brought about by the *intifada,* they suggested the model for the structure of such a government. From a series of meetings of the Executive Committee of the PLO in August and September 1988, there emerged two basic proposals for debate at the meeting of the PNC in Algiers in November. The first was for the declaration of an independent state in the West Bank and Gaza, and advocated the establishment of a provisional government. The second recommended that the Occupied Territories be placed under the trusteeship of the UN, pending a settlement of the conflict.

DECLARATION OF PALESTINIAN INDEPENDENCE

The 19th session of the PNC, held in Algeria on 12–15 November 1988, brought together all the major factions of the PLO, including those based in Damascus. As expected, the PNC unilaterally declared the establishment of the independent State of Palestine, with its capital at Jerusalem. The UN General Assembly's Resolution 181 (see Documents on Palestine, p. 104) had provided the principle for Palestinian statehood in 1947, proposing the partition of Palestine into two states with defined borders. However, the declaration of independence left open the question of the new state's territory. The state was declared to be established, 'relying on the authority bestowed by international legitimacy as embodied in the resolutions of the United Nations since 1947', no mention being made of the specific details of any particular resolution, other than the principle of partition (and, thereby, a Palestinian state) in Resolution 181.

The UN General Assembly's Resolution 181 stipulated specific borders for two states in Palestine, while the UN Security Council's Resolution 242 of 1967 urged Israel to withdraw from territories occupied in the 1967 war. The borders that had been established by the 1948–49 Armistice Agreements between Israel, Egypt, Jordan, Lebanon and Syria, since they were 'dictated exclusively by military and not political considerations', gave Israel no technical right, under international law, to territories other than those designated by Resolution 181, which it had occupied in the hostilities of 1947–48. According to a strict interpretation of the international legal status of the former British mandated territory of Palestine, the declaration of an independent Palestinian state could have made reference to a specific territory, and many delegates representing the Occupied Territories at the PNC's 19th session urged such a move, and the creation of a provisional government. In the run-up to the meeting, however, there had been considerable disagreement within the PLO regarding the composition of such a government, and it was decided to refer the matter back to the Executive Committee for further consideration. The Executive Committee, it was decided, would function as an *ad hoc* government.

ACCEPTANCE OF RESOLUTION 242

Another source of controversy was the question of the UN Security Council's Resolution 242. For many years, the USA, supported by Israel, had demanded that the PLO should accept its provisions. However, since this Resolution sought 'respect for the sovereignty, territorial integrity and political independence of every state in the area', such a concession would amount to recognition of the State of Israel. As the Fez Arab summit proposal of 1982, endorsed by the PLO, explicitly recognized Israel's existence, the PLO had already effectively recognized Israel. It had, furthermore, repeatedly stated its acceptance of all the pertinent UN resolutions. At the 19th session of the PNC in Algiers, Arafat and others within Fatah wanted to accept Resolution 242 'in isolation', in order to appease the USA and to spur it into action. However, left-wing factions within the wider Palestinian movement, as well as many Fatah cadres, forced the leadership to adopt a compromise formula: the PLO's acceptance of Resolution 242 was, in conjunction with Palestinian rights of self-determination and to international legality on the basis of UN resolutions, to provide the basis of an international peace conference. In a press conference at the end of the PNC session, Arafat was explicit: he sought acceptance of UN Security Council Resolution 242 as a mandate 'to actively pursue peace', and challenged the USA to respond to the PLO's overtures.

RESPONSES TO THE DECLARATION OF INDEPENDENCE

By the time that the 19th session of the PNC took place, the Israeli general election had resulted in a narrow victory (but not a clear parliamentary majority) for Itzhak Shamir's Likud party, while, in the USA, a Republican President had again been returned to power and the Democrats retained control of Congress. Shamir dismissed the results of the 19th PNC session as 'tactical moves devoid of any importance'. The response of the outgoing US Administration was more damaging. Invited to address the UN General Assembly in New York in December 1988, Yasser Arafat and his aides had to obtain visas to enter the USA. On the personal instructions of the US Secretary of State, George Shultz, the visas were denied. Elsewhere in the world, however, the PNC's declaration of independence encountered more favourable responses. By the time that Shultz had banned Arafat from entering the USA, more than 60 states, including two permanent members of the UN Security Council (China and the USSR), had recognized the State of Palestine. Although the 12 members of the EC had not recognized the new state, they welcomed the decisions of the 19th PNC session as a 'positive step forward', and continued, with the backing of the USSR, to support the PLO's appeal for the convening of an international peace conference.

ARAFAT ADDRESSES THE UN GENERAL ASSEMBLY

Arafat eventually addressed the UN General Assembly on 13 December 1988, the meeting having been relocated to Geneva, where he made a number of historic concessions. Inviting the 'leaders of Israel' to join him in reaching a peace agreement, Arafat presented the General Assembly with a three-point programme, the main proposals of which were that the UN Secretary-General should establish a preparatory committee for an international peace conference; that the Occupied Territories should be brought under the temporary supervision of UN forces, who would oversee Israel's withdrawal; and that there should be a comprehensive settlement, among the parties concerned, including Israel, at an international peace conference to be held on the basis of UN Security Council Resolutions 242 and 338. In his address, Arafat explicitly recognized Israel and rejected 'terrorism', as the USA had demanded.

Prime Minister Shamir of Israel, however, dismissed Arafat's address as a 'public relations exercise'. Its impact on the attitude of the USA towards the PLO was, nevertheless, alarming enough to persuade Shamir to disregard most of his party's differences with the Israeli Labour Party and to establish a new coalition government of national unity.

US RECOGNITION OF THE PLO

Although he found his Government almost completely isolated (in particular among its European allies) over its decision to ban Arafat from entering the USA, Shultz still refused to acknowledge that Arafat had conceded anything previously demanded of him by the USA. Following Arafat's address in Geneva, it required hours of intense Swedish diplomacy to detail

the concessions asked of the PLO in words which the USA would find unambiguous. Even then, it took pressure from the incoming Administration of President-Elect George Bush to convince Shultz. On 16 December 1988 the US Ambassador to Tunisia, Robert Pelletreau, held talks lasting 90 minutes with two representatives of the PLO. The USA had finally recognized the PLO. At the meeting, it was agreed that the dialogue should be maintained, and a second session of talks was planned for 20 January 1989. The PLO thus achieved its most important diplomatic breakthrough, although it did not necessarily expect any concrete advances in the peace process to follow quickly.

THE FIRST YEAR OF THE INTIFADA

In the Occupied Territories, the outcome of the 19th session of the PNC was greeted with widespread jubilation, and the declaration of independence was regarded as the greatest achievement of the *intifada*. The opening of a dialogue between the PLO and the USA was also widely perceived as a victory for the uprising, although many in the Occupied Territories feared that Arafat had conceded too much in return for too few guarantees. By the end of 1988, with more than 300 Palestinians shot dead and another 100 killed by other means in the first year of the uprising, a widespread pessimism had developed among the population of the Territories.

Apart from momentary lulls, there was no relaxation of the uprising. Palestinian protestors were still able to surprise the Israeli authorities by means of an underground network. Furthermore, despite the emergence of an autonomous Islamic fundamentalist group in Gaza (the Islamic Resistance Movement, allied to the Muslim Brotherhood and known by its Arab acronym, Hamas), both the UNLU and the people at large had managed to maintain unity of action and purpose. Israel's only real resort remained brute force.

The use of pre-emptive beatings to suppress the uprising, espoused by Israel's Minister of Defence, Itzhak Rabin, in the spring of 1988, gave way to the more widespread use of plastic and rubber bullets, many of which also contained lead, and which, contrary to official guidelines, were often discharged at very close range. On 18 December violent demonstrations erupted in Nablus after troops opened fire on a funeral procession, killing two people. The Israelis reacted severely and a further eight Palestinians were killed, and a curfew was imposed on the city for six consecutive days. By 16 January 1989 a total of 31 Palestinians had been killed, and more than 1,000 wounded, in confrontations with troops, as the indiscriminate firing of 'non-lethal' ammunition into crowds of demonstrators became commonplace. A further alarming development was the emergence of Israeli 'death-squads' which sought out, and attempted to liquidate, leaders of the uprising.

ISRAEL'S DIPLOMATIC INITIATIVE

Meanwhile, there were signs that Israel was preparing to announce a diplomatic initiative. Pressure from the USA and Europe, from both governments and Jewish communities, for Israel to redeem its image, together with condemnations of the high number of casualties, led to rumours that Prime Minister Shamir intended to reveal the initiative when he made his first visit to Washington since the election of President Bush.

However, even after the dialogue between the USA and the PLO had begun, and most Arab states had expressed support for Arafat's strategy, Shamir could still say, in January 1989, that 'nothing has changed' and that the 'Arab intention is the same: the destruction of Israel'. It was surprising, therefore, to learn that discussions had been taking place between Israeli officials and a prominent Jerusalem Palestinian, Faisal Husseini, the head of the Arab Studies Centre in Jerusalem, since the beginning of 1989. Despite this diplomatic initiative, there was no sign of an end to Israel's use of brutal methods to suppress the uprising. Indeed, discussions of Israeli concessions caused further problems for Palestinian communities in the form of attacks by Israeli settlers in the West Bank and Gaza. The death of a West Bank settler in February 1989 provoked a series of revenge attacks on the town of Qalqilya and a raid on the village of Burin, near Nablus. It was alleged in the Knesset that a well-armed settlers' militia was operating in the West Bank. Further serious disturbances occurred in Rafah and Nablus at the end of February.

THE USSR ENDORSES THE PLO'S PROPOSALS

Diplomatic initiatives from the USA were slow to develop. A tour of the Middle East by the Soviet Minister of Foreign Affairs, Eduard Shevardnadze, in February 1989 emphasized the USA's inactivity, as he demonstrated, by his talks in Syria, Jordan, Egypt, Iran and Iraq, that the USSR was the only 'superpower' able to talk freely to all parties to the Middle East conflict. With the exception of Israel's Likud party, all concerned agreed with Shevardnadze's proposal for the convening of an international peace conference.

THE USA CLARIFIES ITS POSITION

Despite a visit to Washington by the Israeli Minister of Foreign Affairs, Moshe Arens, in early March 1989, it became clear, when the dialogue between the USA and the PLO resumed, that the USA now accepted that the PLO was the only negotiating partner qualified to represent the Palestinians. However, several serious points of contention remained, in particular the purpose of the dialogue itself, which the PLO regarded as a prelude to wider negotiations and, eventually, an international peace conference. The USA rejected this notion.

During Arens' visit to Washington, the US Government hinted that Israel might eventually have to negotiate with the PLO, and pressure on Israel to formulate peace plans intensified. By the time that Prime Minister Shamir met President Bush in Washington on 6 April 1989, the details of his peace plan were widely known. Based largely on the proposals that Minister of Defence Rabin had presented, the plan offered 'free and democratic' elections in the Occupied Territories in return for the ending of the *intifada*. The elections, according to Shamir's plan, would produce a delegation to conduct negotiations with Israel for a permanent settlement. The USA gave its cautious approval to the plan, while Palestinians, both inside and outside the Territories, sought more specific details and attached a number of conditions to their acceptance of it. Israeli right-wing parties condemned the proposals and demanded a firmer suppression of the *intifada*.

THE VIOLENCE ESCALATES

April 1989 was one of the *intifada's* bloodiest months, with the death toll since the outbreak of the uprising exceeding 500. The worst atrocity of the uprising to date occurred on 7 April at the village of Nahalin, near Bethlehem. Members of the Israeli border police entered the village early in the morning and attacked people leaving a mosque, killing five and injuring more than 50. Violence in Gaza on 22–23 April left a further two people dead and 87 injured.

In Gaza, following demonstrations during the Islamic festival of Id al-Fitr, three Palestinians were shot dead, and more than 400 wounded, as troops fired 'plastic' bullets and canisters of CS tear-gas into crowds. On 8 May the territory was sealed off, with border crossings closed and telephone connections severed. An indefinite curfew was imposed, which continued until the end of the month, when the Israelis began to issue identity cards to all Gazans with a record of political activity, effectively denying them entry into Israel.

PALESTINIANS' RESPONSE TO ISRAEL'S PLAN FOR PEACE

These tougher measures were in accordance with Minister of Defence Rabin's warning, issued on 15 May 1989, when he threatened Palestinians with greater repression if they did not accept the Israeli Government's peace proposals. However, the leadership of the *intifada* and of the PLO in Tunis remained adamant that certain conditions must be satisfied before the plans could be accepted, although they did not reject the proposals outright. Full details of the Israeli peace plan were disclosed after its approval by the Knesset on 14 May. The plan was similar to the Camp David proposals in many respects. Its failure to clarify either who would be eligible to be a candidate or to vote in the proposed elections or the status of the residents of East Jerusalem; its reiteration of Israel's opposition to the creation of a Palestinian state and its proviso that no change in the status of the Territories could take place without the consent of the Israeli Government, all fell short of what was acceptable not only to the Palestinians and the USSR, but also

to the EC states. However, the plan made too many concessions for right-wing opinion in Israel, and its announcement provoked threats by settlers to establish their own independent state on the West Bank if Israel ever agreed to relinquish the territory.

PRESSURE ON ISRAEL INCREASES

In early May 1989 Yasser Arafat was invited by President Mitterrand of France to make an official visit to Paris. The visit was a great success, especially after Arafat declared that the Palestinian National Charter (or PLO Covenant—see Documents on Palestine, p. 105) had been superseded by the resolutions of the Algiers session of the PNC in November 1988. Israel was sufficiently disturbed by the success of Arafat's visit to Paris for Prime Minister Shamir to begin a European tour two weeks later, fearing, perhaps, that the PLO's publicity exercise might be repeated in other European capitals.

The USA was also beginning to give the Israeli Government cause for alarm. Shamir's visit to Washington had coincided with that of Egypt's President Mubarak, to whom President Bush had confided that the US Government shared Egypt's aim of ending Israel's occupation of the West Bank and Gaza. A warning by the USA that the time had come for Israel to renounce the idea of maintaining its control over the Territories, and the USA's description of the vision of a Greater Israel as 'unrealistic', caused further anxiety. The USA seemed to be gradually distancing itself from the policy of almost unquestioned support for Israel, which had characterized President Reagan's term of office. In July 1989, however, in order to appease critics of Israel's peace initiative within the Likud, Shamir agreed to a resolution which added four principles to the original plan. These clarified four areas of the initiative which had deliberately been left ambiguous to avoid alienating the USA and the PLO from the outset. They stipulated that residents of East Jerusalem would not be permitted to participate in the proposed elections in the West Bank and in Gaza; that violent attacks by Palestinians must cease before elections could be held in the Occupied Territories; that Jewish settlement should continue in the Territories and that foreign sovereignty should not be conceded in any part of Israel; and that the establishment of a Palestinian state west of the River Jordan was out of the question, as were negotiations with the PLO. In response the leadership of Israel's Labour Party recommended that the Party should withdraw from the coalition Government. At the end of July, however, it was reported that the Israeli Cabinet had voted in favour of endorsing the peace plan in its original form.

The *intifada* continued unabated throughout the summer of 1989. On 19 June the deportation of a further eight Palestinians was ordered, giving rise to more street protests, and in August the newly appointed commander of Israeli forces in the West Bank, Itzhak Mordechai, issued an order permitting troops to open fire on Palestinians who wore face masks during demonstrations. An increase in raids on Palestinian villages by the Israeli Defence Force (IDF), together with the deliberate targeting of organizers of the popular committees, contributed to a rising casualty toll.

In Gaza, meanwhile, a fierce battle of wills developed between the local population and the Israeli authorities over the introduction of new identity cards. The Israelis stipulated that possession of a new, computer-readable, magnetic identity card was necessary for all those travelling outside of the Gaza Strip. However, such cards would only be issued to those Palestinians who acquired security clearance and who could prove they were up-to-date with payment of taxes. As the majority of Gazans earned their living inside Israel, the Israeli authorities hoped that economic pressure would force them to accept the new identity cards. The popular committees responded by urging a boycott of the new identity cards, which were confiscated as soon as they were issued. By mid-July so few Gazans were reporting for work in Israel that employers pressurized the IDF into allowing some Gazans to leave the Gaza Strip without identity cards. However, fearing the financial hardships of a prolonged boycott, the UNLU eventually abandoned it.

Acts of communal resistance persisted in the West Bank. In Beit Sahur, a small Christian town near Bethlehem, residents had observed a total boycott of tax payments ever since the UNLU had first called for payments to the civil administration to be withheld. A six-week campaign to break the boycott was launched by the Israelis in 1989. It began with arrests, the imposition of lengthy curfews and the cutting of electricity and telephone lines, and ended with the blockading of the town and the confiscation of property in lieu of payment.

Despite the defiance in Beit Sahour and the struggle against the new identity cards in Gaza, there were signs that a combination of exhaustion and frustration at the lack of political return was fostering extremism. At the end of June 1989, a US aid worker was the victim of an unprecedented kidnapping in Gaza and two weeks later 14 people died when a young Palestinian seized control of an Israeli bus in which they were travelling and sent it crashing down a ravine.

MUBARAK'S ATTEMPT TO RESTART THE PEACE PROCESS

In mid-September 1989 President Mubarak attempted to restart the peace process by asking the Israeli Government to clarify 10 points concerning the procedure and substance of Prime Minister Shamir's peace plan. Mubarak sought commitment to the principle of exchanging land for peace and the participation of the residents of East Jerusalem in the plan's proposed election. At the same time, Mubarak offered to convene an early meeting of Israeli and Palestinian delegations to discuss the details of the election. The US Government had been privy to Mubarak's proposals since mid-July, but had cautioned against making them public in the hope that the Israeli Government would be able to sustain what was, after all, its own peace initiative. The fact that the US President George Bush had now permitted Mubarak to announce an initiative of his own revealed the US Government's ebbing faith in the Israeli Government.

The reaction of the Israeli Government to Mubarak's initiative was divided. The Labour leader Shimon Peres voiced his support, while Prime Minister Shamir stated his opposition and spoke of the need 'to fight off grave threats'. No formal rejection was sent to Cairo, but the Israeli Prime Minister was clearly irritated by the Egyptian Government's attempt to usurp his peace initiative. Both Mubarak and the US Secretary of State, James Baker, anxious not to further alienate the Israeli Prime Minister, insisted that the Egyptian proposal was merely a supplement to Shamir's plan, not a replacement. By mid-October, however, it was clear the USA was failing to persuade Likud to embrace the revised peace proposals. Prime Minister Shamir and the Israeli Minister of Foreign Affairs, Moshe Arens, did not regard Mubarak's 10 points as a basis for negotiations, nor would they agree to talks with a Palestinian delegation which had any connection whatsoever with the PLO. In a final attempt to keep the peace initiative alive, US Secretary of State James Baker put forward five proposals (the 'Baker plan') which aimed to remove Israeli objections. Essentially, Baker proposed that acceptance of Mubarak's 10 points should not be a precondition for participation in the Cairo talks and that the composition of the Palestinian delegation should be decided by the Governments of Israel, the USA and Egypt.

PLO'S FORMAL RESPONSE TO THE 'SHAMIR PLAN'

The 'Shamir plan' and the subsequent attempts to modify it aroused little enthusiasm in Palestinians or the PLO, who were convinced that Shamir had only conceived his peace initiative as a concession to the USA, and in order to pressurize the Palestinians. Moreover, the PLO believed that Mubarak's clarifications of the 'Shamir plan' still fell short of its own minimum negotiating position. At a meeting of the PLO's central council in Baghdad in October, the PLO stated that the negotiating team should be selected by the PLO and should comprise Palestinians from both inside the Occupied Territories and the Palestinian diaspora; and that the dialogue should be attended by the five permanent members of the UN Security Council and should constitute the preliminary stage in the convening of an international peace conference.

Although the gulf between the 'Baker plan' and the PLO's response appeared to be unbridgeable, the PLO was not keen to be seen to officially abandon a peace initiative which was being promoted by the USA. Privately, however, PLO officials complained that the USA was ignoring the need for the PLO to play a role in the peace process while, at the same time, seeking its support for the same process. All the more galling was the

USA's insistence that its endorsement of the peace process should be private rather than public so as not to deter Israel.

EXECUTION OF COLLABORATORS

Within the Occupied Territories opposition to the Baker proposals was widespread and was expressed in the underground communiqués of the UNLU. However, during the latter half of 1989 another issue drew the attention of the international media. The execution of Palestinians suspected of collaborating with the Israeli security forces had been accepted as necessary by most Palestinians, especially after it emerged that the Israelis had organized 'hit squads' of their own. During the second half of 1989, however, there was a dramatic increase in the killing of collaborators. Palestinian leaders began to fear that unless the killing was checked it might legitimize the use of violence to resolve factional disputes; they also recognized that the death of Palestinians at the hands of other Palestinians was a public relations disaster.

By the beginning of October 1989 the UNLU was urging the popular committees to show maximum restraint in their dealings with suspected collaborators. The activities of vigilante groups, such as the Red Eagles and the Black Panthers, were ultimately halted by the Israelis. However the widespread mourning and disturbances following the deaths of their members demonstrated to the UNLU and to the PLO that as the *intifada* approached the end of its second year, the political stalemate inside the Territories and the diplomatic impasse outside was strengthening the hand of radicals.

DIVISIONS WITHIN THE ISRAELI GOVERNMENT

There were few signs from Israel that the 'Baker plan' was improving the prospect of an Israeli-Palestinian dialogue in Cairo. Shimon Peres had signalled Labour's readiness to talk to a Palestinian delegation composed of deportees living outside the Occupied Territories as well as pro-PLO personalities from within the Territories. For Shamir, this was tantamount to talking to the PLO itself and he warned that Israel would boycott any talks with a delegation endorsed by the PLO. Moreover, in what amounted to a significant retreat from the terms of the original 'Shamir plan', the Israeli leadership demanded a guarantee that at any future meeting discussion would be confined to electoral procedure and would not address the question of a final settlement. In a visit to Washington in November Prime Minister Shamir failed to gain assurances on these questions, but did not face any real pressure from the US Government. In a private meeting with Shamir, President Bush reportedly criticized Israel's handling of the *intifada*, while Secretary of State James Baker called for Israel to show greater flexibility towards the peace process. Shortly before Shamir's visit, however, the USA had once again vetoed a UN Security Council resolution criticizing Israeli policy in the West Bank and in Gaza, and at the end of the visit Shamir was confident enough to declare that 'tensions had been relieved' by his trip.

In a letter to President Bush PLO chairman Yasser Arafat stated that Israeli intransigence was convincing Palestinians that Israel was not serious in its quest for peace and 'creating an atmosphere that rouses the radicals against the moderates'. The USA did not reply to the letter and, in a further rebuff, announced that it would cut funds to the UN's Food and Agriculture Organization if it co-operated with the PLO over agricultural development in the Occupied Territories.

Divisions in the Israeli Cabinet intensified in 1990. After returning from a visit to Cairo at the end of January, Shimon Peres announced that he had the support of the Labour Minister of Defence, Itzhak Rabin, for breaking up the Government if there was no progress on the issue of the Israeli-Palestinian dialogue. Shamir also faced pressure from right-wing elements within the Likud. At a meeting of Likud's central committee on 7 February 1990, the Minister of Trade, Ariel Sharon, the populist leader of the 'rejectionists', announced his resignation from the Cabinet. Sharon's resignation was ostensibly prompted by disagreement with Shamir over the 'Baker plan', but in reality it amounted to a thinly veiled bid for the party leadership. While Shamir managed to retain the support of the majority of Likud members within the Knesset, the attempted *putsch* weakened his authority. It was followed, a few days later, by the decision of Itzhak Modai to withdraw his Liberal faction from Likud. On 21 February, with Shamir barely recovered from the dissent in his own ranks, Peres announced that he would give him two weeks to respond positively to the 'Baker plan' before withdrawing the Labour Party from the coalition. Moreover, the USA declared that further dilatory tactics by Israel might lead it to abandon the Middle East peace process altogether.

COLLAPSE OF THE COALITION

On 10 March 1990 Labour ministers walked out of a cabinet meeting after Shamir had refused to allow a vote on a proposal regarding the Cairo talks. Three days later, after Labour had stated its intention to vote with the opposition in favour of a 'no-confidence' motion against the Government, Shamir dismissed Peres from the Cabinet. The remaining Labour ministers immediately submitted their own resignations. In the ensuing 'no-confidence' debate, the small religious party, Shas, abstained, causing the collapse of the coalition. Israel's President Herzog granted Peres two weeks to form a Labour-led administration. Meanwhile Shamir would continue as 'caretaker' Prime Minister.

PROGRESS OF THE INTIFADA

The publication on 21 February of the US State Department's Country Reports on human rights indicated that despite the lower profile of the Palestinian *intifada* in 1989, its second year had been as bloody and intense as its first. The US report claimed that 304 Palestinians had been killed by Israeli soldiers and settlers in the year under review, while a further 128 suspected Palestinian collaborators had been killed by other Palestinians and 13 Israelis had died in *intifada* incidents. Up to 20,000 Palestinians had been wounded, 26 deported and 164 homes demolished or partially sealed. At the beginning of 1990 9,138 Palestinians, more than 2% of the adult male population, were being detained, more than 1,200 without charge or trial. The Palestinian universities remained closed throughout 1989 and the schools for many months.

Throughout 1989 the UNLU coalition had maintained an operational unity, although factional tension was increasing. Disputes concerned the PLO's pursuit of a diplomatic solution to the Middle East conflict and the short-term tactics of the *intifada*. In general, the PCP was prepared to give qualified support to Fatah, and sought to maintain the momentum of the *intifada*. The traditionally radical PFLP put the least faith in talks and moderation, and, unlike the PCP, favoured the steady escalation of strikes, street confrontations and civil disobedience. The DFLP occupied a position between that of the PCP and that of the PFLP. In the first quarter of 1990 disagreements between DFLP 'hardliners', led by Naif Hawatmeh, and a more pragmatic faction led by Yasser Abed Rabbo, caused a serious rift in the party.

Relations within the Occupied Territories between the nationalists of the UNLU and the fundamentalist grouping Hamas remained strained, although in some areas a *modus vivendi* was achieved. Gaza remained the stronghold of Hamas and of the more militant Islamic Jihad organization. The latter enjoyed a revival in 1989, having been weakened by arrests and deportations in 1988. It remained strongly opposed to the PLO's diplomacy.

EMIGRATION OF SOVIET JEWS TO ISRAEL

Following the USSR's relaxation of restrictions on Jewish emigration in 1989, a reported upsurge of anti-semitism in the Russian Republic and Washington's decision to reduce the number of visas it issued to Soviet Jews, 1990 offered the prospect of a huge increase in the emigration of Soviet Jews to Israel. Prime Minister Shamir claimed that up to 1m. Soviet emigrants might settle in Israel. More realistic estimates put the number at 150,000, but, whatever the figure, an influx of immigrants was regarded as a fillip for the Israeli right. Increased immigration helped counter the demographic argument used by those Israelis who favoured a withdrawal from the Occupied Territories and argued for increased 'colonization' of the West Bank and Gaza. Shamir commented on 14 January 1990, 'We will need a lot of room to absorb everyone and every immigrant will go where he wants . . . for a big immigration we will need a big and strong state'.

In Arab capitals and in the Occupied Territories the prospect of mass Jewish emigration to Israel, together with Shamir's statement, caused grave concern. King Hussein expressed a fear that the settlement of Jewish immigrants in the West Bank would presage the 'transfer' of the indigenous population to the East Bank, thus transforming the Hashemite Kingdom into a Palestinian state. Similar concern was expressed by the Arab League, which decided to send a high-level delegation to the 'superpowers' and to the EC in order to discuss ways of reducing the flow of emigrants to Israel. Yasser Arafat conceded the right of Israel to accept Jewish refugees, but stated the PLO's opposition to the use of immigrants to perpetuate the occupation of the West Bank and Gaza. Within the Occupied Territories the UNLU urged the convening of an Arab summit meeting to debate the issue.

There was no clear evidence that Israel's Ministry of Immigrant Absorption was directing Soviet Jews to settle in the West Bank and in Gaza and only a small number were said to be considering making a home there. However, Israeli officials stated repeatedly that they would not discourage the new immigrants from settling in Judaea, Samaria and Gaza. Many of the new arrivals were already being directed to housing in occupied East Jerusalem. This caused considerable anger in the USA, from which Israel had requested an extra $400m. to facilitate the absorption of Jewish immigrants, at a time when Israeli intransigence over the peace process was straining US–Israeli relations. In a noticeable departure from the policy of the Reagan administrations, President Bush stated his administration's strong opposition not only to the settlement of Jews in the West Bank and in Gaza, but also in East Jerusalem. This pronouncement on what Israel regarded as its 'undivided and eternal' capital would certainly have provoked an acrimonious confrontation, had it not been for the collapse of the Likud-Labour coalition in March. A few weeks earlier, the leader of the Republican Party in the US Senate, Robert Dole, had attacked another 'sacred cow' of US–Israeli relations by suggesting that the USA's aid programme to eastern Europe should be financed by a 5% cut in aid to the five principal recipients of US aid, of which Israel was the major beneficiary.

LABOUR'S FAILURE TO FORM A NEW GOVERNMENT

By mid-April Peres' attempts to form a new government had failed, despite the Labour leader's determination to persuade the orthodox religious parties to lend their support to a new, Labour-dominated coalition. As the chance to form a new government passed back to Shamir, the Minister of Defence in the former Government, Itzhak Rabin, was reported to be considering challenging Shimon Peres for the leadership of the Labour Party. Meanwhile, both Peres' and Shamir's unseemly attempts to gain the support of the religious parties with lavish offers of cash and cabinet posts had prompted widespread disaffection among Israelis. On 7 April 100,000 people gathered in Tel-Aviv to call for an end to such political 'horsetrading' and for the reform of the country's electoral system.

FURTHER ESCALATION OF VIOLENCE

Soviet immigration, and the continuing controversy over Israeli settlement policy, was continuing to raise tension in the Occupied Territories. On 9 March violent protests against the settlement of Soviet Jews in East Jerusalem led to the killing of two young Palestinians. One month later attempts by a nationalist-religious group to settle in the Christian quarter of Jerusalem's Old City provoked violent confrontations with Israel's security forces. Palestinian anger was deepened by revelations that the Israeli Government had funded the settlers' fraudulent purchase of a building belonging to the Greek Orthodox Church.

By May 1990 the situation in the Occupied Territories was extremely volatile. On 20 May a uniformed Israeli approached a group of Palestinians congregating at a roadside labour market in Rishon le Zion. After checking their identity cards, he opened fire with an automatic rifle, killing eight of them and wounding 10 more. Demonstrations erupted and attempts at suppression by the army were ignored. By the end of that week more than 20 Palestinians had been killed and, for only the second time since December 1987, the *intifada* spilled over into Arab-populated regions inside Israel.

Following international criticism of Israel's response to the demonstrations, the US Government stated that it would consider an Arab-sponsored move to send UN observers to the Occupied Territories. At a specially convened session of the UN Security Council in Geneva Yasser Arafat accused Israel of attempted 'genocide' in the Occupied Territories. While no agreement was reached to send the UN observers to the Territories, Israel was now arguably more isolated than at any other time in its 42-year history. Further, and more predictable pressure came from the Arab summit meeting held in Baghdad at the end of May 1990 to discuss Soviet Jewish immigration to Israel and western hostility to Iraq's reported attempts to develop a nuclear capability. A bellicose Saddam Hussain reiterated his threat to unleash a chemical attack on Israel if the Israelis attacked Iraqi nuclear sites. The Jordanian delegation suggested that Israel was trying to engineer a war with Jordan as a means of expelling the Palestinian population from the West Bank. The USA was also criticized for its support of Israel and a pledge was made to honour a two-year-old promise of the Arab states to 'fund the *intifada*' at a rate of US $40m. per month.

NEW COALITION FORMED

The new Israeli coalition Government (an alliance of the Likud and small, right-wing religious groupings formed in early June 1990) was regarded as the least conciliatory in recent Israeli history, and unlikely to further the peace process. Rather, its very survival was dependent on its ability to appease those within the Knesset who sought to prevent any future dialogue between Israelis and Palestinians. A further setback to the peace process was the decision of the USA on 20 June to suspend its dialogue with the PLO after the PLO had failed satisfactorily to condemn an abortive attempt by the PLF (led by Muhammad Abbas—'Abu Abbas', a member of the PLO's Executive Committee) to land guerrillas on Israel's Mediterranean coast in May. At the same time, in a formal letter to Prime Minister Shamir, President Bush questioned the commitment of the new Israeli Government to the revival of the Middle East peace process. The first talks between representatives of the USA and the new Israeli Government were held in late July 1990.

IRAQ INVADES KUWAIT

Iraq's invasion of Kuwait in August 1990 was not regarded with the same sense of outrage in the Arab world as it was in the West. Although few Arabs condoned Iraq's occupation of Kuwait, there were many who admired the Iraqi President, Saddam Hussain. At a time of considerable disillusion with Western attitudes towards the emigration of Soviet Jews to Israel, and with the US Administration's decision to terminate its dialogue with the PLO, the militant rhetoric of the Iraqi leader and his promises to use Iraq's formidable military strength to confront Israeli expansionism had been favourably received by the Arab masses. Kuwait, on the other hand, was resented both for its prosperity and for its pro-Western outlook. As Arab Heads of State tried unsuccessfully to mediate between Iraq and Kuwait, two developments attracted popular support for Iraq. The first was Saddam Hussain's attempt to link Iraq's withdrawal from Kuwait to that of Israel from the Occupied Territories. The second was the decision of the USA to dispatch a large military force to the Gulf region in order, initially, to defend Saudi Arabia. What had begun as an act of aggression by one Arab state against another was now perceived by many Arabs as a confrontation between the forces of Arab nationalism and Western imperialism.

Many Palestinians, in particular, shared this perception. That the USA should act so swiftly to deter territorial conquest in Kuwait when it had effectively sustained such conquest in the areas occupied by Israel since 1967 was taken by Palestinians as proof of the West's hypocrisy and hostility to their cause. Saddam Hussain was swiftly championed as a saviour in the style of Nasser. By mid-August large pro-Iraqi demonstrations were taking place throughout the Occupied Territories and Jordan, and in the countries of the Maghreb.

THE POSITION OF THE PLO

The position of the PLO was far from clear at the outset of the new crisis in the Gulf. Privately, its leadership was said to be

dismayed by the Iraqi invasion of Kuwait because it deflected attention from the *intifada* and created further divisions in the Arab world. However, the PLO's wish to broker an Arab solution to the crisis, together with its traditionally close ties to Iraq, made it reluctant to condemn the invasion. At the chaotic Arab summit meeting convened in Cairo on 10 August 1990 the PLO condemned Iraq's annexation of Kuwait, but abstained in the vote on whether to deploy a pan-Arab military force in Saudi Arabia. Furthermore, the PLO joined Jordan, Yemen, Tunisia and Algeria in denouncing the proposed deployment of US armed forces in the Gulf region.

On 19 August the PLO confirmed its opposition to the invasion of Kuwait in its first official statement on the crisis in the Gulf. Together with Libya and Jordan, it continued to attempt to act as a mediator, but with the US success in building an anti-Iraq coalition rapidly polarizing the Arab states, there was no sign of the consensus that was needed to make their proposals feasible. Instead, the concept of linkage of the Gulf conflict with the Palestinian question, popular support for Iraq and distrust of the USA all dictated that the PLO should align itself with Iraq. At the end of August 1990 Yasser Arafat issued a joint statement with the Iraqi leader in Baghdad, proclaiming that the Palestinians and the Iraqis were united in a common struggle against Israeli occupation and US military intervention in the Gulf. The political risks of such a firm alliance with Iraq were immense, but PLO officials argued that, given the mood of their constituency, they had no other option. Inside the Occupied Territories a special UNLU communiqué condemned the deployment of the US-led multinational force in Saudi Arabia and elsewhere in the Gulf region. It also upheld the rights of peoples to self-determination, but noticeably refrained from demanding Iraq's withdrawal from Kuwait.

The PLO's partisanship earned it the opprobrium of the West and alienated its principal financial supporters, Saudi Arabia and the Gulf states. Jordan, Yemen and Sudan, whose Governments were most hostile to Western military involvement in the Middle East, similarly had to endure the full weight of US and conservative Arab displeasure. Jordan, traditionally pro-Western and in the process of democratization, was subjected to particular criticism for having allowed a meeting of Arab nationalist and left-wing political parties to take place in Amman in mid-November 1990.

ISRAEL AS BENEFICIARY

Israel was one of the principal beneficiaries of the events which followed the invasion of Kuwait. It had until recently been internationally isolated for its procrastination over the peace process and the repression in the Occupied Territories; the Gulf crisis offered it the prospect of rehabilitation. Israeli leaders lost no time in restating their old claim that it was the lack of democracy in the Arab world, not Israel's occupation of Arab territory, which was the principal cause of instability in the region. The PLO's stance on the Iraqi invasion, they argued, conclusively validated their refusal to negotiate with it. Equally, the vociferous support in the West Bank and Gaza for Saddam Hussain confirmed Israel's wisdom in treading the path of diplomacy with caution, and maintaining its opposition to a Palestinian state.

Moreover, in President Bush's attempt to persuade Arab and majority Muslim states to participate in 'Operation Desert Shield', the codename for the deployment of the multinational force in Saudi Arabia, Israel also saw scope for political gain. The Israeli Prime Minister, Itzhak Shamir, understood that Israeli military action against Iraq, like its attack in 1981 on Iraq's nuclear reactor, would be disastrous for the USA: it would spell the end of Arab involvement in the multinational force, a political if not a military prerequisite for its success, and would also threaten a wider conflagration in the Middle East. Israel hinted that its restraint would be conditional upon its receiving certain guarantees from the USA: of increased military and economic aid, and of an easing of pressure with regard to the peace process. Israel's Minister of Defence, Moshe Arens, also made it clear that, from an Israeli point of view, the only acceptable conclusion to the crisis would be one that included the dismantling of the Iraqi military machine.

THE PRICE OF ISRAEL'S SUPPORT FOR THE USA

Just as the USA had to pay for Israel's passivity, so it had to offer inducements for Arab governments to participate in the multinational force. The Gulf states, potentially vulnerable to further Iraqi aggression, needed little persuasion to do so. Egypt, Syria and Morocco were also in favour of deploying armed forces in Saudi Arabia, the Governments of Syria and Egypt being deeply mistrustful of Baathist Iraq. However, it was the prospect of economic aid and of influence in any post-crisis settlement which ultimately persuaded them to dispatch troops to fight alongside Americans against fellow Arabs. President Assad of Syria, a longstanding radical, and hence the most unlikely of the coalition partners, certainly expected the crisis to be followed by moves to end the Israeli occupation of Arab, including Syrian, territory. President Mubarak of Egypt, who was anxious to see his country reinstated as the *primus inter pares* of the Arab world, aired the same concerns in discussions with his US and European counterparts.

The burden of conflicting expectations from Israel and the Arab states placed the USA in a delicate position. President Bush and the US Secretary of State, James Baker, had to avoid any linkage of the crisis in the Gulf with the Arab–Israeli conflict since this would effectively reward Saddam Hussain and displease Israel. At the same time they had to reassure the Arab world. Speaking in September 1990, President Bush agreed that sooner rather than later the Arab–Israeli conflict had to be resolved. Nevertheless he dismissed the possibility of an international conference on the issue in the near future. The EC states were more sensitive to Arab charges of hypocrisy over tackling the problems of the Middle East and hence to an implicit linkage of the occupation of Kuwait with other outstanding issues. During an emergency debate on the Gulf crisis in the British Parliament at the end of August 1990, members of all political parties spoke of the urgent need for a swift conclusion of the crisis, to be followed by the resolution of the Palestine problem. In an address to the UN General Assembly on 24 August, President Mitterrand of France proposed a timetable for the settlement of all the Middle East's problems. This would begin with an Iraqi declaration of intention to withdraw from Kuwait, but would also include direct dialogue between the concerned parties on the issues of Palestine, Lebanon and Israel's security. Moreover, at a meeting of EC ministers of foreign affairs in Paris in mid-September, the President of the EC Commission, Jacques Delors, warned Israel that once the Gulf crisis was over it would have to accept 'the legitimate rights of the Palestinians'. In addition, the Italian Minister of Foreign Affairs, Gianni de Michelis, who was acting as chairman of EC foreign policy meetings, informed his Israeli counterpart, the newly-appointed David Levy, that the Palestinians had a right to their own state.

EVENTS IN THE OCCUPIED TERRITORIES

Meanwhile, the Palestinian *intifada* continued, albeit with less intensity. Exhaustion, and the adoption of new tactics by Israel's Ministry of Defence, contributed to the decrease in activity. Israel's Minister of Defence, Moshe Arens, believed that intensive policing of population centres was largely counter-productive. Instead, he instructed the IDF to reduce its presence in the towns and villages of the West Bank and Gaza, and to redeploy troops on highways and at major road intersections. Fewer clashes and fewer Palestinian casualties resulted, but arrests and collective punishments continued. Palestinians were encouraged by Saddam Hussain's rhetoric, but the economic repercussions of the Gulf crisis were very damaging. Many Palestinian families relied on remittances from relatives working in Kuwait, and the loss of this income at a time when the population was already suffering economically, caused severe hardship. Factionalism was another source of concern for the Palestinian leadership. In September 1990 fierce disputes in Gaza and some towns of the West Bank, between the nationalists of Fatah and the fundamentalists of Hamas, led to ugly street brawls and at least one death. Divisions within the DFLP also resulted in a *de facto* split, prompting a struggle for the control of its various front organizations, such as trade unions, women's committees and press offices.

Yet even while international attention was firmly fixed on the huge military deployment in the Gulf, events in the Occupied

Territories continued to remind the world of the unresolved issue of Palestine. On 8 October 1990 at least 17 Palestinians were shot dead in the Old City of Jerusalem when a large crowd, protesting at an attempt by an extremist Israeli group to lay the symbolic cornerstone of the Third Temple on the Temple Mount, was indiscriminately fired on by Israeli security forces. News of the killings at Islam's third holiest shrine immediately precipitated a wave of protests which claimed a further three lives and left many injured. It was the bloodiest day yet of the *intifada*. Palestinian leaders in the Occupied Territories responded to the killings with an emotional appeal to the UN Security Council: 'We do not understand how oil in the Gulf can be more highly prized by you than Palestinian blood . . .' they wrote; 'we do not understand how the Security Council can ignore our pleas for protection when it is prepared to send troops to the Gulf region'. Moreover, the UNLU issued its most uncompromising communiqué so far, calling for a week of mourning and declaring that 'every soldier setting foot on the land of Palestine is a fair target to be liquidated'. Anxious to avoid charges of hypocrisy at such a sensitive time in Arab–US relations, the USA submitted a draft resolution to the UN Security Council condemning the Temple Mount killings. It also supported the decision of the UN Secretary-General to dispatch an investigative mission to Jerusalem. Although this fell short of the PLO's demand for UN protection for the population of the Occupied Territories, the USA's censure of Israel at the UN Security Council was significant for being the first vote of its kind for eight years. Predictably, Israel denounced the UN vote, and its decision to send a fact-finding mission to the Occupied Territories, as interference in its internal affairs. It declared that the UN representatives would only be admitted as 'tourists'. In an interview with the Israeli daily newspaper, *Ma'ariv*, Prime Minister Shamir castigated both President Bush and Secretary of State Baker for 'messing with Israel'. What they failed to understand, opined Shamir, 'is that Israel is Washington's only reliable ally'. The Arab League's own deliberations in Tunis on the Temple Mount killings ended in acrimony and confirmed the rift provoked by the Gulf crisis. A resolution which condemned the killings, but was also sharply critical of US bias towards Israel, was defeated by 11 votes to 10. In what was effectively a vote on the US military presence in the Gulf, only Morocco, facing mounting domestic criticism for having agreed to participate in the multinational force, confounded expectations by voting with the anti-US faction.

The killings of 8 October were followed by a spate of attacks by Palestinians on Israeli civilians and soldiers. The worst incidents occurred on 21 October, when three people were stabbed to death by a lone Palestinian in West Jerusalem, and at the beginning of December, when a series of attacks in Tel-Aviv claimed four lives and left several people injured. A number of Palestinians died in anti-Arab protests following the stabbings, and also in the violence precipitated by the assassination, in New York, of Rabbi Meir Kahane, the leader of the neo-fascist Kach movement. Nearly all the attacks by Palestinians were the work of individuals acting on their own initiative, although Hamas did claim responsibility for some of the murders in Tel-Aviv, and Islamic Jihad gave its wholehearted support to a 'revolution of knives'.The PLO factions were more ambivalent in their attitude towards the stabbings: Faisal Husseini denied that the stabbing of Israeli civilians had been sanctioned by the leadership of the *intifada*; the UNLU spoke only of the need to employ 'all forms of resistance'; and graffiti praising the use of knives was signed by both Fatah and the PFLP. Shortly after the incident on 21 October, the Israeli Ministry of Defence ordered all Palestinians from the Occupied Territories working in Israel to return to their homes. The borders were sealed for four days, after which the Minister of Defence, Moshe Arens, declared an intention to reduce the number of Palestinians working inside the 'Green Line' and to bar altogether those with a record of activism. The announcement was welcomed by some Palestinians as a further step towards redefining the 'Green Line'.

UN SECURITY COUNCIL RESOLUTION 678

The passing of UN Security Council Resolution No. 678 on 29 November 1990, which effectively authorized the use of military force against Iraq if it had not withdrawn from Kuwait by 15 January 1991, considerably increased tension in the region. In Israel the authorities completed the distribution of gas masks to the civilian population and issued instructions on civil defence against attacks with chemical weapons. Only belatedly did they decide to provide masks to limited areas of the West Bank. Iraq and Israel continued to exchange threats, while Jordanians and Palestinians expressed fears that Israel might use the pretext of military conflict in the Gulf to drive Palestinians from the West Bank into Jordan. Palestinian support for Saddam Hussain remained high during the weeks preceding the UN deadline for Iraq's withdrawal from Kuwait, while the PLO's relations with the USA's Arab allies continued to deteriorate. The leader of the PLF, 'Abu Abbas', warned that his organization would strike against Western targets if hostilities erupted. In mid-December Israel's Prime Minister travelled to Washington for his first meeting with the US President in more than a year. The proximity of the deadline set by UN Resolution 678 ensured that the encounter was cordial, despite a strong undercurrent of mutual distrust. Shamir sought and received assurances that the Gulf crisis would not be resolved at Israel's expense. However, no promises were made on the question of aid for the settlement of the 200,000 Soviet Jews who had emigrated to Israel during 1990, or on the sale of arms by the USA to Arab participants in the multinational force.

There was a resurgence of the *intifada* at the beginning of 1991. Seven Palestinians were killed in protests linked to the anniversary, on 1 January 1991, of the founding of Yasser Arafat's Fatah organization. On 6 January Saddam Hussain declared that the impending military conflict would be a 'battle for the sake of Palestine'. After the failure of meetings in Geneva on 9 January between the Iraqi Minister of Foreign Affairs, Tariq Aziz, and the US Secretary of State, war was generally accepted as inevitable.

IRAQ ATTACKS ISRAEL

On 19 January 1991, less than three days after the multinational force had begun a massive aerial bombardment of Iraq, Iraq launched an attack on Israel, employing adapted *Scud* missiles against Tel-Aviv and Haifa. The missiles were fitted with conventional, rather than chemical warheads, and although damage to buildings was considerable, casualties were light. Further attacks with *Scud* missiles on the nights of 20 and 22 January provoked panic, but resulted in only two deaths. The attacks drew immediate demands for retaliation from some senior Israeli military figures and politicians, but both the USA and the European members of the multinational force vigorously urged Israel to exercise restraint. Their concerns were obvious: while Arab states in the force had indicated that they would not be opposed to Israel taking appropriate and proportionate defensive action against an Iraqi attack, Syria and Egypt had made it quite clear that they could not remain aligned against Iraq if Israel were to attack it. Furthermore, Jordan had warned Israel that it would be forced to respond if there was any violation of its airspace. The US Administration backed its calls for restraint with an urgent airlift of *Patriot* anti-missile batteries to Tel-Aviv, and undertook to make the destruction of Iraq's mobile missile launchers a military priority. To be courted so attentively by the West after such a long period of soured relations was an agreeable novelty for Israel, and not one it had much incentive to jeopardize. Given the intensity of the bombing of Iraq, Israel's leaders were aware that any Israeli contribution to the campaign would be militarily insignificant as well as potentially catastrophic in political terms. Moreover, the Israeli Government knew that as long as the casualties from the *Scud* attacks remained minimal and chemical warheads were not employed, domestic pressure for retaliation would be containable. Shamir consequently assured the USA that there would be no unilateral retaliation by Israel. Immediate benefits were reaped from the policy of restraint: the USA indicated that it would provide funding for the development of Israel's anti-ballistic missile project, hitherto in some financial difficulty, while Germany promised up to US $1,000m. in military and economic aid. However, just as important for Israel's leaders was the wave of international sympathy for Israel which the Iraqi attacks provoked.

THE CONSEQUENCES OF IRAQ'S DEFEAT FOR THE PLO

Palestinians of the West Bank and Gaza endured a strict curfew for most of the duration of the war in the Gulf. The UNLU and Hamas instructed their supporters not to clash with the Israeli army during the curfew in order to avoid reprisals. Nevertheless, a number of people were shot and killed for curfew violations. The economic impact of the curfew was severe. According to Palestinian economists, losses to the local economy ranged from \$150m.–\$200m., equivalent to approximately 8% of the GDP of the Occupied Territories.

The decisive defeat of Iraq by the multinational force in February 1991 left the PLO demoralized and in its most vulnerable state for several years. As expected, the Gulf Co-operation Council (GCC) countries cut their funding to the PLO, thereby raising the prospect of financial crisis. It was also made clear in the USA and the Gulf that the best chance of improving relations lay in a change in the PLO leadership. Overtures were made by Saudi Arabia and other GCC member states to anti-Arafat Palestinian groups based in Damascus, but, given the political radicalism and the small following of these factions, it was difficult to imagine what Saudi Arabia hoped to achieve. Within the PLO itself there were a number of senior figures, for the most part identified with the conservative wing of Fatah, who had voiced criticism of the organization's support for Iraq and who could have formed the nucleus of a leadership acceptable to both Saudi Arabia and the USA. Yet the fact that the PLO had enjoyed overwhelming support among Palestinians for its stance on the Gulf crisis proved an important antidote to US and Arab hostility. The EC adopted a more pragmatic approach towards the PLO. At the conclusion of hostilities with Iraq it agreed to 'freeze' contacts at ministerial level. By the end of April 1991, however, the French Minister of Foreign Affairs, Roland Dumas, had met Yasser Arafat in Tripoli.

BAKER VISITS THE MIDDLE EAST

The Israeli Government drew comfort from the PLO's isolation, but was wary of the political pressures that might accompany the post-war search for a resolution of the Arab–Israeli conflict. As expected, US Secretary of State Baker undertook several tours of the Middle East in the weeks following the end of the war. He hoped to persuade Israel and the Arab states which had participated in the multinational force to move towards mutual recognition, and to win support for a regional peace conference, to be sponsored by the USA and the USSR. It soon became clear, however, that these propositions were not acceptable to either side. Although the Israeli Minister of Foreign Affairs, David Levy, indicated that Israel would give its approval to such a regional conference if it led directly to bilateral talks, and conceded that issues like the status of the Golan Heights could be negotiated, these were not views shared by Shamir and most of his colleagues within the Likud. Rebuking Levy, Shamir stated his opposition to Soviet involvement in the Middle East peace process. He also opposed negotiating the future of the Golan Heights or making goodwill gestures to the Palestinian population of the West Bank and Gaza, as urged by Baker, as long as the *intifada* continued. After the US Secretary of State had held talks with leading pro-PLO figures in East Jerusalem, Shamir warned that Israel did not consider any of them to be suitable partners for negotiation.

Israel's Arab neighbours expressed their own reservations about Baker's proposals. After lengthy talks with Baker in Damascus, Syrian officials reaffirmed that Syria would only attend a peace conference held under UN sponsorship and based on the implementation of UN Security Council Resolutions 242 and 338. Jordan and the PLO indicated that they were in full agreement with Syria. The PLO also voiced its suspicions that the concept of a regional conference had been promoted with the intention of normalizing Arab–Israeli relations and of avoiding the issue of Palestinian national rights. The PLO was relieved by the reluctance of the GCC states to open a dialogue with Israel. At the end of May 1991 PLO representatives made a rare visit to Damascus in order to discuss their common position with Syria on the peace process. Syrian officials also urged the PLO to readmit pro-Syrian Palestinian groups, including Fatah rebels from the 1983 revolt and the PFLP-GC, into the Organization.

Baker was reluctant to apportion blame for the lack of progress in his peace mission. However, the continued settlement of Soviet Jewish immigrants in the Occupied Territories angered the US Secretary of State enough for him to testify: 'I don't think there is any bigger obstacle to peace than the settlement activity that not only continues unabated but at an enhanced pace'. Further US pressure on Israel, regarded by much of the international community as essential if the opportunity for a peace agreement in the Middle East was not to be missed, did not materialize. Continued US arms supplies to Israel and the Gulf states, together with promises that the USA would guarantee Israel's regional military superiority, appeared to contradict President Bush's stated goal of working towards disarmament in the region, and heightened Arab cynicism about the US President's much-vaunted 'new world order'.

WORSENING CONDITIONS IN THE OCCUPIED TERRITORIES

There was little optimism in the Occupied Territories following the defeat of Iraq. After the lifting of the curfew many Palestinians discovered that they had lost their jobs in Israel to Soviet immigrants. Another series of knife attacks, including the killing of four women at a bus stop in Jerusalem in March 1991, prompted the Israeli authorities to impose further travel and employment restrictions. Only Palestinians with the requisite permits were allowed to enter Israel, including East Jerusalem. Those Palestinians fortunate enough to be issued with work permits had to be transported in buses to and from work by their employers. Those found working without permits faced fines or imprisonment. The result was soaring unemployment in the West Bank and in Gaza and the effective division of the West Bank into northern and southern zones. Concerns over the economic situation and continued Israeli settlement were raised in meetings with the US Secretary of State. There was debate within the Occupied Territories as to whether these meetings were appropriate, and the Palestinians who did meet Baker only did so after they had received the formal authorization of the PLO. Nevertheless, the US Administration's refusal to hold direct talks with the PLO led the organization's Communist and PFLP affiliates to boycott the meetings.

Adding to Palestinian gloom was uncertainty over the direction of the *intifada*. The killing and intimidation of Palestinians by other Palestinians, increasing criminal activity and further outbreaks of violence between followers of Hamas and the PLO factions were causing much public alarm. Several articles appeared in the Arab press in the first half of 1991, urging an end to the killing of suspected collaborators and a complete reappraisal of *intifada* tactics. Palestinian activists subsequently announced that strikes and demonstrations would be scaled down, and efforts made to control the masked fugitives responsible for most of the *intifada's* excesses. The use of firearms against military targets was widely predicted. Calls were made for greater democracy within the PLO, including elections to the PNC. Senior Communist Party officials also challenged the Palestinian leadership over its uncritical support for Iraq during the Gulf War and for having unrealistically raised Palestinian expectations of an Iraqi victory.

THE SYRIAN-LEBANESE TREATY

In May 1991 the Syrian and Lebanese Presidents signed a treaty of 'fraternity, co-operation and friendship', confirming Syria's dominant role in the affairs of its neighbour. Israel condemned the treaty as tantamount to a Syrian takeover of Lebanon and as a threat to its security. On 3 June the Israeli air force launched its heaviest raids on Lebanon since 1982. At least 20 people were killed and many injured in a series of attacks on Palestinian and Lebanese militia targets in the south of the country.

NEGOTIATIONS WITH SYRIA

Meanwhile PLO forces grouped around the Lebanese port of Sidon fell victim to the Lebanese Government's plan to disarm the country's militias and deploy the Lebanese army nationally. The attempts of PLO leaders to persuade the Lebanese Government that their forces should be exempt from the disarmament process, or at least that the process should be delayed until the

rights of the country's Palestinian population had been formally safeguarded, were ignored. At the beginning of July, in a brief but bloody battle, units of the Lebanese army expelled PLO fighters from positions above Sidon. The defeated Palestinians withdrew to the refugee camps and were subsequently forced to give an undertaking to surrender their heavy weaponry. The circumstances surrounding the PLO's loss of its sole military stronghold in Lebanon fuelled speculation that Syria, deprived of its Soviet sponsor, had reached an understanding with the USA whereby the latter would tolerate Syria's control over Lebanese affairs in return for President Assad's backing for the Bush administration's Middle East peace plans. Palestinians expressed suspicions that Damascus and the USA had been conspiring to ensure that the PLO remained militarily weakened and diplomatically isolated.

The extent to which the end of the 'cold war' had pushed Syria to revise its foreign policy was underlined in dramatic fashion in mid-July. During US Secretary of State James Baker's fifth peace mission to the Middle East, it was announced that President Assad had acceded to US and Israeli conditions for the convening of a Middle East peace conference. Abandoning his long-held insistence that any conference on the Arab–Israeli dispute should have the coercive weight of the UN behind it, Assad gave his consent to a more symbolic gathering. Although based on UN Resolutions 242 and 338, this would only feature the UN in the role of an observer and would pave the way for direct negotiations between Israel and its Arab adversaries. Assad agreed to a joint Soviet-US chairing of the proposed conference with EC observers also present.

TOWARDS A PEACE CONFERENCE

The Syrian *volte face* was swiftly followed by Jordanian, Egyptian and Lebanese acceptance of the USA's proposals. Baker also received the backing of the G7 nations meeting in London, United Kingdom, and, more significantly, of Saudi Arabia. Saudi Arabia also gave its support to an Egyptian proposal that the Arab states should end their trade boycott of Israel in return for a 'freeze' on new settlements in the Occupied Territories, a gambit that Israel declined. Indeed, despite a *de facto* Arab capitulation to Shamir's conditions, the Israeli Government's attitude to the progress engineered by Baker was far from generous. The Israeli Cabinet endorsed Shamir's acceptance of the Baker conference proposals, but with the proviso that Israel hold a veto over the composition of any Palestinian negotiating team. Even this, however, failed to satisfy three right-wing members of the Cabinet, including Ariel Sharon, who voted against Israel's acceptance of the Baker formula. Moreover, in a pointed snub to both Arab states and the USA, which were hoping for a goodwill gesture from Israel in return for Arab flexibility, a new West Bank settlement was inaugurated less than two days after the cabinet meeting.

At the heart of Palestinian uncertainty over the proposed conference lay the issues of representation and settlement. It was accepted that the PLO would not participate officially and that Palestinians might have to be represented as part of a joint team with Jordan, but the threat of an Israeli veto of a Palestinian delegation that included East Jerusalem residents, led those Palestinians who had met with Baker to warn that they might not get popular backing for their attendance. They also demanded that the USA should apply pressure on Israel to halt settlement during negotiations, and that a letter of assurance be drafted on such issues as the USA's interpretation of UN resolutions and its commitment to mandatory international arbitration in the event of a deadlock in negotiations. Some PLO factions, notably the PFLP and the DFLP faction loyal to Naif Hawatmeh, rejected Palestinian participation outright. The PFLP issued a communiqué within the Occupied Territories calling the conference 'a conspiracy aimed at bypassing the PLO and Palestinian rights'. The fundamentalists of Hamas were even more forthright in their opposition, condemning the Baker proposals as a 'conference for selling land' and threatening any would-be participants. However, the two leading Palestinian participants in the Baker talks, Faisal Husseini and Hanan Ashrawi, made it clear that it would be the PLO which ultimately decided whether the Palestinians were represented at the conference.

It was clearly dangerous for the PLO to exclude itself from a process that might offer an opportunity to end the occupation of the West Bank and Gaza. However, the PLO was concerned that by giving approval to the peace conference it might be abdicating its role as the Palestinians' sole representative. There was also the sobering realization that the Organization could no longer rely on the support of Arab states for its own negotiating positions and that there was a real danger that a normalization of Arab–Israeli relations could be achieved without addressing the fundamentals of the Palestinian problem. Initiatives by the PLO, supported by Jordan, to organize a meeting with Arab front-line states in order to co-ordinate negotiating positions in the run-up to the conference, were rejected by Egypt and Syria.

At the end of August the PLO held a meeting in London, United Kingdom, attended by a number of Palestinian personalities from the Occupied Territories, to set guidelines for the letter of assurances from the USA that would facilitate Palestinian participation in the planned conference. The letter that Baker did finally present to Hanan Ashrawi in Amman did not fulfil all the Palestinian criteria for attending the conference, not least because Baker refused to contradict assurances he had already given to Israel. Arafat described the letter as 'a positive step, but one which fell short', referring to the fact that while Baker had clarified the US interpretations of the relevant UN resolutions and the status of East Jerusalem, which agreed with that of the Arabs, there was no mention of the USA's commitment to Palestinian self-determination nor any proposals for a resolution of the Jerusalem issue. Nor was there any suggestion that Baker would demand a 'freeze' on settlements in the Occupied Territories or allow the PLO to formally nominate the Palestinian delegation. Arafat left it to the PNC meeting in September to debate the question of Palestinian involvement in the peace conference. The Council's resolutions reiterated Palestinian commitment to the principle of autonomy, but such was the pressure on the PLO—from the USA and the Arab states—to support the US proposals that by the end of September 1991 it was clear that the Palestinians would be sending representatives, albeit on terms that were far from satisfactory. Jordan, with which the Palestinians were now certain to form a joint delegation, had assured the PLO leader that it would fight for Palestinian objectives, but had also stressed that it would attend the conference whether these were achieved or not. Moreover, the failure in the Soviet Union of the attempted coup, which had been welcomed by some prominent Palestinians, removed any hopes that the USSR would counteract US authority in the Middle East.

SUSPENSION OF LOAN GUARANTEES

Israel, meanwhile, was engaged in its own battle of wills with the Bush administration. The Likud Government had sought US $10,000m. in loan guarantees from the USA in order to help the settlement of immigrants from the USSR. However, in the run-up to the peace conference the combination of Bush's displeasure at the continuing settlement, and a desire not to offend Arab sensibilities, led the US President to ask Israel for a four-month delay in its formal submission for the loan guarantees. Bush also warned that if the loan request was approved by the US Congress, he would impose his veto. Shamir accepted the challenge and set Israel's formidable lobbying machine in motion. However, opinion polls in the USA suggested that an overwhelming majority of the public supported the Government's position and this was reflected in congressional support for the President's stance. It was the first time since the Suez crisis that a US administration had made aid conditional on Israeli policy.

THE MADRID CONFERENCE

The peace conference, to be held in Madrid on 30 October 1991 (see Documents on Palestine, p. 120), was preceded by a series of inter-Arab meetings. Denied the Arab summit he had originally proposed, Arafat was nevertheless invited to talks in Cairo, Amman and Damascus—his first visit to the Syrian capital for eight years—where he was assured that there would be no Arab concessions until the question of territory was resolved. Faced with Israel's insistence that residents of East Jerusalem be barred from the Palestinian negotiating team, the PLO offered a compromise whereby the Palestinian delegation should

include an advisory body made up largely of East Jerusalem residents. The USA supported this proposal, recognizing the advisers as an official part of the Palestinian delegation. Dr Haider Abdel Shafei, veteran chief of the Gaza Red Crescent Society, was named head of the negotiating team and Hanan Ashrawi was to be chief spokesperson. Faisal Husseini was in overall charge of the delegation which included supporters of Fatah, the Abed Rabbo faction of the DFLP, and the PCP as well as several independents. Shamir decided to head Israel's team himself, intimating that he did not trust the Minister of Foreign Affairs, David Levy, with such an important mission.

As Israel had never before attended a peace conference with its Arab neighbours, including the Palestinians, the Madrid conference generated intense media interest. In spite of the precedent, however, no real progress was made. During the three-day plenary session the Israeli delegation offered no prospect of an Israeli withdrawal from the Occupied Territories, while Arab Ministers of Foreign Affairs and Palestinians stated that there could be no peace without territorial compromise. Exchanges between Syria and Israel were particularly hostile and rapidly degenerated into mutual invective. Predictably their first round of bilateral talks, which followed the plenary sessions, ended in early deadlock, Syria's Minister of Foreign Affairs left Madrid repeating that Syria would not attend the proposed multilateral negotiations on regional issues until Israel committed itself to territorial concessions. Israel's talks with the other Arab delegations were more cordial but scarcely more productive. On the two principal issues of discussion, a venue and an agenda for the second round of talks, there was no agreement. Israeli officials demanded that the negotiations be held in the Middle East to emphasize the regional rather than the international nature of the process, and, for the opposite reason, the Arab states and the Palestinians insisted on a European venue. Only the Palestinian delegation had cause for satisfaction after the Madrid conference. It had won an early procedural victory by gaining the same (45 minute) period in which to make its representations as the other Arab delegations, and enjoyed public relations successes with eloquent and dignified articulations of the Palestinian case. Madrid was also significant for the Palestinian acceptance that self-determination should follow a period of autonomy in the Occupied Territories. However, the presence in Madrid of a high-level PLO delegation left little doubt that the Palestinian team was in close contact with the PLO.

The impression that the Palestinians had successfully exploited the opportunities afforded by the Madrid conference was reflected in several peace marches in the Occupied Territories. Some were tolerated by the Israeli army, but others ended in confrontation; a 15-year-old from Hebron became the one-thousandth casualty of the *intifada* when he was shot dead during a demonstration in support of the conference. However, the strong support for a general strike called by Hamas and the Popular and Democratic Fronts to protest against the conference underlined the strength of the radical opinion opposed to Palestinian participation in the peace talks. Meanwhile in southern Lebanon there were Israeli and SLA air strikes and artillery bombardments of Shi'ite and Palestinian positions, ostensibly in revenge for successful Palestinian and Hezbollah ambushes.

THE WASHINGTON CONFERENCE

The failure of the Arabs and Israelis to agree a venue or agenda for the next session of bilateral talks prompted James Baker to issue invitations for negotiations in Washington on 4 December 1991. A set of US guidelines suggesting how each delegation might conduct its negotiations was included with the invitations. However, while these efforts to maintain momentum in the peace process were largely welcomed by the Arab side, they were coolly received in Israel. Shamir announced that the Israeli delegation would not be going to Washington until five days after the scheduled opening of the talks. US disappointment was contrasted with satisfaction from Israeli government hardliners who applauded the 'revolt against American compulsion' and called on Shamir to take further steps to disrupt the peace process.

Israel's decision was interpreted in the Occupied Territories, as in the rest of the Arab world, as evidence of Shamir's contempt for the peace process. On the West Bank and in Gaza, it became increasingly difficult to convince the growing number of sceptics that there was any value in pursuing negotiations with an intransigent Israel. A decision by the USA to refuse US visas to several senior PLO figures who had played a covert role in Madrid further eroded Palestinian goodwill. Yasser Arafat tried to mobilize Arab support for a delayed attendance at the talks in solidarity with the PLO, but he was informed that the Arabs in general and the Palestinians in particular could not afford to be seen to disrupt the peace process. In the end the Palestinian delegation registered its disapproval by delaying its flight to Washington by 12 hours.

Israel's absence from the first days of the talks meant that the Arab delegations had to sit opposite empty chairs in the conference rooms. When the Israeli delegation did arrive, they immediately tried to undermine the Palestinian status as a delegation in their own right in Madrid by refusing to negotiate on Palestinian issues with a team that did not come under Jordanian auspices. As a result most of the time allocated for Israeli-Palestinian and Israeli-Jordanian talks was spent on procedural issues. The questions of a 'freeze' on settlements in the Occupied Territories, interpretations of UN resolutions and the nature of interim autonomy in the Occupied Territories were barely discussed. Israeli talks with Syrian and Lebanese delegations also achieved very little. Israel's refusal to accept that Resolution 242 called on it to withdraw from occupied Arab territories continued to infuriate the Syrians. Lebanese-Israeli talks were less disorderly but threatened to founder on the Lebanese insistence that Resolution 425, calling for an Israeli withdrawal from Lebanese territory, was non-negotiable, and Israeli demands that it had to be discussed as part of the peace process. As the deadlock increased, the Arab delegation signalled that there was need of some form of US intervention. However, Baker had indicated that the USA would be adopting a 'hands-off' approach, commenting that the USA could not want peace more than the concerned parties themselves. For the Arabs this was tantamount to a surrender to Israeli obstructionism. 'If the Americans want us to talk to Israel without them . . . well, we have done', commented one Arab delegate, 'Without US intervention, however, they should have known success would be a long shot'. In New York, meanwhile, the UN General Assembly voted overwhelmingly to repeal its 1975 Resolution equating Zionism with racism. Several Arab states refused to participate in the vote.

EVENTS IN THE OCCUPIED TERRITORIES

Palestinian frustration was exacerbated by the accelerated settlement drive in the Occupied Territories. Indeed 1991 had been the most vigorous year for the building of settlements in nearly 25 years of occupation. Under the supervision of the Ministry of Housing, work had begun on 13,500 housing units in the Occupied Territories, excluding East Jerusalem, a 65% increase over all the units established in the previous 23 years. It was also reported that 13% of immigrants from the former USSR were being settled on occupied Arab lands, boosting the Israeli population in the territories to over 200,000. While the Washington talks were in progress a leaked report revealed that government approval had been given for a massive programme of Jewish colonization of Arab neighbourhoods in East Jerusalem. This was confirmed in mid-December, when a combined force of settlers and Israeli police took over several houses in the Silwan district of the city, evicting Palestinian families in the process. 'The Israelis are destroying the ground under our feet', commented Faisal Husseini on the effects of the settlement policy on his efforts to build support for the peace process. Israel's decision in early January 1992 to deport a further 12 Palestinians (reportedly in retaliation for the killing of a Jewish settler in Gaza) and to establish a settlers' civil guard in the West Bank and in Gaza, was further evidence that the Shamir Government was trying to provoke the Palestinians to withdraw from the peace talks, or, at least, to widen the rift between opponents and supporters of negotiation.

Clashes between Fatah and Hamas activists in Gaza and the West Bank became increasingly common as the *intifada* entered its fifth year. Despite appeals from PLO figures and community leaders for an end to the killing of collaborators, suspected informers were still stabbed and shot almost daily. In the refugee camps of Gaza and the nationalist strongholds of the

West Bank the knives and axes once carried in ceremonial fashion by masked activists were being replaced by pistols and automatic rifles. As predicted, there was an increase in armed attacks on settlers and soldiers at the beginning of 1992. In the most serious incident, in mid-February, three soldiers were bludgeoned to death in a raid on an army camp just inside the 'Green Line'. Meanwhile, Israel's Ministry of Defence relied more heavily on the activities of undercover units to combat the *intifada*. An upsurge in what witnesses described as summary executions of Palestinian activists led journalists and human rights organizations to accuse Israel of operating Latin American-style death squads in the Occupied Territories.

Following the deportation orders in January, the Palestinians decided to postpone the sending of a delegation to the next round of bilateral talks in Washington. The other Arab delegations subsequently agreed to follow the Palestinian lead. The deportations also seemed to draw a more conciliatory line from the Bush administration; visas, which had been refused to PLO members the previous month, were now granted. When the negotiations began on 16 January, Israel dropped its earlier objections to separate Palestinian representation, but refused to address the principal items on the Arab agenda, namely the interpretation of Resolution 242, borders, and settlements. The Palestinian delegation was told that the issue of settlements had no bearing on the autonomy details and could only be discussed when the final status of the territories had been decided. Arab frustration was compounded by the premature departure of the Israeli delegation. Israel's steadfast avoidance and obstruction of substantive negotiations created profound disillusion in Palestinian ranks; many believed that it was only to avoid alienating the USA while the question of loan guarantees was in the balance that Israel remained at the conference table. It was also recognized that US President Bush was unlikely to pressurize Israel into breaking the deadlock with an election due in November.

TALKS IN MOSCOW

The prospect of a negotiated settlement receded further in January 1992 when the far-right Moledet and Tehiya parties resigned from the Israeli Government in protest at discussion of Palestinian autonomy in the Occupied Territories. This left the Shamir Government without a majority in the Knesset and made an early election inevitable. Nevertheless, multilateral regional talks opened in Moscow at the end of January. With inter-Arab relations still strained in the wake of the 1991 Gulf War, it came as little surprise that they failed to agree on a coherent policy. Eleven states attended, a sufficient number for Israel to claim a diplomatic breakthrough, while Syria and Lebanon stuck to their earlier promise to observe a boycott of regional talks until progress had been made in the bilateral negotiations. The PLO, concerned at Arab disarray but determined to use the multilateral session to highlight the issue of Palestinian representation, sent a delegation composed of personalities from the West Bank and Gaza, Jerusalem and the diaspora. While conceding that representatives from the diaspora and Jerusalem could be included in some of the working groups that the conference was to establish—on the refugee problem for example—the USA only issued invitations to the plenary session to Palestinian delegates from Gaza and the West Bank. Believing that they had already made too many concessions, especially on the issue of representation, the Palestinian delegation refused to attend the talks. US Secretary of State Baker voiced his disappointment at the Palestinian decision and promised that diaspora Palestinians could be included in two of the five working groups scheduled to meet in the spring. The Palestinians had demanded free representation on all five, but could take some solace in the fact that their fears of Israeli and Arab participants taking steps towards normalizing relations were unfounded.

ESCALATION OF HOSTILITIES IN LEBANON

On 16 February 1992 the leader of the Lebanese Hezbollah, Sheikh Abbas Mussawi, was killed in an Israeli helicopter attack on his motorcade in southern Lebanon. Moussawi's wife, child and several bodyguards also died. Many observers were puzzled by the assassination; for all its anti-Israeli rhetoric Hezbollah had never launched attacks against targets inside Israel, nor had there been a noticeable increase in raids on the IDF or its SLA allies in the Israeli security zone prior to the killing. One SLA spokesman even described Hezbollah as 'militarily insignificant'. Moreover, the killing halted negotiations to exchange Lebanese and Palestinian prisoners in return for news of Israeli servicemen missing in Lebanon. It also provoked an escalation of warfare in the south. Hezbollah rocket attacks on northern Israel were followed by heavy Israeli shelling of Shi'ite villages. Syria eventually persuaded Hezbollah to halt its salvoes, which led the organization to search for other means of retaliation. On 9 March Israel's chief security officer in Ankara was assassinated, and on 17 March a massive car-bomb wrecked the Israeli Embassy in Buenos Aires, Argentina, leaving 30 dead. Responsibility for both attacks was claimed by Islamic Jihad.

The situation in Lebanon deepened the pessimism surrounding the peace process. The Israeli delegation arrived in Washington for the fourth round of bilateral talks in an unforgiving mood. At the end of February James Baker had finally ended speculation over Israel's request for $10,000m. in loan guarantees. He told Congress that they would not be granted unless there was a halt to new settlement activity in the Occupied Territories, a condition that Shamir had already rejected.

BILATERAL TALKS IN WASHINGTON

Negotiations over the form of Palestinian autonomy within the Occupied Territories confirmed the extent of the gulf between Israel and Arab–Palestinian aspirations. The Israeli delegates outlined a proposal which would maintain Israeli control over land, and guarantee the right of unlimited settlement and full responsibility for public order. There was no mention of elections with the implication that the limited administrative powers devolved to the Palestinians would be executed by official appointees. This contrasted with the Palestinian plan for a Palestinian interim self-governing authority along with the election of a legislative assembly, a halt to all settlement, a transfer of judicial and administrative power and the phased withdrawal of Israeli forces leading to Palestinian self-determination throughout the Occupied Territories. A US State Department spokesman described both positions as 'maximalist', but went on to criticize the Palestinians for trying to pre-empt the negotiations by declaring sovereignty as their goal. Although this criticism reflected the USA's longstanding opposition to a Palestinian nation, it was interpreted as an attempt to counterbalance the refusal to grant Israel's loan guarantees. Israel's outright rejection of territorial compromises left negotiations with Syria and Jordan in stalemate. Trying to negotiate with Israel, said a Syrian spokeswoman, was 'an exercise in futility'.

REACTIONS IN THE OCCUPIED TERRITORIES AND ISRAEL

Within the Occupied Territories there was further opposition to continued Palestinian involvement in the peace process. The PCP, renamed the Palestinian People's Party (PPP), had initially supported the Washington talks, but withdrew its backing during the fourth round after the Palestinian delegation had agreed to negotiate on the issue of autonomy without having secured Israel's prior agreement to a settlement 'freeze'. Yet more evidence of public opinion turning against the talks came in the elections to the Ramallah Chamber of Commerce in early March. Hamas supporters won a clear majority of seats despite the fact that Ramallah had a sizeable Christian majority and had long been considered as the stronghold of liberal, secular nationalism.

Party manoeuvring and infighting were also in evidence in Israel in the run-up to the general election. In February 1992 Shimon Peres was deposed as the leader of the Labour Party by his more 'hawkish', but equally veteran colleague, Itzhak Rabin. Rabin's reputation as a 'hardliner' on defence and security was widely regarded as a boost to the Labour Party's battle to win voters from Likud. Their fortunes were further enhanced by rifts within the Likud ranks. In a speech broadcast live on Israeli TV, the Minister of Foreign Affairs, David Levy, angered by what he claimed was a plot against his supporters during internal party elections, accused Likud of being 'racist'. Although he was dissuaded from resigning, Levy's vitriolic attack on his own party undoubtedly contributed to steady

Labour gains in the opinion polls. Meanwhile three parties of the centre-left, the Civil Rights and Peace Movement, Shinui and Mapam, decided to merge their lists to form a new electoral bloc, Meretz.

The fifth round of the bilateral talks were held in Washington at the end of April 1992, but were largely overshadowed by the Israeli election campaign. As predicted, the Israeli delegation arrived in Washington with a plan for phased municipal elections in the West Bank and in Gaza. The Palestinian delegation offered to consider the proposal, but reiterated its commitment to a nationally-elected legislative assembly. Hanan Ashrawi later described municipal elections as 'a dead-end'. There was also a suspicion among Palestinians that the Israeli offer was a Likud public relations exercise designed to win the moderate vote. Interestingly, those Palestinian factions which had raised the strongest objections to the autonomy negotiations—Hamas, the PFLP and DFLP—argued that municipal elections were a better option precisely because they did not commit Palestinians to the autonomy plan. Following its gains in the Ramallah Chamber of Commerce election, Hamas also viewed municipal elections as a welcome test of strength against a divided nationalist bloc. However, in elections to the Nablus Chamber of Commerce in mid-May, the nationalist bloc, standing as the National Muslim Coalition, won nine of the 12 seats contested.

There was an increase of violence associated with the *intifada* in the weeks leading up to the election. Four Palestinians were shot dead and 80 injured in Rafah on 7 April and several were killed in armed clashes during May. There was also a rise in the death-toll during demonstrations. The killing of an Israeli girl in a Tel-Aviv suburb at the end of May by a lone Palestinian was the catalyst for several nights of anti-Arab rioting and a government decision to further restrict the movement of Gazans into Israel; unemployment rates in some parts of the Gaza Strip were reported to exceed 50%. The stabbing of an Israeli settler in Gaza shortly afterwards was followed by widescale destruction of Palestinian crops and property.

In mid-June 1992 members of the Palestinian negotiating team travelled to Amman for a televised meeting with Yasser Arafat. Israeli government ministers condemned the meeting and demanded the arrest of the participants on their return. The USA made clear its firm opposition to such measures, leaving Israel's Minister of Police to make the somewhat lame threat of calling in the Palestinians concerned for questioning.

ELECTION VICTORY FOR LABOUR

A combination of public discontent over the economy, the state of relations with the USA, the plight of Russian immigrants and the lack of progress in the peace process, made Labour gains in the Israeli elections on 23 June inevitable. However, the extent of the Labour majority over the Likud, 44 seats to 32, exceeded most expectations. Meretz became the third largest party in the new Knesset with 12 seats, while the right-wing Tzomet Party, headed by the fiercely anti-clerical Rafael Eitan, made an unexpectedly strong showing and won eight seats. The right-wing Tehiya Party failed to win any seats. There was a slight drop in support for the orthodox religious parties and the Arab-dominated lists.

As expected, Meretz entered into partnership with Labour. The inclusion of the Sephardi Orthodox party, Shas, gave Rabin an overall majority, but an attempt to increase his majority and broaden his constituency by recruiting Tzomet into the coalition came to nothing. Former Labour leader Shimon Peres was appointed Minister of Foreign Affairs in the new Government, while Prime Minister Rabin retained the defence portfolio.

INITIAL REACTIONS TO RABIN

The USA and the EC, in the belief that only a Labour victory could keep the peace process alive, warmly welcomed the outcome of the election. The defeat of Shamir and the Likud was also greeted with relief in the Arab capitals where the attitude towards the new Israeli Government was one of official caution and unofficial optimism. The reaction of Palestinians was more equivocal. Those who had supported the peace negotiations saw Rabin's election as a positive development. But left-wing and Islamic factions feared that a Labour government would pave the way for an agreement on the autonomy proposals they so bitterly opposed. Relations between Fatah and Hamas supporters in particular grew more volatile following the election and, in July, the Occupied Territories witnessed the worst round of internecine fighting in many years. Several people had been killed and scores injured in gun battles and street confrontations before an uneasy truce was brokered.

Rabin's initial comments on the peace process did little to reassure Palestinians. He stated that he would be willing to travel to any Arab capital to pursue peace negotiations, but stopped short of instituting the settlement 'freeze' the Palestinians had demanded. He promised a halt to the building of 'non-political' settlements, but insisted that all existing contracts would be honoured. This was positive enough for Egypt's President Mubarak to issue an invitation to Rabin to visit Cairo—the first visit by an Israeli Prime Minister for six years—and for the USA to intimate that it might release at least part of the $10,000m. in loan guarantees that Israel had requested. In mid-July James Baker began another round of 'shuttle' diplomacy in the Middle East in an effort to reactivate the peace process. In the wake of the Baker mission, Arab leaders, including the PLO, met in Damascus with Palestinians from the Occupied Territories in order to co-ordinate policy before a possible renewal of bilateral talks.

In mid-August Rabin travelled to the USA for a visit intended to restore US–Israeli relations to their traditional amicability after the frostiness of the Bush-Shamir years. The Israeli Prime Minister left Washington with pledges of further military aid and assurances of Israel's enhanced strategic importance to the USA in the post-'cold war' era. For his part, Rabin promised that the coming round of bilateral talks would achieve progress on substantive issues.

OPTIMISM AND DISAPPOINTMENT

Rabin's optimistic approach to the peace process was not shared by the Palestinians. There was disappointment that the new Israeli Government had refrained from implementing a complete 'freeze' on settlement in the Occupied Territories, and dismay at the USA's readiness to grant the $10,000m. in loan guarantees without such a policy change. Moreover, the goodwill measures that the Labour Government had announced prior to the resumption of negotiations—the rescinding of deportation orders against 11 Palestinians, the release of a small number of political prisoners and the reopening of some of the roads sealed during the *intifada*—were considered to be little more than political cosmetics. Government spokesmen in Jordan and Syria also expressed concern at the repercussions that the rapidly improved US–Israeli relations would have on the USA's supposed impartiality as co-sponsor of the peace process.

Despite Arab reservations, Israel's continued intimations that there was a real prospect of a breakthrough in the stalled peace process ensured that the mood before the sixth round of bilateral talks began in Washington was more sanguine than for some time. Delegates spoke of a 'positive new tone' and a constructive informality that previous encounters had lacked. However, by the end of the fourth week, the longest round of bilateral talks to date, the Arab parties described the negotiations as deadlocked. Syria's chief negotiator accused Rabin's Government of exhibiting 'exactly the same attitude and policy as Shamir'. His comments were provoked by Israel's insistence that Syria should commit itself to a full, normal peace with Israel before the issue of withdrawal from the Golan Heights could be discussed. The Palestinian delegation expressed similar frustration with its Israeli counterpart on the 'land for peace' issue. While the Palestinians insisted that the entire peace process—including discussions on Palestinian autonomy—should be guided by Resolution 242, the Israelis argued that UN resolutions were only applicable to negotiations on the ultimate status of occupied Arab land. Hanan Ashrawi, the chief Palestinian spokesperson, told journalists that Israel was still adhering to the notion of 'autonomy for the people but not the land'.

PEACE TALKS FOUNDER

The failure of the sixth round to produce tangible results strengthened the hand of Palestinian groups opposed to the peace process. Meeting in Damascus in mid-September 1992, 10 Palestinian organizations, four from within the PLO and six from outside, signed a memorandum urging a withdrawal from the

Madrid process. A strike called by the 10 factions was widely observed in the Occupied Territories and caused clashes between Fatah and Hamas supporters. However, while pressure from the rejectionist group narrowed Arafat's field of manoeuvre and reflected the substantial opposition to further Palestinian involvement in the Washington talks, other developments encouraged the Palestinians to remain engaged. Israel's Minister of Justice announced his intention to repeal legislation outlawing contact between Israelis and Palestinians and the PLO, and economic controls were eased in order to allow a less restricted flow of capital to the Occupied Territories. One of the quietest periods in the *intifada* finally came to an end in mid-October when a hunger strike called by Palestinian prisoners in Israeli prisons prompted a series of violent protests in the Occupied Territories and a sharp rise in Palestinian deaths and injuries.

A meeting of the PLO's Central Committee was called by Arafat in October in order to obtain official approval for Palestinian participation in the seventh round of peace talks in Washington. Arafat achieved a minor victory in persuading the PFLP and DFLP to attend the meeting, although both factions refused to vote on the issue of participation and were bitter critics of the Palestinian negotiating position. Their opposition was intensified by reports that Israel was considering an exchange of land in return for peace with Syria. At a meeting of Arab foreign ministers in Amman, Jordan, in mid-October Syria refused to give assurances to its Jordanian and Palestinian colleagues that it would not conclude a separate Israeli-Syrian peace treaty, arguing that progress in the Israeli-Palestinian talks could take years. An angry Arafat cancelled a scheduled visit to Damascus.

The Israeli delegation travelled to Washington for the seventh round of bilateral talks buoyed by the USA's formal approval of the release of $10,000m. in loan guarantees, and with an apparent willingness to discuss 'withdrawal in the Golan' with its Syrian counterpart. However, the proximity of the US presidential election and an expected change to an unambiguously pro-Israeli administration ensured that the negotiations would be cautious. The Israeli-Lebanese dialogue was given a particular poignancy by artillery duels between the IDF and Hezbollah fighters that were prompted by the deaths of five Israeli soldiers in a land-mine explosion. Israel used the pretext of the fighting to try to persuade Lebanon to agree to the establishment of a joint military commission in the south of the country. Lebanon interpreted the offer as a ploy to legitimize Israel's occupation of the south and insisted that there could be no peace without a full Israeli withdrawal. After the Israeli delegation accused its Lebanese counterpart of 'abdicating responsibility to terrorists' and warned that they 'could make normal life impossible' for Lebanon, the Lebanese delegation walked out of the talks. The Israeli-Palestinian dialogue again foundered on disagreement over the applicability of UN resolutions to the interim negotiations on Palestinian autonomy in the Occupied Territories. Deadlock was only averted by Palestinian consent to a series of 'informal' talks on the substance of interim Palestinian autonomy. The Palestinian delegation was at pains to stress the exploratory nature of the talks for fear of being seen to give assent to discussions on the technicalities of autonomy before the broader political principles governing interim and final phase negotiations had been established. Israel's talks with Syria also disappointed. The Israeli delegation had come to Washington prepared to discuss territorial compromise in the Golan, but it rapidly became obvious that it would only commit itself to discussing a limited withdrawal. Talks with Syria were further soured by Israel's repeating of its earlier call that Syria should not hold out for a comprehensive resolution of Arab–Israeli disputes but should 'stand on its own'. Only in the talks between Israel and Jordan was there a modicum of success, with both parties agreeing on a provisional agenda for the next round of talks.

CLINTON ADMINISTRATION TAKES OVER IN USA

The seventh round of bilateral talks coincided with Bill Clinton's victory in the 1992 US presidential election. The outgoing Bush administration was eager to bequeath a viable Middle East peace process to the new Administration and dutifully called for a resumption of talks in December. Not surprisingly, however, there was little enthusiasm for a further round of negotiations before the formal inauguration of the new US President. The Palestinians, under mounting pressure from a sceptical constituency to protest at the lack of progress in, and general media indifference to, the peace process, were the most reluctant to attend. However, with the Arab states committed to returning to Washington, the Palestinians were left to register their unhappiness by sending a delegation of only four to deal with Israel's controversial proposals for Palestinian 'interim self-government'. The draft model for Palestinian autonomy envisaged a stratified system of authority in the Occupied Territories (excluding East Jerusalem); Israeli jurisdiction would be maintained over Israeli settlements, public lands would come under joint Palestinian-Israeli jurisdiction, and an Israeli-supervised Palestinian authority (whose composition and competence were to be negotiated) would govern private Palestinian lands and municipalities. While the Palestinian delegation was not in a position to reject the Israeli proposals outright, it argued that they would lead to the creation of a Palestinian Bantustan.

The inconclusive eighth round of Washington talks coincided with the fifth anniversary of the *intifada*. The character of the Palestinian uprising had changed considerably since its beginnings in Gaza. The popular committees that had served as the *intifada's* original dynamo had long since fallen victim to Israeli repression and factional infighting. The UNLU itself existed largely in name only and its bi-weekly communiqués no longer set the tone or tenor of resistance. Instead the activities of small armed groups had come to be viewed as the principal focus of the uprising. Many of these owed only nominal allegiance to identifiable political factions and some of their more dubious activities, especially the settling of political scores in the guise of eliminating collaborators, had led to heated debate and calls for the young gunmen to be restrained. However, with scant prospect of a breakthrough in the Washington talks, there was undeniable political capital to be made out of successful armed attacks against Israeli targets. Hamas, as self-appointed inheritor of the radical Palestinian mantle and an uncompromising opponent of the peace process, was the best placed, politically and militarily, to exploit the armed option. Bolstered by generous financial backing from Iran (which reportedly paid a bonus for every Israeli soldier killed), Hamas fighters embarked on a spectacular series of military operations. During two weeks in December four Israeli soldiers were killed in Hamas ambushes in Gaza and Hebron, and another was kidnapped inside Israel and later murdered (the IDF lost a further soldier to an Islamic Jihad gunman near Jenin in the same week).

DEPORTATION OF ALLEGED ISLAMIC ACTIVISTS

Rabin promised radical steps to counter the Islamist movement's military successes. On 16 and 17 December 1,600 alleged Hamas and Islamic Jihad activists were detained by the Israeli security forces. Some 413 of those arrested were subsequently transported to the Lebanese border and, with the approval of Israel's Supreme Court, expelled through Israel's security zone into south Lebanon. The Lebanese Government refused to accept the deportees, a stance which the Arab world unanimously applauded, leaving the displaced Palestinians to establish a makeshift refugee camp on a barren mountainside wedged between the IDF and Lebanese army front lines. Although Rabin explained that the deportees would be eligible to return to their homes after a two-year period, the mass expulsions elicited a chorus of international condemnation. The UN Security Council, affirming the inadmissibility of deportations under the Fourth Geneva Convention, unanimously passed Resolution 799 demanding the immediate safe return of the expelled Palestinians. UN Secretary-General Boutros Boutros-Ghali also warned Israel that he might ask the Security Council to take further measures if it did not comply with the UN Resolution. In the Occupied Territories, and particularly in Gaza, where the majority of the deportees originated, Rabin's action provoked another surge of violent street protests—six demonstrators were killed in Khan Yunis on 21 December alone.

The mainstream PLO appeared to benefit from the political and diplomatic repercussions of the deportations. Firstly, it was believed that the PLO would be able to extract significant concessions from Israel and the USA before sanctioning a Palestinian return to the negotiating table; secondly, in the opinion of

some observers, Rabin's demonization of Hamas was effectively paving the way for a future Israeli-PLO dialogue; and thirdly the December events provided Yasser Arafat with an opportunity to manage his troublesome opposition. In reluctant admission of the PLO Chairman's stewardship of the Palestinian cause in times of crisis, Hamas and the Damascus-based 'rejectionists' accepted invitations to a series of talks in Tunis. Although no real concessions were made by either side, with Arafat ignoring calls for a Palestinian withdrawal from the peace process, Hamas representatives agreed to work towards ending sectarian conflict and to co-ordinate activities with Fatah inside and outside the Occupied Territories. Hamas later signalled a significant revision of its maximalist position of settling for nothing less than an Islamic state in all of historical Palestine, by dropping objections to an independent state in part of Palestine.

US ATTEMPTS TO SAVE PEACE PROCESS

The deportations were a clear embarrassment for the new Clinton administration. With the PLO and the Arab states urging the imposition of sanctions on Israel for non-compliance with Resolution 799, Clinton and his Secretary of State, Warren Christopher, persuaded Israel to take steps to defuse international unease over the expulsions. The Rabin Government subsequently announced that the expulsions had been an 'exceptional' measure and that the Palestinians would be allowed to return home before the end of 1993. It added that 101 of the deportees would be allowed back to the Occupied Territories immediately (this was rejected by the deportees' spokesman). Armed with the Israeli concessions, the USA embarked on a vigorous diplomatic campaign to persuade the six 'third world' members of the UN Security Council to abandon their support for sanctions against Israel. The USA argued that Israel had moved towards compliance with resolution 799 and that the imposition of sanctions would irreparably damage the fragile peace process. Madeleine Albright, the new US Ambassador to the UN, also warned that the USA would veto any move to impose sanctions. By 12 February 1993 the USA's heavy-handed diplomacy had borne fruit. The President of the UN Security Council issued a statement to the effect that there was to be no further debate on Resolution 799. He called on all parties 'to reinvigorate the Middle East peace process'. The UN decision caused glee in the Rabin Government, but confirmed the deep-seated Arab and Palestinian belief that Israel was immune to international law.

CHRISTOPHER TOURS MIDDLE EAST

In mid-February Warren Christopher made a tour of the Middle East with the primary intention of enticing the Palestinians and the front-line Arab states to resume talks in Washington. Syria and Lebanon were the easiest targets, since they had already indicated that they were prepared to separate the deportation issue from the peace process. However, Syria's President Assad went some way towards allaying Palestinian fears by stressing, in his talks with Christopher, that a separate Syrian-Israeli peace was impossible without a resolution of the Palestinian issue. Jordan proved to be less amenable to Christopher's urgings. It had said that it would not accept an invitation to Washington as long as the deportation issue was outstanding. This was not repeated by King Hussein in his talks with Christopher, but the Jordanian monarch left the US Secretary of State in no doubt that it would be almost impossible for a Jordanian delegation to attend the next round of talks if the Palestinians did not do so. It was clear, therefore, that the success or failure of the Christopher mission depended on the outcome of his meetings with the Palestinian peace team in Jerusalem. Initial reports suggested that progress had been made, and a six-point plan, designed to address Palestinian grievances, was agreed by the two sides. The outcome was a further letter of US assurances to the Palestinians. The Administration reiterated its commitment to Resolutions 242 and 338, stated its willingness to participate as a full partner in the peace talks, expressed opposition to deportation and settlement and affirmed its readiness to stand by assurances given by the previous Administration with regard to the peace process (most crucially the acknowledgement that East Jerusalem was occupied territory). Christopher also told the Palestinians that Israel would not resort to deportations in the future. However, while the Secretary of State flew back to the USA, the Palestinians waited in vain for a positive Israeli response to the six points and a statement of principle on deportations. Instead, the Israeli media announced that the Palestinians would be attending the ninth round of talks on 20 April. Angered by subsequent US inaction and complaining bitterly that it was being taken for granted, the PLO ordered the Palestinian delegates to refuse an invitation to the talks. 'If Israel cannot comply with the six points,' commented one PLO official, 'then we cannot participate in the next round'.

PALESTINIANS RELUCTANTLY RETURN TO TALKS

The PLO's refusal to accept an invitation to the talks led to a series of inconclusive inter-Arab meetings and the postponement, at the end of March 1993, of any decision on whether to attend until further talks had been held with the US Administration. Privately the Palestinians had by now resigned themselves to the resumption of negotiations before the return of the deportees, but they insisted that they could not resume talks without major Israeli concessions on the issue of the deportations. The USA and Egypt's President Mubarak subsequently urged Rabin to adopt some confidence-building measures to smooth the way for Arab participation. The result was a declaration by Rabin that mass deportation was not government policy and a promise to allow the return of a small number of Palestinians expelled since 1967. In a departure from the Israeli Government's previously-held policy of refusing to allow Palestinians from East Jerusalem to participate in the negotiations, Rabin also announced that it no longer objected to Faisal Husseini becoming the official leader of the Palestinian delegation. This last point was regarded by some Palestinians, not least by Husseini himself, as an important gain and a sufficient concession for the Palestinian delegation to attend talks in Washington. However, for the majority of Palestinians, including delegation leader Haider Abdel Shafei, who had given an undertaking in his native Gaza that there would be no return to the talks while the deportees languished on a Lebanese hillside, Israel's concessions and the USA's promise to play a full and active role in the talks still fell short of the minimum required to enable them to return to Washington.

RENEWED VIOLENCE IN THE WEST BANK AND GAZA

Public opinion in the Occupied Territories remained firmly opposed to a retreat from commitments made to the deportees and had hardened as repression escalated in the West Bank and Gaza. Since the deportations there had been a dramatic increase in violent incidents in Gaza and the West Bank, with Palestinian deaths and injuries equalling those of the *intifada's* bloodiest months. The death of children had reached alarmingly high levels, as had summary executions of Palestinian fugitives by Israeli undercover units. Scores of homes were also being destroyed as the IDF adopted the controversial new tactic of targeting houses suspected of harbouring wanted Palestinians with rocket fire. Yet the militarization of occupation policy failed, as had mass expulsions, to halt anti-Israeli violence. Instead, the frequency of attacks and demonstrations in the Gaza Strip led some Israeli military figures to conclude that Gaza had been 'lost'. Each Israeli casualty drew appeals for stiffer policies to be applied in the Territories. Following the killing of two secondary school students in Jerusalem in March, Rabin ordered the closure of the Occupied Territories. Such a measure had been employed many times during the *intifada* but this time, Rabin stated, the West Bank and Gaza would be sealed for an indefinite period. Tens of thousands of Palestinians lost their livelihoods as a result. Pressure from Israeli employers eventually persuaded the Government to issue work permits for a few thousand Palestinians, but this still left many areas of Gaza and the West Bank in the grip of an economic catastrophe.

Against this background the PLO faced unenviable choices. Domestic animosity to the Middle East peace process was counterbalanced by pressure from the USA, the EC and Arab states for the PLO to resume talks. Syria paid official lip-service to Resolution 799, but it was eager to capitalize on its improving relations with the USA and sensed that there might be some movement on the Golan issue. Saudi Arabia also made it clear to the cash-starved PLO that restored relations and future funding would be contingent on Palestinian attendance at the ninth round of bilateral talks. Despite huge misgivings and

against a chorus of protest from the Occupied Territories, Arafat finally consented to Palestinian participation in the ninth round, stating that 'We go to the negotiations because if we do not have a place on the political map we will not have a place on the geographical map either'. Another member of the PLO's old guard, Farouk Kaddoumi, called attendance 'the lesser of two evils'. The Palestinian peace delegates, who remained strongly opposed to Palestinian attendance at the talks, had to be ordered back to Washington. Hamas called the PLO's decision an act of 'treason' and severed contact with the Organization. A protest strike called by opposition factions shut down the Occupied Territories and precipitated a further round of bloody demonstrations.

Palestinian disarray immediately before the ninth round of bilateral talks fuelled Israeli intransigence. No promises were given on the return of the deportees, Rabin still refused to acknowledge that the West Bank and Gaza were 'Occupied Territories', in accordance with UN Security Council Resolution 242, and, despite the inclusion of Faisal Husseini in the Palestinian delegation, its Israeli counterpart continued to insist that East Jerusalem was not on the agenda. When, during the last days of negotiations, the USA submitted a draft proposal of principles in an attempt to break the deadlock and honour its earlier promise of playing a more active role in the negotiations, the Palestinian delegates complained that it was almost a carbon copy of Israeli positions. Further evidence of the USA's tilt towards Israel came in Assistant Secretary of State Edward Djerejian's testimony to a US Congress foreign affairs subcommittee on the Middle East in which he voiced no objections to the use of the unfrozen $10,000m. in loan guarantees to finance 'natural growth' of existing settlements in the Occupied Territories. A disgruntled Haider Abdel Shafei concluded at the end of the ninth round of bilateral talks that nothing had been accomplished. He said that the delegation would not return for further talks unless the PLO Chairman convened a session of either the PNC or the PLO's Central Council to assess the situation. This brought a sharp rejoinder from Faisal Husseini who said that the decision on whether to attend further talks rested with the PLO leadership. Rifts within Palestinian ranks grew wider with the resignation of the PNC's veteran speaker in protest at the direction of the peace process. 'Tragedies are befalling the Palestinian people', he said in his resignation address, 'and I do not want to be blamed for it'. There was little progress in the other bilateral talks. A claim by Israel's Minister of Foreign Affairs, Shimon Peres, that the Jordanian and Israeli delegations were on the brink of agreement was angrily denied by Jordan.

SOMBRE MOOD AT TENTH ROUND OPENING

The tenth round of bilateral negotiations opened in mid-June in quiet, almost ritualistic fashion and without Arab preconditions or expectations. Several Palestinian delegates, including Abdel Shafei, did not attend the talks but refrained from announcing an official boycott. The sense of Palestinian demoralization was deepened by comments made by the PLO Chairman to an Israeli newspaper to the effect that if Israel agreed to withdraw from Gaza and parts of the West Bank it would be proof of its implementation of Resolution 242. Arafat's statement was cited as evidence of the PLO leadership's abandonment of principle and absence of policy and led to calls for a complete re-evaluation of the Palestinian negotiating strategy. In a thinly-veiled attack on the PLO leader, Abdel Shafei also pleaded for democratization of the Organization. There was no progress in Washington to provide relief for the beleaguered Chairman. US efforts to produce a joint Israeli-Palestinian declaration of principles eventually led to the issuing of a draft proposal designed to constitute the new terms of reference for the peace talks. For the Palestinians the US document was an unacceptable departure from the assurances upon which their participation in the peace process was premised; firstly, because the USA insinuated that both Israel and the Palestinians had claims to sovereignty over the West Bank and Gaza; and secondly, because the issue of East Jerusalem was excluded from negotiations on interim self-government arrangements. The US proposals, Palestinian leaders agreed, were not even suitable as a starting point. Speculation that there might be progress between Israel and Syria was scotched after Rabin, under pressure from right-wing Jewish settlers, rejected a Syrian offer of a 'total' peace in exchange for a 'total' withdrawal from the Golan Heights.

'OPERATION ACCOUNTABILITY'

At the end of July, following the killing of seven Israeli soldiers in south Lebanon by Hezbollah fighters, the IDF launched its severest bombardment of Lebanese territory since 1982. More than 55 villages were heavily damaged, 130 people, mainly civilians, were killed and 300,000 Lebanese fled north during the week-long assault. Hezbollah responded by firing salvoes of *Katyusha* rockets into northern Israel. These reportedly caused little damage and resulted in few casualties. Prime Minister Rabin code-named the IDF's action 'Operation Accountability' and stated that its purpose was to create a refugee crisis in Lebanon and thus pressurize Lebanon and Syria into taking action against Hezbollah. The deliberate targeting of civilians provoked harsh international condemnation. The UN Secretary-General, Boutros Boutros-Ghali, declared it 'deplorable that any government would consciously adopt policies that would lead to the creation of a new flow of refugees and displaced persons', sentiments that were echoed by Arab states and the European Union (EU—formerly EC). Fears that the fighting would deal a fatal blow to the faltering peace process prompted Syria and the USA to mediate an end to the hostilities and to arrange what was termed an 'understanding' between Israel and Hezbollah whereby the IDF would refrain from attacking civilian targets as long as Hezbollah fighters confined their military operations to Lebanese territory. Israel declared its attack on south Lebanon a success, but it quickly became evident that Hezbollah had not been entirely subdued by the IDF. Less than three weeks after the Israeli bombardment, nine Israeli soldiers were killed in two ambushes carried out by Hezbollah fighters in Israel's security zone. Significantly, Israeli reprisals were confined to limited air strikes on Hezbollah bases in the Beka'a valley.

THE OSLO ACCORDS

Throughout the summer the political and financial crisis within the PLO deepened. Two prominent members of the PLO Executive Committee resigned before the beginning of the 11th round of bilateral talks in protest at Arafat's negotiating strategy; the resignation of Faisal Husseini, Saeb Erakat and Hanan Ashrawi from the Palestinian delegation was only averted by the PLO's acceptance of their demands for greater democratization of the decision-making process. Rumours of corruption and mismanagement of the Organization's finances caused further erosion of support for Arafat's leadership, as did the growing chorus of dissent from the Damascus-based Palestinian groups, independents and erstwhile Fatah supporters. With the prospect of the PLO's disintegration seeming ever more likely, a dramatic development at the end of August injected sudden energy into the peace process and promised to shift Arab–Israeli relations onto a more positive footing. It emerged that Israel and the PLO had been engaged in secret negotiations in the Norwegian capital, Oslo, and had reached agreement on mutual recognition and a plan for staged Palestinian autonomy in the West Bank and the Gaza Strip. The precise details of the autonomy agreement were purposefully vague, but according to initial press reports the key components of the 'Oslo Accords' were said to include an early withdrawal of Israeli forces from Gaza and the Jericho area; the redeployment of Israeli troops in other areas of the West Bank; the gradual transfer of power from the civil administration to a Palestinian authority; the creation of a Palestinian police force; and the election of a Palestinian Council. Permanent status negotiations were to begin within two years of the Israeli withdrawal from Gaza and Jericho, be concluded within five years and would address such issues as Jerusalem, borders, settlement, co-operation, security and refugees. The reaction of the Arab world to the nascent PLO-Israeli agreement was decidedly mixed, not least amongst Palestinians themselves. Arafat managed to secure majority support for the Accords from the Fatah Central Committee, but failed to persuade three of the movement's co-founders, Farouk Kaddoumi and Khalid and Hani Hassan, to give their backing. Hamas and the Damascus-based Palestinian groups denounced the agreement as a betrayal, an interpretation that was shared by the majority of Palestinian refugees in Lebanon who staged

protest marches and decked their camps with the black flags of mourning. The prominent Palestinian writer, Edward Said, scorned the agreement for transforming the PLO from a national liberation movement to a municipal council. Within the Occupied Territories, many ordinary Palestinians, no doubt swayed by the attrition of the *intifada* years, expressed guarded approval of the plan. Nevertheless there was widespread concern among activists of all persuasions that the agreement represented a capitulation to Israeli demands and a dangerous journey into the unknown. Crucially, however, there was a strong consensus against the use of violence to settle inter-Palestinian differences. Gaining the support of the Arab world was as important for Arafat as winning over his domestic constituency and to this end the PLO Chairman embarked on a hurried tour of regional capitals at the beginning of September. President Mubarak predictably gave full support to the agreement, while Egyptian officials let it be known that Cairo had played a seminal role in securing the two sides' agreement. King Hussein of Jordan initially displayed considerable pique at the failure of the PLO to consult him over the details of its talks in Oslo, and the Jordanian press expressed official disquiet at a 'separate' Israeli-Palestinian peace. However, given the USA's endorsement of the Oslo Accords and Jordan's traditional, if cautious, advocacy of Israeli-Arab peace, it came as little surprise that Jordan soon expressed support for the PLO Chairman. On 4 September King Hussein told a press conference that the Oslo Accords were 'part of a process leading to the implementation of (Security Council Resolution) 242 . . . so I will emphasize our full support.' A day later the foreign ministers of the Gulf Co-operation Council (GCC) member states gave their qualified support to what was described as 'a first step towards the liberation of all occupied land, including Jerusalem.' President Assad of Syria proved to be far less amenable to the new developments. At various times during the peace process Syria had been accused of negotiating a separate peace deal with Israel regarding the Golan Heights. Revelations that the PLO was on the verge of concluding its own agreement with Israel prompted the government-controlled media in Syria to issue lengthy commentaries denouncing disunity within Arab ranks. During six hours of talks in Damascus, Arafat failed to persuade the Syrian President to endorse the Oslo Accords. Assad stressed that he believed the PLO's action had made the achievement of an Israeli withdrawal from the Golan Heights and southern Lebanon more difficult. These fears were shared by the Lebanese Prime Minster, Rafik Hariri, who was even more outspoken in his objections to the Israel-PLO deal. Addressing concerns that the Accords effectively froze the position of Palestinian refugees in Lebanon, he announced that 'under no circumstances whatsoever' would Palestinians be allowed to settle permanently in Lebanon.

The Israeli Cabinet unanimously approved the Oslo Accords on 30 August and early opinion polls suggested that there was a significant majority in the country in favour of the agreement. As government officials were quick to explain, there was little in the substance of the Oslo Accords to cause alarm in Israel. Withdrawal from the chaos of the Gaza Strip was broadly popular and dialogue with the PLO had become far more acceptable to the national psyche since the growth of Islamic fundamentalism. For the more hawkish and sceptical sectors of the Israeli population there was solace in the fact that, under the terms of the agreement, security for the West Bank and Gaza would remain an Israeli responsibility, and that the short-term future of Israeli settlements was assured. Agreement with the Palestinians also offered the prospect of an end to the Arab economic boycott of Israel and of normalized relations with the Arab world. The Likud opposition was largely unimpressed by Labour's arguments, however. It accused Prime Minister Rabin and Minister of Foreign Affairs Peres of laying the cornerstone of a Palestinian state and stated that if the Likud came to power it would refuse to honour the agreement. Representatives of the settler movement and of the extreme right-wing vowed to resort to civil disobedience in order to prevent the implementation of the Accords.

THE DECLARATION OF PRINCIPLES

The official signing of the Israeli-PLO Declaration of Principles took place on 13 September 1993 (see Documents on Palestine, p. 120) on the White House lawn in Washington. In front of 3,000 international guests Israeli Prime Minister Rabin declared: 'We the soldiers who have returned from the battle stained with blood, we who have fought against you the Palestinians, we say to you today in a loud and clear voice: "Enough blood and tears! Enough!" '. For his part, Yasser Arafat pleaded for 'courage and determination to continue the course of building coexistence and peace between us', and added, 'Our people do not consider the exercising of our right to self-determination could violate the rights of their neighbours or infringe on their security.' Significantly, however, it was the Israeli Minister of Foreign Affairs, Shimon Peres, and the PLO spokesman on foreign policy, Mahmud Abbas, who actually signed the Declaration documents. The ceremony was concluded by an embarrassed, but highly symbolic handshake between Arafat and Rabin. Support for the Oslo Accords had grown steadily in the Occupied Territories in the two weeks since the PLO-Israeli agreement had been made public and the day of the signing was marked by massive celebrations throughout the West Bank and the Gaza Strip. Detecting the shift, and fearful of its marginalization, Hamas revealed once again its pragmatic streak. While stressing its continued opposition to the Accords, it acknowledged that a new reality had been created which it would be foolish for it to ignore. It also agreed with Fatah that their respective demonstrations in favour of and in opposition to the Accords should be allowed to pass without interference. Contrary to the fears of Palestinians there were few reports of clashes between the two sides. Nevertheless, on the eve of the Washington ceremony Hamas sent a warning signal to the PLO and Israel when its gunmen ambushed and killed three Israeli soldiers on the edge of Gaza City; while in Beirut eight people were killed when units of the Lebanese army fired on a Hezbollah demonstration protesting against the PLO-Israeli agreement.

There were immediate and positive results from the signing of the Declaration of Principles for both Israel and the PLO. On 14 September Israeli Prime Minister Rabin was received in Morocco by King Hassan, in the first official visit by an Israeli Prime Minister to any Arab country other than Egypt. On the same day in Washington, Israeli and Jordanian representatives signed an agreement on an agenda for forthcoming negotiations between the two states. A number of issues of concern to Jordan were covered, including the return of Jordanian territory (adjoining the Dead Sea) occupied by Israel since the late 1960s; the fate of Palestinian refugees in Jordan; water rights; and a number of security issues. Jordan also committed itself not to threaten Israel by force and to work towards the removal of weapons of mass destruction from the Middle East. Meanwhile, Yasser Arafat was being fêted by the media networks in the USA and enjoying the sort of rehabilitation in the eyes of the US public that would have been unthinkable only a few months previously. There was a developing awareness among all the parties who wished to see the peace process maintain its momentum that future progress depended on the ability of Arafat to demonstrate to his own constituency that the benefits of the deal outweighed its obvious shortcomings. Particularly important, PLO officials stressed, was the immediate commitment of the international community to the kind of substantial aid package that would be needed to revitalize the economy and to improve social conditions in the Occupied Territories. The Clinton administration responded to these pleas by organizing a donors' conference in Washington that secured promises of $23,000m. in emergency aid for the West Bank and Gaza over the following five years; the EU and the USA pledged $600m. and $500m. respectively.

PLO LEADERSHIP CRISIS

Securing promises of substantial financial aid was an important fillip for the PLO Chairman in managing the scepticism with which the Oslo Accords were still regarded within PLO circles. In mid-October the PLO's Central Council met in Tunis to debate the Accords. The boycotting of the meeting by the Popular and Democratic Fronts (for the Liberation of Palestine) and the other opposition groups ensured that the ratification of the Accords was passed by a bigger majority (63 votes to 8, with 11 abstentions) than might have been expected. Yet, despite the margin of the victory, the Central Council session and subse-

quent meetings in Tunis were not the triumph that Arafat loyalists claimed. Delegates complained that there was little substantive discussion of the Accords and no attempt to map out a coherent negotiating strategy in the forthcoming talks with Israel over their implementation. Moreover, Arafat's autocratic handling of the meetings revived fears that the PLO Chairman lacked the requisite political skills to resist Israeli pressure to make further concessions, or for that matter to transform the Palestinian struggle from one of national liberation to one of nation building. Haider Abdel Shafei, the erstwhile chief Palestinian negotiator in the peace process, signalled his own lack of faith in the ability and motives of the PLO leadership by announcing his resignation from his post. The lack of confidence in the political leadership extended to the Damascus-based opposition, in particular to the PFLP and DFLP, which were widely criticized for boycotting the Tunis meetings and for their preference for sloganeering rather than establishing an alternative programme to the autonomy proposals. It also appeared increasingly obvious that the secular opposition was being outflanked and outmanoeuvred by Hamas. After the 'rejectionist' PLO factions had announced their intentions to boycott a proposed Palestinian reconciliation conference in the Yemeni capital, San'a, Hamas informed Arafat that it would be attending. Behind the Islamic movement's contradictory pronouncements on its intended relationship with the new Palestinian authority (in contrast to the Popular and Democratic Fronts which insisted that they would have no dealings with the new autonomous Palestinian institutions) many observers claimed to detect a bid by Hamas to posit itself as the only credible opposition to the Arafat wing of the PLO.

FURTHER NEGOTIATIONS

Israeli-Palestinian negotiations on the implementation of the first stages of the Declaration of Principles began in Cairo and the Red Sea resort of Taba on 13 October. It quickly emerged during the first round of talks that there were several potentially serious obstacles to be overcome. Firstly, the Israeli and Palestinian delegations had widely differing definitions of what constituted the geographical area referred to as Jericho. According to the chief Palestinian negotiator, Nabil Sha'ath, Jericho referred to the old British Mandate Administrative Area comprising some 390 sq km and currently encompassing a number of Israeli settlements, as well as Arab villages. According to his Israeli counterpart, Gen. Amnon Shahak, the area in question was Jericho limited to its present municipal boundaries of a mere 25 sq km. More emotively, the two sides failed to agree on a timetable for the release of the estimated 11,000 Palestinian political prisoners in Israeli prisons. For the Palestinian side a comprehensive release of Palestinian prisoners was crucial to the maintenance of any degree of popular support for the autonomy plan. However, its request that Israel should draw up a timetable for release bore little fruit. Six hundred and seventeen prisoners were released on 25 October as a confidence-building measure. However, the majority of these were Fatah loyalists, leading one of the Palestinian negotiators to remark that they were 'trying to make peace between Palestinians and Israelis, not between Israel and a faction of the PLO'. Israel responded by saying that it would wait until the Palestinian police force was in place before releasing the majority of the detainees. Shortly afterwards it bowed to right-wing pressure and ended nearly all releases. The moratorium provoked one prominent Palestinian, Ziyad Abu Zayad, to tender his resignation from the negotiating team. The issue of border security proved just as intractable. From Israel's point of view this was its most sensitive domestic concern and, as such, the one area of the autonomy negotiations where it was least likely to compromise. On 1 November the Israeli delegation submitted proposals on security and the withdrawal of troops from the self-governing enclaves of Gaza and Jericho. These envisaged not so much the withdrawal of troops from Gaza as their redeployment in buffer zones around the Gaza Strip's Jewish settlements. They also proposed the retention of 20 checkpoints along the 1967 border to ensure the security of soldiers and settlers, and Israeli control over crossing points into and out of the autonomous enclaves. The Israeli proposals were condemned as unacceptable by Sha'ath, who withdrew the Palestinian delegation from the negotiations; it only returned after the Israeli delegation agreed to revise its plans for the redeployment of the IDF in Gaza. Palestinian critics of the autonomy proposals commented that this early dispute over security went to the core of their dissatisfaction with the Declaration of Principles, namely its studied refusal to address the status of Jewish settlements. 'If Israelis and Palestinians can't agree that the settlements are illegal entities on our land,' commented one Gazan economist, 'then we are saying that in the Occupied Territories there are *de facto* two separate entities and that these are somehow equivalent. They are both legal or legitimate presences'. An inescapable corollary of this failure to define the status of the settlements was implicit acceptance of the long-held Israeli view that the West Bank and Gaza were not so much occupied territories as disputed ones.

VIOLENCE CONTINUES

Hopes that the signing of the Declaration of Principles would lead to a reduction in violent incidents in Gaza and the West Bank were also frustrated. In Gaza the impending transfer of power to a PLO authority gave rise to a secret feud within Fatah that claimed the lives of three top figures in the Organization, including that of As'ad Saftawi, a co-founder of the Fatah movement and its leading activist in Gaza. At the same time the IDF maintained its policy of pursuing wanted activists, killing and arresting gunmen of all political factions, including those identified as Fatah loyalists. Protests from the Palestinian negotiators that the targeting of activists was a violation of the spirit of the newly signed Accords failed to end the operations of Israeli undercover units. The killing of Hamas's senior military leader in Gaza in November gave rise to a massive increase in confrontations which were reignited two weeks later when a leading Fatah hawk, Ahmad Abu Rish, was shot dead by an Israeli undercover unit in Khan Yunis. Only a few days before his killing Abu Rish had received a much publicized amnesty from the Israeli authorities for obeying an Arafat directive and surrendering his weapon. His colleagues subsequently announced that they would resume their military operations unless Israel stopped pursuing wanted activists. Hamas, which was the principal target of the IDF's operations in Gaza, had never shown any sign of scaling down its attacks on Israeli targets. Despite the deaths and arrests of scores of its activists it continued to demonstrate that it was by far the most effective Palestinian military force in the Occupied Territories. Seemingly impervious to penetration by the Israeli security services, it was able to inflict regular casualties on both soldiers and settlers. Indeed, the killing of Jewish settlers by Palestinian gunmen during the autumn of 1993 produced fierce right-wing reprisals that escalated with every passing incident. Arguably more opposed to their Government's agreement with the PLO than the Islamists of Hamas, the settlers' desire to avenge attacks on their own community became intertwined with a desire to derail the negotiation process. Such was the scale of the assaults on Palestinian targets that Israeli newspapers started to refer to a 'Jewish *intifada*'. Right-wing spokesmen hinted darkly that as long as the twin provocations of Palestinian violence and government talks with the PLO existed, there was every likelihood of the re-emergence of the kind of settler underground movement that had operated during the late 1970s and early 1980s. At a nationalist rally in Jerusalem, settlers were urged to 'rise up against this government of iniquity, against the evil ruling over us', and were told that 'these are not days of peace but of war'. The warnings proved to be prophetic. In mid-December, after two settlers were killed in an attack by Hamas fighters near Hebron, Israeli gunmen shot dead three young Palestinian workers in retaliation.

CRISIS WITHIN FATAH

The cycle of violence made the prospect of an agreement on withdrawal from Gaza and Jericho by the 13 December deadline (as set down in the Declaration of Principles) increasingly unlikely. The main obstacles remained security and the size of the Jericho enclave. At a joint press conference in Cairo on 12 December, the Israeli and Palestinian negotiators announced their failure to meet the deadline. Rabin complained that the PLO Chairman 'lacked the inner strength' to reach an agreement, while the Israeli Chief of Staff, Gen. Ehud Barak, complained that it was unlikely that the IDF would hand over Gaza

to the Palestinians as long as the PLO seemed unable to halt the violence there. Unlike Rabin, who appeared unperturbed by the delay and made a point of stating that the timetable laid out in the Declaration of Principles was not a rigid one, the PLO Chairman was visibly upset. And not without good reason. Failure to meet the deadline had further undermined dwindling support for the peace process—in the student council elections at Bir Zeit University, long regarded as a good indicator of Palestinian public opinion, Fatah had lost control of the student body to a coalition of 'rejectionist' groups—and was an undoubted setback for the beleaguered Chairman. While he did receive grudging recognition for his refusal to accept Israel's proposals for the redeployment of the IDF to protect Jewish settlements in the Gaza Strip, this was small comfort when compared with the renewed chorus of criticism of the style and substance of his leadership. Calls for a clearer negotiating strategy and the democratization of the PLO were too loud to be ignored and compelled the PLO leader to accept demands for a dialogue with the nationalist opposition. Yet for some Fatah elements in Gaza patience with the PLO leadership had clearly run out. At the end of December three senior Fatah members resigned their posts in protest at the 'cronyism and favouritism' that had characterized political advancement in the Occupied Territories. They were articulating a concern of many Palestinians from within the Occupied Territories: that local cadres belonging to the *intifada* generation of activists were being marginalized by the imposition of political appointees from outside the Occupied Territories, and by 'salon spokesmen', with little experience of activism, from within. These were not new criticisms, but such a public airing of them at such a sensitive time pointed to an ever deepening crisis within the Fatah movement.

PLO RELATIONS WITH JORDAN

The PLO Chairman also had to contend with a crisis in the Organization's relationship with Jordan. While the PLO and Israel had been struggling to overcome their differences on the autonomy accords, Israel and Jordan had been making swift progress in their own talks in Washington. The claim, by an Israeli minister, that everything with Jordan 'is tied up and signed' hardly pleased the PLO leader. There was also strong annoyance with Jordan for signing a memorandum with Israel that allowed the opening of branches of Jordanian banks in the Occupied Territories during the interim period. According to the PLO, Jordan should have waited to sign an agreement with the new Palestinian authority, and by not doing so it had undermined Palestinian attempts to secure practical acknowledgement of Palestinian sovereignty. As a result, Arafat refused to sign an agreement that would have allowed Jordan's Central Bank to regulate monetary policies in the Occupied Territories during the interim period. The deadlock was finally broken in mid-January 1994 after a strong attack by the Jordanian monarch on the PLO's delaying tactics finally persuaded Arafat to dispatch Farouk Kaddoumi to Amman to sign an economic agreement. This allowed for the reopening of 20 branches of Jordanian banks closed in 1967 and confirmed the use of the Jordanian dinar in the Occupied Territories. The banks would be supervised by the Central Bank of Jordan until a Palestinian central bank was established.

SYRIAN REACTION

Syria, meanwhile, continued to smart at the perfidy of the Oslo Accords and at Jordan's apparently fruitful negotiations with Israel. King Hussein assured the Syrian leader that Jordan would not sign a separate deal with Israel, despite pressure to do so from Rabin and President Clinton of the USA. Nevertheless the feeling in Damascus remained one of perceived betrayal and injured pride, Syria regarding itself as the standard-bearer of Arab unity while all around the Arab world drifted into unprincipled accommodation with Israel. The USA's concern that Syrian isolation threatened to unbalance the peace process led to a summit meeting between the US and Syrian Presidents in Geneva, Switzerland, in January 1994. Assad stressed to Clinton that Syria could not consider a separate peace deal with Israel, and that he would not entertain a normalization of relations with Israel until Israel had committed itself to full withdrawal from the Golan Heights. Assad did, however, confirm that peace with Israel was Syria's goal and intimated that, in return for an Israeli withdrawal from south Lebanon, the Syrian army would disarm Hezbollah. Fearing that the Clinton-Assad summit meeting was a dangerous step towards the rehabilitation of the Syrian President and a prelude to US pressure on Israel to make concessions over the Golan Heights, representatives of the Jewish settler movement delivered a letter of protest to the US Embassy in Tel-Aviv stating that any US interference would be harmful to the peace process. Despite claims that 90% of Israelis were opposed to withdrawal from the Golan Heights, a radio opinion poll revealed that nearly one-half of the 12,000 Israeli settlers there had considered moving back to the pre-1967 borders of Israel. Several of the more 'dovish' members of the Israeli Cabinet, including the Deputy Minister of Foreign Affairs, Yosi Beilin, used the occasion of the Clinton-Assad meeting to concede that, given the proper security guarantees, Israel would have to withdraw from the Golan Heights. Rabin distanced himself from such remarks, preferring to allude to withdrawal in the Golan Heights rather than from the Golan Heights. Interestingly, however, the Israeli Prime Minister hinted at greater Israeli flexibility with the assessment that the 'extent of the withdrawal will be as the extent of the peace'.

RENEWED DISCUSSIONS

Yasser Arafat and the Israeli Minister of Foreign Affairs, Shimon Peres, met in Davos, Switzerland, in January 1994 for talks aimed at resolving the differences that were preventing the signing of an agreement on implementation of the Gaza-Jericho component of the Declaration of Principles. Sufficient progress was made for a resumption of talks in Cairo, Egypt, on 6 February. After three days of intense discussion it was announced that agreement had been reached on most of the issues that had been dividing the two sides. On the question of the control of border crossings between the autonomous zones and neighbouring states, it was agreed that Israel would maintain military control and have a veto over Palestinian visitors. The latter would be allowed to stay in Gaza and Jericho for a maximum period of four months only and would have to apply to the Israeli authorities for any extension of that time. The Palestinian presence at the borders was to be limited to flags, entry stamps, guards and immigration officials, although Israel acknowledged that the searching of Palestinian visitors would be largely a Palestinian responsibility. It was also agreed that the territory of Gaza would be divided into three zones; Israeli settlements and the Egyptian border area, which were to remain under Israeli control; a second area, encompassing the perimeter of the Israeli settlements and access roads, to be jointly patrolled; and the rest of the Gaza Strip, which was to be transferred to the new Palestinian authority. There was no resolution of the dispute over the precise size of the Jericho enclave, but Palestinian officials maintained that the 'size of Jericho will not be a problem in itself'.

PALESTINIAN REACTION

The agreement reached in Cairo was widely regarded as Palestinian capitulation to Israel's conception of what shape the interim autonomy period should take. In Damascus the 10 Palestinian rejectionist factions, grouped under the umbrella of the newly formed Alliance of Palestinian Forces (APF), condemned the new security arrangements and insisted that they would refuse to co-operate with the PLO or take part in elections scheduled for July 1994. The APF announced the formation of a new central council to rival that of the PLO and pledged an escalation of the *intifada*. The decision of the Palestinian rejectionists, together with continued Fatah infighting, was further evidence of the painful process of disintegration and realignment that was steadily transforming the face of Palestinian politics. In Gaza, which continued to be affected by both inter-Palestinian violence and Israeli–Palestinian clashes, there were reports that huge numbers of arms were being stockpiled for the purpose of settling political differences once the Israeli forces withdrew. The visibility and availability of weapons led to allegations that the IDF was encouraging future disorder in Gaza by ignoring the organized gun-running to the Strip.

THE HEBRON MASSACRE

The peace process suffered a dramatic setback on 25 February 1994 when Baruch Goldstein, an American-born adherent of the extremist Kach movement and resident of Kiryat Arba, carried out an armed attack on Palestinian worshippers in the Ibrahimi mosque in the centre of Hebron. Goldstein entered the mosque during early morning Ramadan prayers and sprayed the congregation with a hail of automatic gunfire. Twenty-nine people died before worshippers managed to overpower and kill their attacker. Palestinian fury at the massacre was heightened by reports that Israeli soldiers on duty at the mosque had contributed to the atrocity by failing to intercept Goldstein and by barring the doors of the mosque to fleeing worshippers. As news of the massacre spread, violent protests erupted throughout the Occupied Territories and among Arab communities inside Israel; a further 33 Palestinians were killed in the eight days following the massacre despite widespread curfews and massive troop deployment. The massacre and its bloody aftermath was roundly denounced in the Arab world. The Jordanian, Syrian and Lebanese Governments declared the suspension of their participation in the peace process. The Rabin Government responded to the events in Hebron by announcing its intention to set up a commission of inquiry and ordering the detention of a handful of known settler extremists. A ban was also declared on the Kach organization and its offshoot, Kahane Lives. These measures failed to mollify Palestinians, who asserted that only the disarming of settlers and the dismantling of the settlements could guarantee Palestinian security in the Occupied Territories. PLO spokesmen called for a revision of the Declaration of Principles to allow immediate discussion of the future of Israeli settlements and for the dispatch of an international protection force to the Occupied Territories, a suggestion that was endorsed by Arab states and the UN Secretary-General, but dismissed as 'neither particularly helpful or useful' by the USA. Several prominent PLO figures stated publicly that the removal of 400 or so militant settlers from the heart of Hebron was the *sine qua non* of the PLO's decision to restart talks with Israel. Both Hamas and Islamic Jihad vowed to take revenge for the Hebron massacre, a predictable response, but one that only added to the burden of pressure on the PLO leader. The massacre placed Arafat in a delicate position. Although it was believed that Hebron would allow the PLO Chairman to exact concessions from Israel in return for an early end to the Organization's suspension of participation in the autonomy negotiations, it was unlikely that Rabin would entertain the PLO's demands for immediate action against core settler interests. The Labour Government had little ideological affinity with 'hardline' settlers. However, Rabin recognized that they were valuable bargaining chips and that it would be a mistake to cash them in before the 'final status' negotiations. Moreover, it was clear to Arafat that the best hope to bolster his own standing and to regain support for the peace process lay in demonstrating the benefits of the Oslo Accords by securing an early Israeli withdrawal from Gaza and Jericho. Any residual willingness of the PLO Chairman to hold out for Israeli concessions was also undermined by Syrian and Jordanian assurances to the USA that their withdrawal from the peace talks with Israel was only temporary. The somewhat surprising stance of the Syrian Government was explained by its Minister of Foreign Affairs as a response to the PLO's 'isolationist' approach and its refusal to co-ordinate its position with the front-line Arab states. But it was also clear that the USA had lobbied hard in Damascus for a Syrian return to the negotiating table, primarily as a means of putting pressure on the PLO to end its boycott of the talks. The USA similarly promised Jordan that it would lift the naval blockade of the Jordanian port of Aqaba (in place since the Iraqi invasion of Kuwait) as a reward for Amman's early resumption of talks with Israel. In the mean time, the USA maintained its pro-Israel diplomacy at the UN. US Ambassador Albright effectively delayed a vote on Resolution 904, which condemned the Hebron massacre and urged protection for Palestinians in the Occupied Territories, because the USA objected to the inclusion of paragraphs describing Jerusalem and the territories seized in 1967 as 'occupied Palestinian territory'. Resolution 904 was finally adopted by the Security Council on 10 March 1994, with the USA abstaining on two of its preambular paragraphs referring to occupied Palestinian territory. Albright justified the USA's abstentions on the grounds that it did not wish to prejudice the course of the 'final status' negotiations agreed upon in the Declaration of Principles. Nevertheless, Nasir el-Kidwa, the Palestinian observer at the UN, remarked that the USA's decision marked a disturbing departure from early US assurances that it regarded all of the 1967 territories as occupied. There was further Palestinian disappointment with Resolution 904's demand for their protection in the Occupied Territories. Instead of a UN armed force, as favoured by the PLO, the UN Security Council – again acting under US pressure – voted for a temporary observer force to be dispatched to Hebron. It was agreed that the force would not be under the control of the UN and that its mode of operations would be decided through negotiation between Israel and the PLO within the framework of the Declaration of Principles. Israel eventually agreed to the presence of 160 lightly armed, mainly Norwegian, observers operating under ultimate Israeli control. Their rather limited remit was 'to monitor Palestinian safety' and to aid the return of Hebron to 'normal life'.

RETALIATION BY HAMAS

By the beginning of April 1994 the PLO had agreed to resume negotiations with Israel despite the failure to secure the reassurances on settlements that PLO leaders had initially demanded. Its decision was perceived negatively by many Palestinians in the Occupied Territories, where dwindling goodwill towards the Oslo process was undergoing further erosion as a result of IDF security operations. Several people were killed in Hebron and a number of houses were destroyed by rocket fire in an army attempt to flush out Hamas gunmen. At the end of March six members of a pro-Arafat Fatah security team were shot dead in an ambush in Gaza. The latter incident forced an apology by the IDF and underlined a belief shared by many in the Israeli political establishment that urgent steps would have to be taken to reinforce Arafat's position and guarantee the viability of the peace process. The return of 47 Palestinian deportees, most of them senior PLO figures, was widely welcomed in the Occupied Territories. More importantly, the IDF began to redeploy its forces in response to news from Egypt that an agreement had been reached on the final issues dividing Israel and the PLO over the implementation of autonomy in the Gaza Strip and Jericho. However, even as the Oslo Accords were on the verge of being translated into reality, there came a deadly reminder of the fragility of that process. On 6 April 1994 a car bomb in the Israeli town of Afula killed seven Israelis and maimed scores of others, many of them schoolchildren. A week later five more people were killed in a similar outrage in Hadera. Hamas claimed responsibility for both attacks and claimed that they were in response to the Hebron massacre. Some 300 Islamist militants were rounded up after the bombings and the Occupied Territories were sealed off. The Hamas spokesman in Amman said his Organization would halt attacks on civilians in return for an end to the Israeli offensive. He also promised that Hamas would support a peace agreement with Israel in return for an Israeli withdrawal from all of the Palestinian territory occupied in 1967. The Hamas offer received no official reply from Israel except an appeal to Jordan to close down Hamas's offices on its territory. Israel was also highly critical of an agreement reached in Gaza between Hamas and Fatah that had been precipitated by an outbreak of armed clashes between the two factions. Both sides agreed to a month-long moratorium on the killing of collaborators and 'an end to violence in Palestinian society'. Commenting on Israel's criticism of its talks with Hamas, a Fatah spokesman rejoined that Fatah's dealings with Hamas to secure order in the Gaza Strip would be on the PLO's terms and not Rabin's. He added that 'Our decision to co-operate with Hamas is an internal Palestinian issue and does not concern any other side. Fatah and Hamas are in the same boat and we will not allow anyone to sink it.'

AUTONOMY IN GAZA AND JERICHO

Against a backdrop of weary anticipation and lawless confusion in Gaza, Israeli and Palestinian officials met in Cairo on 4 May 1994 for a signing ceremony to seal the successful conclusion of eight months of troubled talks on the implementation of an autonomy agreement for Gaza and Jericho. Yet, in ironic accordance with the problems that had bedevilled the negotiations

from the start, the dignified proceedings turned to high farce when Arafat refused to sign one of the documents pertaining to the size of the Jericho enclave. A highly embarrassing moment for the assembled dignitaries and the Egyptian President was eventually resolved by a hasty adjournment and an agreement that Arafat would annotate the offending document with a comment to the effect that it was awaiting final agreement. On returning to Israel an outraged Rabin insinuated that the problems at the Cairo ceremony were symptomatic of the PLO Chairman's inability to provide leadership. Arafat was also reproached by members of the PLO Executive Committee for having failed to discuss the agreement about to be concluded with Israel at a meeting held just a few days before the Cairo signing. Many PLO executive members stayed away from Cairo in protest at Arafat's autocracy, while within the Occupied Territories deepening reservations over the style of Arafat's leadership and the substance of the agreement reached with Israel meant that the PLO Chairman experienced great difficulty in trying to persuade political figures to take seats on the 24-member Palestinian Autonomy Council, the body designed to oversee the implementation of the autonomy agreement. Nevertheless, the signing of the agreement in Cairo resulted in rapid change in Gaza and Jericho. The IDF hastened its withdrawal from centres of Palestinian population, and on 10 May the first contingent of the Palestinian police force arrived in Gaza. A further 400 arrived in Jericho a few days later. Israel had also announced the imminent release of 5,000 Palestinian detainees. On 13 May and 17 May, in Jericho and Gaza respectively, the IDF handed over its positions to the commanders of the Palestinian forces in simple ceremonies. The Chief of Palestinian Police Forces told crowds in Gaza that they were witnessing 'a historic day for the Palestinian people, the first step on the way to independence.' The following day, in the early hours of the morning, Israel evacuated its last position in Gaza City. Bitter memories of the occupation meant that even at this final hour there would be no dignity in the Israeli withdrawal. The departing troops left under a cloud of tear-gas and a shower of rocks and bottles, while tens of Palestinian gunmen joined members of the Palestinian police force in a deafening salute to the beginning of a somewhat different reality.

Finalization of the agreement on autonomy for Gaza and Jericho was met with scorn in Syria, where Arafat was widely perceived as having allowed the Palestinian national movement to be humiliated by Israel. Syria refused an invitation to attend the Cairo ceremony and the state-controlled media commented that, 'There can be no middle way. There can be no compromise over land and peace. Comprehensive peace in the Middle East depends on the return of all occupied land.' Syria's unwavering commitment to these principles was regarded by the USA as the principal obstacle to achieving a wider Middle East settlement. The US Secretary of State, Warren Christopher, was dispatched to the Middle East at the end of April and again in May in an attempt to reconcile the Syrian and Israeli positions. His mission proved largely fruitless. Rabin stated that he would entertain no greater compromise than a promise to dismantle some of the settlements on the Golan Heights and to make a phased withdrawal, over a number of years, from some areas of the Heights. This was unacceptable to President Assad, who insisted that a peace agreement had to be preceded by a total Israeli withdrawal from occupied Syrian territory accomplished within a one- to two-year period. Plans for a further visit by the US Secretary of State in June were abandoned after Rabin confirmed that negotiations with Syria were totally deadlocked and Syria reiterated that there was little purpose in further dialogue until Israel made a public pledge that its withdrawal from the Golan Heights would be total. Controversial Israeli military operations in Lebanon during May and June made it even less likely that Syria would soften its stance. On 22 May Mustafa ad-Dirani, a leader of the radical Iranian-backed Faithful Resistance Organization, was kidnapped by Israeli forces from the Beka'a valley. The raid, reminiscent of the abduction of Sheikh Obeid in 1989, was justified on the ground that ad-Dirani had information about the missing Israeli navigator, Ron Arad, who had been shot down over Lebanon in 1986. Ten days after ad-Dirani had been seized, Israeli aircraft were once again in action over Lebanon, attacking a Hezbollah training camp in the Beka'a valley and killing, according to Israeli sources, 36 Hezbollah fighters and wounding more than one hundred. The attack was of questionable political value and it was regarded as an indication of a shift to the right in the governing Israeli Labour Party.

In Gaza and Jericho there was widespread jubilation at the departure of Israeli troops and an end to the curfews and restrictions that had been part of daily existence during the years of the *intifada*. Israel's own relief at being rid of the security problem of Gaza was marred, only two days after the withdrawal, when two Israeli soldiers were shot dead by Islamic Jihad gunmen near the Erez border crossing to Israel. Significantly, the IDF did not pursue the gunmen into Palestinian-controlled territory, and while the PLO assured Israel that it would try to curb such actions, it insisted that the disarming of Palestinian groups could only take place within the framework of broad factional agreement. Nevertheless, the agreed joint patrols by Israeli and Palestinian security forces along the demarcation lines of authority in Gaza and Jericho appeared to function in a spirit of comparative harmony.

ECONOMIC DIFFICULTIES

A far greater worry for Palestinians than security co-ordination with Israel, and one that was only briefly masked by the general euphoria, was the financial and administrative chaos in Gaza. The difficulty Arafat was experiencing in recruiting appointees to the new Palestinian Autonomy Council – to be composed of 15 personalities from inside the Occupied Territories and nine from the Palestinian diaspora – resulted in the 3,000-strong police force operating in a judicial and legal vacuum. This situation was aggravated by the absence of properly constituted structures to co-ordinate and implement administrative change. The extent of the financial crisis was epitomized by the fact that the new police force was having to subsist on munitions donated by the local population. High unemployment levels made matters worse. Israel had placed a limit of 23,000 on the number of Gazan workers it was prepared to allow into Israel and had sealed its border completely in response to the killings at the Erez checkpoint. Under pressure from Israeli farmers, Rabin had also reneged on an earlier decision to allow the importation of Gazan agricultural produce into Israel. Further trouble loomed for the nascent Palestinian authority in Gaza with the prospect of having to pay the estimated 7,000 employees of the previous Israeli civilian administration. With little prospect of revenue from tax collection from a population for whom tax avoidance had been seen until now as a patriotic as well as a personal imperative, there were desperate pleas from the PLO for international aid. Palestinian economists had estimated that Palestinian self-rule would require an annual budget of $240m., with a maximum of $127m. likely to be raised in tax revenues. First year start-up costs were likely to be in the region of $600m., leaving a huge budgetary deficit. Although $2,300m. had been promised to the Palestinians at the international donors' conference held in Washington in October 1993, the international community was reluctant to disburse funds until the Palestinians had established proper accounting procedures and clear project proposals. The PLO rejoined that without immediate funds to set up a basic administrative structure—which the donors were reluctant to subsidize—it would be impossible to meet the international requirements. Arafat expressed his personal fury at the implications of corruption and mismanagement and stated that he would not visit the autonomous regions to take charge of the transition until pledges of aid were forthcoming. The Israeli media appeared to take delight in the discomfort of the PLO leader and cited the financial wrangling as further evidence of his unredeemable political shortcomings. However, for once, Arafat's brinkmanship appeared to pay off. In a series of tense meetings in Paris, France, in June the donor countries agreed to the immediate release of $42m. in aid, with at least one-quarter of this sum going to fund the setting up of the Palestinian administration—without the *quid pro quo* of detailed accounting. They also agreed to take measures to make up the shortfall to meet the expected 1994 deficit. There were also positive developments in the West Bank and Gaza. By the end of June most of the 24 places on the Autonomy Council (which later became the Palestinian National Authority—PNA) had been filled, mostly

by Arafat loyalists, but also by several quasi-independents and members of Fida, the faction of the DFLP led by Abed Rabbo. In Gaza the Palestinian police force had won an assurance from Hamas that the killing of collaborators would stop; and in Damascus the ageing leader of the PFLP, George Habash, marked a considerable softening of his organization's position on the new Palestinian authority by instructing his supporters 'not to take a negative stance towards the institutions that offer services during the interim phase.'

ARAFAT VISITS GAZA

The easing of the PLO's financial worries, coupled with criticism of the PLO Chairman's apparent hesitation in taking control of the Palestinian self-rule areas, was answered with a commitment by Arafat to make his long-awaited visit to the newly autonomous enclaves. On 1 July 1994, with little advance warning, the PLO leader crossed from Egypt into Gaza to step foot on Palestinian soil for the first time in 25 years. His reception was more muted than might have been expected for a returning leader who had for so many years been an international symbol of the Palestinian cause. Yet large crowds did gather both in Gaza City and in Jabalia refugee camp, birthplace of the *intifada*, to hear Arafat's address. There was little of note in either speech beyond the repeated pleas for Palestinian unity — directed principally at the Islamic opposition — and an acknowledgement that there was little popular enthusiasm for the Oslo Accords. Arafat reassured his audience that the Gaza and Jericho enclaves were the stepping-stones to an independent Palestinian state with Jerusalem as its capital. Similar sentiments were voiced two days later in Jericho. When the PLO Chairman ended his four-day visit to meet with Rabin and Peres in Paris, France, his aides announced that he would soon be returning 'for good' and that Gaza, rather than Jericho, would be the home of the new Palestinian administration. Arafat's visit had raised more questions than it had answered. Despite the affection extended to him, Arafat's performances failed to convince anybody that he possessed the requisite political skills to tackle the shortcomings of the autonomy accords or to build on their openings. The presence of the PLO Chairman in Gaza and Jericho had as much symbolic resonance on the boulevards of Tel-Aviv as in the alley-ways of Gaza. The return of a personality who for more than two decades had been demonized by politicians and the media alike, was seized on by the Israeli right wing as a focus to rally opposition to the Oslo Accords. A demonstration in Jerusalem organized by the nationalist right to protest at Arafat's visit ended as something of an 'own goal' for the Likud when some 10,000 demonstrators left the main rally and ran amok in East Jerusalem. Scenes of settlers and their supporters not only attacking Palestinians and their property, but also fighting running battles with the Israeli security forces, were a severe embarrassment for the struggling Likud leader, Binyamin Netanyahu. Rabin lambasted the settlers as the Israeli equivalent of Hamas, while the Likud quietly reflected that they had lost an opportunity to garner the moderate support needed to obstruct the PLO-Israeli agreement. Rabin's own fortunes were fortified in July with news that the orthodox Shas party would be rejoining the Labour coalition, as would Ye'ud, a splinter group from the right-wing Tzomet Party. There was no such comfort for Arafat. Shortly after returning to Gaza, the PLO leader became embroiled in the most serious incident of the Strip's two-month-old autonomy. In the early morning of 17 July a clash occurred at the Erez checkpoint between Palestinian labourers and units of the IDF trying to check that they possessed the correct documentation for entry into Israel. Pent-up frustrations at the slowness of the process led to a full-scale riot, with the Palestinian workers burning down an Israeli bus depot and Israeli soldiers attempting to restore order with live ammunition. There then followed a prolonged gun battle between members of the Palestinian police force and soldiers of the IDF. Two Palestinians were killed in the clash and 75 were injured; 18 Israeli soldiers also suffered gun-shot wounds. The mutual recriminations that followed failed to obscure the underlying tensions that had given the incident an air of inevitability. Firstly, rather than easing the process by which Palestinian workers gained employment in Israel, the advent of autonomy had merely added to it a further tier of administrative bureaucracy. Secondly, the Erez violence confirmed the fears of Palestinians that the security arrangements agreed in Cairo had created a kind of Gaza gulag. Finally, the entire autonomy process appeared to be doomed to failure unless something could be done to address the perilous state of the Gazan economy. 'What happened in Gaza today,' the Palestinian Minister of Justice, Furaih Abu Middain, commented 'was a battle for a loaf of bread.' The Israeli decision to seal off the Strip in response to the violence was condemned as incendiary by Palestinian sources and cast a further shadow over impending negotiations on the implementation of the next phase of the autonomy accords.

ISRAELI–JORDANIAN RELATIONS IMPROVE

The depressed mood that characterized Israeli–Palestinian relations was thrown into sharp relief by dramatic progress in Israel's bilateral talks with Jordan. On 9 July 1994 King Hussein announced to the Jordanian National Assembly that he was prepared to meet the Israeli Prime Minister, and on 18 July Jordanian and Israeli negotiators sat at a table straddling the Israel-Jordan border to take part in the first bilateral talks to be held in the Middle East itself. The decision of the Jordanian monarch to make such a highly symbolic concession to Israel was widely interpreted as an exercise in pragmatic self-interest. Anxious to maintain the momentum for a comprehensive peace settlement in the Middle East, the USA had offered appealing incentives to King Hussein to move Israeli–Jordanian relations to the centre of the peace process. Not least among these was US President Clinton's promise that his Government would work towards the waiving of Jordan's $900m. debt to the USA, provide military assistance to Jordan and seek to persuade Saudi Arabia and the Gulf states to end their economic and political boycott of the Hashemite regime. An announcement by Shimon Peres in mid-July acknowledging the Golan Heights to be Syrian territory was seen as Israel's contribution to the wider US plan of muting Syrian criticism of Jordan's effective *coup de grâce* to the dying beast of Arab unity. That Jordan refrained from signing a full peace treaty with Israel did not disguise the fact that the normalization of Israeli–Jordanian relations was close. In Washington on 25 July King Hussein and Itzhak Rabin formally ended the state of belligerency between their two nations in a ceremony that underlined not only the understanding that had been a feature of Israeli–Jordanian relations for many years, but also the personal warmth that existed between King Hussein and Rabin, a quality that was visibly absent from relations between the Israeli Prime Minister and the PLO Chairman. With the exception of the extreme right-wing fringe of Israeli politics, the country met the formal end of the state of war with Jordan with general acclaim, and a feeling that the key issues of contention with Jordan, the sharing of water resources and the return of a small area of Jordanian territory seized by Israel in the late 1960s, could be easily resolved. Jordan's citizens were less sanguine. Fundamentalist and left-wing groups were critical of the *rapprochement*, while the majority of the population saw the overtures to Israel as the inevitable price that had to be paid if Jordan was to solve the problem it had created for itself in the aftermath of Iraq's invasion of Kuwait in 1990. Palestinian reaction, in contrast, was sharply critical. There were strong suspicions that Israel, the USA and Jordan were engaged in a concerted effort to isolate the PLO and prepare for a reassertion of Hashemite control over the West Bank, leaving the PLO Chairman as 'mayor of Gaza.' There was particular concern at the inclusion in the document signed by King Hussein and Itzhak Rabin in Washington of a paragraph acknowledging Jordan's 'special role' as guardian of the Muslim holy sites in Jerusalem. Assurances from King Hussein that there was no contradiction between Jordan reaching an understanding over guardianship of religious sites in East Jerusalem and Palestinian political sovereignty, failed to convince the PLO leadership. On 20 July the PLO retaliated against Jordan's perceived treachery by banning the sale and distribution of the pro-Jordanian daily, *An-Nahar*, in the autonomous enclaves. Arafat reportedly justified the decision on the ground that he could not 'tolerate any undermining of Palestinian national interest in the name of press freedom.' The irony of a Palestinian authority restricting Palestinian freedom of speech was not lost on anyone, least of all Israel. The Arab world responded to both the Israeli-Jordanian

agreement and the PLO's quarrel with Jordan with a large measure of indifference, damning evidence, if such was still needed, that the Arab world could not muster sufficient enthusiasm even to pay lip-service to the notion of Arab solidarity. Of the region's principal powers, only Syria condemned Jordan's agreement with Israel, in a statement that was made much easier by an earlier refutation, by Rabin, of Shimon Peres' comment that Israel regarded the Golan Heights as Syrian territory.

ISRAELI-JORDANIAN PEACE TREATY

Israel's breakthrough in its relations with Jordan was succeeded by further diplomatic and political gains. On 1 September 1994 Morocco became only the second Arab nation to establish diplomatic ties with the Jewish state, while Tunisia announced that it would shortly be establishing its own links with Israel via the Belgian embassy in Tel-Aviv. At the end of the month the six GCC member states responded to US urgings and signalled the formal end of their long-standing economic boycott of companies trading with Israel. Meanwhile Jordanian and Israeli negotiators had reached agreement on outstanding disputes over territory and water. Israel acceded to the immediate diversion of 50 cu m from the Sea of Galilee to meet Jordanian water needs and, in order to aid the construction of flood reservoirs on the Rivers Jordan and Yarmouk, agreed to supply a further 50 cu m. The Israeli Government also recognized Jordanian sovereignty over contested border lands in return for a Jordanian commitment to lease back the territory to Israel. President Assad of Syria scorned this commitment as 'blasphemous', but despite his opposition and the resistance of Jordan's Islamist and leftist parties to the normalization of relations with their historic foe, King Hussein duly sealed the agreement with Israel on 26 October by signing a peace treaty with Itzhak Rabin in the presence of US President Clinton. Israel and Jordan opened their respective embassies in Amman and Tel-Aviv less than two months later. Peace with Jordan was broadly welcomed in Israel and met with overwhelming approval in the Knesset; only the three deputies of the right-wing Moledet party voted against ratification of the peace treaty with Jordan, with a handful of Likud 'diehards' abstaining. Equally indicative of Israel's rapidly improving relations with the Arab world was the presence of a large Israeli delegation at a regional economic summit meeting in Casablanca, Morocco, at the end of October. The meeting attracted 2,000 business and political leaders from the Arab world and their main Western trading partners and was designed to further the peace process by encouraging economic co-operation. Although the summit concluded with few substantive proposals, Israel's high-profile presence was celebrated at home as both a political and economic victory.

FURTHER DEADLOCK ON DECLARATION OF PRINCIPLES

The Palestinian reaction to the Israeli-Jordanian peace treaty was, predictably, less welcoming. Yasser Arafat was not invited to the signing ceremony, and unallayed Palestinian suspicions regarding Hashemite designs on Jerusalem led to the burning of King Hussein's portrait in demonstrations on the West Bank. It was also feared that, having achieved peace with Jordan, the Israeli Government would feel under less pressure to pursue negotiations with Arafat's Palestinian National Authority (PNA) on the implementation of the Declaration of Principles. Indeed, by the autumn of 1994 Israeli-Palestinian negotiations were effectively deadlocked. An early empowerment agreement had been reached between the Israeli Government and the PNA at the end of August for the transfer of control in the fields of education, tourism, taxation, health and social welfare from the Israeli civil administration to the PNA. However, this limited agreement was already several months behind the deadline stipulated in the Declaration of Principles and did nothing to resolve the serious differences preventing progress on the substantive issues of the interim phase negotiations. In Cairo, Egypt, Israeli negotiators emphasized that there could be no progress on IDF redeployment in the West Bank until they were satisfied that the Palestinian authorities had demonstrated an ability to curb the anti-Oslo violence of Islamist militants and PLO 'rejectionists'. There were further disputes over the function and composition of an elected Palestinian authority. Itzhak Rabin reiterated a strong preference for a 24-member executive council whose legislative powers would be subject to an Israeli veto. Publicly, at least, PNA representatives argued for a 100-seat assembly with full executive and legislative authority. Without such a formula Arafat realized that it would be increasingly difficult either to stem the tide of Palestinian disaffection with the course of the peace process or gain legitimacy for the PNA. There was already a growing conviction that the Palestinian negotiating team was being outmanoeuvred by its Israeli counterparts, and being drawn into a situation in which Israel's ostensible security concerns dominated the negotiating agenda. According to Palestinian sceptics the 'security' issue served a dual purpose for Israel. First, it trapped the PNA in the role of Israeli gendarme and hence ensured continuing Palestinian divisions. Secondly, the failure to reach agreement on arrangements for the interim period allowed the Israeli Government to postpone a confrontation with Jewish settlers in the West Bank, while providing a breathing space to pursue the infrastructural development—road building and settlement expansion—on the West Bank and around Arab Jerusalem that would create the necessary 'facts' to prejudice the course and outcome of the 'final status' negotiations.

The fragility of the peace process and the character of the PNA's relationship with Israel was emphasized by a series of violent incidents towards the end of 1994. In mid-October an Israeli soldier, Nachshon Waxman, was kidnapped by Hamas militants demanding the release of 500 of their jailed comrades. Although there was no evidence that Waxman was being detained in the Gaza Strip, or, indeed, that his kidnappers came from there, Rabin stated publicly that he held Arafat and the PNA responsible for the soldier's safety. Under mounting Israeli pressure, Arafat ordered his security forces to detain hundreds of known Hamas activists. However, it soon emerged that Waxman was in fact being held on the West Bank, where he and three of his captors died in a clumsily unsuccessful rescue operation by the IDF. Shortly after Waxman's killing Hamas struck again. Twenty-two Israelis were killed and tens were injured in the suicide bombing of a crowded Tel-Aviv bus. Rabin immediately ordered the sealing of the Gaza Strip and the West Bank, and, while he was more circumspect about blaming Arafat directly for the atrocity, he did urge the PNA to crush its Islamist opponents. He added that Israel reserved the right to intervene militarily in the Gaza Strip and on 2 November a leading member of Islamic Jihad in Gaza, Hani Abed, was blown up in his booby-trapped car. The killing bore all the hallmarks of an Israeli undercover operation and happened on the same day that Rabin stated that, while he was extending a hand of peace to Jordan, the other was 'pulling the trigger to hit the terrorists of Hamas and Islamic Jihad'. Jihad took revenge 10 days later with a suicide attack on an IDF checkpoint in Gaza that left three Israeli soldiers dead and several injured. Some 200 Jihad sympathizers were arrested by the Palestinian police in the aftermath of the attack, while Rabin again harangued the PLO Chairman about his duty to 'dry out the swamp of terrorism in Gaza'. There was little doubt that this ugly cycle of violence severely undermined the PNA. The forces of militant Islam gained considerable sympathy from being perceived as victims of Arafat's heavy-handedness in the same way as the readiness with which Arafat was seen to be doing Rabin's bidding served to increase the alienation of those ordinary Palestinians already frustrated at the absence of a tangible 'peace dividend'. The presence of scores of Hamas and Islamic Jihad cadres in Palestinian prisons, together with the swelling ranks of the various Palestinian security forces, also spelt the end of the delicate *modus vivendi* which the PNA had tried to construct with the Islamist opposition.

SPECULATION OVER THE GOLAN HEIGHTS

At various times during the second half of 1994 prominent members of the Israeli Cabinet hinted that Israel was prepared to make more extensive concessions regarding the Golan Heights than had hitherto been entertained by the Labour-led coalition. However, the Israeli Prime Minister reiterated that any Israeli withdrawal from the Heights would be both gradual and modest. The apparent disunity within the Israeli Government on policy towards Syria was widely interpreted as a ploy to test domestic opinion on territorial compromise, and to entice

Syria into making concessions. If true, there was little evidence to suggest that President Assad was about to soften his own position. Despite the shuttle diplomacy of US Secretary of State Warren Christopher and face-to-face meetings in Washington between the Israeli and Syrian ambassadors to the USA, it was conceded that 'wide differences' still existed between the two Governments and official bilateral talks remained suspended. Rumour did, however, spur the leaders of the 13,000 Israeli settlers on the Golan Heights into launching a vigorous anti-withdrawal campaign. In TV adverts and rallies up and down the country the settlers and their supporters denounced what they described as Rabin's treachery in reneging on his election promise to maintain an Israeli presence on the Golan Heights. Particularly disturbing for the Labour Prime Minister was the fact that the Golan settlers enjoyed the backing of a significant section of the Labour establishment—seven Labour deputies tabled a bill that would have effectively ruled out withdrawal from the Golan Heights by making any change in the region's status subject to a 65% approval rating in a referendum. Opinion polls conducted in September also revealed that only 40% of the electorate would support a 'partial' withdrawal from the Golan Heights, while 35% opposed any withdrawal at all. This apparent lack of support in Israel for any compromise with Syria, together with a resurgence in the popularity of the Likud, led well-placed Israeli sources to suggest that Rabin would be happy to place the Golan issue on hold until the 1996 elections. This view gained in currency after visits to Damascus by US President Clinton and Warren Christopher in October and December only resulted in an Israeli-Syrian agreement to restart talks on the understanding that they would be characterized as an 'exchange of ideas' rather than 'negotiations'.

INTER-PALESTINIAN CONFLICT

Arafat's relations with his Islamist opponents seriously deteriorated on 18 November when units of the Palestinian police fired on demonstrators as they left a Gaza City mosque. Twelve people died and 200 were injured, most of them Islamists, in the initial shootings and the gunfights which followed. Pro-and anti-Arafat rallies in the immediate aftermath of the killings, which were characterized by mutual threats and recriminations, kept the political atmosphere at boiling-point in the Gaza Strip. However, a realization that further confrontations could well tip Gaza into the abyss of civil war served eventually to cool tempers. The Palestinian police were prudently absent from the funeral marches of those killed on 18 November, while newspaper editors and political independents, most notably Haider Abdel Shafei, gave support to hastily convened mediation committees. Their cause was aided in no small degree by the refusal of many Fatah cadres in Gaza to engage in the kind of provocation of Hamas in which the more ardent Arafat supporters in the West Bank had indulged. Arafat's own attempts to exploit the crisis beyond his Gaza headquarters proved only partially successful. By stressing the connection between civil unrest in Gaza and the dire economic situation there, he was able to persuade a conference of international donors in Brussels to promise an immediate aid package of $125m. and a further $23m. for infrastructural projects. However, the PLO Chairman found it far more difficult to exploit the Gaza crisis to wring the concessions he and the PNA needed so urgently from Israel. Central to Arafat's and wider Palestinian unease were the continuing signals that the Israeli Prime Minister, in contrast to the more conciliatory voices in the Cabinet, was intent on revising some of the fundamental articles of the Declaration of Principles. Speaking in mid-December, Rabin suggested that rather than completing its full withdrawal from Palestinian population centres in the West Bank prior to elections to the PNA, as stipulated in the Declaration of Principles, the IDF should redeploy only temporarily for the duration of the elections. The alternative, according to Rabin, was 'protracted negotiations' on the two issues. Arafat rejoined that the redeployment of the IDF would need to be completed by the eve of the elections, while one of the chief Palestinian negotiators stated that for Israel 'to come up with formulas and versions that contradict the Oslo Accords' would be 'the quickest way to destroy the peace process'. Events in the Gaza Strip and continued wrangling over the interpretation of the Declaration of Principles were thrown into sharp relief by the award of the Nobel prize for Peace to Arafat, Rabin and the Israeli Minister of Foreign Affairs, Shimon Peres. As with many other awards, the decision of the Nobel committee had caused controversy when it was initially announced, but at the award ceremony in December it appeared particularly premature.

EXPANSION OF SETTLEMENTS

The sense of foreboding surrounding Israeli-Palestinian negotiations intensified at the beginning of 1995. On 2 January four Palestinian policemen were killed on the outskirts of Gaza City by Israeli soldiers who claimed that they had mistaken them for 'armed militants'. Yet this, the most serious breakdown to date in co-ordination between the Israeli and Palestinian security forces, was largely overshadowed by another furore over Israeli settlements. It was triggered by a decision of the settlement council of Efrat to expand its settlement on land adjoining the Palestinian village of Al-Khader and some 2 km away from the settlement itself. As Arab villagers and Israeli sympathizers confronted the bulldozers, Palestinian leaders protested that the expansion violated the Declaration of Principles. The Israeli Cabinet eventually devised a compromise solution that 'froze' building on the initial site but allowed for the construction of new housing on lands next to Efrat. The compromise failed to assuage the anger of the PNA, but it was powerless to effect a reversal of this or other incidences of land confiscation and settlement building that had occurred on the West Bank since the signing of the Declaration of Principles. The USA made it clear that it would not intervene in a dispute which it regarded as a local matter, to be dealt with within the framework of the programme. Yet this provided little comfort for the opponents of Israel's settlement- and road-building programme. Under the Declaration, the issue of settlements had been assigned to the 'final status' negotiations and although a moratorium had been declared on the inauguration of new settlements, the expansion of existing ones had been implicitly accepted. Some 40,000 acres of Palestinian land had been confiscated since the signing of the Declaration of Principles, and construction had started on an additional 400 km of settlement roads. Their effect, in the words of Meron Benvenisti, a former deputy mayor of Jerusalem and a severe critic of the settlement programmes of successive Israeli governments, was to turn a 'huge expanse of the West Bank into a region in which it will be impossible to implement any final arrangement except by annexation to Israel'. Mahmud Abbas, Palestinian signatory of the Declaration of Principles in Washington, added: 'If the confiscation of Palestinian land is not stopped we will not find anything to negotiate over in the future'. That the continued settlement activity in the West Bank violated the spirit if not the letter of the Declaration of Principles was tacitly acknowledged by sections of the Israeli Cabinet. However, spokesmen for the Israeli Prime Minister explained that Rabin was too weak politically—polls at the beginning of 1995 showed the Labour-led coalition badly trailing its Likud rivals—to implement the next stage of the Declaration of Principles or to tackle settler interests directly. Instead, Rabin insisted, with strong backing from the USA, that the course of the peace process would be determined by Israel's assessment of the impact of the autonomy experiment on its security concerns. It was a formula that the Palestinian opponents of the Declaration of Principles continued to exploit.

THE BEIT LID BOMBINGS

On 22 January 1995 two Islamic Jihad suicide bombers killed 22 Israelis, most of them soliders, in a carefully planned attack at Beit Lid. Israel immediately sealed its borders with the Gaza Strip and the West Bank and arrested hundreds of Islamist activists. Rabin also gave his backing to a proposal to build a 228-mile long security fence in the West Bank that would 'physically segregate' Palestinians and Israelis. Yasser Arafat condemned the Beit Lid bombings and instructed his security forces to undertake a further and unpopular detention of Islamic Jihad cadres. The PNA leader attracted further criticism for his muted response to the security fence plan. Many Palestinians feared that the separation calls were inspired by a desire unilaterally to seize Palestinian territory around Israel's border settlements and thus pre-empt negotiations on the 'final status' agreements. These concerns were aggravated on 25 January when the Israeli Cabinet committee for settlement voted in

favour of the massive expansion of the Jewish satellite townships around Jerusalem. Attempts to limit the damage caused by the Beit Lid bombings produced few results. A beleaguered Arafat met Rabin in Gaza City on 9 February in an attempt to have the closure of the Gaza Strip and the West Bank lifted, and to obtain assurances on the redeployment of troops in the West Bank. He achieved neither of his aims, leading one Palestinian negotiator to describe the peace process as having 'reached a state beyond that of collapse'. A meeting of Jordanian, Israeli, Egyptian and Palestinian representatives in Washington three days later proved no more fruitful for Arafat. US Secretary of State Christopher gave his seal of approval to the crippling security closure of the Gaza Strip and the West Bank by commenting that free movement into and out of the territories could not be expected until the problem of terrorism had been addressed. Confirming Arab and Palestinian fears that the USA's agenda was broadly the same as Israel's, Christopher refused to address the problem of Palestinian detainees and did not criticize Israel for its refusal to adhere to the timetable set out in the Declaration of Principles.

INCREASING ARAB DISILLUSIONMENT

The Palestinians were not the only Arab party to despair at the deadlock in the peace process. By the beginning of 1995 the Egyptian President was clearly exasperated with Israeli policy. Having enthusiastically played the role of the key Arab Government in achieving a comprehensive regional peace, and having invested considerable political capital in the outcome of the peace process, President Mubarak viewed Israel's obstructionism on fundamental issues as undermining his own regime. For Egypt to regain its place as leader of the Arab world, and for the Mubarak Government to erode support for Egypt's own violent Islamist opposition, Israel had to be seen to be dealing sensitively with Arab and Palestinian concerns. However, the Israeli Government's frequent humiliation of Arafat, its bellicose statements on Jerusalem and the ongoing concerns over the West Bank settlements strengthened Egypt's conviction that only by distancing itself from Israel could it ward off criticism that it was giving legitimacy to a process it was itself increasingly wary of. Egypt signalled the rapid deterioration in its relations with Israel through clear and public support for Syria's terms for an Israeli-Syrian peace, and by announcing that it would not sign the renewal of the 1970 Nuclear Non-Proliferation Treaty (NPT) unless Israel, a non-signatory and the only known nuclear power in the region, also undertook to adhere to it. This stance won the backing of Arab states but was greeted with annoyance by Israel. Gentle persuasion by the USA led Israel to make a minor concession, to the effect that it would sign the NPT once a comprehensive Middle East peace had been achieved. Such a peace, however, would have to include peace treaties with such arch foes as Iran, Iraq and Libya. This concession failed to impress President Mubarak. Emboldened by Arab support and by charges of hypocrisy against the USA for its failure to pressurize Israel, the Egyptian President disregarded the USA's urgings to reconsider Egypt's position on the NPT. On 20 April Egypt reiterated that it would withhold its signature to the extension of the NPT because of Israel's refusal to ratify the Treaty. However, further persuasion by the USA and its threats to withhold aid, led Egypt and the rest of the Arab states to agree to an extension of the NPT without Israel's signature. It was a victory for Israel, but one that emphasized its deteriorating relations with Egypt. An attempt by Israeli officials to blame the rift on the Egyptian Minister of Foreign Affairs, Amr Moussa, failed to disguise the fact that Egypt's position was symptomatic of wider Arab disaffection with the lack of reciprocity in Arab–Israeli relations. The evidence of the previous six months gave credence to the Syrian belief that separate deals with Israel and an absence of inter-Arab co-ordination made Israel's neighbours vulnerable to manipulation. It was feared that Israel would achieve integration into the Arab world without having to make a commitment to withdraw from the territories it occupied. This somewhat belated assessment provided the impetus for Jordan to seek better relations with the PNA. King Hussein and Yasser Arafat signed a general co-operation agreement on 27 January covering trade, currency, banking, communications and administrative affairs. The Jordanian Prime Minister also promised that in future Jordanian policy towards Israel would be guided by the aim of achieving Palestinian sovereignty over East Jerusalem. The *rapprochement* with the Palestinians signalled a shift in Jordanian policy. Early in March the new Jordanian Minister of Foreign Affairs, Abdul Karim Kabariti, underlined Jordan's new priorities by warning Israel that the key to better Israeli-Jordanian relations lay in progress in negotiations with Syria and the Palestinians. In a meeting with US Secretary of State Christopher on 13 March King Hussein also admonished the US Administration for failing to honour pledges of increased economic and military assistance for Jordan. Without this promised assistance, the King argued, it would be difficult for him to persuade his subjects to see the value of peace with Israel. Moreover, Syria would be wary of any future US promises intended to encourage it to reach an agreement with Israel.

Israel gradually eased the restrictions it had imposed on Palestinians entering Israel following the Beit Lid bombings. Two months after the initial closure of its borders 20,000 workers were given permits to return to their jobs in Israel. This compared to 45,000 who had been working in Israel prior to the bombing and more than 100,000 who had worked in Israel before the Palestinian *intifada*. The presence in Israel of some 80,000 guest workers from Eastern Europe and Asia suggested that, despite the Gaza Strip's 50% unemployment rate, the Israeli Government had no plans to restore the number of Palestinians allowed to work in Israel to its pre-*intifada* level. The partial lifting of the blockade on Palestinian workers was agreed during talks between Arafat and Shimon Peres in Gaza on 9 March. An optimistic Peres described their meeting as a 'breakthrough', but this was not an assessment shared by Palestinian negotiators. Although Peres promised to open up a road corridor between the Gaza Strip and Jericho, and to initiate discussion in the Israeli Cabinet on the release of some of the 7,000 Palestinians still held in Israeli prisons, there was still no agreement on the outstanding issues of IDF redeployment and Palestinian elections. Rabin had earlier suggested that Israel would agree to a town-by-town redeployment in the West Bank, with the proviso that Arafat would have to curb terror attacks.

PNA ANTI-TERRORISM ACTIVITIES

Peres confirmed in his meeting with Arafat on 9 March that negotiations on redeployment might be completed by July 1995 as long as 'specific actions were taken by the Palestinians against terror'. Such warnings hardly seemed necessary. With the tacit approval of Israel and the USA, Yasser Arafat had presided over the expansion of security forces in the Gaza Strip to some 17,000 personnel organized into six separate, competing branches. In the period since the Beit Lid bombings and an attack by DFLP fighters on an IDF patrol on 6 February they had rounded up scores of activists opposed to the Declaration of Principles. Additionally, the PNA had set up special security courts which were administered by appointed security personnel. They were shortly to pass sentences of 25 years' imprisonment on members of the military wings of the Islamist opposition. Reports of the death in custody of Palestinian suspects and the routine torture of detainees provoked severe criticism from local and international human rights organizations. The harassment of journalists and the closure of opposition newspapers confirmed the increasingly authoritarian nature of the PNA regime. Arafat was also censured by former allies for his handling of negotiations with Israel, and in Gaza and the West Bank prominent independent activists had begun to seek support for a new political party committed to the democratization of the PNA. Especially troubling for the PLO leader was growing dissent from within his own Fatah ranks. At a stormy meeting of the Fatah central council in Tunis in late March Arafat came under strong pressure from erstwhile comrades-in-arms turned dissidents to suspend the peace process. Farouk Kaddoumi and Mahmud Abbas, founder members of Fatah, argued that it would be a grave error to pursue talks with Israel until a new and more accountable negotiating strategy had been devised. Breaking ranks even further, Kaddoumi publicly accused Arafat of embezzlement and of surrounding himself with corrupt opportunists. The meeting ended in uproar, but not before Arafat had won a narrow mandate to continue with the autonomy negotiations, with the proviso that

a committee be set up to monitor the course of the negotiations and that dialogue be initiated with the opposition. (The sense that the largest faction of the PLO was moving towards violent division was given added weight by a series of feuds and turf wars in the West Bank that led to several deaths and scores of injuries.) No sooner had Arafat survived the Tunis meetings than the PNA became embroiled in further crisis. On 2 April a massive explosion in a residential apartment block in Gaza City killed four Palestinians and injured 30 others. Among the dead were key figures of Hamas' military wing, the *Izz ad-Din-Qassam* Brigades. Hamas immediately accused the PNA authorities of collaborating with Israel in the bombing of the building. PNA representatives rejoined that the apartment had been blown up in an unsuccessful bomb-making operation. While Arafat's police produced a cache of arms and bomb-making equipment from the debris to support their claims, Hamas supporters demonstrated on the streets, vowing revenge for their slain comrades. On 9 April two suicide attacks on settlers and soldiers in Gaza left eight dead and more than 50 wounded. Hamas and Islamic Jihad claimed responsibility for the two operations. The Israeli Prime Minister ordered another closure of the West Bank and the Gaza Strip, a measure designed to deflect calls from right-wing political parties for an end to negotiations with the PNA over the extension of Palestinian autonomy in the West Bank. The closure did little to calm the rising passions in Gaza, however. Although Rabin confirmed that negotiations on the next phase of Palestinian self-rule would continue, there was little doubt that the events in Gaza had provided his Government with an opportunity to obtain both time and concessions from the embattled PNA. This was evidenced in Arafat's vetoing of a draft national reconciliation treaty brokered between the various leftist and Islamist opposition groups in Gaza. Arafat's aides stated that he had opposed the agreement because it did not contain a condition that the opposition should respect his agreements with Israel.

NO PROGRESS ON SYRIAN TRACK

Negotiations between Israel and Syria remained stalled during the spring of 1995. In the absence of progress, southern Lebanon once again became the arena for the pursuit of political objectives. Eighty attacks on IDF and SLA targets were reported during February, the highest monthly total for several years. Israel responded by subjecting the south Lebanese coast to a month-long blockade, an action that led to a loss of livelihood for some 1,800 Lebanese fishermen. On 31 March Israeli helicopter gunships attacked a car carrying a leading Hezbollah official, Rida Yasin. Both he and his companion died in an attack that was strongly reminiscent of the assassination of Hezbollah leader, Sheikh Abbas Mussawi, in 1992. Hezbollah fighers retaliated with rocket attacks on targets in northern Israel. A further escalation of hostilities was only averted by the intervention of US Secretary of State Warren Christopher. In communications with the Israeli, Syrian and Lebanese leaders, he reminded the respondents of the agreements brokered in the wake of Israel's 'Operation Accountability' in 1993. The mediation of Warren Christopher reflected the high priority the Clinton administration was giving to the Israeli-Syrian track of the peace process. The US President had stated that he hoped a peace agreement would be concluded between the two states prior to the 1996 elections in Israel and the USA. Mindful of the slow pace of negotiations he announced in March that a representative from the State Department would participate in the ambassadorial talks taking place in Washington. Conciliatory statements by the Israeli Prime Minister to Syria prompted rumours that more progress was being made in the negotiations than the terse official summaries suggested. It emerged, nevertheless, that this optimism was largely misplaced. However, having failed to reduce differences on the crucial issue of Israel's withdrawal from the Golan Heights, Christopher urged the Israeli and Syrian delegations to postpone these discussions and concentrate on what security arrangements would be satisfactory to them in the wake of an Israeli evacuation of the Golan Heights. This change in emphasis appeared to bear fruit. Emboldened by Shimon Peres' further references to the Heights as Syrian territory, President Assad hinted that he would be prepared to share the Golan's water resources with Israel in the event of the latter's evacuation. In June Syria also conceded that the demilitarized zones on either side of the new border would not have to be of equal size; until this point Syria had insisted on 'symmetry' in all security arrangements. Despite these small shifts towards accommodation on security and water issues, there was little evidence of a breakthrough on the core issue of withdrawal. An opinion poll published in June indicated that 58% of the Israeli public remained opposed to a full withdrawal from the Golan in exchange for a comprehensive peace agreement with Syria. Disturbed by these findings, the Israeli Government repeated an earlier suggestion that an Israeli evacuation of land and settlements on the Golan Heights would have to be subject to a referendum. The idea was clearly irritating to the Syrian regime which saw it as evidence of Israel's unwillingness to give up the occupied land. Shimon Peres reassured Syria and the USA that, despite the pledge to hold a referendum, the Israeli Government was committed to its goal of peace with Syria. Supporters of Israel's continued presence on the Golan also found little comfort in the extent of opposition to withdrawal from the Heights. They were equally perturbed by Rabin's comment to the IDF's Golani Brigade that the Golan Heights was 'a tank land rather than a holy land'. In July three rebel Labour backbenchers sponsored legislation that sought to set a requirement of a majority of 70 in the 120-seat Knesset for any agreement to withdraw from the Golan. Rabin dismissed the proposed law as nonsense, adding that Israel had gone to war without such a mandate and could also make peace without one. The US ambassador, Martin Indyk, lobbied hard prior to the vote, pointing out that if the law was approved it would effectively destroy the chances of a peace agreement with Syria. At the end of July the Knesset voted 59-59 on a first reading of the proposed legislation. The Speaker cast his vote against and declared the bill defeated.

NEW SETTLEMENT PLANS

At the end of April 1995 Rabin expressed his support for a plan of the Ministry of Housing to construct 7,000 new homes in East Jerusalem and announced plans to confiscate 130 acres of Arab land to facilitate the project. The scale of the proposed construction and its prejudicial impact on final status negotiations on the future of Jerusalem caused an international furore. An irate Arafat authorized the tabling of a UN Security Council resolution demanding that the decision be annulled. He did, however, resist a call from Haider Abdel Shafei to 'shock international opinion' by withdrawing from the peace talks, insisting that there was no alternative to a continuation of dialogue. Shimon Peres attempted to ease the pressure on the PLO leader with several minor concessions—increasing the number of Palestinians allowed to work in Israel to 31,000, simplifying bureaucratic procedures for the entry of goods into the Gaza Strip, promising to hasten the release of 250 Palestinians held in Israeli detention. But, in view of Palestinian outrage at the construction proposals, Peres' clumsy attempt to make them more acceptable only added insult to injury. The US reaction was similarly anodyne. Madeleine Albright, the US Ambassador to the UN, admitted that the new housing units 'pose problems as far as the peace process is concerned', but added that the Security Council was an inappropriate forum for the discussion of the issue. On 17 May the USA once again used its veto at the UN to defeat a resolution which insisted that Israel should rescind its construction plan. All of the other 14 voting countries supported the resolution. It was the thirtieth time since 1972 that the USA had used its veto to prevent the censure of Israel. If developments in the Security Council were wholly predictable owing to the strong pro-Israeli bias of the Clinton administration, what followed was not. With the PNA reluctant to take the lead in mobilizing opposition to the construction proposals, it was left to a late intervention by the six deputies of the Arab Democratic Party and the Communist-led Hadash coalition to obstruct the Israeli plans. The two parties submitted a motion of 'no-confidence' in the Rabin Government, in spite of warnings from Arafat not to do anything that would cause the Israeli coalition to fall. When it emerged that Likud, despite their strong support for the confiscations, intended to seize the chance to defeat the Labour coalition and that vigorous attempts to get other parties to abstain on the vote had failed, the Israeli Prime Minister was left with no option other than to suspend the

plans to confiscate Arab land. The 'no-confidence' motion was withdrawn immediately.

NEGOTIATIONS ON IDF REDEPLOYMENT

During June 1995 Israeli and Palestinian representatives outlined their respective positions on the next, long-delayed phase of Palestinian autonomy: the redeployment of Israeli troops in the West Bank and the related issue of Palestinian elections. Arafat summarized the official PNA position on 18 June: there would be no elections until the IDF withdrew from all population centres in the West Bank. This was loyal to the text of the Declaration of Principles but still at odds with Israel's own assessment of how stage two of the Declaration should be implemented. Advance warning of the rift was served by Rabin on 12 June when he commented that it would be impossible for Israel to reach agreement on redeployment by the target date of 1 July 1995 unless the PNA agreed to a partial redeployment of Israeli armed forces before the elections and further negotiations on full redeployment after them. The positions of the Israeli delegation involved in the redeployment talks were unveiled during June. A three-stage approach to the redeployment of the IDF was proposed. The first stage would involve the withdrawal of the IDF from towns and cities in the West Bank which were regarded as 'non problematic'. These would include Jenin, Nablus, Tulkarm and Qalqilya. The IDF had stated that withdrawal from these towns could be completed by November 1995 as long as it only involved a retreat to the municipal boundaries—refugee camps and villages outside the boundaries would remain under Israeli control. The second stage of the Israeli delegation's approach referred to towns such as Ramallah and Bethlehem, which were contentious in Israeli eyes because they were adjoined by large Israeli settlements. For this reason there could be no withdrawal from these towns until the completion of 110 km of settler roads, a project that would not be completed until May 1996. The third stage of the Israeli approach to redeployment referred to settlements, Israeli-declared state lands and the city of Hebron with its central colony of 400 settlers. According to Israeli officials there could be no withdrawal from these areas until the conclusion of the 'final status' agreement. There were hints that the PNA leadership might accept the idea of a phased Israeli withdrawal, but only as long as it was guaranteed that the second stage of the redeployment would take place within two months of Palestinian elections. For many Palestinians, already weary with the delays to the implementation of autonomy, the Israeli proposals were too radical a departure from the Declaration of Principles to be entertained. As Israeli and Palestinian negotiators resumed their talks on the latest proposals it swiftly became obvious that no agreement would be reached before the target date of 1 July 1995. A later deadline of 25 July was set, but two days prior to this, in the midst of lengthy and secret negotiations, the PLO leader confirmed suspicions that the two sides were still some way from signing an agreement on the extension of Palestinian autonomy. On 25 July Hamas signalled its reaction to the impending agreement with the suicide bombing of a bus travelling through a Tel-Aviv suburb. Six Israelis were killed and dozens injured in the explosion. The prospect of an arrangement for withdrawal of the IDF from areas of the West Bank also led right-wing Israeli nationalists to stage land invasions and to occupy abandoned settlements throughout the occupied territory. Rabin ordered troops to break up the demonstrations leading to several days of clashes with settler groups and scores of arrests. On 21 August a suicide attack on a Jerusalem bus killed another five Israelis. Hamas's military wing immediately claimed that the female bomber responsible was one of its members and promised to carry out similar operations in the approach to the 1996 Israeli elections. The closure of the Gaza Strip and the West Bank followed, but it was accompanied by statements from Rabin that suggested that the talks on the second phase of the Oslo Accords (Oslo II), would be delayed rather than cancelled.

NEGOTIATIONS OVER OSLO II

As Palestinian and Israeli negotiators engaged in round the clock talks in the Red Sea resort of Taba, reports from the negotiations appeared to confirm Israeli and Palestinian pessimism: that an agreement on Oslo II would not be signed by the new target month of September 1995. The status of Hebron was cited as the principal obstacle. However, the submission by the Israeli Minister of Foreign Affairs, Shimon Peres, of a compromise proposal on the disputed city broke the deadlock and paved the way for a formal signing in Washington of an Israeli-Palestinian agreement on the interim stage of Oslo II (see Documents on Palestine, p. 127). Under the terms agreed by the two sides, Israel committed itself to the withdrawal of the IDF from six of the seven main towns and the 440 villages of the West Bank. Civil authority was to be transferred to the PNA in these areas of Palestinian population, but Israel reserved the right to intervene militarily in the villages. Israel also agreed to the establishment of an elected 82-member Palestinian Council with executive and legislative powers. While this represented a more flexible approach, the Israeli Prime Minister insisted that no amendments could be made to existing legislation without prior Israeli approval. On the issue of Hebron, the Palestinian negotiators acceded to Israel's demands that the IDF preserve full or partial authority over 25%–30% of the city's municipal area. This included the Ibrahimi mosque and five locations in the city centre where Jewish settlers and religious students were housed. There was no definitive resolution of the fate of Palestinians in Israeli prisons. Instead, Israel undertook to free up to 2,200 prisoners prior to elections to the Palestinian Legislative Council and the remaining 3,000, somewhat cryptically, 'according to principles to be established separately'. However, Rabin remained adamant that there would be no freedom for those prisoners 'with Jewish blood on their hands'.

Palestinians were noticeably less enthusiastic in their response to the agreement reached at Taba than they had been two years previously, at the beginning of the Oslo process. This time there were no celebrations. A Hamas-inspired general strike shut down the city of Hebron on the day of the Washington signing and leaflets distributed by Islamists in the Gaza Strip and the West Bank castigated Arafat and declared the agreement null and void. In the refugee camps of Lebanon and Syria, Palestinians protested angrily at what they perceived as a further step towards marginalization. This rejection of the agreement was shared by their Arab hosts. Of Israel's neighbours, only Jordan was unconditional in its support for the Taba agreement. This contrasted sharply with King Hussein's initial hostility towards the first phase of the Oslo Accords (Oslo I) and appeared to confirm Jordan's increasing tendency to accommodate the USA's agenda for a Middle East peace. The Jordanian monarch's enthusiasm for the new agreement led to accusations in Arab circles that Jordan's improving relations with Israel and the USA had encouraged Israel to be less compromising in negotiations with the PNA.

The Israeli public's reaction to the Oslo II agreement, like that of the Palestinians, was characterized by indifference and resignation. Anti-Oslo II demonstrations organized by right-wing elements were unusually muted and poorly attended. The leader of the Likud party, Binyamin Netanyahu, initially refused to comment on a future Likud government's attitude towards Oslo II, but eventually conceded that his party would honour agreements between the Labour Party and the PNA. However, with obvious regard to his right-wing constituency, Netanyahu announced that he would renege on any clauses that might be considered harmful to Israel's security and added that the IDF would not refrain from pursuing 'terrorists' into areas of PNA control.

The Labour-led Government was also soon to prove that despite ongoing relations with Arafat's PNA, it had not adopted a more tolerant attitude towards more militant Palestinian factions. On 26 October 1995 Islamic Jihad leader, Fathi Shqaqi, was assassinated in the streets of the Maltese capital, Valetta. Although the Israeli Government refused to confirm or deny that it was behind Shqaqi's killing, it was widely acknowledged that the assassination showed signs of being a Mossad operation. Islamic Jihad cadres urged vengeance for the death of their leader and the news of the killing was followed by violent confrontations in towns of the West Bank. Elsewhere, however, the reaction to Shqaqi's death was decidedly low key. The Egyptian and Jordanian leaders declined to comment on the incident, while PNA spokesmen would go no further than to state that they would not be deflected from their commitment to the peace process. Hamas's reaction to the killing of an

Islamist leader was also less strident than might have been expected. Unwilling to sour negotiations aimed at improving their relations with the PNA in the approach to elections to a Palestinian Legislative Council, Hamas's Gaza-based leaders confined their official reaction to a restrained leaflet.

PHASED IDF REDEPLOYMENT BEGINS

In accordance with the Taba agreements, the IDF began its phased redeployment on the West Bank in mid-October 1995. The village of Salfit was the first Palestinian locality to be evacuated by Israeli troops and this was swiftly followed by other villages. On 25 October Jenin became the first West Bank town to be relinquished by the IDF. However, Palestinian relief at seeing the Israeli occupation lifted for the first time in nearly 30 years was tempered by the limitations of the autonomy. In many instances Israeli troops withdrew not much further than municipal boundaries, confirming opponents of the Oslo Accords in their belief that the new agreements represented not so much an ending of the occupation as its reorganization. Meanwhile, Arab and Israeli leaders gathered in New York to celebrate the 50th anniversary of the founding of the UN. In a speech to the General Assembly Arafat urged the UN to continue to support the Palestinian cause until the implementation of the Palestinians 'inalienable rights' and insisted that the Palestinians wished to live side by side with the Israeli people in two independent states. The Saudi Arabian Minister of Defence, Prince Sultan bin Abd al-Aziz, stated that a comprehensive and just peace would have to be concluded before the Arab world could countenance the normalization of diplomatic or economic relations with Israel. For his part, the Israeli Prime Minister thanked the international community for its support for the peace process and gave his undertaking that it would be pursued 'until we have brought peace to the region'.

ASSASSINATION OF RABIN

Rabin's ability to influence the course of the peace process was to be dramatically short-lived. On 4 November 1995 the Israeli Prime Minister was shot dead by a Jewish religious nationalist, Yigal Amir, as he was leaving a peace rally in Tel-Aviv. The assassination shocked Israeli society, not least because it had hitherto been unthinkable that a Jew would be responsible for the killing of the leader of the Jewish state. The Israeli internal security service, Shin Bet, came under severe criticism for its perceived complacency in not anticipating the threat of violence from the far right wing. This was particularly so given that Amir was well known on the extremist fringe of Israeli politics and his assassination plans were part of a wider conspiracy to attack Palestinian and pro-peace Israeli politicians, including Rabin's designated successor, Shimon Peres. While the manner and place of Rabin's death completed his metamorphosis from warrior to peacemaker and caused an outpouring of popular grief, it embarrassed the Israeli right wing. Likud leader Netanyahu was criticized for failing to distance himself from the increasingly rancourous verbal attacks on Rabin by the settler lobby and for thus contributing to the climate of opinion that made the assassination possible. Rabin's widow singled out the Likud leader as morally responsible for her husband's death. An opinion poll conducted in the immediate aftermath of the assassination revealed only 20% support for Netanyahu compared with 54% for Peres.

There were widely different reactions in the Arab world to Rabin's death. Oman and Qatar sent high ranking ministers to Rabin's Jerusalem funeral, at which both King Hussein of Jordan and Yasser Arafat paid effusive tribute to the memory of the Israeli premier. Damascus and Beirut offered no official comment on the killing, while in Lebanon Hezbollah and Palestinian fighters celebrated the death of an old foe with volleys of gunfire. Yet, despite the variety of responses to Rabin's killing there existed a widespread belief, and not just in the region of conflict, that the peace process was at a challenging juncture. There could be no doubting Rabin's importance to the Oslo process and his credibility with those sections of Israeli society that had traditionally opposed compromise with their Arab neighbours.

PERES BECOMES PRIME MINISTER

Whether his immediate successor, Shimon Peres, regarded as more 'dovish' than his predecessor, possessed the political acumen to build a national consensus around the path taken by Rabin was the cause of much speculation. For Arafat's PNA there was comfort in the fact that the cornering of the Israeli right had created, albeit temporarily, a shift in the Israeli national consciousness and a mood that was far more hostile to settler interests in the West Bank and Gaza Strip. Syrian leaders noted that Peres' agenda was less strongly defined by security than Rabin's had been, and that the new Israeli Prime Minister was more amenable to their views on the Golan Heights. In talks with Western leaders Syrian officials reportedly expressed enthusiasm for a resumption of their deadlocked negotiations with Israel, sentiments that clearly elicited excitement in Washington and Jerusalem. In early December Peres visited Cairo and Amman before making his first official trip as Israeli Prime Minister to Washington. At each venue Peres stressed that his administration would be prioritizing efforts to achieve a breakthrough with Syria. However, in spite of Peres' assertion that 'a new chapter' was about to open in Israeli-Syrian relations, the resumption of negotiations in Washington at the end of December failed to achieve significant progress. The main obstacle remained Syria's insistence that UN resolutions, and hence Israel's withdrawal from the Golan Heights were the *sine qua non* of any agreement. Israeli demands for manned monitoring stations on the Golan Heights were rejected by Syria as a violation of its sovereignty and moves by Israel to tempt Damascus with joint economic and development initiatives proved no more successful. Hints from Washington that Syria's flexibility could lead to its removal from the US list of states which allegedly sponsored terrorism and therefore open the way for US aid, also left President Assad unmoved.

PALESTINIAN ELECTIONS

The IDF's redeployment on the West Bank had been completed by the end of 1995 and without serious disagreement. The way was now open for elections to the Palestinian Legislative Council. There was considerable uncertainty in the approach to the January 1996 poll as to which political factions would participate. The PFLP and the DFLP were quick to urge Palestinians to boycott the elections, a stance that was apparently dictated by their Damascus-based leaderships, but was opposed by many of the parties' cadres in Gaza who argued that a boycott would deprive Palestinians of a secular left-wing voice in the Council. For many observers the decision of the DFLP and the PFLP to boycott the elections without having developed a coherent alternative to the peace process was further evidence of their growing political irrelevance. Hamas' position on participation in the elections was initially more equivocal. Like all the other factions opposed to Arafat, it was highly critical of the first-past-the-post election system which seemed designed to guarantee the dominance of official Fatah candidates. However, a sizeable minority of pragmatists within Hamas was anxious to reach a *modus vivendi* with the PNA and called an early decision to boycott the elections 'unduly hasty and unwise'. The situation within Hamas was further complicated by the formation of a new Islamist party, the National Islamist Salvation Party (Khalas), formed to contest the election and including several personalities closely identified with the moderate caucus in Hamas. By mid-December it appeared that the 'hardliners' had won the debate within Hamas. The movement reiterated its decision to boycott the elections and most of the figures associated with Hamas and connected to Khalas sought to distance themselves from the latter. This was a setback for Arafat's long-standing efforts to drive a wedge between Hamas' political and military wings. Nevertheless talks between the two sides in Cairo at the end of the year did result in the issuing of a joint communiqué stressing the importance of national unity and the need for dialogue to resolve differences. Privately Hamas also promised to refrain from attacking Israeli targets until after the elections, but it also stated that there could be no question of the movement renouncing 'the armed struggle'. That the resumption of suicide attacks against Israel would be sooner rather than later was signalled by the assassination, on 4 January 1996, of Yahya Ayyash. Known by the *nom de guerre* the 'Engineer', Ayyash was thought to have organized the spate

of Hamas bus bombings in Israel and was therefore a prime target for Israeli agents. Killed in Gaza by a booby-trapped mobile phone, Ayyash's funeral was attended by 100,000 Palestinians. The death of Ayyash at a time when Hamas had for several months observed a *de facto* cease-fire, was regarded within the movement as vindicating the position of the 'hardliners'. Hamas and Islamic Jihad concurred that retaliation for Ayyash's death was an inevitability.

Some 676 candidates contested the 88 seats in the Palestinian Legislative Council. In a separate poll to elect the President of the PNA, Yasser Arafat was opposed by a single candidate, Samiha Khalil, a veteran women's activist and Fatah dissident. The result of the presidential vote was never seriously in doubt, even without Arafat's supporters' control of the nascent Palestinian radio and TV stations and of much of the print media. His capture of 88% of the votes cast for the position of PNA President was largely anticipated. The election of the Legislative Council was more interesting, not least because of the extremely high turn-out—90% of the electorate in Gaza and 68% on the West Bank participated (interestingly only in localities that were fully or partially under Israeli control, Hebron and East Jerusalem, was there a low turn-out, of 35% and 40% respectively). As predicted, official Fatah candidates were successful, winning 50 of the Council seats. There was also a strong showing by independent candidates (many of them ex-Fatah cadres), who gained 35 seats. Haider Abdel Shafei, a former Washington negotiator, topped the poll in Gaza and in Jerusalem another independent activist, Hanan Ashrawi, came second to the incumbent Minister of Finance, Ahmed Quray. Overall, the results appeared to confirm the electorate's preference for candidates who had earned their political credentials through activism, as opposed to those who owed their position to Arafat's patronage. International observers declared the elections free and fair, an assessment that appeared to ignore not only Arafat's monopoly on media resources, but also widespread reports of ballot-rigging in the Hebron and Ramallah areas, and Israel's efforts to undermine Palestinian electioneering in Jerusalem. It led some commentators to conclude that the whole process had been rubber-stamped under pressure by a US Administration that was anxious to avoid further setbacks to the peace process. Yet, however flawed an excercise in democracy, the elections did represent a significant restructuring of Palestinian politics. They effectively signalled the end of Palestinian representation outside of the West Bank and the Gaza Strip, and with it a disintegration of the PLO institutions that had sustained the Palestinian struggle in the decades preceding the Oslo Accords. Exactly what the relationship would be between the Legislative Council and the Palestine National Council, theoretically the supreme decision-making body, was unclear. It seemed only a matter of time, nevertheless, before existing political forces realigned and transformed themselves into political parties.

RENEWED VIOLENCE AND SECURITY MEASURES

If the IDF's redeployment on the West Bank and the Palestinian elections were seen as proof of the workability of the peace process, what was shortly to occur provided that same process with its most serious test to date. On 25 February 1996, the second anniversary of the Ibrahimi mosque massacre, Palestinian suicide bombings in Jerusalem and Ashkelon, claimed the lives of 25 Israelis and wounded some 55 others. On 3 and 4 March a second wave of bombings in Tel-Aviv and Jerusalem left a further 32 Israelis dead and scores more injured. Hamas' military wing (the *Izz ad-Din Qassam* Brigades) claimed responsibility for the bombings, but a series of contradictory communiqués issued in the aftermath of the attacks appeared to suggest a growing split between the more moderate Gaza-based leadership of Hamas and a dissident military faction that owed allegiance to political radicals stationed abroad. Speculation regarding the bombers' motives identified revenge for the killing of Yahya Ayyash and a desire to hinder the peace process by wrecking Peres' electoral chances. Either way, the response of the PNA and the Israeli Government was wholly predictable. Having so clearly tied his political future to that of the Israeli Labour Party, it came as no surprise that Arafat instructed the forces of the PNA to ameliorate the discomfort of the Israeli leader. The risk of bloody internecine conflict prevented Arafat from acting to dismantle Hamas' institutional base, as Israeli and US leaders would have liked, but he did earn grudging approval for a massive wave of arrests of Hamas and Islamic Jihad members in the areas under his control. On 3 March, five Palestinian militias, including the *Izz ad-Din Qassam* Brigades were officially outlawed by the PNA. On 6 March the PNA's Mahmud Abbas announced 'there is now no dialogue with either Hamas' political or military wings'. The Palestinian clampdown (as many as 12,000 Islamists were said to be in PNA custody by the end of March) was accompanied by Israel's announcement of an indefinite closure of the West Bank and Gaza Strip and restrictions on the movement of goods and people between autonomous areas on the West Bank. With the co-operation of the Palestinian security forces, the IDF also re-entered Palestinian villages to arrest suspects and several houses belonging to suspected Islamist militants were demolished in areas of Israeli control. However, despite Peres' and Arafat's co-ordinated attempts at damage limitation and the unequivocal condemnation of the bombings by a broad spectrum of Palestinian opinion, the suicide attacks heightened Israeli ambivalence towards the peace process. An opinion poll conducted shortly after the bombings revealed that the Likud leader had now overtaken his Labour rival, who had enjoyed a 30-point lead on becoming Prime Minister. Israeli observers suggested Netanyahu would have fared even better had Peres not been so uncompromising in his reaction to the spring's atrocities.

THE SHARM ESH-SHEIKH SUMMIT

In the wake of the suicide bomb attacks the US Administration sought to bolster the peace process and its vulnerable participants by organizing what was described as an anti-terrorism conference and a 'Summit of the Peacemakers' in the Egyptian resort of Sharm esh-Sheikh on 13 March. Twenty-seven nations were represented at the conference, including 12 Arab states, Israel and the nascent Palestinian entity. The conference concluded with a tame communiqué pledging the participants' support for the peace process and their commitment to combating terrorism. Iraq, Libya and Sudan were not invited to the conference. Syria and Lebanon declined their invitation, stating that the reconvening of the original Madrid peace conference would have been a more appropriate forum for discussion. Indeed, President Assad had already signalled his dissatisfaction with the state of the peace process by refusing publicly to condemn the Hamas bombings in Israel.

'OPERATION GRAPES OF WRATH'

With Israeli-Syrian peace talks deadlocked, the two states' proxy conflict in south Lebanon intensified. In a 16-day period in mid-March 1996 Hezbollah fighters killed six Israeli soldiers and wounded 27 others in and around Israel's self-declared security zone. At the end of the month Israeli tank fire killed two Lebanese civilians installing a water tank in the village of Yatar, prompting Hezbollah to fire rockets into northern Israel. On 8 April two Lebanese children were killed in an explosion on the edge of the security zone. Hezbollah blamed Israel for these attacks and fired more rockets into Galilee, wounding 13 people and sending hundreds more scurrying into air raid shelters. Three days later Shimon Peres announced the beginning of 'Operation Grapes of Wrath', and, in an attempt to deliver a fatal blow to Hezbollah's military capabilities, launched combined air and artillery strikes against targets in south Lebanon, Beirut and the Beka'a valley. In a development reminiscent of Israel's bombardment of the Lebanese south in 1993, IDF commanders warned the populations of Tyre and surrounding villages to leave their homes, sparking the displacement of an estimated 400,000 civilians northwards. During the following week Israeli forces expanded their area of attack. As well as firing thousands of shells at southern villages, Israel's navy bombarded the coast road south of Beirut and its air force struck against power-stations around Beirut and against the international airport, killing several Lebanese and Syrian troops. With few if any fixed positions to defend, Hezbollah's highly mobile guerrillas appeared largely unscathed by the Israeli onslaught and were able to continue firing *Katyusha* rockets into Israel. These caused panic in the northern settlements but little damage and no loss of life. One week into 'Operation Grapes of Wrath' it had become evident that Israeli forces had been unable to achieve their military objective of

silencing Hezbollah, and that they would not be able to do so without the commitment of ground troops, an option that Peres could not sanction in view of the casualties this would inevitably entail. Politically, Peres was also beginning to regret his decision to intensify the conflict on the northern borders. The indiscriminate nature of the attacks had, temporarily at least, healed the sectarian divisions in Lebanon and united the country behind Hezbollah. As hundreds of Shi'a youth volunteered to join the ranks of the Islamist militia, their Sunni and Christian countrymen hailed it as Lebanon's most potent symbol of national resistance. Moreover, with the exception of the USA, which once again blocked attempts by the UN formally to condemn the Israeli action, the international community was vocal in its opposition to what was widely interpreted as a cynical electioneering excercise by the Israeli Prime Minister.

THE QANA MASSACRE AND THE SUBSEQUENT CEASE-FIRE

Peres' discomfort was magnified on 18 April 1996 when Israeli shells landed on a UN base at the village of Qana, killing 105 civilian refugees who had been sheltering there and wounding scores of others, including Fijian soldiers serving with the UN. Israel's claim that the shelling of Qana had been the result of technical and procedural errors was rejected in a report commissioned by the UN Secretary-General. Whatever the truth about the tragedy at Qana, it did galvanize diplomatic efforts to bring about a cease-fire between the warring parties. Following the massacre at Qana President Clinton dispatched the US Secretary of State on a seven-day assignment, travelling between Jerusalem and Damascus. However, his six-point plan for securing a cease-fire—which included the disarming of Hezbollah and a Lebanese-Syrian guarantee of security for Israel's northern border—was regarded as too hopelessly pro-Israel to survive exploration (the Syrian President pointedly snubbed Warren Christopher in Damascus). Eventually Israel and the USA were obliged to submit to proposals which developed through the diplomatic efforts of the French Minister of Foreign Affairs, Hervé de Charette. What emerged was a new 'understanding' between the warring parties—essentially a return to the *status quo ante*. Written, but unsigned, it stipulated the terms of engagement between the two sides to the conflict, principally that both parties would refrain from attacking civilians, that Hezbollah would not launch attacks from areas of civilian habitation and that Israel would not target civilian infrastructure. In addition, both parties agreed to retain the right of 'legitimate defence' within the understanding. The cease-fire was to be monitored by a group consisting of Lebanon, Israel, France, the USA and Syria. Most observers saw the cease-fire terms as a victory for the Arab side, in that Hezbollah's standing had been enhanced through its ability to emerge from the conflict undefeated. The Lebanese Prime Minister, Rafik Hariri, insisted that the resistance would continue. Three days after the cease-fire of 27 April Hezbollah fighters were once again attacking the IDF and the SLA in the security zone.

US–ISRAELI RELATIONS

With its Middle East policy now so firmly linked to the victory of the Labour Party in the forthcoming Israeli elections, the USA was determined to boost the fortunes of its ally in the wake of the 'Grapes of Wrath' débâcle. At the end of April 1996 the Israeli Prime Minister made an official visit to Washington where he was praised by and received the backing of President Clinton for his Lebanese adventure. He returned to Israel having obtained substantial US military and technological aid and promises to further develop mutual security, including the possible establishment of a formal defence treaty.

PALESTINIAN–ISRAELI RELATIONS

Yasser Arafat was also being urged to aid Peres' election campaign. On 24 April the PNC was convened in Gaza with the main intention of fulfilling Arafat's earlier promise to Rabin that the PNC would rescind those articles of the Palestinian National Charter which denied Israel's right to exist. This the PNC dutifully approved by an overwhelming majority of 504 to 62. Arafat's control of the debate was underlined by the heavy defeat of a motion tabled by his opponents that urged the Council to oppose any amendment if Israel did not acknowledge the Palestinians' right to self-determination. 'I am very happy to have fulfilled my commitments,' was the comment of the PLO leader. A delighted Peres described the PNC's decision—somewhat exaggeratedly—as 'the most significant ideological change in the Middle East in the last 100 years.' The *quid pro quo* for Arafat was the partial rehabilitation of the peace process in the aftermath of the suicide bombings and the crippling closure of the Palestinian territories. On 5 May Palestinian and Israeli negotiators met again in Taba to commence 'final status' talks on issues such as settlements, Jerusalem, refugees, borders and the status of a future Palestinian entity. As expected, the impending Israeli elections led to a ceremonial inauguration, brief procedural discussion and a formal adjournment of the talks until after the formation of a new Israeli government.

ISRAELI ELECTIONS

Israelis voted on 29 May 1996 to elect a new Knesset. For the first time ever there was also a separate vote to elect the Prime Minister. The campaign of suicide bombings earlier in the year had eroded the massive lead the Labour leader had enjoyed over his Likud rival immediately following Rabin's assassination, and a close contest was predicted. The result was a win for Likud's Netanyahu by a margin of less than 1%, confirming the constancy of the left–right division of the Israeli electorate. Analysts attributed Netanyahu's victory partly to a dogged and opportunistic campaign that won the support of such diverse constitutencies as the religious orthodox and the development town populations, and partly to a lacklustre performance by Peres. In the legislative elections the Likud's representation fell from 40 to 32 seats while the Labour Party lost 10 seats and its Meretz allies three. There was a particularly strong showing by the three religious parties, which captured 23 seats, and the Russian Immigrants' party, headed by the former Soviet dissident, Natan Scharansky, which won seven seats in the first election it had contested. Israel's Arab voters had voted overwhelmingly in favour of Peres to continue as Prime Minister, in spite of earlier threats to abstain because of the Israeli attack on Lebanon. In the Knesset Arab-dominated parties increased their representation from six to nine seats.

REACTION TO LIKUD VICTORY

The return to power of the Israeli right wing was viewed as little less than a disaster for the peace process. Netanyahu had long been associated with the nationalist 'hardliners' in the Likud and his pre-election pronouncements had included a commitment to treble the settler population of the West Bank and the expression of his total opposition to Palestinian self-determination and to any change to the status of Jerusalem. Sensitive to the international disquiet that had accompanied his victory, Netanyahu's first major speech (to an adoring Likud crowd) was moderate and conciliatory as he paid generous tribute to his defeated predecessor and pledged to continue the peace process. Yet, even if Netanyahu was ultimately more of a pragmatic opportunist than a nationalist ideologue, as many commentators suspected, nothing could disguise the disappointment in Western and Arab capitals at Peres' loss of office. Yasser Arafat, struggling to manage a $100m. budget deficit and the consequences of the 12-week closure of the PNA-ruled areas, was reported to be devastated by the Netanyahu victory, and not without good cause. For two years his policies had largely been predicated upon refraining from any course of action that would upset the electoral chances of Israel's Labour leaders. In the previous two months, and largely at Peres' bidding, Arafat had agreed to the delay of Israel's redeployment in Hebron, clamped down on dissent in the PNA, imprisoned nearly 1,000 Palestinians and unilaterally changed the Palestinian National Charter. As his detractors now scornfully pointed out, the politics of acquiescence and accommodation had spectacularly backfired. Netanyahu, who refused to use the terms PNA or PLO, instructed a junior official at the Ministry of Foreign Affairs to inform Arafat's deputy, Mahmud Abbas, that a 'mechanism of contact' would be established in due course. The snub was deliberate. The Likud leader had already stated that he would not meet Arafat unless Israeli security deemed it necessary. As if this did not augur sufficiently badly for the future, Netanyahu went on to appoint the 'hardline' Ariel Sharon to head a ministry

responsible for infrastructural development on the West Bank. The only comfort for Arafat and the PNA lay in Likud's ideological opposition to 'separation' and, hence, the prospect that there would be a gradual relaxation of the closure of the Occupied Territories. Sources close to Israel's internal security services also pointed out that Netanyahu would be foolish to jeopardize the established sharing of information by Israeli and Palestinian intelligence chiefs.

Jordan and Egypt were relatively sanguine in their official responses to the changes in Israel, with both of their Government's adopting a 'wait-and-see' attitude to the Likud leader. Syria and Lebanon displayed a degree of grim satisfaction, seeing in Netanyahu's victory a vindication of their refusal to join those Arab states who had moved to build relations with the Jewish state. However, for neither Lebanon nor Syria was there any evidence that Netanyahu would advance bilateral relations. On the issue of Lebanon, the Likud leader differed little from his Labour predecessors. He had stated in his election campaign that Israel would maintain its security zone until the Lebanese army disarmed Hezbollah and assumed responsibility for security in the south. Netanyahu was notably more rigid in his views on the nature of Israeli–Syrian relations. There would be no withdrawal from the Golan Heights because it was vital to Israel's security. Given Assad's insistence that an Israeli withdrawal from occupied lands was a prerequisite for any peace deal between the two countries, it was predicted that Israeli–Syrian relations were about to enter a potentially dangerous new era.

ARAB SUMMIT IN CAIRO

There was sufficient trepidation in the Arab world over the implications of the change in government in Israel for the Egyptian and Syrian Presidents to organize an Arab summit meeting in Cairo on 21–23 June 1996. The first of its kind since the Iraqi invasion of Kuwait in 1990, the meeting was attended by all of the Arab states with the exception of an uninvited Iraq. Syria had wanted the summit to produce a commitment by the Arab states to make any moves towards the normalization of relations with Israel dependent upon progress being made in the peace process. Fear of the USA's reaction prevented the Syrian proposal from being adopted, but the summit's final communiqué did reiterate that peace should be based on Israel's withdrawal from Arab lands, and that if Israel reneged on any of the agreements it had so far signed under the terms of the Oslo Accords, then the Arab states would have to reconsider the steps they had taken in the peace process. A series of important bilateral meetings took place in the context of the summit in the Egyptian capital, the most noteworthy being between the Syrian President and the Jordanian and Palestinian leaders. King Hussein, perhaps least threatened by the Netanyahu victory, promised to support Syrian demands for an Israeli withdrawal from the Golan Heights, and agreed with Assad that they would continue their dialogue as a means of improving their strained relations. Similar sentiments were expressed at the conclusion of Palestinian-Syrian discussions.

HOPES FOR PROGRESS RECEDE

Fears of a slide towards greater instability in the region were partially borne out in the two months following the Israeli election. In south Lebanon Hezbollah attacks claimed the lives of 11 Israeli soldiers, and on the West Bank five settlers and three soldiers were killed in attacks blamed on the PFLP and Abu Musas's faction of Fatah. Both Damascus-based groups had for a number of years allowed Islamist groups to take the leading role in armed activities in the West Bank and Gaza Strip. Meanwhile the Netanyahu Government unveiled plans to establish eight new settlements in the West Bank in line with election promises to increase the settler population to 500,000 by the end of the millennium. A decision was also taken by the new Minister of Defence, Itzhak Mordechai, to reintroduce IDF undercover units to the West Bank and to expand their operations to include areas of PNA control. In mid-July one of these units was reported to be responsible for the killing of an Islamic Jihad activist in Ramallah, an area of the West Bank that according to the terms of Oslo II was supposed to be under exclusive Palestinian security control. The first contacts between the PNA and the Netanyahu Government also indicated that the future course of the peace process would not be smooth. Meeting Arafat on 19 July, the Israeli Minister of Foreign Affairs, David Levy, informed the PLO leader that there could be no progress on resolving the outstanding issues of the interim phase period—principally the stalled redeployment in Hebron—until certain Israeli conditions were fulfilled. Levy detailed these as a halt to all PNA activity in Jerusalem, a moratorium on the release of Islamist suspects and the continued clamp down on terrorist activities. He also refused to set a date for the resumption of 'final status' negotiations. The only concession that the Israeli Government was prepared to make was a verbal undertaking to increase by 10,000 to 35,000 the number of permits issued to Palestinians wanting to work in Israel.

During his first official visit to Washington as Israeli Prime Minister in mid-July 1966, Netanyahu did nothing to dispel Arab gloom or confirm Western hopes that he would reveal a more pragmatic bent. In a speech to the US Congress, Netanyahu dismissed the 'land-for-peace' formula and stated instead that the resolution of the Middle East conflict must be based on security, reciprocity and democracy. Equally uncompromising were his comments on the future of Jerusalem and the prospects of peace with his northern neighbours. On talks with Syria he told reporters: 'I can tell you that the first item on my agenda would be the cessation of all terrorist attacks from Syrian-controlled areas in Lebanon, via Hezbollah, or for that matter other terrorist attacks from groups based in Syria'.

At the end of July the PLO leader made his first visit to Damascus since 1993. Given the mistrust and personal emnities that had soured Syrian–Palestinian relations for more than a decade, it was perhaps inevitable that the discussions between the two sides concluded with little more than a commitment to work towards future co-ordination. However, the arrival of the Jordanian monarch in the Syrian capital only a few days after Arafat had departed seemed to suggest that the changes in Israel were producing tentative moves by its Arab neighbours to establish less unilateral strategies of dealing with the Jewish state.

CONTACTS ARE RE-ESTABLISHED

Against a backdrop of mounting domestic unrest and cynicism with regard to the peace process, Arafat tried to persuade the Israeli premier to meet for direct negotiations that would demonstrate that the Oslo process was again on track. Netanyahu remained aloof, judging correctly that delaying a resumption in the peace talks presented an opportunity to wring concessions from the PNA. By the end of July Palestinian negotiators were conceding that the agreements signed with the previous Labour Government on withdrawal from Hebron were open to revision. Equally controversially, Arafat bowed to Israeli demands that three Palestinian charitable institutions in Jerusalem, affiliated to the PNA, be closed down. Both developments laid Arafat open to criticism from a broad spectrum of Palestinian opinion, particularly when Netanyahu signalled that his Government would not be guided by notions of reciprocity. Just days after the Jerusalem closures, Israeli troops demolished a Palestinian centre for the disabled in Jerusalem's Old City (supposedly on the pretext that it had been built without a license) and announced that 900 new housing units would be built in a settlement near Ramallah. These were rebukes that the embattled Arafat could not afford to ignore. Declaring to the Legislative Council that 'Israel has declared war on us' he announced a four-hour general strike and warned that only a resumption of the *intifada* could end the current impasse with Israel. This latter announcement, together with a threat from President Mubarak to cancel November's Middle East and North Africa economic conference in Cairo unless Israel began to meet its Oslo commitments, aroused sufficient concern in Washington and in European capitals for the Israeli leader to calculate that it was no longer in his interests to distance himself from the PNA, and from the peace process.

On 4 September 1996 Prime Minister Netanyahu met the PLO Chairman at the Erez checkpoint between Israel and the Gaza Strip to discuss a resumption of the Oslo talks. There was evident relief, not least in Washington, that the meeting had finally taken place. US Secretary of State, Warren Christopher, applauded the Israeli Prime Minister for having crossed 'a

psychological threshold'. But US approval and declarations from the two negotiating sides that the meeting had produced positive results, failed to disguise the largely symbolic nature of the encounter. The Israelis did commit themselves to resuming full contacts with the PNA, and to participation in a joint steering committee designed to direct implementation of the outstanding issues of Oslo's interim phase, yet when this committee first convened on 9 September in Jericho, there was an obvious divergence of opinion over the extent to which Israeli redeployment in Hebron could be renegotiated. In mid-September Arafat informed a meeting of Arab foreign ministers in Cairo that Israel was not committed to reaching consensus and that the peace process remained at a critical stage. On 23 September the Israeli Prime Minister announced that an ancient tunnel, running beneath the Muslim quarter of Jerusalem's Old City, alongside the al-Aqsa mosque, was to be reopened. Given the already strained nature of Israeli–Palestinian relations and the acute Palestinian and Muslim sensitivities to the perceived threat to Jerusalem and its Islamic holy sites, the tunnel judgement was widely interpreted as unnecessarily provocative. Arafat denounced the rehabilitation of the tunnel as 'a crime against our holy places' and, to a chorus of popular indignation and support, advocated protests against the 'Judaization of Jerusalem', effectively endorsing a return to the politics of the *intifada*; the crucial difference at this stage being the existence of a legitimate armed Palestinian security force.

PNA POLICE CLASH WITH IDF

On 25 September 1996 hundreds of Palestinian students, mobilized by the PNA and Arafat's Fatah movement, confronted IDF positions on the outskirts of Ramallah. For a while the furious exchange of rocks and rubber bullets recalled the early days of the *intifada*, but after Israeli troops resorted to live ammunition and made incursions into areas under Palestinian control, Palestinian police observers of the protest became full participants in the battle. The following day the West Bank and Gaza witnessed the worst violence since the occupation of 1967 as Israeli and Palestinian troops engaged in lengthy exchanges of gunfire; in Ramallah and Gaza the Israeli army used helicopter gunships to fire on Palestinian positions, while in Nablus Palestinian security forces and armed militants overran the Israeli-held site of Joseph's Tomb, killing six soldiers in the process. After three days of bloody clashes, 55 Palestinians had been killed and around one hundred more had been wounded. Fourteen Israeli soldiers had also died in the violence and Israeli tanks had been moved into positions around the areas of PNA control amid speculation that Netanyahu was about to order the reoccupation of Palestinian population centres. The prospect of a full-scale conflagration prompted the US President to interrupt campaigning for November's Presidential election and return to Washington. On 29 September President Clinton agreed to host a crisis summit between Arafat and Netanyahu and pledged his own participation in the talks. Invitations were also extended to the Jordanian and Egyptian leaders. In the West Bank and Gaza, meanwhile, Arafat ordered his forces to contain the demonstrations and to co-operate with the IDF who, in turn, imposed a closure of the major Palestinian population centres but refrained from further incursions. By the end of September only isolated incidents of violence were being reported from the West Bank and Gaza.

EUROPEAN REACTION

Internationally the crystallizing perception was that it was the Netanyahu Government's intransigence, rather than Arafat's manipulation, that was ultimately responsible for the latest débâcle. Amid reports that it intended to pursue a more proactive role in the peace process, the European Union (EU) emphasized its reservations concerning the policies of the Netanyahu Government by receiving the Palestinian leader in Luxembourg on the eve of the Washington summit. It was announced that negotiations would begin on a Euro-Palestinian trade agreement to accelerate the economic development of the West Bank and Gaza, and pledges of $30m. in immediate aid were made. Shortly afterwards EU foreign ministers issued a statement on the recent escalation of violence on the West Bank and in Gaza, in which the IDF was accused of deploying disproportionate force in dealing with the Palestinians. The statement went on to comment 'The EU recognizes that the recent incidents were precipitated by frustration and exasperation at the absence of any real progress in the peace process and . . firmly believes that the absence of such progress is the root of the unrest.' The publication of the statement coincided with an announcement that the EU was for the first time to assign a special envoy to the Middle East. The eventual appointment of the Spanish diplomat, Miguel Moratinos, with a limited brief represented a defeat for a French-led attempt to have the post filled by a high-profile political personality with a wider ranging mandate.

THE WASHINGTON SUMMIT

Realistic expectations of the Washington mini-summit did not exceed an easing of tensions. The Egyptian President had declined an invitation to be present on the grounds that he doubted Israeli sincerity, while the looming US Presidential election effectively ruled out any significant political initiative from the Clinton administration. Indeed Netanyahu had prefaced his appearance in Washington by insisting that the controversial Jerusalem tunnel would remain open and was unequivocal in attributing responsibility for the renewed violence to the PNA. Yet despite the lack of progress in Washington—the two sides committed themselves to little more substantive than continued talks over Hebron—Arafat was not despondent as he left the US capital. Temporarily, at least, his standing had been strengthened by the crisis. Opinion polls published in October revealed overwhelming Palestinian support for the stance adopted by the PNA and for the actions of the security forces during the tunnel crisis. In addition to reaping the benefits of European frustration with Israel's new Government, Arafat had also drawn strength from a rapid deterioration in relations between Jordan and Israel. The Jordanians had been deeply angered by the Israelis' unilateral decision to open the tunnel (the Jordanian-Israeli treaty of 1994 recognized Jordan's special relationship with Muslim holy sites in Jerusalem) and King Hussein was reported privately to have expressed severe criticism of Netanyahu's policies. In a subsequent interview with the Saudi newspaper, *Asharq al-Awsat*, King Hussein warned that Israel's failure to meet its commitments as established by the Oslo Accords was raising the spectre of war in the region. In a clear gesture of support for the Palestinian leader, King Hussein made his first visit to the West Bank since the Israeli occupation of 1967. Speaking at a joint news conference with Arafat, in Jericho, he described an unprecedented improvement in Jordanian–Palestinian relations.

ARAB–ISRAELI ECONOMIC RELATIONS

Israeli–Egyptian relations remained less than cordial. In mid-October 1996 President Mubarak announced that he would not meet with Netanyahu until redeployment in Hebron was agreed, although his earlier threat to cancel the Middle East and North Africa economic conference was quietly abandoned in the face of domestic economic interests and US opposition to such a move. Nevertheless, for Israeli delegates the conference presented few opportunities. The Egyptian Chamber of Commerce had urged its members to boycott Israeli business stands while Foreign Minister Musa told reporters that Israel's isolation was the 'natural reaction from people in the region' and that 'inter-Arab co-operation should be the base of all regional co-operation'. A plan to build a natural gas pipeline from Egypt (through Gaza) to Israel, first proposed in 1993, was postponed indefinitely by its Italian contractor, and a joint Egyptian-Jordanian-Israeli project for tourist development along the shared coastline of the Gulf of Aqaba became another victim of the soured atmosphere. (Earlier, on economic grounds, Israel had cancelled an agreement to buy gas exclusively from Qatar. The Qatari Government reacted by suspending moves towards normalization with Israel, thus isolating Oman as the only Gulf state continuing to develop trade links with Israel.)

DISCUSSIONS ON HEBRON

Whatever satisfaction Arafat derived from 'uniting the world against the Netanyahu Government' (his claim to the Palestinian Legislative Council), the formulation of a coherent strategy

for future contact with the Israelis had become increasingly problematic given Palestinian expectations that their negotiators would now be resolute in resisting Israeli pressure to alter agreements already signed under the terms of the Oslo Agreements. Discussions over the Hebron deployment were resumed and continued throughout the remainder of 1996 with the principal point of contention being the Israeli insistence that their troops should have the right to intervene militarily in the 20% of the city that would remain in Israeli hands following the initial redeployment. Under the terms of Oslo's interim agreement the IDF had preserved the right to enter Palestinian areas to 'bring an end to an act or incident' which threatened Israeli lives, but Netanyahu wanted this arrangement expanded to include, in the words of his chief media adviser, actions to 'pre-empt a terror attack as well as to pursue one.' There was little chance of Arafat agreeing to such a demand, given the support he had enjoyed internationally and locally in the wake of the September clashes. By the end of November, the Israeli Prime Minister was accusing his Palestinian interlocutors of deliberately delaying any agreement on Hebron in an attempt to increase international pressure on Israel to make further concessions. Mutual distrust deepened following an announcement on 19 November that 1,200 new housing units were to be built in the West Bank settlement of Emmanuel. The PNA reacted to the announcement by urging 'popular confrontation' against Israeli settlement policy, and organized a brief blockade of the Netzarim settlement in Gaza. The prospects for agreement on Hebron appeared to recede even further during December. On 10 December the Jerusalem District Planning Authority approved the construction of 110 housing units in a Palestinian district of East Jerusalem. The following day a Jewish settler and her young son were shot dead by members of the PFLP near the Jewish settlement of Beit El on the West Bank. At the funeral of the two victims, attended by the Israeli Prime Minister, settler leaders called for the immediate confiscation of land adjoining the settlement to make way for the building of 1,000 new homes. A belligerent Netanyahu seized on the mood of popular outrage and instructed his aides to draft a cabinet resolution calling for the expansion sought by the settlers. This decision attracted opposition from unexpected quarters. In addition to the predictable fury emanating from Arab capitals and protests from the EU, US officials also expressed their dismay. However it was the opposition of Israel's security chiefs, who warned that implementation of the Beit El scheme might lead to a repeat of the September clashes, coupled with the misgivings of Foreign Minister Levy and Defence Minister Mordechai, that persuaded the Israeli Premier to adopt a compromise on Beit El that involved a more modest expansion on land serving as an IDF base. Any goodwill that might have been engendered by this compromise was immediately eroded by an Israeli cabinet decision to reinstate subsidies and tax incentives to all settlements in the Occupied Territories by classifying them as 'national priority areas'. Clearly unimpressed by Netanyahu's assurances that the new ruling was largely symbolic and would not facilitate a new settlement initiative, US State Department spokesman, Nicholas Burns, expressed the Clinton administration's view that '. . settlement activity is unhelpful, and settlement activity clearly complicates the peace process.' His concern was shared by former high ranking US officials who wrote to Netanyahu warning him 'not to take unilateral actions that would preclude a meaningful settlement and lasting peace.' The signatories of the letter included former Secretaries of State James Baker, Cyrus Vance and Lawrence Eagleburger as well as former national security advisers Brent Sowcroft, Frank Carlucci and Zbigniew Brezsinski.

On 15 December the Palestinian and Israeli leaders resumed contact and committed themselves to renewed talks on Hebron redeployment. Two weeks later a Jewish settler and off-duty soldier made an indiscriminate machine-gun attack on shoppers in Hebron's crowded central market, wounding eight Palestinians before being overpowered and disarmed by Israeli troops. The realization that the incident could have claimed many lives lent new urgency to the negotiations. In a secret meeting in Gaza on 5 January 1997 the outstanding issues surrounding Israel's security redeployment in Hebron were effectively agreed between Arafat and Netanyahu. Nevertheless, continuing disagreement on future redeployments elsewhere forestalled the public announcement of a Hebron deal. Instead the Israeli leader demanded that the deadline for Israel's final redeployment—from all West Bank territory except the settlements, municipal Jerusalem and certain military locations—should be postponed until April 1999, rather than September 1997 as stipulated under the Oslo timetable.

AGREEMENT ON HEBRON

Arafat's unwillingness and effective inability to agree to this proposal meant that agreement on Hebron appeared as elusive as ever. Attempts by the US special envoy, Dennis Ross, to persuade the Palestinians to accommodate Netanyahu's request earned a swift rebuttal, and it fell to King Hussein of Jordan to broker a compromise. Travelling between Gaza and Tel-Aviv on 12 January the Jordanian monarch was able to secure Israeli and Palestinian acceptance of a proposal (originated by the Egyptian President) for Israel to complete its final West Bank redeployment by March 1998. The agreement was formalized by the signing of a protocol between Saeb Erekat and Dan Shomron, chief Palestinian and Israeli negotiators, on 15 January. Under the terms of the protocol Israel agreed to withdraw from 80% of the city of Hebron, while retaining control over a central enclave housing 400 settlers and their 20,000 Palestinian neighbours for an interim period of at least two years. In addition, Israel agreed to begin immediate discussion of outstanding interim issues of Oslo II, most notably the questions of Palestinian detainees, Gaza's airport and a West Bank–Gaza corridor. There was no mention of the earlier insistence of the IDF's right of pre-emptive operations in the self-rule areas. For its part, the PNA reiterated its commitments to combating 'terror', finalizing the revision of the Palestinian National Charter and confiscating illegal weapons in the areas under its control.

REACTION IN ISRAEL

A large majority of Knesset members supported the Hebron deal, as did the majority of Israel's population. The reaction of the nationalist right wing to the agreement also proved to be far more muted than their militant leaders had indicated. Attempts to disrupt the withdrawal through direct protest-action had been threatened but, in the event, failed to materialize. The Hebron agreement won the support of 11 of the 18 members of the Israeli Cabinet; of the seven dissenters only Binyamin Begin, the uncompromising Minister of Science, and son of the former Israeli Prime Minister, was prepared to express his opposition through resignation from the Government.

PALESTINIAN REACTION

The PNA leadership felt evident relief that the tortuous deliberations over Hebron had finally been concluded. There was satisfaction that the terms of the agreement were essentially in line with the Oslo Accords and that Arafat's strategy of internationalizing the negotiation process (and of discouraging Jordan from conducting a unilateral peace effort with Israel) had apparently been vindicated. The issue of Hebron had become for the Palestinians a crucial testing ground of relations with Likud. Palestinian concessions would have seriously undermined Arafat's position and made the Oslo process even more vulnerable to the revisionist intentions of the Israeli right wing. Nevertheless, while admitting that Palestinian negotiators had performed well in achieving the Hebron deal, sceptics of the Oslo process claimed that it was only mass participation in the September protests that had ultimately allowed Arafat to pursue such a course of inter-Arab co-operation and internationalization. Speaking to Arafat after he had addressed a large crowd in Hebron, Hamas leaders also adopted a conciliatory tone. Recognizing that the PLO Chairman was enjoying a rare moment of political success, they expressed disappointment with an agreement that left Israeli troops and settlers in control of the centre of Hebron, but promised that they would express their continued opposition to the Oslo Accords through 'democratic channels'.

DOMESTIC CRISIS FOR NETANYAHU

The optimism that had arisen from the January protocols proved to be short-lived. In Israel, at the end of January 1997, it was alleged that Netanyahu had supported the appointment as Attorney-General of a little-known lawyer, Roni Bar-On, on the understanding that Bar-On would ensure lenient treatment of Aryeh Der'i, the leader of the orthodox Shas party and coalition ally of the Likud, who was facing criminal proceedings on political and financial corruption charges. In return for leniency, it was reported, Shas party ministers were alleged to have pledged support for the Hebron withdrawal within the Cabinet. Bar-On resigned within 12 hours of his appointment; he was replaced by Elyaqim Rubenstein at the end of January. For a time, Netanyahu's impeachment seemed a distinct possibility, and this prospect exposed the growing rift between the nationalist 'hardliners' in government and the pragmatic ideologues grouped around the Prime Minister. Mindful of Netanyahu's vulnerability, and still irate at the Hebron withdrawal, the nationalist wing of the coalition threatened to bring down Netanyahu unless he agreed to a plan for the construction of a large new settlement on Palestinian-owned land to the south-east of Jerusalem. At the end of February 1997 the Ministerial Committee on Jerusalem approved the construction of a settlement (Har Homa) on the hilltop of Jabal Abu Ghunaim, just inside the municipal boundaries of Jerusalem. On completion Har Homa would house some 32,000 settlers in 6,500 housing units, and complete the ring of settlements around Arab East Jerusalem. In a palliative move, Netanyahu simultaneously announced that his Government was granting 3,015 building permits to Palestinians in East Jerusalem.

HAR HOMA

The Har Homa issue aroused a predictable storm of protest. The EU described the decision as a 'major obstacle to peace', while President Clinton, who had recently been effusive in his praise of Netanyahu's accomplishment over Hebron, expressed the opinion that, 'The important thing is for these people on both sides to be building confidence and working together and so I would have preferred the decision not to have been made because I don't think it builds confidence, I think it builds distrust and I wish it had not been made.' Palestinian reaction to Har Homa was predictably fierce, with PNA spokesmen warning that it spelled the end of the peace process and would usher in a new era of confrontation. The rhetoric softened, however, after the US cautioned against any repeat of September's armed clashes and the Israeli defence minister warned that contingency plans had been drawn up for invasion of the autonomous areas if violence proceeded from the Har Homa decision. Nevertheless, a series of marches and protest strikes were urged by political and community organizations throughout the West Bank and Gaza. These reportedly failed to win the full support of Arafat, whose preferred response to the crisis was to attempt the diplomatic isolation of the Israeli Government. The PNA leader consulted EU leaders, King Hassan of Morocco and the Egyptian and Jordanian leaders in quick succession. Arafat's relatively restrained response to Har Homa led to speculation, fermented in the Israeli media, that he had, at some time during negotiations with Israel, acquiesced to the construction of the settlement in return for swift progress on Israeli redeployments in the West Bank. Critics of Oslo repeated earlier assertions that what was happening at Har Homa was an inevitable consequence of the Accords' failure to curtail settlement activity during the interim period.

Following their success in helping to broker the Hebron agreement, the events surrounding Har Homa were received with alarm in Egypt and Jordan. On the day after the settlement was officially endorsed in Israel King Hussein wrote to the Israeli Prime Minister requesting his reappraisal of the decision and careful consideration of the consequences implicit in pursuing the project. To underline official Jordanian dissatisfaction, Crown Prince Hassan cancelled a scheduled visit to attend the inauguration of the Rabin Peace Centre at Tel-Aviv University. The Jordanian leader, however, stopped short of severing diplomatic links; Hussein had, after all, staked his regional policy on constructive engagement with Tel-Aviv. Yet the Jordanian monarch's perceived tolerance of Israeli provocation resulted in government policy that was severely at odds with a popular sentiment that was increasingly hostile to its country's relations with Israel under Netanyahu. Public feeling in Egypt was similarly pitched against the Jewish state. An ill-timed visit by Netanyahu to a Cairo trade fair in early March provoked overwhelming press hostility and the refusal of many prominent businessmen and intellectuals to accept invitations to be presented to the Israeli Prime Minister. On 7 March an EU-drafted UN resolution calling on Israel to refrain from settlement-building in East Jerusalem encountered the now customary US veto. Washington's new Ambassador to the UN, Bill Richardson, defended the use of the veto by stating that UN involvement in the current dispute could only serve to hinder progress.

Meanwhile, following lengthy cabinet discussion and considerable international pressure, Israel announced details of its first phase of West Bank troop redeployment, as required by the Oslo Accords and reaffirmed by the Hebron agreement. The Israeli proposal, which provided for the transfer of only 2% of 'new' West Bank territory to Palestinian control, was immediately rejected by the Palestinian negotiating team, which also challenged the level of total deployment quoted within the terms of the three-phase initiative. By 11 March negotiations had been suspended and all Palestinian officials had been instructed, by Arafat, to end all contacts with Israel. The deadline for the initiation of 'final status' talks, established by the Hebron agreement, was not observed by the Palestinians, who subsequently rejected an Israeli proposal to accelerate the timetable for the 'final status' negotiations, given that a satisfactory resolution of the outstanding provisions of Oslo II had yet to be achieved.

On 13 March seven Israeli schoolgirls visiting a border site in the Jordan Valley were killed when a Jordanian soldier sprayed their party with automatic gunfire. King Hussein condemned the massacre and curtailed an official visit in order to meet with the victims' families in Israel. His actions were widely applauded in Israel; less so in Jordan where his gesture was criticized as overly dramatic. Construction work on the Har Homa settlement began on 18 March 1997. On the following day a Palestinian suicide bomber killed three women at a café in Tel-Aviv. Hamas' military wing in Jerusalem claimed responsibility for the attack, but the organization's political leaders in Gaza denied involvement. The Israeli Government immediately accused Arafat of having given tacit approval to his Islamist opposition to renew terror attacks and urged the PNA authorities to rectify the situation. Twelve months previously the PNA had apprehended some 1,200 Islamist activists and sympathizers in the wake of a suicide bombing campaign, but on this occasion Arafat felt little compunction to respond so readily to Israeli demands. Arafat had made considerable efforts to build relations with Islamist organizations in the previous few months and was anxious not to antagonize this constituency with no prospect of reciprocity from Israel. Moreover, the issue of settlements had eroded residual support for the peace process in Palestinian communities and the prevalent mood was far less opposed to acts of violent resistance. Even Arafat's own Fatah faction was taking steps to distance itself from the policies of its nominal leader. On 23 March the Fatah Higher Committee in the West Bank called for an end to negotiations with Israel and an escalation of protests. There was an immediate response in the West Bank, particularly in Hebron, where there were prolonged clashes between Israeli soldiers and hundreds of demonstrators. Three Palestinian protesters were killed and more than 500 injured in the two weeks after the commencement of work at Har Homa.

ARAB FOREIGN MINISTERS' DECLARATION

Arab diplomatic protests were stepped up in response to the commencement of construction on Jabal Abu Ghunaim. The GCC foreign ministers' meeting in Riyadh, the Islamic summit in Islamabad and the ICO Jerusalem Committee meeting in Rabat all produced statements denouncing Israel's settlement activity. More tangible opposition was expressed at an Arab foreign ministers' meeting in Cairo at the end of the month when it was recommended that Arab League states should suspend involvement in multilateral negotiations with Israel, reassert the primary economic boycott and end moves towards normalization of relations, by closing down the representative offices through which they were conducted. (Morocco, Tunisia,

Oman, Qatar and Mauritania all had trade or representative offices in Tel-Aviv.) As these recommendations were non-binding and did not apply to those states—Egypt, Jordan and the PNA—which had formal relations with Israel, it was unclear what practical import they would have. (The Omani Government did prohibit Israeli participation at a Muscat trade fair in early April.) A group of states led by Syria had urged the imposition of more severe measures against Israel and the convening of a special Arab summit to authorize them, but this proposal was vetoed by Cairo. There was little indication that the Netanyahu Government was unduly perturbed by the deterioration in relations with the Arab world. Although the previous Labour administration had regarded the development of closer relations with Arab states as a major dividend of the peace process, Israel's nationalist bloc had never been ideologically inclined to forge links with an Arab world that had long been held in cultural and political contempt.

DIPLOMATIC INITIATIVES

With the peace process effectively stalled over Har Homa and the issue of redeployment attention turned to Washington, and Arab hopes that Clinton's successful re-election would allow him the political freedom to adopt a more uncompromising stance in his dealings with Israel. While Dennis Ross's assessment of the prevailing mood in the Middle East was sufficiently pessimistic for him to recommend that the new Secretary of State Madeleine Albright should cancel plans for a tour of the region, Arab and Israel delegations beat a path to the White House. At the beginning of April the Jordanian monarch met Bill Clinton in Washington and expressed concerns that the precariousness of the current situation demanded that the USA play a more forthright role. However, Clinton replied that he was not willing to enforce an agreement. The end of King Hussein's visit coincided with the arrival in Washington of the Israeli Prime Minister. Netanyahu's visit was accompanied by an announcement that the USA was authorizing substantial new funds for Israel's anti-missile defence system, and no public expression of criticism of the Israeli leader was made by the US President. Their discussions, however, were described as 'frank', and privately Clinton aides revealed that the President had pressurized the Israeli leader to expedite a resumption of negotiations with the Palestinians by offering to suspend settlement in disputed areas, begin construction of Arab housing in Jerusalem and offer to negotiate on the next stage of redeployments. Netanyahu rejoined that under the terms of the Oslo Accords and the recent Hebron protocols Israel was under no obligation to move forward with the peace process while the Palestinians were failing to fulfil their 'security responsibilities'. This message was repeated to the PLO Chairman and the Palestinian delegation that held talks with US officials in Washington in mid-April. Arguing that the Palestinian side needed to undermine Israel's security argument, Clinton urged the Palestinians to renew security co-operation with Israel. Arafat duly complied, with an announcement that the PNA would 'temporarily' resume intelligence co-ordination.

INTER-PALESTINIAN PROBLEMS

Deaths and injuries were still occurring on much of the West Bank in continued demonstrations over Har Homa, and Arafat's decision on security was deeply unpopular, not least because the Israeli leader pointedly refused to make concessions in return. Hamas, who were judged to be the main target of intelligence-sharing, registered their anger by boycotting a conference aimed at building better relations between the PNA and the Palestinian opposition. Arafat was beset by mounting difficulties throughout May and June, including the economic problems associated with a burgeoning budget deficit. In addition, Arafat's Administration was severely undermined by allegations of widespread corruption and human rights abuses, and by a sustained strike by Palestinian teachers. Privately expressed hopes that domestic pressures would be relieved by the collapse of Netanyahu's Government were frustrated when investigation into the Der'i affair absolved the Israeli Prime Minister of any criminal wrongdoing. Instead Israeli–Palestinian relations further deteriorated into crisis after Israel accused the PNA of complicity in the murder of several Palestinians suspected of involvement in land sales to Israelis. PNA spokesmen denied the charge although one week prior to the first killing, the Authority's justice minister had stated that the selling of land to 'questionable land dealers' should become a capital offence.

ISRAELI RELATIONS WITH SYRIA AND LEBANON

Israel's relations with her northern neighbours had reverted to customary hostility following Syria's refusal to condemn Islamist attacks on Israeli civilian targets and the previous Israeli Administration's subsequent decision to suspend bilateral negotiations. In August 1996, an attempt by the Netanyahu Government to entice Syria into a 'Lebanon first' agreement was rebuffed, while Israeli consideration of a plan to double the number of Jewish settlers on the Golan through the building of a new township seemed to cast doubt on the sincerity of Netanyahu's stated readiness to resume negotiations with Damascus 'without preconditions'. Tension remained high between the two states in late 1996 when Syria deployed army units from the Lebanese coastal towns (as provided for by the Saudi-brokered Ta'if agreements between Lebanon and Syria) to the militarily sensitive area of the Beka'a valley. A substantial car-bomb attack in Damascus in late December that resulted in the deaths of a dozen people, and a machine-gun attack on a minibus transporting Syrian workers in Lebanon, were both attributed to Maronite elements working with Israel. Scores of Lebanese connected to the National Liberal Party, which had previously had close connections with Israeli intelligence services, were detained in the aftermath of the incidents. Netanyahu vehemently denied the charges of complicity in the attacks, while sections of the Israeli press carried ever more frequent stories of impending conflict with Syria, a proposition that was regarded as highly fanciful by most intelligence experts. Increasing security co-operation between Israel and Turkey, particularly the announcement in May 1997 of joint naval exercises with US warships in the Mediterranean, heightened Syrian concerns regarding territorial isolation and prompted renewed Syrian diplomatic efforts to persuade Arab states to block normalization with Israel. At the end of June Syria enlisted the support of Saudi Arabia in exerting pressure on Qatar to cancel the next post-Madrid economic summit due to take place in November with Israeli participation. The Saudi Crown Prince stated that the Kingdom would not be represented, a decision also taken by the UAE. Syrian moves to establish more cordial relations with Iraq (the two states agreed to reopen border crossings and resume limited trade in June) and its attempts to broker improved relations between Iran and Iraq, on the one hand, and Iran and Saudi Arabia on the other, were all interpreted as a response to the perceived threat of an Israeli-Turkish axis. Meanwhile, the war of attrition in southern Lebanon continued at differing rates of intensity but with no sign of cessation. The deaths of 73 Israeli servicemen in February, killed in a collision of helicopters while being transported to southern Lebanon, briefly provoked a debate on the future of Israel's presence in that country. Both left- and right-wing supporters in Israel argued that more was to be gained from abandoning the 'security zone' than maintaining it. However, this remained a minority opinion in the Knesset—a poll revealed that only 27 of the 120 deputies supported unilateral withdrawal—and was strongly opposed by Netanyahu and his defence minister. Reports also emerged that Israel had revised its counter-insurgency strategy with regard to Hezbollah and was relying more heavily on commando raids by élite parachute units. The IDF claimed this had been effective in disrupting Hezbollah's ability to engage in classic guerrilla warfare. However it did not prevent the Shi'a militia from continuing to inflict casualties on the IDF; 12 Israeli troops were killed in combat in southern Lebanon in the first half of 1997.

SPORADIC VIOLENCE CONTINUES

By the summer of 1997, and after months of stalled Israeli-Palestinian negotiations, many commentators were declaring the death of the Oslo process. Release from domestic scandal had fortified Netanyahu against US pressure to agree to the level of compromise on Har Homa that would facilitate the Palestinians' return to the negotiating table. However evidence of increasing US frustration with Israeli policy emerged in May with the leaking of a US intelligence report that claimed that

many of the homes in Gaza's settlements and in the West Bank were lying empty. The report appeared seriously to undermine Netanyahu's principal public justification for continued settlement in the Occupied Territories, namely that land was needed to relieve Israel's chronic housing shortage. Netanyahu and settler leaders claimed the figures were groundless, but few doubted the accuracy of intelligence based on many years of field monitoring and satellite reconnaissance. Following the leak the Israelis agreed to two confidence building measures suggested by the Clinton administration: allowing the construction of more Arab housing in Jerusalem and suspending the policy of demolishing dwellings built without a licence. On the crucial issue of halting work on the Har Homa settlement, however, there was little sign of compromise, cabinet 'hardliners' urging Netanyahu to ignore the pleas of the international community. The impasse ensured that the West Bank and Gaza remained in a state of high volatility. There were violent clashes in Gaza during May and June, provoked by settler attempts to encroach on neighbouring lands. Hebron also seemed to have descended into a state of permanent confrontation between stone-throwing youths and Israeli troops and armed settlers. The appearance in the city at the end of June of crudely offensive anti-Islamic posters, prompted further large-scale unrest that provoked an Israeli ultimatum for the PNA to contain the protests or risk the reoccupation of the rest of the city. Two hundred unarmed Palestinian police were subsequently ordered onto the streets by Arafat to restore order. However, with the conflict in Hebron temporarily contained, another crisis arose when four Palestinian police-officers were arrested by Israeli troops outside Nablus on suspicion of planning attacks on Israeli targets. The discovery of a 'terror cell' was described by the Israeli defence minister as 'the gravest event since the Oslo Accords'. He also demanded the extradition of Jihad Masini, head of criminal investigations in Nablus, on suspicion of ordering an attack on a Jewish settler on 10 July. On 19 July Israel Radio reported that Ghaza Jabali, Arafat's police chief, had authorized actions against West Bank settlers and that Netanyahu had ordered his removal. Masini and Jabali denied the Israeli allegations, but after receiving instructions from Washington to treat the Israeli charges with 'the highest degree of seriousness', a number of Palestinian police-officers, including Masini, were detained for investigation. Their arrest coincided with the discovery by the Palestinian police of what they termed a Hamas 'bomb factory' in the West Bank town of Beit Sahur. In the same week, the announcement that a permit had been granted for the building of a Jewish settlement in the densely-populated Palestinian district of Ras al-Amud aroused considerable international concern.

NEW INITIATIVE THWARTED

A sense of impending crisis in the Occupied Territories led to renewed US efforts to formulate an initiative that would save the Oslo process. In mid-July Clinton dispatched Thomas Pickering, Under Secretary of State for Political Affairs, to meet with Israeli and Palestinian leaders. His presence in the region prompted speculation that Washington was close to securing the backing of both Israelis and Palestinians for a new proposal. Hopes were encouraged by a statement issued by the Israeli Prime Minister expressing his opposition to the building of the settlement in Ras al-Amud and an interior ministry announcement that the permit for construction had been temporarily suspended. On 28 July Israeli and Palestinian negotiators announced that they would resume formal talks on the Oslo Accords within one week. The nature of the formula that had broken the deadlock remained unclear but was thought to have involved the possibility of suspension of works at Har Homa for between three and six months. It was also announced that Dennis Ross would be making an imminent visit to the region with a new package of proposals. A sense of relief that the peace process might yet be salvaged proved to be short-lived. On 30 July two suicide bombers attacked West Jerusalem's Mahane Yehuda market. Thirteen Israelis were killed and scores were wounded in the double explosion, responsibility for which was claimed initially by Islamic Jihad and subsequently by Hamas' military wing. There was little chance that the fledgling attempts to revive the peace process would survive the scenes of carnage in Jerusalem. The proposed resumption of formal negotiations was cancelled, as was Ross's visit to the region. Netanyahu charged Arafat with responsibility for the atrocity for his failure effectively to combat Islamist extremism. He pointedly refused to accept a message of condolence from the PNA Chairman and instead ordered the sealing of the Palestinian-controlled areas and the detention of suspected Islamist militants. Arafat aides described the measures as 'a declaration of war' on the Palestinian people. Despite the arrest of some Hamas and Islamic Jihad activists there was no immediate indication that the PNA was prepared to engage in the massive anti-activist campaign that Netanyahu declared to be the crucial prerequisite for both lifting of the siege and continuing the Oslo process.

The PLO Chairman's reluctance to accede to Israel's security demands was rooted in domestic vulnerability and ever-deepening mistrust of the Netanyahu Government. The day before the Jerusalem bombings, a report commissioned by the Legislative Council into the finances of the PNA had been presented and had concluded that corruption was endemic throughout the Authority. It recommended the dissolution of the existing executive and the prosecution of two Palestinian ministers. Following an announcement by Israel that, in addition to the closure of the West Bank and Gaza, further sanctions were to be applied including the withholding of tax revenues for the PNA, the 'freezing' of Authority assets in Israeli banks and the obstruction of broadcasts from Palestinian TV and radio stations, there was little possibility that Arafat would risk further opprobrium and potential civil conflict by acquiescing with Israeli demands to dismantle the institutional base of his Islamic opposition. Instead he attempted to counter Israeli belligerence by taking steps to prevent further fracturing of his constituency. In mid-August he chaired a 'national unity' conference that was attended by representatives of both Hamas and Islamic Jihad. Although both organizations reiterated appeals for the PNA to abandon the Oslo process, their attendance at the conference was interpreted as a gesture of gratitude to Arafat for resisting Israeli demands for a crackdown on Islamist movements. The conference drew predictable criticism from the Netanyahu Government which accused the PLO Chairman of 'colluding with terrorists'.

Having expended considerable diplomatic energy in attempting to reactivate Israeli-Palestinian negotiations, the aftermath of the Jerusalem bombings was viewed with particular dismay by the Clinton administration. In mid-August 1997 the US Government announced that Secretary of State Albright was to undertake her first tour of the region. Arab expectations of the visit were decidedly low. Albright's diplomatic career had established a firmly pro-Israeli profile in the Arab world, and her consistent response to the suicide attacks had been to echo Israli demands for tighter security controls in the PNA-administered areas. However, greater encouragement was derived from the less partisan briefings of her spokesman, James Rubin, who, despite condemning Hamas and Islamic Jihad as 'enemies of peace', was careful not to criticize Arafat's recent meetings with them and also let it be known that the US Government opposed the economic sanctions that Israel had imposed on the Arab populations of the West Bank and Gaza. For their part, Palestinian officials warned that the Albright visit would provide the momentum for a resumption of the peace process only if Israel's security concerns were not the Secretary of State's principal focus. Such hopes were largely frustrated by a triple suicide bombing in Jerusalem the week before Albright's arrival that claimed the lives of a further four Israelis and led to renewed demands from the Netanyahu Government for drastic action to be taken against Islamic militants. Albright repeatedly lent her voice to these calls in her first public statements in Jerusalem; however, she did go some way to addressing Arab concerns by criticizing Israel's withholding of Palestinian tax revenues and advising Israel against the 'unilateral actions' that were hindering the creation of a climate for peace. In Egypt Albright asserted that both the US and Egyptian Governments maintained that 'a permanent settlement must ensure real security for Israel and recognition of the legitimate rights of the Palestinian people'. Although such rhetorical flourishes won the Secretary of State guarded praise in some Arab quarters, Palestinian officials were less enthusiastic. They noted that there was 'a conspicuous dichotomy between our views and

those of Albright on the concept of security and terrorism'. Even more worrying for Arafat and his loyalists, who had predicated their peace strategy on the expectation that the US Government would act as a guarantor of Israeli adherence to the terms of the Oslo Accords, Albright had pointedly discounted the possibility of a more interventionist role for the USA. Continuing Palestinian despondency was a stark contrast to the satisfaction of the Israeli Government that the US Secretary of State's visit had committed Netanyahu to little more than the release of funds illegally withheld from the PNA and the resumption of negotiations with the Palestinians in the USA later in the month.

THE MESHAAL INCIDENT

Jordanian relations with Israel were plunged into renewed crisis at the end of September 1997 following a bungled Mossad assassination attempt on Khalid Meshaal, a Jordanian citizen and head of the Hamas political bureau in Amman. Travelling with false Canadian passports, the two Israeli agents were overpowered on the streets of the Jordanian capital after they had injected Meshaal with a potentially lethal chemical agent. The Jordanian Government threatened to try the two Israeli operatives for murder and to sever diplomatic relations with Israel unless an antidote to the poison was supplied. This was handed over immediately and probably saved Meshaal's life. Interviewed in the Arab press, King Hussein used the incident to launch a stinging attack on the Israeli Prime Minister and the role his Government had played in the search for a Middle East peace. Meanwhile, the Jordanian Government sought to undermine the gains made by its own Islamist opponents as a result of the Meshaal affair by exacting a high price for the return of the Israeli agents. The Government in Israel subsequently announced that it was to free from a lengthy prision sentence, Sheikh Ahmad Yassin, the founder and spiritual leader of the Hamas movement. Although Israeli and Jordanian officials denied that an agreement had been negotiated, Yassin's release was followed by the deportation of the Israeli agents, and the further release of Jordanian and Palestinian prisoners. On returning to his native Gaza the ailing Yassin was fêted by thousands of well-wishers and given an official reception by the PNA leadership. The scenes in Gaza did little to diminish the embarrassment that had been generated by the assassination attempt and by the ensuing rupture in relations with Jordan. Given Netanyahu's repeated demands for the PNA to apprehend and contain Hamas cadres, the release of the movement's leader by Israel could scarcely have been more ill-timed.

ISRAELI CASUALTIES IN LEBANON

September 1997 witnessed the most serious resurgence of violence in the conflict in southern Lebanon since the Israeli bombardments of April 1996. A series of clashes involving the SLA and Hezbollah militias resulted in a number of Lebanese civilian casualties and the launch of rocket attacks against northern Israel. Israel responded with air raids on Hezbollah and Palestinian targets, and the bombing of a power station providing electricity to the port of Sidon. On 5 September a party of Israeli commandos were ambushed by a combined Hezbollah, Amal and Lebanese army force while mounting a raid on territory north of the 'security zone'. Twelve Israeli soldiers were killed and several were injured in the attack; two Lebanese soldiers and six Amal and Hezbollah militiamen also died during the IDF's evacuation of its wounded. The incident was significant not just for the number of Israeli casualties—the highest for more than a decade—but also because it illustrated a growing trend for regular Lebanese troops to engage the IDF and their SLA allies in battle. Further raids into Lebanon by Israeli forces on 12 and 13 September resulted in the deaths of six Lebanese soldiers and four Hezbollah fighters, and prompted a Lebanese army commander, Gen. Emile Lahoud, to state that 'the Lebanese army will confront Israel until all our land is liberated'. Five more Israeli troops were killed in action in Lebanon during September bringing the total number of IDF-SLA casualties during 1997 to 50 (compared to 48 Hezbollah deaths). Several reasons were advanced for the high number of casualties among Israeli and SLA forces. Defence commentators noted the deployment by Hezbollah of more sophisticated weaponry, particularly the *Sagar* missile, capable of penetrating the heavy armour of Israel's battle tanks. It was also suggested that Hezbollah had benefited from better intelligence; the activities of a 'double' agent were said to be behind the successful ambush of 5 September. Within Israel the mounting death toll in Lebanon provoked renewed public debate as to the wisdom of maintaining the occupation of the south. Yossi Beilin, a prominent member of the opposition Labour party earned a rebuke from the new party leader, Ehud Barak, for campaigning for an immediate withdrawal from Lebanon. The mothers of serving troops also launched protests in Tel-Aviv, while opinion polls suggested that some 60% of the Israeli population was in favour of evacuation.

THE SETTLEMENT AND DEPLOYMENT ISSUES

The long hiatus in negotiations over implementation of the Oslo Accords ended in late September 1997 when the Israeli foreign minister met with his Palestinian counterpart in the US capital. This meeting prefaced more substantive negotiations in October. The key areas of concern for the Palestinian negotiators remained the question of settlements, the opening of the Gaza harbour and seaport, and the timing and extent of the long overdue Israeli redeployment on the West Bank. The former issue remained the most contentious. In pre-meeting declarations the PLO Chairman restated his intention to seek a halt to all construction of Jewish settlements. Netanyahu's interpretation of Madeleine Albright's appeal for a suspension of 'unilateral steps' was predictably idiosyncratic. Speaking at a press conference in Jerusalem Netanyahu elaborated his own understanding of Albright's rubric—Israel would temporarily undertake not to inaugurate new settlements, but would proceed with planned construction in existing settlements (including Har Homa) so as to 'accommodate natural population growth'. Given this divergence over such a core issue and continued friction over Israel's security demands, observers on both sides predicted that a breakthrough in the forthcoming negotiations was unlikely. Their pessimism appeared to be justified. By November Palestinian officials were accusing Israel of miring the talks in procedural issues so as to avoid broaching the subject of Israeli redeployment and settlements. For his part, Netanyahu stated that he 'would not hand over any more land to the Palestinians without knowing in advance how the features of the 'final status' settlement would look'. This remained unacceptable to the Palestinian side, indeed the only satisfaction that the Palestinian delegation derived from its presence in Washington was the sign of increasing impatience towards Israel from within the US Department of State. Press reports revealed that Albright had 'lambasted' the Israeli premier over his perceived lack of sincerity towards the Oslo process. The lack of progress in Washington also determined that the fourth Middle East and North Africa economic conference in Qatar in mid-November, would not substantially advance the development of trade links and development opportunities between Israel and the Arab world. The Syrian Government, which had distanced itself completely from the multilateral forums of the peace process, urged the cancellation of the conference. Saudi Arabia, Morocco and the UAE, key US allies in the region, subsequently announced that they too would be boycotting the conference in response to Israeli policies. President Mubarak initially refused to commit Egypt to attendance or a boycott, his hesitation was linked to the hope that the Israeli Government would smooth the way for Egyptian participation by announcing substantive movement in the peace process. With no such development, and with domestic opinion crystallized against Israel, Mubarak announced that Egypt would join the boycott of the MENA conference. Despite overt and covert US pressure, only five Arab states (Jordan, Yemen, Kuwait, Oman and Mauritania) sent delegations to Doha. The absence of Egypt and Saudi Arabia inevitably deprived the conference of much political and economic—not to mention symbolic—import. Nevertheless, the conference attracted 2,000 participants from 65 countries; this rivalled the attendance at the previous year's summit in Cairo. American, Qatari and Israeli officials expressed satisfaction with the gathering. Jordan and Israel announced commitments to a number of joint ventures, including the establishment of an industrial park in the Jordanian city of Irbid.

Far from reactivating the peace process, Israeli-Palestinian negotiations were soon marginalized as policy statements in Israel accentuated the chasm between the two sides. At the end

of November 1997 the Israeli Cabinet issued a memorandum which underlined the Government's desire to radically rework the Oslo process. While agreeing in principle to a further redeployment of the IDF on the West Bank, the cabinet paper stated that this could only be accomplished in stages, and after the fulfilment of two conditions. The first of these would be the PNA's meeting certain Israeli demands: the revision of the Palestinian National Charter, and an end to 'terrorism' and political activity in East Jerusalem. The second would be an assessment by government agencies of those areas of the Occupied Territories to be retained indefinitely by Israel and not made subject to negotiation in the 'final status' talks. This was in direct contravention of the Oslo Agreement. Happily for Arafat the Cabinet plan was rejected by Labour's Ehud Barak as 'totally irrelevant'. Of greater concern to the PNA was the response of the USA to Israel's posturing and the commitment of Secretary of State Albright to the provisions concerning redeployment as specified in the Oslo and Hebron interim agreements. As Palestinian officials pointed out, according to these agreements, three redeployments were due to be completed by mid-1998. After this date the only areas of the Occupied Territories to remain under Israeli control would be borders, East Jerusalem, settlements and specified military locations. Ahmad Tibi, one of Arafat's advisers, estimated these areas to comprise no more than 11% of West Bank territory, considerably less than the 55% being touted by some sections of the Israeli Government. In late December Albright flew to Europe to hold separate meetings with Netanyahu and Arafat in London and Paris, but neither these talks, nor a further trip to the Middle East by Dennis Ross in January 1998 achieved an appreciable shift in positions. Ross's visit coincided with the announcement by Israel of a major expansion to two settlements in the Occupied Territories and the resignation of Israel's Deputy Prime Minister and Minister of Foreign Affairs, David Levy. Although Levy's resignation was forced primarily by disagreements over the Government's budget proposals, he was regarded as one of the more liberal voices in the Israeli Cabinet. His departure (not to mention the growing influence of Ariel Sharon) reinforced fears that there would be no relaxation in Israel's uncompromising approach to brokering an agreement with the PNA on IDF withdrawals. Two weeks after the failed Ross mission, Arafat and Netanyahu returned to Washington to hold separate talks with the US Administration. Prior to his appointment at the White House, the Israeli leader held a series of meetings with leading Republicans, including the Speaker of the House of Representatives, Newt Gingrich, and representatives of the evangelical Christian movement—both fiercely pro-Israel and anti-Clinton. If these high-profile engagements were intended as a warning to the Clinton administration not to exert undue pressure on the Netanyahu Government, they proved to be barely necessary. With his presidency under threat from a rapidly-escalating sex scandal, Clinton was keen to avoid a diplomatic spat with the Israeli leader. In seven hours of meetings, described as 'attritional', Clinton failed to persuade Netanyahu to accept a new US initiative. This was thought to involve a phased Israeli redeployment from 12%–15% of the West Bank territory in return for revision of the Palestinian National Charter and steps 'to fight terror and prevent violence' in the self-ruled areas. Netanyahu reportedly stated that his Cabinet would accept no more than a 9.5% withdrawal. Despite the fact that the US proposals represented far less than had been expected by the PNA only six months previously, Yasser Arafat was said to have reluctantly accepted the package. His decision was influenced, in part at least, by the possibility of Israeli rejection and Netanyahu's consequent diplomatic isolation. Netanyahu himself appeared unbowed by this eventuality. His supporters viewed the US trip as a diplomatic trimph—he had after all resisted the most modest of concessions. By contrast, Arafat's description of his meetings with Clinton as 'positive, fruitful and constructive' masked a deepening pessimism. For much of the wider Arab world also, the absence of real progress at meetings in the US capital signalled an end to hopes that the USA would be prepared to exert significant pressure on the Netanyahu Government.

ISRAELI INITIATIVE ON LEBANON

Since 1997 had been such a costly year for the Israelis in Lebanon, it was not surprising that the new year brought signs that the Netanyahu Government was prepared to respond to growing domestic unease with the human cost of the occupation. In an interview with a Lebanese daily newspaper, the Israeli Minister of Defence, Itzhak Mordechai, stated that Israel would be prepared to consider a unilateral withdrawal from Lebanon in line with UN Security Council Resolution 425. He added that the withdrawal could only be undertaken if guarantees were forthcoming that the Lebanese army would be deployed to its southern border and would co-operate with the IDF in preventing 'terror and violence' against Israel. An Israeli foreign ministry briefing also urged the incorporation of the SLA into the regular Lebanese army in the same way that other militias had been absorbed at the end of the Lebanese civil war. Lebanon rejected the offer as unacceptable, a response that observers believed to be conditioned by Syria's long-held opposition to previous 'Lebanon first' proposals mooted by the Israelis. In mid-January 1998 the Israeli press carried reports that senior Lebanese officials had contacted Yossi Beilin, the guiding force behind the newly-constituted 'Movement for a Peaceful Departure from Lebanon', and assured him that in the event of an Israeli withdrawal the Lebanese army would establish full sovereignty over the evacuated areas. In March the Israeli Prime Minister sought to secure international and regional backing for a more comprehensive version of the Mordechai proposals. This reiterated Israel's desire for a withdrawal, but stated that any return to the international borders would occur in phases and be conditional on the negotiation of security guarantees from the Lebanese Government. The plan received the backing of the US Government but was rejected by Damascus and Beirut. On 3 April the Lebanese Prime Minister, Rafik Hariri, accused Israel of rewriting Resolution 425 and of attempting to drive a wedge between Syria and Lebanon. He added that his country would not support a 'security before peace' proposal and indicated that there was no prospect of an amnesty being awarded to the higher ranking officers in the SLA. The Lebanese position received support from the French President, Jacques Chirac, who opined that Resolution 425 demanded a 'unilateral' and 'unconditional' withdrawal; this was also the majority opinion of the UN Security Council. After a closed meeting, the Council President, Hishashi Owada of Japan, reported that the body's consensus was that Security Council resolutions 'are mandatory and they should be implemented without preconditions'. Earlier the Iranian Minister of Foreign Affairs had stated that his Government believed Hezbollah should end its military campaign if Israel ended its occupation of southern Lebanon. He did, however, concur with the Syrian opinion that the Israeli proposal was 'a Zionist plot aimed at splitting the states in the region'. Later in the month the Lebanese President undertook a global tour to win international backing for his country's refusal to accept the Israeli initiative.

INCREASED EUROPEAN INVOLVEMENT

In January 1998 the European Commission issued a detailed review of the EU's Middle East policies. The report argued that, as the region's largest aid donor, the EU should play a more active role in Middle Eastern affairs, particularly in relation to the faltering peace process. The report was careful to acknowledge the leading role played by the US Administration, but at the same time the author of the report, European Commissioner Manuel Marín, was unusually explicit in apportioning blame for the political and economic failures of the previous 12 months. Marín stated that Israeli policies, and in particular the restrictions imposed on trade and economic activity, had undermined EU aid initiatives and were responsible for a severe economic decline in the Palestinian territories. This was, Marín pointed out, despite the injection of $1,200m. of EU funds into the Palestinian economy during 1993–97. Within days of the presentation of the report, the European Commission President, Jacques Santer, embarked on a seven-day tour of the Middle East, his first official visit to the region. The visit was designed to raise the profile of the EU in the region and was punctuated by frequent expressions of Europe's irritation with the policies of the Netanyahu Government. He levelled specific criticism at

Israel for blocking the opening of the European-financed airport in Gaza. Having held talks with both Palestinian and Israeli leaders, he returned to Brussels accusing Netanyahu of generating 'contradictions' with regard to Israel's position. 'On the one hand, Prime Minister Netanyahu says he wants economic development in the Palestinian territories. On the other hand he won't allow the Palestinians to exploit their economic potential.' He also reiterated the European belief that Israel's security needs could best be assured by swift implementation of their obligations as laid down in the Oslo principles. Questioned as to what pressure the EU could bring to bear on the Israelis, Santer declared the Europeans 'powerless' to bring about a change in Israeli policies. He dismissed suggestions of sanctions being employed against Israel. European–Israeli relations deteriorated further in March, following a visit to the Middle East by the British Secretary of State for Foreign and Commonwealth Affairs, Robin Cook. Prior to the visit, Cook had gained EU support for a British initiative to 'unblock the peace process'. In essence, the six-point British plan called for the Palestinians and Israelis to adhere to previously signed agreements. However, it also contained a specific appeal for Israel to implement substantial and credible redeployments on the West Bank and to 'freeze' all settlement activity. The proposals were dismissed by an Israeli Government spokesman as 'essentially Palestinian ideas' which only reinforced antipathy towards greater European involvement in the region. Cook's intended itinerary also raised Israeli hackles. A proposed visit to the site of the Har Homa settlement in the company of Faisal Husseini, the PNA's Minister with Responsibility for Jerusalem Affairs, was declared 'unacceptable' by Netanyahu. Cook eventually agreed to be escorted to Har Homa by Israel's Cabinet Secretary, David Naveh, a compromise that satisfied neither the Israelis nor the Palestinians. In the event, Cook's visit to Har Homa degenerated into an undignified spectacle as Israeli security personnel struggled to keep the British politician from being jostled by a crowd of right-wing settlers. Swiftly departing the scene, Cook travelled to East Jerusalem, where he met Faisal Husseini and laid a wreath to commemorate the Palestinian victims of the 1948 massacre at Deir Yassin. Netanyahu responded by cancelling an arranged dinner with Cook and cutting short their scheduled meeting to a symbolic 15 minutes. The 15 EU foreign ministers issued a statement in support of Cook's visit, countering charges that it had irreparably damaged the chances of a more constructive EU role in the region. Netanyahu's refusal to pursue diplomatic channels in order to ease the strain on relations resulting from the visit suggested that the Israeli Prime Minister had seized on the incident as a way of scuppering the EU's political ambitions in the region.

RENEWED DEADLOCK

In early 1998, a renewed crisis in Washington's relations with Baghdad, occasioned by Saddam Hussain's refusal to allow UN weapons inspection teams free access to his presidential palaces, threw Arab dissatisfaction with the US Government's Middle East policy into sharp relief. The refusal of the Arab world to back US air strikes could be explained in part by the genuine desire to see an end to the hardships endured by ordinary Iraqis, but opposition to military action was also informed by a perception that the Clinton administration was overly indulgent of Israel's reluctance to meet its responsibilities. There were few signs during the early months of 1998 to suggest that the deadlock was about to be broken. Further visits to the Middle East by Madeleine Albright in February and Dennis Ross in March failed to sway Netanyahu from his earlier insistence that Israel would only accept a redeployment of less than 10%. He deemed the US proposals 'an imposed solution that is neither desirable nor viable'. While Netanyahu's stance was reported to be causing exasperation in Washington, it did not lead to the public condemnation of Israel demanded by the Arab world. Yasser Arafat, meanwhile, was taking great risks with his own constituency in order to appease the US Government. Arrests of Hamas cadres had resumed in areas under PNA control, and during the Iraqi crisis pro-Iraqi demonstrations were dispersed by the security forces (it was also reported that, following Israeli allegations that the PNA was secretly releasing imprisoned Islamists, Arafat organized a tour of prisons for the US Central Intelligence Agency (CIA) to demonstrate that those arrested remained incarcerated). More importantly, the PLO Chairman had remained committed to the unpublished, but widely reported US proposals to move the peace process forward. These proposals allegedly required Israel to redeploy from a further 13.1% of the West Bank's 'Area C' (under exclusive Israeli control) in three phases, and for 12% of this territory to be transferred to West Bank 'Area B' (under PNA civilian, but Israeli security control) rather than 'Area A' (under exclusive PNA civilian and security control). An additional 12% of 'Area B' territory would be converted to 'Area A', as a form of compensation. The US initiative fell far short of the 30%–40% redeployment originally anticipated by the Palestinians, yet PNA spokesmen believed that Arafat had no other option but to remain committed to the proposal. Egypt and Jordan had already given their reluctant support to the plan and had convinced Arafat that the US ideas represented the most realistic chance of success with Netanyahu. The PNA leader was also aware that rejection of the agreement would jeopardize US support for a more substantial third redeployment. The Israeli Government had already made it known that they wanted the third redeployment cancelled or at best merged into the 'final status' talks.

Relations between the Jordanian Government and the Israeli authorities remained frosty following the attempted assassination of Khalid Meshaal. Prospects of a thaw receded in mid-March 1998 when Ariel Sharon reportedly threatened to attempt another assassination of the Hamas chief. Jordan's foreign ministry summoned the Israeli ambassador to demand an explanation of Sharon's comments; Sharon subsequently sent a letter to the Jordanian Government stating that his comments had been misunderstood and that Israel had no plans 'to attack Jordan or Jordanians'. In mid-April King Hussein and Prime Minister Netanyahu held an unscheduled meeting in Eilat to discuss the stalemate in the peace process. The details of the meeting were not revealed but the Jordanian monarch later commented that 'not all the results of the meeting had been positive'. In a letter sent to Netanyahu on the day after the talks, King Hussein urged Israel to accept the US formula for withdrawal and warned that if he failed to do so he would bear responsibility for the collapse of the peace process.

During a visit to the Middle East at the end of April 1998 the British Prime Minister, Tony Blair, invited Israeli, Palestinian and US leaders to peace talks in London to be conducted in May. All parties accepted the invitation which was presented, once again, as a last ditch attempt to salvage what remained of the peace process. Following two days of bilateral talks in London on 4 and 5 May, there was little sign that the joint efforts of Blair and Albright had persuaded the Israelis to accept the US proposals. At the end of the talks Tony Blair concluded, somewhat lamely, that there had been 'no breakthrough but no breakdown either'. Albright invited the Israeli and Palestinian leaders to meet President Clinton in Washington later in the month if Netanyahu could agree to the 13.1% redeployment. This was something that Netanyahu claimed his right-wing Cabinet colleagues were not prepared to countenance. He did, however, state that there were still issues to be explored with Albright, and in mid-May he flew to the USA. During his five-day trip to Washington and New York, Netanyahu once again displayed an adroit ability to manipulate the domestic US political scene. He argued his 'hardline' security agenda forcefully in the media, in the US Congress and to pro-Israeli lobby groups. He won both standing ovations and strong political backing from Republican representatives who were critical of the Clinton administration's 'bullying' of Israel. 'Congress,' claimed the Republican Chair of the Committee for International Relations, 'will continue to stand shoulder-to-shoulder with Israel regardless of the obstacles that others may place before her.' Meetings with Albright and Ross concentrated on a formula to bridge the gap between the US redeployment proposals and Netanyahu's insistence that a withdrawal from more than 9.5% of West Bank territory would conflict with Israel's security needs. Before he flew back to Israel to take part in his nation's 50th anniversary celebrations, Netanyahu suggested that his policy differences with the US Administration were diminishing. He refused to elaborate on the reasons for his optimism but there was speculation that a bridging formula may have been agreed. Two potential scenarios were advanced

unofficially. The first envisaged the Israelis implementing a 9.5% redeployment and agreeing to honour the remaining percentage only after the Palestinians had met certain security obligations. The second, and more fancied scenario, involved the Israeli Government agreeing to the larger redeployment but demanding US support for a postponement of the all-important third deployment in compensation. If this was the case, it would be certain to cause a crisis within the PNA. Arafat had staked his negotiating strategy on the understanding, in accordance with the Oslo Accords, that he would be entering the 'final status' talks with at least 80% of the West Bank under his full or partial control. A postponement of the third redeployment would mean that these negotiations would begin with 60% of the West Bank under exclusive Israeli control. According to Hani al-Hassan of Fatah's central committee, this would inevitably lead to a 'final status' solution that involved the partitioning of the West Bank and the retention by Israel of 'around 45% of the territory'. This would be an arrangement, observed al-Hassan, 'that no Palestinian leader could endorse without falling'. The pessimism of the Fatah old guard was reflected in mounting frustration with regard to the peace process on the Palestinian streets. As Israelis were joyously marking the foundation of the Jewish State, Palestinians were marching through the streets of Gaza and the West Bank in officially sanctioned commemoration of the *Nabka*, the 'catastrophe' of 1948 that had led to their dispossession and dispersal. In a number of cities the thousands of demonstrators were joined by masked men carrying machine-guns and automatic rifles. Significantly, the majority of these were not the activists of Hamas and Islamic Jihad, but members of Arafat's increasingly estranged Fatah movement. In Nablus, the local leader of Hamas concluded a march by 15,000 people by firing a pistol into the air and calling for 'a new era of resistance'. Inevitably, several of the demonstrations erupted into violence as protesters vented their emotions on Israeli settlements and military positions. By the end of the day six Palestinians had been shot dead (five of them in Gaza) and scores had been wounded by live ammunition and rubber bullets.

STILL NO PROGRESS ON SYRIAN TRACK

The last week of May 1998 witnessed further fighting in southern Lebanon. Israeli naval vessels joined helicopter gunships in bombarding suspected Hezbollah targets around Sidon. On 26 May the Shi'a militia fired some 300 mortars at SLA positions, and on the following day two Israeli soldiers were killed on the edge of Israel's self-declared 'security zone'. The deaths prompted the Israeli Prime Minister to comment that an IDF withdrawal from Lebanon was 'more pressing than ever'. Tensions were heightened between Israel and its northern neighbours following reports that the Syrian authorities had been encouraging Hezbollah to intensify attacks on Isaeli targets. In mid-June the Israeli daily *Ha'aretz* also reported that Syria had taken delivery of around 1,000 laser-guided anti-tank rockets, the first such shipment of advanced weaponry from Moscow since the demise of the Soviet Union. A rare visit to Paris by the Syrian President, Hafiz al-Assad in July 1998 suggested a developing strategic partnership between Syria and France. The visit also prompted speculation that renewed dialogue between Israel and Syria might be forthcoming. However, Netanyahu rejected a French proposal to resume talks on the basis of understandings already reached on the Israeli–Syrian track, owing to Syria's insistence that the previous Israeli Administration had agreed, in principle, to an Israeli evacuation of the Golan Heights. Moreover, later in the month, the Israeli Knesset approved a bill, sponsored by the Third Way party, that would require any withdrawal from the Golan to be sanctioned by a national referendum. Syria deemed the vote 'a declaration of war against the peace process and a direct defiance of the international community'. In response, there was an immediate escalation of hostilities in Lebanon. Two Israeli soldiers and a civilian army employee were killed in Hezbollah attacks in the 'security zone' in mid-August, while the IDF shelled civilian areas in the south and, on 25 August, assassinated a prominent Amal leader. Hezbollah and its allied militias retaliated with *Katyusha* rocket attacks which wounded a number of civilians in northern Israel and forced residents of northern townships to seek the refuge of underground bunkers.

PALESTINIAN STATUS UPGRADED AT UN

The PNA secured a welcome diplomatic victory at the UN in early July 1998, when the General Assembly agreed by 124 votes to 4 to upgrade the observer status of the Palestinian representative. Henceforth the Palestinians would enjoy the same status as a full member state in all but voting and election rights. Israel and the USA were joined by the Marshall Islands and the Federated States of Micronesia in opposing the move. An earlier draft resolution on the status of the Palestinian mission had been abandoned the previous December following Arab failure to win the support of the EU for the proposal. That the EU was now prepared to put aside former misgivings and back such a resolution underlined renewed European perceptions that Israel's obduracy was largely responsible for the parlous state of the peace process. For the Palestinian leader the vote could not have come at a better time. With the Israeli Government either unable or unwilling to address the latest US initiative on West Bank redeployment, Arafat had sought to stem the tide of domestic criticism of his handling of the peace process by stating his intention unilaterally to declare Palestinian statehood when the five-year interim period established by the Oslo Accords expired on 4 May 1999. Netanyahu, meanwhile, had warned that such a declaration would provoke the sternest of responses from Israel.

TALKS REVIVED

Israeli and Palestinian representatives resumed direct talks on the US initiative in Tel-Aviv in July, but these ended in failure three days later, after the Palestinian side complained of Israel's 'obscure, sophistic formulations', a reference to an Israeli proposal that 3% of the designated 13.1% of territory slated for withdrawal should be classified a 'nature reserve' in which neither Palestinian nor Israeli construction would be permitted. Pressure from Washington had compelled Arafat to instruct his negotiators to revive talks. The decision was not popular with many Palestinians, who argued that by returning to the negotiating table they were lending credibility to a process that had long been devoid of substance and only served to sustain the fiction that the Netanyahu Government was actively pursuing a peace settlement. Arafat's critics also complained that by resuming dialogue the Palestinians were implicitly accepting Israel's stance that the US initiative was still the subject of negotiation rather than implementation. Arafat was unwilling to accommodate dissent on this or other matters.

PNA RESHUFFLE

In June 1998 the PNA Cabinet resigned, apparently in order to obstruct an attempt by the Palestinian Legislative Council (PLC), which had published a highly-critical report of widespread corruption in the PNA in July 1997, to pass a vote expressing 'no-confidence' in it. President Arafat accepted the resignation, but ministers were instructed to remain in office in a provisional capacity until new appointments were made. A new Cabinet appointed in August included several new ministers, but only one minister of the outgoing Cabinet was actually dismissed. On the day following the appointment of the new Cabinet, two prominent ministers resigned on the grounds that the Cabinet reshuffle had failed adequately to address the shortcomings of the PNA. The new Cabinet was also criticized by officials of the principal international organizations granting funds to the PNA. In November, nevertheless, at a conference sponsored by the USA, donors agreed to grant the PNA more than US $3,000m., to be disbursed over the next five years.

DISENCHANTMENT IN THE OCCUPIED TERRITORIES

The mood of the region remained resolutely pessimistic during the summer of 1998, with local developments exacerbating the atmosphere of suspicion and mistrust. Unknown assailants killed three prominent Jewish West Bank settlers in August and Netanyahu responded by announcing the establishment of three permanent settlements in Nablus, Jerusalem and the centre of Hebron. This announcement, roundly condemned by the PNA, coincided with a report from the Washington-based Foundation for Middle East Peace which claimed that new homes were currently being constructed in the Occupied Territo-

ries at a rate of some 2,000 per year, compared to a rate of around 1,000 per year during 1996–97. The report also estimated the number of Jewish settlers living in the West Bank and Gaza to have risen by 12.4% in the 18 month-period to June 1998, bringing the total number of settlers in those areas to some 170,000. In September two prominent members of Hamas' military wing were killed in Hebron during an undercover IDF operation. The killings brought thousands of Palestinians onto the streets of Gaza and the West Bank. Hamas leaders promised revenge attacks, raising the spectre of renewed suicide bombings. Spokesmen for the PNA condemned the assassinations as 'state-sponsored terrorism', but such sentiments failed to prevent charges of complicity being levelled against the PNA and its security apparatus. Despite the ongoing shuttle diplomacy of Washington envoy, Dennis Ross, there was litttle evidence of progress on the redeployment proposals. Tellingly, the 5th anniversary of the signing of the Oslo Accords was marked by a low-key ceremony attended by Yasser Arafat and his older interlocutor, Shimon Peres. The Israeli Prime Minister effectively snubbed the gathering, reporting instead to the Knesset that the PNA was failing in its 'pledge to combat terrorism' and therefore bore responsibility for any delay in reaching an agreement on second-phase redeployment.

LIMITED PROGRESS

Although the Netanyahu Government's prevarication with regard to the US peace proposals had been facilitated by the Clinton administration's embroilment in the Monica Lewinsky scandal, the Israeli Prime Minister recognized that it would not be possible to let the impasse continue indefinitely. The US Government was desperate for a foreign policy success to distract attention from the President's personal embarrassment, and despite Israeli assertions of the PNA's failure to meet its security commitments, the international community was largely unanimous in its belief that Israel's intransigence was responsible for the gridlocked peace process. There were also domestic imperatives prompting Netanyahu to adopt a less uncompromising approach to a deal with the Palestinians. Mounting discontent arising from a poor economic performance, an unpopular budget and simmering industrial unrest meant that the Israeli Prime Minister was almost as much in need of a diversion from home-grown difficulties as the US President. Signs of compromise emerged at a UN General Assembly debate in New York at the end of September when Netanyahu delivered a speech that was unusually conciliatory and affirmed Israel's commitment to achieving regional peace. For his part, Arafat elected not to jeopardize any new initiative by reiterating his plans for a unilateral declaration of statehood. Secretary of State Albright held taks with Arafat and Netanyahu in New York and secured their agreement to meet jointly with President Clinton on 28 September—their first direct encounter since October 1997. The US President subsequently announced that he would host a bilateral summit at the Wye River Conference Centre in Maryland in mid-October, with the express aim of reaching agreement on all outstanding provisions of the interim phase of the Oslo Accords. The portents in the weeks preceding the summit were not favourable. In late September a grenade attack on the IDF in Hebron resulted in injuries to 12 soldiers and a number of Palestinian civilians. A curfew was immediately imposed in the Israeli-controlled part of the city but was frequently interrupted by clashes between soldiers and stone-throwing youths; scores of Palestinian injuries and at least one death were reported during the 13 days of the curfew. The violent intensity of the clashes was fuelled by a succession of developments regarding Israeli settlements in the West Bank. On 4 October the settlement of Ma'ate Hever, near Hebron, was expanded to include a further seven acres of confiscated Palestinian land. Three days later Netanyahu attended a ceremony to upgrade the status of Ariel, the West Bank's second-largest Jewish settlement, from that of a town to a city, while settlers in Hebron laid the cornerstone for a permanent settlement in the city centre. On 8 October it was announced that a further 150 housing units were to be built at a settlement near Ramallah. The Israeli Prime Minister also declared that Israel would annex all areas of the West Bank under Israeli control should Arafat proceed with his threatened declaration of statehood in May. Only days before the planned meeting at Wye Netanyahu assigned the vacant foreign affairs portfolio to Ariel Sharon. While some observers interpreted the installation of such a prominent 'hawk' a particularly uncompromising stand was to be taken at Wye, it was also suggested that Sharon's promotion was timed to mollify the nationalist right in the event of further territorial compromise.

THE WYE RIVER MEMORANDUM

The Wye summit was convened on 15 October 1998 and was scheduled to last four days, but continued for a further five. The Wye River Memorandum was signed on 23 October (see Documents on Palestine, p. 134). Moments of drama punctuated the steady procedures of the negotiating process. A visibly ailing King Hussein of Jordan arrived mid-conference to help broker a deal, while the final agreement nearly collapsed at the last possible moment when the Israeli Prime Minister attempted to trade his signature for the release of Jonathan Pollard, the US citizen convicted of spying for Israel and imprisoned in the USA in 1987. Netanyahu's bid to link Pollard's release to the agreements reached at Wye mystified many observers as the consensus, internationally and in Israel, was that the terms of the agreement, broadly speaking, were more favourable to Israel than to the Palestinians. Although Wye did secure Israeli agreement to the 13.1% withdrawal proposed months earlier, Netanyahu had attached fairly stringent conditions: Israeli redeployment was to be undertaken in three phases, each being contingent on the PNA meeting 'concrete and verifiable' security measures. Should Israel be dissatisfied with Palestinian security compliance—to be overseen by the US Central Intelligence Agency—Netanyahu was empowered to suspend withdrawal. Oslo's putative third redeployment was to be discussed at sessions of a special committee but without commitments from Israel that it would ever be implemented. Negotiations on the 'final status' issues, *inter alia* refugees, settlements and Jerusalem, were to commence in November 1998 and continue until Oslo's timetabled expiry in May 1999. Netanyahu also won Arafat's commitment to convene a special session of the Palestine National Council to repeal formally those clauses of the Palestinian National Charter considered objectionable by Israel. For its part, Israel agreed to a schedule of release dates for jailed Palestinians, and to facilitate the opening of Gaza airport and renew negotiations on a safe passage between Gaza and the West Bank.

VIOLENT REACTION TO THE MEMORANDUM

The announcement of territorial concessions was greeted with accusations of treason from Israeli nationalists, but the return to Israel of Minister of Foreign Affairs Sharon to assure supporters that 'this was the best agreement attainable', helped to marginalize the extreme right. Opinion polls published in Israel revealed 75% support for the Wye agreement. The Palestinian reaction to the Memorandum was far less favourable, despite the positive tone of declarations made by Arafat's spokesmen; there was a belief that too much had been conceded on the part of the Palestinians, and that the Wye Memorandum had strayed too far from the terms and the spirit of the original Oslo Agreements. Of particular concern was the realization that Israel would be entering the crucial 'final status' talks with control of security for 22% of the West Bank and absolute control of a further 60%. An additional cause of unease was the linkage of future redeployments to security compliance and the monitoring role given to the CIA. 'I'm afraid our entire security apparatus will become an extra-territorial department of the CIA', was the response of one Palestinian Legislative Council member. Decrees were issued curbing press freedoms, and the subsequent arrest of personalities critical of the Wye Memorandum convinced many observers that the erosion of civil liberties was a price that Arafat was prepared to pay for the peace process to be seen to be back on track. As the principal targets of any security crackdown, the militant Islamists were unrestrained in their opposition to Wye. More than 60 Israelis had been wounded in a Hamas grenade attack in the city of Beersheba on 19 October, and at the end of the month a suicide bomber attempted to drive his car into a bus carrying settler schoolchildren in Gaza. (He was intercepted by a military jeep, averting major bloodshed; one Israeli soldier and the bomber were killed in the incident.) Responsibility for the attack was

promptly attributed to Hamas's military wing, the *Izz ad-Din Qassam* Brigades. The Hamas political leadership attempted to distance itself from the operation but a fuming Arafat ordered the detention of some 300 senior Hamas members and the immediate house arrest of its spiritual leader, Sheikh Ahmad Yassin. A Hamas military communiqué threatened to target PNA police officers in retaliation for the arrests, prompting both the PNA and the Hamas leadership to seek to prevent a further escalation in tensions. PNA spokesmen, therefore, sponsored the theory that the bombing had been orchestrated by an 'Iranian cell' within Hamas. Such conjecture was regarded as highly fanciful but it did allow for the release of many of the political figures who had been arrested. Sheikh Yassin responded with a call for his movement to engage in dialogue with the PNA, while claiming that 'Palestinians must never turn their weapons against each other'. The relative moderation with which Arafat dealt with Hamas was conditioned, in part, by Fatah opposition to more extreme measures, the belief among Fatah activists being that if the PNA neutralized Hamas, then their own movement would become the principal target. In November further loss of life was also narrowly avoided, when explosives detonated prematurely while being transported by two Islamic Jihad bombers. Both men were killed and several Israelis were slightly injured by the explosion. In response, the PNA arrested scores of Jihad members and closed down a kindergarten in Bethlehem closely identified with the organization.

RESPONSE IN ISRAEL

The attempted bomb attacks strengthened the opposition of the nationalist bloc in Israel to the Wye Memorandum and persuaded Netanyahu to postpone a cabinet vote on its provisions. The Knesset did signal effective support for the accord, although this was largely engineered by the right as a vote of confidence in the Government, and Netanyahu's ministers were more clearly undecided when the Cabinet eventually delivered its verdict on the first-stage withdrawal on 11 November: eight votes were recorded in favour of the agreement, with four against, and five abstentions. On 17 November the Knesset ratified the Wye Memorandum by 75 votes to 19. While some of Wye's clauses were implemented without serious delay—most notably a redeployment (involving the transfer to complete Palestinian control of some 500 sq km) around the city of Jenin on 20 November and the opening of Gaza International Airport four days later—it soon became evident that the 'constructive ambiguity' that lay at the heart of the Wye Memorandum and, indeed, the whole Oslo process, would soon lead to serious disagreement. Before and after signing the memorandum the Palestinians had reluctantly accepted US assurances that Israeli settlement expansion 'would not take place beyond immediately contiguous areas'. However, Israel's chosen understanding of the settlement position was that the so-called 'contiguous areas' would only be realized once ongoing construction had been completed. This interpretation, coupled with the rightist imperative to assume and retain control of as much land on the West Bank as possible before the 'final status' talks, led to intensified settlement activity on the West Bank in the days and weeks after the Wye Conference. Much of this activity was officially sanctioned but there were also several instances of Jewish settlers seizing land in areas which were expected to be subject to negotiation in the 'final status' talks. The IDF did little to restrain the settlers and there was no attempt to conceal the Government's political and legal collusion with the encroachments. The issue of the release of prisoners was becoming equally contentious for the Palestinians. The PNA claimed that under the terms of the Wye Memorandum Israel was committed to release 750 Palestinians detained for politically motivated offences. However, the first batch of prisoners freed on 20 November was largely comprised of those detained for non-political crimes. When protests were made to the Israeli authorities, Netanyahu replied that he would not countenance the release of Islamists or those 'with Jewish blood on their hands'. Palestinian political prisoners staged a nine-day hunger strike in protest, and demonstrations on the West Bank resulted in several Palestinian deaths. (In Nablus demonstrators supporting the prisoners also clashed with Palestinian security forces.

THE PROCESS FOUNDERS AGAIN

The steady erosion of trust between the PNA and the Israeli Government continued in the final weeks of 1998, as domestic pressures—on the streets of the West Bank, and inside the government offices in Israel—precluded the possibility of a dialogue of compromise. In mid-November the Israeli leader claimed that the Wye Memorandum had made the PNA a more compliant interlocutor, ready to accept Israel's 'vital interests in Judaea and Samaria'. He also asserted that if a third-phase redeployment was to take place it would involve an area no larger than 1% of the West Bank. Arafat responded by reaffirming his decision to declare Palestinian statehood on 4 May 1999 and to accept 'nothing short of an independent state with Jerusalem as its capital'. In a speech to the Fatah congress he assured his audience that 'we will brandish our guns ... to pray in Jerusalem'. Such rhetoric caused a predictable stir in Israel. In early December the Israeli Minister of Foreign Affairs informed US Secretary of State Albright that the second Israeli withdrawal, scheduled for 18 December, would be suspended because of 'flagrant Palestinian violations of the accords, particularly incitement to renew the *intifada*'.

US RELATIONS WITH THE PNA

While relations with Israel once again teetered on the brink of collapse, the PNA was basking in the warm attentions of Washington. In December President Clinton visited the Gaza Strip for the formal inauguration of Gaza's airport, and also to address the assembled PNC at its reaffirmation of the abrogation of anti-Israel clauses in the Palestinian National Charter. Clinton's aides denied that the President's visit amounted to Washington's recognition of Palestinian statehood. Nevertheless, Clinton's presence in PNA-administered territory had undoubted symbolic resonance, which was amplified by his address to the Council, during which he paid tribute to the Palestinian leadership and urged Israel to follow their example. He also referred to the Palestinians' 'history of dispossession and dispersal' and the need for Israel to develop an understanding of their plight. PNA officials hailed the President's visit as an important milestone on the road to statehood, but their enthusiasm was not universally shared. On the eve of Clinton's visit Palestinian opposition groups—including Hamas and Islamic Jihad—met in Damascus to recommend that Arafat be expelled from the PLO and that the amendments to the Palestinian National Charter be declared null and void. Twenty-eight members of the PNC also boycotted the Clinton visit in protest at the terms of the agreement concluded at Wye. Moreover, much of the goodwill expressed by ordinary Palestinians to the US President dissipated within days of his departure in angry protest at renewed US bombing of Iraq. The PNA security forces attempted to stifle the protests and ordered the temporary closure of private television stations that were deemed overly sympathetic to the anti-US demonstrations.

DOMESTIC DIFFICULTIES IN ISRAEL

The coalition difficulties troubling the Israeli Prime Minister, meanwhile, were approaching their anticipated climax. Having failed repeatedly to secure Knesset approval for the 1999 budget, the Minister of Finance, Yaacov Ne'emen, resigned. Unable to appoint an obvious successor and under intense critical scrutiny from both pragmatic and nationalist wings of the Government over the progress of the peace process, Netanyahu made a last-ditch appeal to the Labour Party to enter into talks on the formation of a government of national unity. Rebuffed by Labour leader Ehud Barak, Netanyahu bowed to the inevitable, and on 21 December voted in support of an opposition in the Knesset calling for early elections. Polls to elect a Prime Minister and a new legislature were subsequently scheduled for 17 May 1999. Both Palestinian and Israeli observers predicted that significant progress on the peace process would remain suspended until after the formation of a new Israeli goverment.

FIGHTING CONTINUES IN SOUTHERN LEBANON

In late November 1998 the IDF suffered several fatalities at the hands of Hezbollah. In December it was reported that 24 Israeli soldiers had been killed and more than one hundred had been wounded in Lebanon during 1998. Around 40 SLA

militiamen were killed and a further 45 were wounded during the same period. The end of the year witnessed another escalation in the conflict, beginning on 22 December when an attack by Israeli fighter aircraft in the Beka'a valley resulted in the deaths of one woman and six children. Hezbollah retaliated by firing salvos of *Katyusha* rockets into Galilee, wounding 17 inhabitants and causing substantial damage. Further Israeli air strikes in the Beka'a valley ensued, and the shelling of power lines and water pipelines in southern Lebanon prompted renewed speculation that Netanyahu was initiating a campaign to destroy the Lebanese communications infrastructure. Netanyahu was thought to have abandoned plans for a pre-election military adventure in Lebanon, but remained uncertain of his best response to the threat posed by Hezbollah and their Syrian supporters. At the end of 1998 Ariel Sharon introduced the possibility of staged withdrawal from Lebanese territory accompanied by the return to Syria of two Druze villages in the Golan Heights. This plan was promptly dismissed in Beirut and Damascus. In mid-February 1999 Israel took the controversial step of incorporating the semi-abandoned village of Arnoun into the Israeli-declared 'security zone', claiming it was being used by Hezbollah as a staging post for attacks on Israeli convoys. The Lebanese Prime Minister, Selim al-Hoss was fiercely critical of the annexation. Hezbollah reacted with co-ordinated attacks on SLA and IDF positions, killing three Israeli officers and wounding a further five in a prolonged gun battle on 22 February. At the end of the month some 2,000 Lebanese students crossed a minefield and cut through fencing erected by the SLA to reclaim Arnoun. In early March *Katyusha* rockets were again fired into Israel, and four Israeli soldiers (including Brig.-Gen. Erez Gerstein—the most senior member of the Israeli command to be killed in Lebanon since the 1982 occupation) were killed by a roadside bomb inside the 'security zone'. Israel retaliated with a series of air raids on Hezbollah targets, but resisted the demands of extremist elements inside the defence establishment to sanction tank incursions beyond the 'security zone'. The deaths of Israeli soldiers once again focused debate on the future of Israel's presence in Lebanon, with opinion polls demonstrating increased support for a unilateral withdrawal. The Labour Party's candidate for the premiership, Ehud Barak, promised to effect an Israeli withdrawal from southern Lebanon within one year of being elected. Netanyahu baulked at such a time-bound commitment but announced that he was hopeful of a withdrawal 'probably some time in the year 2000'. Later in March Netanyahu informed a Knesset defence and foreign affairs committee that he was preparing a redeployment of forces in southern Lebanon, exciting speculation that the SLA was about to abandon the Jezzine enclave and that the IDF would retreat to the southern bank of the Litani river. Policy statements from senior Hezbollah members suggested an increasingly uncompromising attitude towards Israel. Having previously stated that Israeli compliance with UN Resolution 425 would effectively end armed resistance, in March Hezbollah's chief spokesman, Ibrahim Mussawi, speculated that an Israeli withdrawal would not necessarily prompt Hezbollah to end its military campaign against the Jewish state. The reoccupation of Arnoun in mid-April (following the killing of another Israeli soldier) provoked further clashes that resulted in several Israeli casualties and the death of the SLA's acting commander. Beirut and Damascus reacted vehemently to the Arnoun incursion, accusing Netanyahu of electioneering at the expense of the Lebanese people. Addressing a crowd of some 300,000 assembled celebrants at the Islamic festival of Ashoura, Hezbollah Secretary-General Hassan Nasrallah declared that his organization would 'never accept' an Israeli withdrawal in exchange for Lebanese Government security guarantees. Nasrallah also resurrected calls for his followers 'to eliminate Israel'.

DEATH OF KING HUSSEIN

King Hussein of Jordan died on 7 February 1999, after a long battle against cancer. His centrality to the peace process and his growing regional standing was emphasized in tributes from both Israel and the Arab world. Yasser Arafat heaped praise on the man he had once dubbed a 'Zionist agent', while even leaders of Palestinian Islamist groups and the secular left were generous in their obituaries. In Israel, where respect for the Hashemite King had transformed in recent years into genuine public affection, flags flew at half-mast and the media carried effusive eulogies. It was widely acknowledged that King Hussein had neither trusted nor liked the Israeli premier, whom he held responsible for the reversals of the Oslo process, and Amman made known its wish that Israel be represented at the King's funeral by Israel's President, Ezer Weizman rather than Prime Minister Netanyahu. However, calculating that his absence in Amman would be politically damaging Netanyahu chose instead to risk upsetting reluctant hosts by his attendance. Syria was also represented by an impressive delegation, headed by Hussein's long-term adversary, President Assad. Syria's Vice-President Abd al-Halim Khaddam, and Minister for Foreign Affairs, Farouk ash-Shara, accompanied their President to the funeral. King Hussein was succeeded by his eldest son, Abdullah. Popular with the armed forces but largely untested on the political stage, the new monarch was advised by fellow Arab leaders to strengthen ties with the Arab world and to attempt to co-ordinate policy on Israel. Indeed, in one of his first foreign policy statements King Abdullah announced his intention to foster closer relations with all Arab and Islamic nations; in early March full diplomatic relations with Kuwait were restored. An early test of Israeli–Jordanian goodwill was presented by official Israeli warnings that agreed water quotas to Jordan would be cut by up to 60% as a result of winter drought. Such a move struck at the core of Jordan's peace agreement with Israel and was condemned by the Jordanian parliament as 'a serious threat to the future peace, security and stability in the region'. It also lent impetus to a rapidly developing *rapprochement* with Syria. Following President Assad's unexpected attendance at King Hussein's funeral, at the end of April Assad's son and heir apparent, Bashar, undertook a visit to Jordan. In mid-April King Abdullah made his own high profile trip to Damascus where agreement was made with the Syrian leader to put aside past differences and pursue future relations 'in a manner that will safeguard the interests of the Jordanian and Syrian people and the Arab nation'. Syria also pledged to provide water to Jordan during the summer months to compensate for any impending shortfall. In May Jordanian and Syrian officials met again to discuss ways of implementing the 1987 al-Wahdeh dam project for the Yarmouk river.

ARAFAT POSTPONES DECLARATION OF STATEHOOD

Preoccupation in Israel with the forthcoming elections precluded progress on implementing the provisions of the Wye Memorandum and convinced Arafat to pursue a policy of isolation with regard to Netanyahu. However, there were certain risks attached to the PLO leader's approach. Having encouraged Palestinian expectation of a declaration of statehood on 4 May, it was now evident that such a declaration would be likely to boost Netanyahu's chances of re-election. Furthermore, in order to undermine Netanyahu's attempts to cite Palestinian non-compliance with Wye as an excuse for his own refusal to implement Israeli undertakings, Arafat had first to buttress his own administration's credibility with Washington by ensuring a degree of adherence to the deeply unpopular 'security commitments'. Inevitably this led to conflict with the Palestinian opposition. While Arafat berated the Israeli Government for their refusal to release Palestinian detainees, the PNA was itself under verbal attack from Islamist groups for its own refusal to free more than a handful of prisoners held in PNA custody. A hunger strike by Islamist detainees in the spring of 1999 provoked a series of clashes between opposition supporters and the Palestinian security forces. However, Arafat's ongoing confict with Hamas and Islamic Jihad was largely compensated by the US Administration's increasingly public disaffection with the Israeli Government. In February Martin Indyk, the US Assistant Secretary of State for the Near East, and a committed Zionist, explicitly rejected Netanyahu's claims that the PNA was not fulfilling its security obligations under the terms of the Wye Memorandum, and instead charged Israel with reneging on its commitments to the Palestinians. Of particular concern was the frenzied pace of settlement activity. In mid-April it was revealed that the Likud Government had built nearly 4,000 housing units in the territories occupied in 1967 during 1998 (compared to 1,680 in 1996 and 1,900 in 1997) and that 17 new

'hilltop' settlements had been established on the West Bank since the Wye summit. On 14 April US presidential spokesman James Rubin appeared to accuse the Israeli leader of duplicity when he commented that 'Netanyahu has told us at all levels and on many occasions that as a matter of policy, there would be no new settlements and no expansion of settlements beyond their contiguous periphery . . . Contrary to what we were told, we see an accelerated pattern of Israeli actions that involve both construction of new settlements, as well as an expansion of settlements beyond their contiguous periphery'. He added that 'these Israeli activities . . . make it very difficult to pursue peace'. While Arafat welcomed the US Administration's transparent support for the Labour Party in Israel's election campaign, the US State Department's avowed opposition to a declaration of Palestinian statehood posed a problem, especially since opinion polls revealed considerable support among the Palestinians of Gaza and the West Bank for such a declaration on 4 May. However, any residual commitment that Arafat might have felt to a statehood declaration was dispelled during world-wide 'consultations with friendly states' in the spring of 1999. A whistle-stop tour of more than 50 nations achieved an upgrading of the PLO's representative status in six countries and recognition from the EU and Japan of the Palestinian's 'unqualified' right to self-determination (including the option of statehood) but Arafat was counselled against taking a step for which there had been inadequate preparation and which threatened to enhance the electoral fortunes of the Likud Prime Minister. The US Government tempered its own opposition to the statehood declaration with a letter of assurances which reportedly reaffirmed Clinton's December 1998 support for the rights of Palestinians to 'determine their future as a free people on their land' and restated Washington's opposition to 'unilateral acts'. Clinton also suggested a one-year extension to Oslo's interim phase during which accelerated talks on a 'final status' agreement would be conducted. Arafat described the assurances as 'more than positive' and a vindication of the political energies expended in courting US support. For many Palestinians, however, Arafat's appraisal of the US position was overly optimistic. It was argued that Clinton's letter did not represent a shift in US policy, in that it neither recognized the right to Palestinian self-determination nor committed Washington to actively opposing Israeli settlement activity. Nevertheless, when the 180 members of the PLO Central Council met in Gaza at the end of April to make a 'final decision' on the declaration of statehood, a Palestinian climbdown had become inevitable. The Central Council agreed to postpone a decision on statehood, while lamely expressing 'grave concern' that Oslo's interim period had expired 'without implementing the requirements of this phase, such as the withdrawal of Israel's occupation of Palestinian lands.'

ELECTION OF BARAK

Netanyahu's bid for a second term as Prime Minister had much with which to contend, including the gradual disintegration of his coalition and the transfer of allegiance of a number of former allies. The Minister of Defence, Itzhak Mordechai, was dismissed in January, accused of maintaining unauthorized contacts with the emerging Centre Party, a grouping that had already attracted the support of former Likud stalwarts, Roni Milo and Dan Meridor. Moshe Arens was recruited to replace Mordechai, who went on to represent the Centre Party in the contest for the premiership. Meanwhile, David Levy, Netanyahu's former foreign minister, announced his intention to ally himself with Labour leader Barak, while Binyamin Begin left the Likud right to resurrect the revisionist (New) Herut party. Netanyahu chose to conduct an increasingly personal campaign against his principal adversaries. Attempting to reprise his successful smearing of Shimon Peres prior to the 1996 elections, Netanyahu portrayed Barak as a serious danger to state security. Given Barak's distinguished military career and his image as a soldier-politician in the mould of Itzhak Rabin, Netanyahu's charges failed to engage the electorate. The Israeli leader proved no more successful in attempts to score points against the Labour leadership. In a televised debate with Itzhak Mordechai (Barak having declined an invitation to participate) Netanyahu failed to justify his 'media-friendly' reputation. In an exchange that was largely lacking in substance Netanyahu appeared badly shaken by Mordechai's sharp assault on his credibility and trustworthiness. The only comfort for the Likud campaign was the prospect of the anti-Netanyahu vote being split between politically indistinguishable rivals, thus affording their candidate a theoretical chance of victory in a head-to-head contest with Barak. However, these hopes were frustrated in the days preceding the ballet, when Mordechai and two further candidates withdrew from premiership contest. Victory for Barak over Netanyahu was now widely predicted, but the margin of victory on 17 May—56% to 44%—surprised even the most optimistic Labour supporters. The 1999 campaign was particularly notable for the fact that it was the first election contest in 50 years in which the issue of Arab–Israeli relations had not been the principal focus of public debate. Indeed, commentators considered Barak's victory to be less of a comment on the state of the peace process than a reflection of Netanyahu's poor handling of the economy. Disenchantment with Netanyahu's style of leadership and a perceived duplicity in his actions had also persuaded many former supporters to shift their support to Barak; this was particularly true of the Russian immigrant population. At the legislative elections neither the Labour Party, (restyled the One Israel alliance) nor Likud fared particularly well. The greatest gains were made by the ultra-orthodox Shas party, which nearly doubled its share of the 1996 vote, to take 17 seats. In all, 14 parties won parliamentary representation, a degree of fragmentation blamed on the separate ballots for party lists and for the office of Prime Minister. Netanyahu resigned as Likud leader as soon as the scale of his defeat became known; Ariel Sharon was appointed as caretaker leader. Netanyahu, meanwhile, in accordance with electoral law, remained in office for a 45-day period during which Barak sought to build a coalition and form a government.

SYRIAN PEACE AND PALESTINIAN ISOLATION?

Netanyahu's defeat provoked barely concealed delight in Washington and Europe. However, the PNA's extension of a cautious welcome to the new leadership in Israel was tempered by the knowledge that Barak's most recent statements on the future of peace with the Palestinians had been distinctly uncompromising. He was a committed supporter of Israel's 'eternal' sovereignty over Jerusalem, was opposed to withdrawal to pre-1967 borders, considered that most West Bank settlements would remain *in situ* and under Israeli rule and rejected the idea of 'foreign armies' west of the Jordan river. It was also noted that Barak had been the only member of the former Peres Cabinet to abstain during a vote organized in support of the Oslo Accords. Palestinian fears were exacerbated by the suspicion that Barak's principal foreign policy objective was the achievement of a peace treaty with Syria and that if a deal were struck between Damascus and Israel, the Palestinians would be dangerously isolated. Privately, Palestinian officials admitted that having broken Arab ranks to pursue a separate peace with Israel, they were now in no position to demand co-ordination and a unified front from a disaffected President Assad. Barak remained resolutely non-committal on relations with his Palestinian neighbours as he sought to form a coalition. When Barak did finally break his silence in a lengthy interview to *Ha'aretz*, the Israeli daily newspaper, he said little to dispel Palestinian anxieties. Although he expressed a desire for a 'comprehensive' resolution of the conflict with the Arab world, Barak appeared to suggest that it was the Syrians, with their formidable military arsenal, rather than the Palestinians, 'the weakest of all our adversaries', who would be the focus of his attentions. Reports that President Assad was also ready to embark on serious negotiations with Israel appeared to confirm speculation that formal bilateral contacts would be resumed shortly.

SLA WITHDRAWS FROM JEZZINE

At the beginning of June 1999 the SLA began to withdraw from the Jezzine enclave adjoining Israel's 'security zone'. Although the withdrawal had been predicted for some months and was thought, in part, to reflect the IDF's increasing lack of faith in their Lebanese surrogates (the strength of the SLA was reported to have dwindled to just 400 armed operatives who were thought to have been heavily infiltrated by Hezbollah informers) there was a sense both in Israel and Lebanon that the Jezzine evacuation was a practice exercise for a more substantial future withdrawal. Hezbollah attacks increased following the Jezzine

withdrawal, resulting in a number of Israeli casualties in the first week of June. Hezbollah's militiamen also claimed responsibility for the downing of an IDF helicopter, as engagements continued throughout the month. Later in June, Israeli artillery wounded a Lebanese woman in the village of Qabrika, and Hezbollah responded with a rocket attack against the northern Israeli town of Kiryat Shemona. Two Israelis were killed in the attack—the first such casualties since 1995— and substantial damage was inflicted on buildings in the town. Israel retaliated immediately with air attacks against power plants, bridges and communications centres in Beirut and in southern Lebanon. Eight people were killed and some 70 were wounded in the raids. The cost of the bomb damage incurred was estimated at US $52m. The intensity of the air raids was thought to have been prompted by frustration in the Israeli defence establishment with Hezbollah's military successes and by Netanyahu's desire to undermine the peace efforts of his successor. Netanyahu confirmed that Barak had been informed but not consulted about the attacks, a version of events that was welcomed by the Syrian authorities. In a rare break with the official Syrian stance, Lebanese officials held both Barak and Netanyahu responsible for the bombardment. The Lebanese press also gave voice to the widespread belief that the escalation of hostilities between Israel and Hezbollah had been provoked by the political manoeuvring of Syria and Israel in the preamble to future peace talks.

BARAK ASSUMES OFFICE

Ehud Barak swore in a new Cabinet on 6 July 1999, having gained the support of an estimated 77 of the 120 Knesset deputies. The new Cabinet, which contained familiar political figures including Levy, Mordechai and Peres, was considered well balanced between ministers with a 'dovish' outlook on the peace process and those of a more pragmatic persuasion. In his inaugural address to the Knesset, Barak announced his intention to achieve peace with all of Israel's neighbours. He stated that peace with Egypt, Jordan, Syria and the Palestinians was of equal importance since, 'if we don't place peace on all four pillars, peace will be unstable'. He added, 'I know not only the pain of my own people, but recognise the pain of the Palestinian people'. Anxious to demonstrate the sincerity of his commitment to the peace process, Barak announced that he would be making immediate visits to President Mubarak of Egypt, Yasser Arafat and King Abdullah of Jordan, before holding extensive talks with President Clinton in Washington. At a joint press conference with Mubarak in Alexandria on 9 July, Barak vowed 'to turn every stone in order to find a way to go forward without risking our security or vital interests'.

HOPES RENEWED OVER WYE TWO

During August Israeli and Palestinian representatives met in Jerusalem to discuss the feasibility of reactivating the stalled Wye River Memorandum. Negotiations were encouraged by visiting delegations from Norway and the Netherlands (presiding over the EU at that time) and by an official visit to the region undertaken by the US Secretary of State, Madeleine Albright, in early September. Negotiations continued in Egypt, and on 4 September Ehud Barak and Yasser Arafat signed the Sharm esh-Sheikh Memorandum on the Implementation Timeline of Outstanding Commitments of Agreements Signed and the Resumption of Permanent Status Negotiations (Wye Two), which detailed a revised timetable for the outstanding provisions of the Wye River Memorandum of October 1998, including: the conclusion of permanent status negotiations within one year of the resumption of talks on this issue (to be commenced not later than 13 September 1999), with an agreed framework for these negotiations to be concluded by 13 February 2000; Israeli redeployments from a further 10% of the West Bank to be undertaken on 5 September 1999 (7%), 15 November 1999 (2%) and 20 January 2000 (1%); 200 Palestinian prisoners to be released on 5 September 1999, and a further 150 to be released on 8 October 1999; a southern safe passage to become operational from 1 October 1999, the location of a northern safe passage to be agreed by 5 October 1999; construction of Gaza sea port to begin on 1 October 1999; increased, immediate and effective security co-operation to be undertaken. The Israeli Cabinet approved the new Memorandum on the following day, and on 8 September the Knesset endorsed the first Israeli redeployment under the terms of the new agreement, scheduled for 13 September. Some 200 Palestinian 'security prisoners' were released by the Israeli authorities on 9 September. (Although the document stipulated that the first troop withdrawal and release of prisoners should take place on 5 September, the Israeli authorities invoked a clause which allowed one week for 'technical preparations'.) Transfer of control of the initial 400 sq km of West Bank territory (7%) was initiated on 10 September with the signing of relevant maps; control of police operations and postal and public services was to be completed within three days. On 13 September Israeli and Palestinian delegations inaugurated the 'final status' negotiations at a ceremony at the Erez checkpoint.

THE JERUSALEM ISSUE

Updated for this edition by PAUL COSSALI

Based on an original article by MICHAEL ADAMS, with subsequent additions by DAVID GILMOUR, PAUL HARPER and STEVEN SHERMAN

The Arab sector of Jerusalem, including the old walled city, was captured during the Six-Day War in 1967 by Israeli forces, which went on to occupy all the Jordanian territory lying west of the Jordan river. Theoretically, there was no difference in status between Jerusalem and the rest of the West Bank; both were occupied territory. In practice, Israel immediately removed the walls and barriers dividing the western (Israeli) and eastern (Arab) sectors of the city and at the end of June 1967 the Knesset passed legislation incorporating the Arab sector into a reunited Jerusalem under Israeli sovereignty. At the same time the boundaries of the municipal area of Jerusalem were greatly extended, reaching to near Bethlehem in the south and incorporating Kalandia airport (close to Ramallah) in the north.

In response to Israel's effective annexation of the Arab sector, on 4 July 1967 the UN General Assembly ruled the annexation to be invalid, and called on Israel not to take any measures to alter the status of the city. Ten days later the Assembly adopted a second resolution 'reiterating' the earlier one and 'deploring' Israel's failure to implement it.

Before the first of these resolutions was passed, the Israeli authorities had embarked on a series of structural alterations and demolitions in the Old City of Jerusalem, which aroused strong Arab protests. The continuation of such activity was to lead to considerable international controversy. In clearing the area in front of the Western (Wailing) Wall, the dwellings of 50 Arab families were expropriated and demolished at very short notice, while in the Jewish Quarter a further 200 Arab families were dispossessed. In all, and before the end of June 1967, some 4,000 Arabs in Jerusalem had lost their homes. In some cases, but not all, they were provided with alternative accommodation.

In November 1967 the UN Security Council unanimously approved Resolution 242, setting out the basis for an overall settlement between Israel and its Arab neighbours. However, it was not until May 1968 that the Security Council passed its first resolution dealing specifically with the Jerusalem issue. Resolution 252 of 21 May 1968 deplored Israel's failure to comply with the two General Assembly resolutions of 4 and 14 July 1967, confirmed that any measures taken by Israel to alter the status of Jerusalem were invalid and called on Israel to rescind all such measures and to refrain from similar action in the future. The only visible effect of the declaration was to increase the haste with which Israel set about changing the face of the city. Bulldozers had been at work on Mount Scopus since February, and soon the first of the new housing estates began to take shape beside the Nablus Road leading northwards out of Jerusalem. In the absence of any progress towards a peace settlement, it became clear that the Israeli Government intended to forestall, by establishing a physical presence in the Arab sector of Jerusalem, any future attempt to challenge its sovereignty over the whole of the municipal area.

Meeting again to consider the question in July 1969, the Security Council unanimously adopted (the USA had previously abstained from voting on the Jerusalem resolution) an even stronger resolution (No. 267 of 3 July 1969). Reaffirming its earlier position, and deploring 'the failure of Israel to show any regard' for the previous resolutions both of the General Assembly and of the Security Council, the Council 'censured in the strongest terms' all measures taken by Israel to change the status of Jerusalem, confirmed that all such measures were 'invalid' and again called on Israel to desist from taking any further action of a similar kind. Israel formally rejected the Resolution and the Israeli Minister of Information stated that it could not influence the 'facts' which had been intentionally created by Israel 'after due consideration of the political danger involved'.

The situation in Jerusalem itself was further aggravated in August 1969 by a disastrous fire in the al-Aqsa mosque, which at first sight appeared to confirm the fears of the Arabs for the safety of the Islamic and Christian shrines in the Old City. Israeli investigations showed that the fire had been caused by a deranged Australian religious fanatic who was later brought to trial; but from that moment the concern of Muslim communities throughout the world reinforced the Arab sense of grievance at the loss of the Holy City.

In the following year Christian concern also began to make itself felt, especially after the publication of an Israeli 'master plan' for the future of Jerusalem. This plan envisaged the doubling of the Jewish population of the city by 1980 and an eventual total population of 900,000. An international conference of town planners, convoked by the Israeli municipal authorities at the end of 1970 to consider the plan, was almost unanimous in condemning its aesthetic implications. Early in 1971 a dispute also developed between the UN and the Israeli Government over the intention, announced in the 'master plan', to build another housing estate in the neighbourhood of Government House, the headquarters in Jerusalem of the UN. In March 1971 articles in the official Vatican newspaper *L'Osservatore Romano* and in the English Catholic weekly *The Tablet* revealed the strength of Catholic feeling over developments in the Holy City, and these feelings were strengthened when it became known that in the same month Israel had destroyed an Arab village on the hill of Nebi Samwil, north-west of Jerusalem, in preparation for the building on Arab land of yet another housing estate for immigrant Jews.

Israeli opinion was divided over the future of Jerusalem. Only a small minority of Israelis were in favour of relinquishing Israeli sovereignty over the Arab sector of the city, if negotiations for an overall settlement of the Arab–Israeli conflict should ever materialize. In the absence of any sign of such negotiations, the issue remained a hypothetical one and the Israeli Government made no secret of its determination to establish a hold on Jerusalem which would prove unbreakable. A further resolution by the Security Council (No. 298 of 25 September 1971—see Documents on Palestine, p. 107) was rejected by Israel as brusquely as the previous ones, and even a provision in the Resolution that the UN Secretary-General, 'using such instrumentalities as he may choose', should report to the Council within 60 days on the implementation of the Resolution, was ultimately fruitless since the Secretary-General was unable to execute his mission for lack of co-operation from the Israeli authorities.

On purely aesthetic grounds, however, many Israelis were disturbed by the physical changes overtaking Jerusalem. Within five years of the 1967 Six-Day War the construction of large housing estates had transformed the appearance of Mount Scopus, where the Old City (and the whole of the Arab sector) was dominated by a row of apartment blocks breaking the historic skyline. There were acute disagreements between the Mayor of Jerusalem and the housing and tourism ministers over some of the implications of this building programme, but continuing uncertainty over the prospects for a political settlement with the Arabs gave encouragement to the 'activists' in Israel, and the creation of 'facts' continued, in Jerusalem as in the rest of the Occupied Territories, throughout 1972 and most of 1973.

Anxiety over the future of Jerusalem and resentment at Israel's treatment both of the Arab population and of the physical fabric of the city played a part in provoking the Arab decision to resort to war in October 1973. In particular, these feelings influenced King Faisal's decision to throw Saudi Arabia's weight behind the attempt to enforce Israel's withdrawal from the Occupied Territories, including Arab Jerusalem. Henceforth, the restoration of Arab sovereignty over the Old City became one of the principal conditions demanded by the Arabs for a comprehensive peace settlement with Israel.

Immediately after the October War political and economic conditions in Israel combined to slow down for a time the work of demolition and construction by which the face of the city was

being transformed. In the course of 1974, however, the same general pattern as before was maintained, resulting in the steady eviction from the Old City of Arabs, whose houses were demolished and replaced by dwellings for Jewish immigrants. Between 1967 and 1977, 6,300 Arab residents of Jerusalem were evicted in this way from their homes in the Old City. Protests from the international community, stimulated by anxiety over the continuing exodus from Jerusalem of Christian Arabs, became more frequent but achieved only publicity.

Similar protests over excavations being conducted by the Israeli authorities in the vicinity of Islamic and Christian holy places in the Old City of Jerusalem brought to a head criticisms which had been voiced for more than five years within the United Nations Educational, Scientific and Cultural Organization (UNESCO). Recalling that urgent appeals previously addressed to the Israeli Government to suspend these excavations had been ignored, the Executive Board of UNESCO, in June 1974, voted 'to condemn the persistent violation by Israel of the resolutions and decisions adopted by the General Conference and the Executive Board'. In its turn the General Conference of UNESCO, meeting in November 1974, condemned Israel's attitude as 'contradictory to the aims of the Organization as laid down in its Constitution' and resolved to withhold assistance in the fields of education, science and culture until Israel agreed to respect previous conference resolutions in the matter.

The attitude previously expressed by both the Security Council and the General Assembly of the UN was reaffirmed in subsequent years despite the failure to obtain the compliance of the Government of Israel with existing resolutions. In a unanimous 'consensus statement' adopted on 11 November 1976, the Security Council 'strongly deplored' Israel's actions in the Occupied Territories, including Jerusalem; required Israel once more to 'desist forthwith from any action which tends to alter the status of Jerusalem'; and called on Israel to comply with the terms of the Geneva Convention on the Protection of Civilians in Wartime.

Jerusalem once again became a controversial issue in May 1980, when the ultra-nationalist Israeli Knesset (Parliament) member, Geula Cohen, tabled a bill in the Knesset with the object of confirming Jerusalem as Israel's indivisible capital. Despite strong protests from the Egyptian Government, which made it clear that it would not resume the peace negotiations on Palestinian autonomy (see Arab–Israeli Relations 1967–99) unless the bill was rejected, it was placed before a Knesset committee. Egypt was further antagonized when, on 23 June, the Israeli Prime Minister, Mr Begin, announced that he was moving his offices to the Arab sector of Jerusalem. At a time when the USA was desperately trying to produce some compromise on the Jerusalem issue which would enable Israel and Egypt to resume negotiations, the Knesset's legal committee voted in favour of giving a first reading of the bill confirming the annexed status of the Arab sector of Jerusalem. As the originator of the bill told *The Times* of London on 30 June: 'This Bill is designed to ensure that there will never be any compromise over the sovereignty of Jerusalem'. Nevertheless, a debate taking place in the UN Security Council on the same day made it clear that this view would not be accepted by the international community. By a vote of 14 to none, with only the USA abstaining, the Security Council passed a resolution denying Israel the right either to change the status of Jerusalem or to declare the city to be its capital. The action of the Security Council was followed by an emergency resolution of the UN General Assembly on 29 July 1980, which called upon Israel to withdraw completely and unconditionally from all territories occupied in 1967, including Jerusalem. The Resolution (ES-7/2) was passed by 112 votes to 7, with 24 abstentions. The following day Israel enacted its 'basic law' proclaiming Jerusalem to be its 'eternal capital'.

The Arab response to this law was swift; on 6 August 1980 Saudi Arabia and Iraq, the Middle East's two largest oil exporters, announced that they would sever economic and diplomatic relations with any country which recognized Jerusalem as Israel's capital. A fortnight later the Security Council adopted Resolution 478, which declared Israel's enactment of the 'basic law' to be a violation of international law and urged 'those states that have established diplomatic missions in Jerusalem to withdraw such missions from the Holy City'. The Resolution was passed by 14 votes to none, with the USA abstaining. Speaking during the debate, the US Secretary of State, Edmund Muskie, berated the Council for passing a 'series of unbalanced and unrealistic resolutions on Middle East issues'. Shortly afterwards the Netherlands and a number of Latin American countries with embassies in Jerusalem announced that they would be moving them to Tel-Aviv.

Jerusalem continued to figure prominently in international efforts to promote an overall settlement of the Arab–Israeli conflict: the European Community's (EC) Venice Declaration of 13 June 1980 (see Documents on Palestine, p. 115) rejected any unilateral actions designed to change the status of the city, and proposals adopted by the Fez Arab summit and a plan put forward by the Soviet President, Leonid Brezhnev, in September 1982 both urged an Israeli withdrawal from the eastern sector of the city and its inclusion in a future Palestinian state. The initiative of US President Reagan, also announced in September 1982, declared only that the city must remain undivided and its final status be negotiable. Every indication remained, however, that Israel was not deterred from its resolve to ensure in advance the city's ultimate status by pursuing an accelerated programme of 'Judaization'. To the south and east of the Old City, plans to complete the encirclement of the Arab population with high-rise, high-density housing complexes proceeded apace with the Neve Yaacov South, Gilo and Ma'aleh Edomin schemes, which were to comprise a total of 26,000 apartments. Over 10,000 dunums of land (1,000 dunums = 1 sq km) were seized for these schemes, virtually all of it expropriated from private Arab owners. In July 1981 the Knesset reaffirmed the designation of the whole of Jerusalem as Israel's 'eternal capital'.

The undiminished sensitivity to the issue of Arabs and the whole Islamic world was demonstrated following an indiscriminate gun attack on worshippers at the Dome of the Rock mosque by an Israeli soldier on 11 April 1982, in which two Arabs were killed and more than 30 wounded. The day of protest recommended by the Organization of the Islamic Conference was observed throughout the Islamic world, while a UN Security Council draft resolution condemning the attack and deploring 'any act or encouragement of destruction or penetration of the holy places, religious buildings and sites in Jerusalem' was vetoed only by the USA. The threat posed by Jewish religious extremists increased throughout 1983 with the emergence of a clandestine group calling itself 'Terror against Terror', which claimed responsibility for a series of bomb attacks on Islamic and Christian sites around Jerusalem, which fortunately resulted in few casualties and no deaths. This campaign culminated in January 1984 in an attempt to smuggle explosives into the al-Aqsa mosque, which was foiled at the last moment by security guards. The implications of the plot were particularly horrendous, not just because the attack had been timed to coincide with the congregation of thousands for Friday services on the following day but also because of evidence that the motivation of the group responsible, which was in possession of standard Israeli army-issue weapons, was to advance the reconstruction of the Jewish Temple by ridding the Temple Mount area of its 'encumbrance' of Islamic holy sites.

The dual threats to Jerusalem posed by Israeli settlement and Jewish religious fanaticism were overshadowed by another to the city's legal status, when it became clear that a number of countries, including, most importantly, the USA, were prepared to signal their acceptance of Israel's claim to the city as its sovereign capital by transferring their embassies from Tel-Aviv to Jerusalem. Discussion of such a move on the part of the USA began in Washington in February 1984 and the proposal rapidly gained momentum, winning the sponsorship of over 180 members of the House of Representatives and some 37 senators. The Reagan administration did not, however, lend its support to the move, and the Secretary of State, George Shultz, wrote to the Senate Foreign Relations Committee, describing the proposed legislation as 'damaging to the cause of peace' and contrary to the US position on Jerusalem of refusing 'to recognize unilateral acts by any party'. Such opposition was felt to spring more from fear of the anti-US backlash, which relocating the embassy would provoke throughout the Islamic world, than from respect for successive UN resolutions declaring East Jerusalem to be occupied territory, or for the Hague Convention of 1907 and the Geneva Civilians Convention of 1949, which held

that purported annexations of territory occupied in war were a violation of international law (as treaties of the USA, both these conventions are parts of 'the Supreme Law of the Land' under Article VI of the US Constitution, and for the US Government to assent to or condone Israel's violation of them would be unconstitutional).

The extreme importance attached to the issue in Arab and Islamic quarters was illustrated again when, on 21 March, El Salvador followed Costa Rica's decision of 1982 to relocate its embassy in Jerusalem, a move which, it had been led to believe, would result in the pro-Israel lobby in Congress helping to clear the way for US military assistance programmes for El Salvador. A meeting of the Organization of the Islamic Conference in Fez in April, which spoke of the obligation to make Jerusalem an international, independent city open to all peoples and faiths, passed a resolution to the effect that member states should sever all diplomatic, economic and cultural relations with any country that moved its embassy to Jerusalem. Egypt made a similar declaration and duly severed diplomatic ties with El Salvador and Costa Rica on 22 April.

The US Administration remained firmly opposed to relocating its embassy in Israel to Jerusalem in the foreseeable future. US officials rejected as 'ridiculous' and potentially dangerous a formal statement issued on 4 April 1982 by leaders of the American Jewish Congress asserting that the status of the US Consulate in Jerusalem was 'intolerable' and undermined US interests in the Middle East. For its part, the Israeli Government stood by its claim that Jerusalem was Israel's 'eternal' capital, rejecting outright a proposal made by Pope John Paul II on 25 April for an internationally guaranteed status for Jerusalem in the interests of Christianity, Islam and Judaism.

Israeli settlement projects in the city proceeded apace in 1984 and 1985, with many thousands of new apartments being built and occupied within the boundary of annexed East Jerusalem. Just outside the municipal line, in the occupied West Bank, there was also rapid construction of the satellite towns of Efrat, south of Bethlehem, Ma'aleh Edomin to the east, and Givat Zeev to the north, which were designed to provide, in total, housing for over 50,000 Israelis. The completion of these new towns filled the last remaining gaps in the ring of settlements enclosing East Jerusalem as part of Israel's Metropolitan Plan, which aimed to achieve a Jewish majority of 120,000 over the Arab population in the Greater Jerusalem area by 1986.

The focus of the conflict over Jerusalem soon shifted back to the competing claims of possession of Jews and Muslims within the Old City. The increasing numbers of Jews settling in the Muslim Quarter, which before 1980 had housed no Jews at all, threatened to introduce strife into an area where relations between the two communities had long been exemplary. Cases of Jewish settlers intimidating Arab residents in order to establish proprietorial rights, and of Jewish-occupied buildings being illegally extended, greatly alarmed the Muslim population, who feared that the inroads could be the start of a campaign to expel the Old City's inhabitants. The new settlers, who, by mid-1985, numbered some 200 among the Muslim Quarter's 20,000 Arabs, were nearly all religious-nationalist extremists, openly dedicated to rebuilding the Jewish Temple on the site of the Muslim sanctuary and mosques, the Haram ash-Sharif. Traditionally, the controversy over the Temple Mount issue had been minimized by Jewish religious rulings forbidding Jews even to enter the area, but the encroachment by Jewish zealots on Muslim areas bordering on the shrine was a sign that this precept was now being challenged. In the Old City alone, seven *yeshivas* (Jewish religious colleges) had been set up expressly to study the issue of the Temple and how Jews could, once again, pray there.

In January 1986, members of the Israeli Knesset Interior Committee asked permission to visit the compound of al-Aqsa mosque on the Temple Mount, ostensibly to ensure that restoration work being undertaken by the Islamic authorities was not detrimental to the ancient remains of the Jewish Temple. Although it was known that the Knesset committee was acting at the instigation of Jewish extremists, who had been attempting to establish a foothold in the mosque compound by conducting prayers there, the Islamic Awqaf department, entrusted with safeguarding the shrine, nevertheless gave permission for members of the committee to visit certain unused chambers beneath the al-Aqsa structure known to Jews as Solomon's Stables. On 7 January the Israeli parliamentarians arrived at the site accompanied by television crews and a number of religious and nationalist extremists, including the leader of the Temple Mount Faithful, a Jewish group dedicated to rebuilding the Temple in place of the al-Aqsa mosque. Islamic officials decided that the Israeli delegation intended a political demonstration of Jewish claims to the site rather than an inspection of restoration work, and refused it entry, whereupon members of the group, led by Knesset member Geula Cohen, of the extreme right-wing Tehiya Party, tried to force their way through. Calls for help were broadcast from the minarets of the Old City's mosques, and alarmed Muslims rushed to the site. The ensuing riot was controlled only by police escorting the Israeli group away and firing tear-gas into the crowd. A week later, despite an inspection of the site in the interim by the leader of the Knesset, Shlomo Hillel, and the Mayor of Jerusalem, Teddy Kollek, who testified that no structural changes had been made, the extremist group returned to the compound and attempted to pray inside it. More riots ensued, and were again dispersed by police using tear-gas.

The al-Aqsa riots were seized upon by Israeli nationalists as an opportunity to publicize Jewish claims to the site, and there were signs that the Temple Mount was increasingly becoming a nationalist, as well as a religious issue in Israeli politics, in that it was a means of asserting Israeli sovereignty over what was internationally considered to be occupied territory. On 30 January 1986 the UN Security Council drafted a resolution strongly condemning Israel's 'provocative acts', which 'violated the sanctity of the sanctuary of the Haram ash-Sharif in Jerusalem' and constituted 'a serious obstruction to achieving a comprehensive, just and lasting peace in the Middle East'. The resolution, otherwise supported by all the Security Council members except Thailand, which abstained, was vetoed by the USA. Although the US Administration maintained its official position that East Jerusalem was occupied territory and that the ultimate status of the city should be determined through negotiation, it was clearly embarrassed by the resolution's reiteration of the UN's rejection of Israeli claims to sovereignty over the entire city. Despite the intense anger and alarm which was generated throughout the Arab and Muslim world by the perceived threat to Islam's third-holiest shrine, Israel's Chief Rabbi, Mordechai Eliahu, shortly afterwards proposed the construction of a synagogue next to the mosques on Temple Mount. The proposed synagogue would be 'higher and more elevated' than the mosques of al-Aqsa and the Dome of the Rock, which would remain only 'to commemorate the Destruction' and the day when the Temple would be rebuilt.

There was a marked increase in tension in the Old City in the autumn of 1986, with acts of intimidation against Palestinians by religious zealots, as well as attacks against Israeli security personnel by Palestinians, occurring with greater frequency. The tension erupted in November after the stabbing of a *yeshiva* student (one of a group of religious nationalists which had resorted to the violent intimidation of neighbouring Palestinian families in an effort to force them to abandon their homes in the Aqabat al-Khaldi quarter). The subsequent backlash from Israeli extremists shocked even Israeli officials. For several days they pursued a campaign of burning and looting Palestinian homes and shops, and assaulting individual Palestinians throughout the Old City. In the days following the violence, vigilante groups were created to warn and protect the community against the Israeli extremists.

While the level of violence diminished in the early part of 1987, the attitude of the Palestinian population in East Jerusalem continued to harden. Demands for protest action that were formerly heeded elsewhere in the Occupied Territories but only to a very limited extent in Jerusalem, began to win more active support. On Land Day in 1987, almost every shop in East Jerusalem closed in observance of the annual commemorative strike, marking a departure from previous years when few shopkeepers had been prepared to lose a day's takings, and a change in the political climate which prefigured confrontation on an increasing scale.

The sharpened nationalist consciousness of Palestinians in East Jerusalem progressively involved them in an extension of the running conflict between the people of the Occupied Territories and the Israeli authorities, which began in December 1987. Clashes in Jerusalem grew more frequent in 1987, and

the Palestinian *intifada* (uprising), although it began in Gaza and spread to the West Bank, took root in Jerusalem as firmly as elsewhere. The city's historical status has made it a centre of Palestinian resistance, particularly for the Unified National Leadership of the Uprising (UNLU), whose organizational work has largely been conducted there. Israeli repression has been a little less in evidence in Jerusalem than elsewhere in the Occupied Territories, but arrests, beatings, deportations, curfews and other measures have all been employed there as well.

The city's central importance to the international community was underlined at the summit meeting of the Arab League in Amman (Jordan) in November 1987. Jerusalem was cited as a 'symbol of peace' and as the 'embodiment of the historic ties between the Muslim and Christian faiths'. This description was contained in a little-noticed passage of the official communiqué at the end of the summit in which King Hussein of Jordan, rather than the PLO, was mandated to undertake contacts with the Vatican on the Jerusalem issue.

During 1988, an election year in the USA, pronouncements on the subject of Jerusalem from presidential candidates were inevitable. Recommendations for the relocation of the US Embassy from Tel-Aviv to Jerusalem were frequently made in an attempt to gain Jewish support. All the candidates for the Democratic Party presidential nomination, with the exception of Rev. Jesse Jackson, promised to support such a relocation, if elected. Among the most ardent supporters of this move was Michael Dukakis who, having received the nomination of the Democratic Party in July 1988, was the favourite to succeed Ronald Reagan in the White House. As the November party conventions approached, there was a real fear in the Arab world of the election of a US President who would endorse the relocation of the US Embassy, conferring implicit US recognition of Israel's annexation of East Jerusalem. Such recognition had hitherto been withheld even by the Reagan administration—probably the most overtly pro-Israeli US Government since 1948. By the time George Bush had overtaken his Democratic rival in the polls, however, the danger of such a move had receded.

The peace proposals first put forward by the Israeli Government in April 1989 (see Arab–Israeli Relations 1967–99), while incorporating elections in the Occupied Territories, made no mention of the eligibility or otherwise of Palestinians in East Jerusalem to vote or stand as candidates in such elections. This question was repeatedly raised by those seeking to obtain more concessions from Israel in order to make the proposals more acceptable to Palestinians, but Israel's agreeing to allow the participation of residents of East Jerusalem would clearly have contradicted its formal annexation of the city in 1967.

At the 19th session of the Palestine National Council (PNC) in Algiers in November 1988, Jerusalem was named the capital of the newly declared independent state of Palestine, and in July 1989 was recognized as such by more than 60 countries.

Disagreements over the status of East Jerusalem and its residents continued to frustrate the progress of the various peace proposals put forward during 1989. US Secretary of State James Baker's preference for 'constructive ambiguity'—keeping the peace agenda deliberately vague in order not to snare progress on controversial issues—was sorely tested by the Israeli Right's insistence that Palestinians from East Jerusalem be barred from prospective elections for the Occupied Territories. Moreover, after President Mubarak of Egypt had suggested that pre-election talks between an Israeli and a Palestinian delegation should be convened in Cairo, Israel's Prime Minister Shamir stated the opposition of the Likud Party to the inclusion of East Jerusalemites in the talks. Attempts by James Baker and Israel's Labour Party to coax Shamir into accepting a compromise formula, whereby Palestinians who had East Jerusalem identity papers but who lived in the West Bank would be allowed to participate in the talks, were unsuccessful. Indeed, in what was widely interpreted as a move to emphasize his opposition to such a compromise, Shamir was said to have ordered the arrest in February 1990 of Faisal Husseini, a leading pro-PLO personality and East Jerusalem resident. The charge brought against Husseini—that he had supplied funds for the purchase of uniforms by the Palestine Popular Army—was as transparently ridiculous as his arrest was politically motivated. An international outcry forced Husseini's prompt release and at a press conference he subsequently alleged that his arrest had been meant to discredit him in view of his association with the proposed Cairo talks.

There was little doubt that Shamir's refusal to compromise on the issue of East Jerusalem stemmed as much from tactical as from ideological imperatives. Endless debate over the details of Palestinian representation seemed the least damaging way for Israel to stifle the peace process. However, such delaying tactics risked frustrating the USA to such an extent that it would be compelled, against Secretary of State James Baker's wishes, to state its position on East Jerusalem. However, it was not the stalled peace process which finally led the US Administration to reveal its hand, but, rather, the issue of Soviet Jewish emigration to Israel. Alarmed by the news that 10% of new Jewish immigrants from the USSR were being settled in East Jerusalem, Bush unequivocally equated East Jerusalem with occupied territory during a telephone conversation with Prime Minister Shamir on 10 February 1990. One week later he commented that US foreign policy was opposed to any new settlements in either the West Bank or East Jerusalem. While President Bush's comment marked a radical departure from the strong pro-Israeli sentiments of the Reagan administration, there were few signs that the Senate was about to abandon its traditional support for Israel. In March 1990 the Democrat-dominated chamber voted perfunctorily but overwhelmingly to recognize Jerusalem as the capital of Israel. Interestingly, the leader of the Republican minority in the Senate, Robert Dole, who had originally supported the Jerusalem resolution, but who was increasingly regarded as a stalking horse for a less slavish US foreign policy towards Israel, admitted that he had 'made a mistake' in voting for the resolution.

In 1989, as in 1988, the Palestinian *intifada* was waged with less ferocity in Jerusalem than in other cities in the West Bank and Gaza. Owing to the city's high profile and its importance to Israel's tourist industry, the Israelis were wary of employing the same kind of lethal force there as they did in Nablus or Gaza. The tactics of the security forces in Jerusalem were noticeably different from those employed elsewhere in the Occupied Territories. Whenever tensions ran high, or a nationalist anniversary approached, Israel was prepared to swamp Arab Jerusalem with huge numbers of police and border guards. Nevertheless, clashes between demonstrators and the security forces in and around the city claimed a number of lives during 1989. There were also frequent confrontations between Palestinians living in the eastern suburbs of Jerusalem and Israelis from the settlement of Ma'aleh Edomin. At the end of 1989 Israeli riot police violently dispersed a legitimate rally for peace held by Palestinians, Israelis and Europeans in the eastern half of the city. Many people, including several foreigners, suffered injury.

The influx of Soviet Jews into Israel at the beginning of 1990 was regarded with dismay by Palestinians living in Jerusalem. The settlement of the new immigrants on Jewish housing estates, built on confiscated Arab lands in the eastern half of the city, resulted in a significant increase in street confrontations during the early part of the year. During Easter celebrations a force of some 120 Jewish religious nationalists forcibly occupied the St John's Hospice in the Christian quarter of the Old City, claiming they had purchased the building from an Armenian tenant for the sum of US $1.8m., most of which had been supplied by the Israeli Government. The owner of the building, the Greek Orthodox Church, disputed the legality of the purchase and mounted an international campaign to have the 'settlers' removed. Anger among local Palestinian Christians was especially strong, not only because of the provocative timing of the action, but also because it was the first attempt by Israeli right-wingers to settle in the Christian quarter of Jerusalem. Demonstrations outside the Hospice by Greek Orthodox and Muslim clergy quickly developed into violent confrontation. The occupation of the Hospice was also condemned by the Israeli Left and Jerusalem's Labour Mayor, Teddy Kollek, who reportedly threatened to resign unless the 'settlers' were evicted from the Hospice. While the Israeli courts eventually decided that most of the 'settlers' should leave the Hospice, 20 were given permission to remain until the ownership of the building was conclusively established.

The bloodiest incident yet of the Palestinian *intifada* occurred in Jerusalem on 8 October 1990, when members of the Temple Mount Faithful (see above) made one of their periodic and highly conspicuous attempts to lay the symbolic cornerstone of the Third Temple at the al-Aqsa mosque. Both the Israeli police and the Palestinian population had been forewarned and prepared accordingly. The police refused the members of the Temple Mount Faithful permission to enter the mosque compound, while Palestinians gathered at the site to defend it against the intruders. A full-scale riot rapidly developed. The paramilitary Border Guard opened fire indiscriminately on the crowds inside the compound and on medical staff called to treat casualties. By the time the violence had ceased, 17 Palestinians had been shot dead and many more had been injured. International condemnation, expressed in a unanimous UN Security Council resolution (supported by the USA), followed swiftly. However, a proposal to send a fact-finding mission to Jerusalem was rejected by the Israeli Government as interference in Israel's internal affairs. A commission of inquiry set up by the Israeli Government and chaired by an ex-general and former chief of Mossad known for his right-wing views, predictably absolved the security forces of responsibility for the bloodshed. In the months following the killings there was a spate of 'revenge' stabbings in West Jerusalem that claimed several Israeli lives and led to further anti-Arab violence. Many Palestinians employed in the West Bank either gave up their jobs or were forced to leave by gangs of right-wing vigilantes. Not since the early days of the occupation had the city appeared so divided.

The defeat of Iraq in the Gulf War in February 1991 by the multinational force led to a renewal of efforts to settle the Arab–Israeli conflict. The Israeli Government showed no signs of willingness to compromise on any of the substantive issues, arguably adopting its most intransigent stance on the issue of Jerusalem. Prime Minister Shamir took the opportunity of Jerusalem Day, the anniversary of the annexation of the city, to tell an audience of Soviet immigrants that 'Jerusalem has never been subject to negotiation. United Jerusalem is the capital of Israel'. This position was forcibly underlined by an ambitious programme of building for settlement in and around East Jerusalem, a policy that continued to exasperate both US President Bush and the US Secretary of State, James Baker. Furthermore, the confiscation of Arab property in the Muslim quarter of the Old City continued.

The dispute over the status of East Jerusalem and its Palestinian inhabitants initially threatened to obstruct the Arab-Israeli peace talks that began in Madrid in October 1991. Israel had made it clear to the USA that it regarded the participation in the talks of Palestinian residents of East Jerusalem as unacceptable because this would represent an implicit challenge to Israel's claim that the city was not occupied territory. Such a condition was unacceptable to the Palestinians, not only because it would have established the principle of an Israeli veto over Palestinian representation, but also because it would have made it even more difficult for the Palestinians to force the issue of Jerusalem onto the agenda. US Secretary of State James Baker assured the Palestinians that the USA did consider East Jerusalem to be occupied territory, but he cautioned that the Palestinians could not afford to be seen to be wrecking the peace talks by their inflexible attitude over representation. Similar warnings came from Egypt and Jordan and resulted in a compromise, supported by the USA and, somewhat reluctantly, by the PLO, whereby the official members of the Palestinian-Jordanian negotiating team would be accompanied by an advisory team composed primarily of East Jerusalem residents. At the Madrid conference and subsequent rounds of bilateral talks in Washington it became clear that the principal function of the advisory body was to co-ordinate negotiation tactics and positions with the PLO. In the course of the talks the meetings between East Jerusalem Palestinians and PLO representatives became more overt and there was pressure from the Israeli establishment to bring charges against the offending Palestinians under anti-terrorism legislation which forbade such contact. But, although Faisal Husseini and Hanan Ashrawi (the PLO representatives) were questioned by the police, US opposition restrained any further action.

The Palestinian delegation tried unsuccessfully to raise the subject of Jerusalem during various rounds of the peace process. James Baker's attitude towards the Arab-Israeli talks was that their continuation depended upon avoiding the more intractable problems until progress had been made in less controversial areas. As progress under the Shamir premiership was agonizingly slow, Jerusalem did not come onto the negotiation agenda.

In 1991 Israel began its most aggressive settlement building programme in the Occupied Territories since 1967. The settlement drive was concentrated in the West Bank and in Gaza, but included considerable building activity in and around Arab Jerusalem. A disturbing development for Palestinians were attempts to extend colonization to parts of the city hitherto regarded as exempt from them. In July 1991 security guards acting for a department of the Ministry of Housing took possession of a house in the Arab suburb of Sheikh Jarrah under orders from the Custodian of Absentee Property. Since the owners lived in the West Bank, the seizure set an ominous precedent by classifying West Bank residents as 'absentees'. On the eve of the Madrid conference, Jewish settlers occupied seven houses in the Silwan district outside the Old City walls, evicting a number of families in the process. Court action forced them to leave six of the houses, but the settlers returned in December, assured by Israel's Attorney-General that he found nothing wrong with the settlers' titles to 20 houses in the district. These titles were based on the assertion that the properties had been owned by Jews in the 1930s. The Arab owners gained a temporary injunction for the eviction of some of the settlers, but the settlers appealed against this, guaranteeing a lengthy round of legal battles before ownership could be established. Jerusalem's Labour Mayor, Teddy Kollek, joined Palestinian leaders in condemning the settlers and their sponsors. The Government, he said, was sacrificing calm in the city 'on the altar of ideology'. Controversy over the Silwan incident was heightened by the leaking of an Israeli Ministry of Housing blueprint for extensive land expropriation in the Arab suburbs of the city.

The election of a Labour-led Government in Israel in July 1992 brought little hope that Jerusalem would be included on the agenda of the peace process. Although the new Government seemed sure to refrain from the ideological excesses of Likud when it came to settlement in traditional Arab areas of East Jerusalem, Prime Minister Itzhak Rabin repeated that Israeli sovereignty over the whole of Jerusalem would remain non-negotiable if the peace talks were revived. His promise was borne out by Israel's continued refusal, during the sixth and subsequent rounds of the Middle East peace process, to discuss the issue of Jerusalem in negotiations on the period of interim self-rule for Palestinians in the Occupied Territories. Rabin's position received the unspoken support of the Bush administration when the latter declared that the USA would not deduct from the $10,000m. in loan guarantees recently released to Israel, sums that were spent on financing settlement construction in East Jerusalem. This appeared to be a clear retreat from earlier assurances given to the Palestinian peace delegation on the US position regarding Jerusalem and was fundamental in strengthening Palestinian opposition to the peace process.

The election of Bill Clinton as President of the USA in late 1992 was greeted with some trepidation by the PLO. Both Clinton and his Vice-President, Al Gore, were regarded as committed Zionists. During the presidential campaign Gore had voiced his support for the transfer of the US Embassy to Jerusalem. Although such a step was highly unlikely, given sensitivities surrounding the peace process, Palestinians believed that the new US Administration would be reluctant to pressurize Israel into allowing Jerusalem onto the agenda of the bilateral negotiations. Attempts by Palestinian negotiators to extract from the USA a statement of principle regarding East Jerusalem produced conflicting signals. When US Secretary of State Warren Christopher visited East Jerusalem in the wake of the deportation affair (see Arab–Israeli Relations 1967–99) to try to establish grounds for a restart of the peace process, he reassured members of the Palestinian delegation that President Clinton was committed to assurances on Jerusalem made by his predecessor—namely that it was considered to be occcupied territory. However, during subsequent rounds of bilateral talks in Washington in the spring and early summer of 1993, US negotiators supported Israel in its insistence that Jerusalem would not be discussed until the so-called 'final status' negotiations took place some years hence. By the summer of 1993 the

conflict over Jerusalem at the Washington talks was threatening to make progress on any other issue an impossibility.

Palestinians feared that the Rabin Government was adopting the same approach to negotiations on Jerusalem as the Shamir Government had towards the Occupied Territories as a whole; i.e. avoiding discussion of fundamental issues at the negotiating table while creating 'facts' on the ground. There was increasing evidence to support this view. In March 1993 Rabin sealed off the West Bank and Gaza from Israel proper, including annexed East Jerusalem, following the killing of two young Israelis by a Palestinian in West Jerusalem. As the cultural, political, geographical and economic capital of the Occupied Territories, the isolation of Jerusalem from the West Bank was extremely disruptive to Palestinian populations on both sides of the divide (it was possible for West Bank and Gaza residents to get permits to visit Jerusalem but these were reportedly very difficult to obtain). Most worrying from the Palestinian point of view were the political implications of the new measure. There was a widespread conviction that the closure heralded an attempt to cantonize the Occupied Territories and bring about the permanent separation of East Jerusalem from the West Bank. In June it was also revealed that, for the first time since 1967, there were more Israelis than Palestinians living in East Jerusalem.

The Declaration of Principles (see Documents on Palestine, p. 120) agreed in Oslo and signed by Yasser Arafat and Itzhak Rabin in September 1993 stipulated that issues relating to Jerusalem would be left until 'final status' negotiations took place. Given the polarized positions of Palestinians and Israel on the future of the city, it was hardly surprising that discussion of Jerusalem would not take place during the interim negotiations. Palestinians were far less comfortable with this than their Israeli counterparts. A highly visible and ambitious programme of settlement and road-building in and around the occupied east side of the city appeared as irrefutable confirmation that Israel was transforming East Jerusalem into a ghetto, isolated from its West Bank hinterland. The rapid physical transformation suggested that by the time Jerusalem joined the negotiation agenda, the proposed capital of a future Palestinian state would be dwarfed by a ring of Jewish suburbs and a major ring road. The deposition of the long-standing, moderate Labour Mayor, Teddy Kollek, in municipal elections in late 1993, and his replacement by the Likud candidate, Ehud Olmert, implied that this process of encirclement would be hastened. Kollek had tried to avoid a Likud victory in the municipal polls by appealing to Palestinians in East Jerusalem to vote. Significantly, however, the city's Arab population observed its customary boycott of Israeli elections: only 6% of Jerusalem's Palestinians exercised their voting rights.

Palestinians attempted to use the political space conferred by the legalization of the PLO to push their own claim to sovereignty over East Jerusalem. Orient House, once home to the Arab Studies centre, became the semi-official headquarters of the PLO in the Occupied Territories and there were moves to establish similar quasi-governmental offices in the city. This largely symbolic attempt to create the 'fact' of a Palestinian 'capital' was viewed with suspicion by the Israeli Government and the new Likud administration in the city. Indeed, public pronouncements by Israeli leaders about Jerusalem continued to be united by the common thread of a refusal to countenance any compromise on Israeli sovereignty. While the Israeli position was clear to the PLO, it was dismayed at what appeared to be a shift in the USA's policy towards Jerusalem. During the 1992 presidential campaign there had been unconfirmed rumours that Clinton and Gore had promised Jewish leaders that they would revise US policy on the status of Jerusalem by excluding reference to Jerusalem as occupied territory—a formulation that the USA had accepted in UN resolutions since 1971. However, during a UN Security Council vote on a resolution (No. 904) condemning the massacre of worshippers in Hebron, the USA abstained on a preambulary clause defining Jerusalem as occupied Palestinian territory and stated that if the definition had been in an operative paragraph they would have voted against it. The US ambassador to the UN defended this apparent shift in policy by saying that Israel and the Palestinians had agreed, under the Declaration of Principles, to negotiate the city's 'final status' and the Clinton administration did not wish to prejudice the outcome of those negotiations.

The conclusion of the first stage of the Declaration of Principles, with the redeployment of Israeli troops in Gaza and Jericho, once again focused attention on Jerusalem. The PLO Chairman, Yasser Arafat, was criticized in Israel when he appealed for a *jihad* to free Jerusalem. Although Arafat later attempted a clarification by insisting that he meant a peaceful crusade, his comment was acknowledged to be a public relations disaster. Israeli leaders responded to Arafat's gaffe with an offensive of their own. The Jerusalem municipality announced its intention to begin the process of demolishing an estimated 2,000 Arab dwellings in East Jerusalem that had been built without licences. Rabin, meanwhile, instructed his Government's legal experts to explore the possibility of drawing up legislation that would forestall the PLO's plans to develop its institutional base in East Jerusalem. A confidential cabinet report leaked to the Israeli press in July detailed plans to reinforce Israeli control of Jerusalem during the approach to the 1996 talks on the status of the city. It proposed the adoption of measures to stop the 'illegal' ingress of outsiders—presumably Arabs—to the city and the creation of job opportunities for Arabs outside the city boundaries. The inescapable conclusion was that the Israeli Government was trying to engineer a further change in the demographic balance, not just by settling Jews in the eastern half of the city, but also by trying to exclude its non-Jewish population.

Palestinian despondency over the developing battle for Jerusalem deepened with Israel's agreement, on 25 July, with Jordan to formally end the state of war that had existed between the two countries. One of the articles in the Israeli-Jordanian agreement acknowledged the special role of Jordan as guarding Muslim sites in Jerusalem. Responding to Palestinian objections to the implications of such an agreement, King Hussein stated that 'religious and political sovereignty over the holy city were two separate issues'. Further comments from Jordanian officials, that the motivation for the controversial clause was a desire to save the holy sites from Israeli control before the 'final status' negotiations, failed to allay Palestinian fears that Jordan was being used by Israel to undermine Palestinian claims to sovereignty over East Jerusalem. Although the PLO had until this point declined to challenge Jordan's custodianship of the Muslim holy sites, King Hussein's agreement with Israel revived speculation that the Palestinians would work towards the creation of a Palestinian *waqf* (religious endowment fund) department to replace the existing Jordanian one. A furious Arafat insisted that only Palestinians could decide the fate of East Jerusalem and called a meeting of the Arab League to discuss the Jerusalem clause. There were also reports that King Hassan of Morocco had been asked to mediate between King Hussein and Arafat. Commentaries in the Arab press were generally critical of the Jordanian monarch's agreement with Israel on Jerusalem. Israel, meanwhile, appeared to take particular delight at the disarray. Speaking in Washington, Rabin commented, 'It wouldn't bother me at all if there is a little friction between Jordanians and Palestinians over Jerusalem.'

Israeli and Palestinian sensitivity over Jerusalem ensured that the city would continue to be an issue of contention between the Israeli Government and the Palestinian National Authority (PNA) in the period leading up to 'final status' talks. In September the World Bank was forced to cancel a donor's conference in Paris after Israel and the Palestinians became entangled in a bitter dispute over whether foreign aid for the PNA could be used to fund development projects in East Jerusalem. Israel adamantly refused to accept that such aid was authorized in the Declaration of Principles. Further controversy followed in November when the Turkish Prime Minister, Tansu Çiller, visited Orient House, the PNA's *de facto* headquarters in Jerusalem. The visit had not been approved by the Israeli Government and provoked strong protests. Israel insisted that any discussion on Palestinian self-rule had to take place in Gaza City or Jericho. Faisal Husseini, the principal Palestinian spokesperson on Jerusalem, whose office was located in Orient House, rejoined that what was being discussed with the Turkish Prime Minister was the wider issue of the Middle East. The visit was followed by others from French, Czech and South African diplomats. The Israeli Government claimed that the Palestinians were trying to 'create facts' to prejudice the outcome of 'final status' talks and stationed Israeli troops outside the

building. In November a draft law to restrict PLO activity in Jerusalem was given its first reading in the Knesset and was passed on 26 December. This was despite the assertion, made by Shimon Peres in 1993 to his Norwegian counterpart, that 'All the Palestinian institutions of East Jerusalem, including the economic, social, educational and cultural . . . will be preserved. Needless to say, we will not hamper their activity; on the contrary, the fulfilment of this important mission is to be encouraged'.

By the end of the year it had also become apparent that Jordan would have to revise its position on Jerusalem. The clause it had signed with Israel concerning Hashemite custodianship of the Muslim Holy sites in the city was not popular on either bank of the Jordan river, largely because the rift that it had created in relations with the PLO was seen as divisive to Arab interests and only of benefit to Israel. More importantly, at a meeting of the Organization of the Islamic Conference in Casablanca in mid-December, King Hussein spectacularly failed to win recognition of the Hashemite role in Jerusalem. Jordanian officials later conceded that they had mishandled the Jersulem issue with Israel and stated that defusing the conflict with the PLO over the city would become a priority. In January 1995 the Jordanian Minister of Foreign Affairs assured Arafat that Jordan would support all steps taken to ensure Palestinian sovereignty over the east of the city, and that the patronage of the holy sites was never intended to prejudice this eventuality. A mollified Arafat agreed not to raise the issue in a forthcoming visit to Jordan.

The construction of exclusively Jewish housing in East Jerusalem and around the city boundaries continued to provoke Palestinian and international concern. Commitment to the notion of a Jerusalem 'united under Israeli sovereignty' was once again underlined in the aftermath of the Beit Lid bombings (see Arab-Israeli Relations 1967–99, p. 66) when the Ministry of Housing won the Cabinet's support for the construction of an additional 5,000 housing units in the dormitory settlements of Greater Jerusalem. When the Meretz party leader enquired where the expanding Palestinian population of East Jerusalem was going to live, Rabin answered bluntly, 'I am worried about Israelis, not the Arabs'. Meretz claimed that of the 70,000 dunums of land in East Jerusalem, 23,000 had been confiscated since 1967. Of these expropriations, 85% had been of Arab land, but of the 35,000 apartments subsequently constructed, not one had been for Jerusalem's Arab citizens. 'Whoever thinks we can go on with this policy', commented Yair Tzaban, a prominent Meretz member, 'is making a grave mistake'. It was not an opinion that would deflect Rabin from his drive to assert Israel's territorial and demographic domination. In April 1995 the Labour leader authorized the confiscation of a further 130 acres (500 dunums) of Arab land in Jerusalem and the construction of an additional 7,000 new homes. Ehud Olmert, the city's Likud Mayor expressed his warm support for the Government's plans, while his deputy stated that this was the first stage of a wider design to confiscate up to 4,400 dunums of East Jerusalem. The original expropriation proposals were eventually 'frozen' following a threat by the Arab parties represented in the Knesset to bring down the Israeli Government. An earlier Security Council resolution demanding that Israel should rescind the land confiscation had been vetoed by the USA. The US Ambassador to the UN, Madeleine Albright, had defended the US action on the grounds that the issue was a local matter that would have to be resolved within the framework of the Declaration of Principles. The US veto was unremarkable and largely symptomatic of the increasingly pro-Israel bias informing the policies and discourse of both Democratic and Republican parties. The strongly Zionist views of the Clinton administration were well known; the US President had received 60% of his funding from Jewish sources and 80% of the Jewish vote in his 1992 campaign. What was more alarming from an Arab perspective was a movement among Republican leaders to co-ordinate their attempts to court the Jewish vote with a campaign to have the US Embassy in Israel moved from Tel-Aviv to Jerusalem. In February the Republican Speaker in the US House of Representatives, Newt Gingrich, stated that he 'strongly favoured' moving the embassy. His comments prompted politicians in both the Senate and the House of Representatives to express support for his position. By May the leader of the Republicans in the House of Representatives, Bob Dole, who had recently argued in favour of a reduction in US aid to Israel, had garnered bipartisan support for a bill requiring the USA to build a new embassy in Jerusalem. Clinton's embarrassment at having to oppose the measure was pre-empted, for the time being, by Rabin's decidely lukewarm response to the Dole initiative. There were two reasons for this. Firstly, Rabin was concerned that such a gesture was untimely given the precarious state of negotiations on Palestinian autonomy. Secondly, and relatedly, the US Republicans' novel enthusiasm for the transfer of the embassy originated from the activities of Aipac, the most influential and increasingly intransigent pro-Israel lobby group. Ideologically Aipac had far more in common with the Israeli Right than with the Labour Party, and Rabin suspected that however welcome a transfer of embassy might be in theory, the sabotage of the autonomy talks was Aipac's hidden agenda.

An opinion poll published in June 1995 provided some comfort for Palestinians. It revealed that there was a significant decline in support among Jerusalem's Jewish citizens for the nationalist doctrine of exclusive Israeli sovereignty over Jerusalem. According to the findings, support for this notion had decreased from 57.4% in 1993 to 45.8%. There was a big difference in opinion between secular and religious voters, with the latter more strongly in favour of exclusive sovereignty. However, the preponderance of secular opinion nationally seemed to suggest that there was a greater readiness for some compromise with the Palestinians over the status of East Jerusalem than had previously been thought.

The PNA secured a small, but significant victory on the issue of Jerusalem during the negotiation of interim-phase agreements (see Documents on Palestine, p. 127) with Israel, within the framework of the Oslo Accords. According to a deal concluded by the two sides in the Egyptian resort of Taba in September 1995, the Palestinian villages on the municipal borders of the city were to enjoy the same status as the rest of the West Bank villages; i.e. civic authority and responsibility for 'public order' there would be transferred to the PNA, while Israel would remain in charge of 'overriding security'. Israel also agreed to allow residents of East Jerusalem to vote in the forthcoming elections to the Palestinian Legislative Council, and to stand as candidates provided they also had residency in the West Bank. In the view of one of the Palestinian negotiators at the Taba talks, the agreement on the Jerusalem villages meant that Israel's dream of a Greater Jerusalem had come to an end. Despite these concessions, Israel gave notice that it would not tolerate any PNA activity in East Jerusalem. As a prelude to the closure of Orient House, the unofficial PNA headquarters in the city, Israel's Chief of Police shut down three Palestinian institutions in the city (the Palestinian Health Council, Broadcasting Corporation and Bureau of Statistics). Arafat was able to forestall their closure by allowing the three institutions to sign declarations stating that they were independent of the PNA.

Meanwhile, US Senator Bob Dole, by now the leading Republican candidate for the US presidency, had won an overwhelming majority in the US Congress for his bill to have the US Embassy in Israel transferred from Tel-Aviv to Jerusalem by May 1999. The PNA reacted sharply to the decision, with Yasser Arafat angrily condemning the proposed move as 'incompatible with the spirit of the peace process'. President Bill Clinton's embarrassment at this transparent electioneering by his Republican rival was partially allayed when he secured a last-minute amendment to the bill. This allowed the US President to certify every six months that it would not be in the national interest to transfer the embassy. The certification could be used indefinitely and a White House spokesman insisted that Clinton would be using the waiver provision if he was still in office in 1999.

Palestinians were noticeably less enthusiastic about registering for the 1996 Legislative Council elections in Jerusalem than they were in the towns and villages of the West Bank and the Gaza Strip, despite the PNA urging them to do so. Their reluctance originated partly through fear that by registering to vote they would jeopardize their status as Jerusalem identity-card holders, and partly through lack of faith in a process that was being conducted under continued Israeli occupation. However, just as the PNA had a vested interest in ensuring

that the turn-out for the elections to the Legislative Council was as high as possible, so Israel was happy to see as few Palestinians as possible take part. Israeli police established blockades to prevent candidates for Jerusalem's seven seats from canvassing during the election campaign and insisted on restricting polling stations to a number that Palestinians argued was far less than could realistically accommodate the expected number of voters. On 20 January 1996 some 40% of potential voters cast their ballots, a turn-out that was lower than in any other area of the territories occupied in 1967 except Hebron (significantly the only other Palestinian population centre also under partial Israeli control). This was a disappointment for the PNA, but the fact that Jerusalem had participated at all was declared by one of the successful Jerusalem candidates as signifying 'the beginning of the re-emerging of Jerusalem, legally, politically and structurally within the Palestinian system'.

In Israel's own prime-ministerial and legislative elections in May 1996 both the Labour and Likud leaders restated their commitment to a unified Jerusalem under Israeli sovereignty. Their pronouncements were given added resonance by the fact that the talks about to resume between Israel and the PNA on the 'final status' of the territories occupied in 1967 would focus on the need to reconcile opposing claims to the Arab areas of Jerusalem. Despite the ritualized utterings of successive Labour leaders on the need to preserve Israeli domination of all sections of the city, the fact that a two-thirds majority of Labour Party members in Jerusalem were reportedly happy to accept something less than full Israeli sovereignty meant that most Palestinians supported Shimon Peres and the Labour Party. The victory of Likud and of Binyamin Netanyahu was received, not just by the Palestinians and Arab states, but by much of the international community as a set-back to hopes of achieving a compromise on Jerusalem. Initial policy statements by the victorious Likud leader appeared to confirm the international pessimism. In his first meeting with Yasser Arafat, Israel's newly-appointed Minister of Foreign Affairs, David Levy, stated that the PNA would have to shut down all of its institutions in Jerusalem—including its headquarters, Orient House—before negotiations could be resumed on 'final status' agreements. In a further statement of intent to limit the Palestinians' room for manoeuvre in Jerusalem, the Israeli police summoned the seven PLC deputies who represented Jerusalem to question them about 'their political activity'. The seven refused to respond, claiming immunity under agreements previously signed between Israel and the PNA. In late June the Israeli press revealed plans for the seizure of large tracts of land belonging to two Palestinian villages with the purpose of building hundreds of new housing units, an industrial zone, a public park and a swimming pool. Observers pointed out that if the proposals proceeded, it would effectively mean the encirclement of East Jerusalem. Palestinians were angered again at the end of July when the Israeli High Court granted members of the extremist Jewish movement, the Temple Mount Faithful, permission to enter the compound of the al-Aqsa mosque. Hundreds of Palestinians converged on the scene and a bloody confrontation was only narrowly avoided. Commenting on the incident, the PNA's minister for *waqf* affairs declared: 'We know well that the hour of confrontation with the Jews is getting closer, and we must be willing to die and shed blood for our rights and for the holy places'.

Netanyahu underlined his Government's opposition to Palestinian attempts at institutional development in East Jerusalem with an order in late August 1996 for the closure of further institutions (including the Geographical Office and the Youth and Sports Department) loosely connected to the PNA. Just days after compliance with the order, Israeli bulldozers demolished a Palestinian centre for the elderly and handicapped in Jerusalem's Old City, on the grounds that the five-year-old building had been constructed without a licence. This development provoked strong protests from the PNA and from the city's Legislative Council members, who advocated a four-hour general strike to demonstrate opposition to the measure.

On 23 September 1996 the Likud Prime Minister announced the opening of the 500-m 'Hasmonean' tunnel that runs through the heart of the Old City, alongside the compound of the al-Aqsa mosque. Given the existing political climate and Muslim sensitivities over any perceived threat to Islamic holy sites, Netanyahu's decision was widely viewed as somewhat rash. King Hussein of Jordan, whose 1994 peace treaty with Israel recognized Hashemite custodianship of *waqf* property in the city, was extremely critical of Netanyahu's failure to consult or inform him regarding the move. Yasser Arafat, meanwhile, denounced the decision as a 'crime against our holy places' and he urged Palestinians to protest against what he termed the 'Judaization of Jerusalem'. The response was immediate and overwhelming. Three Palestinians were shot dead and more than 120 were injured after Friday prayer demonstrations at al-Aqsa mosque on 27 September. Elsewhere in the Occupied Territories 52 Palestinians and 15 Israelis died in the bloodiest series of confrontations since the June War of 1967. While the scale of the violence unleashed in September injected an urgency into the peace process which had hitherto been lacking under the Netanyahu Government, there was no evidence of any reversal of Israel's policy of extending control over the east of the city, while denying Palestinians either the physical or the political space to preserve residual autonomy. In November 50 prominent Palestinians organized a sit-down demonstration outside Jerusalem's interior ministry to draw attention to two aspects of Israel's rule that they claimed were having a particularly insidious impact on the status and livelihoods of the city's Palestinian residents. The first of these was the 'general' closure imposed on the West Bank and Gaza in 1993. This had required non-resident Palestinians to obtain Israeli permission to enter the city and had effectively detached East Jerusalem from its Arab hinterland. Many of the city's businesses had subsequently relocated to the West Bank. The result, according to Palestinian economists, had been a 50% decline in trade among its merchants and steadily rising unemployment. Of equal concern to the protesters was an Interior Ministry policy of redefining the parameters under which Palestinians could live in Jerusalem. Since 1994 Palestinians' right of residency in Jerusalem had become increasingly determined by whether or not their so-called 'centre of life' was in the city. By the end of 1996 more than 1,000 Palestinians had been relieved of their rights of residency because they failed to meet this criterion. Many of these individuals were people who had moved to the West Bank in response to the economic downturn.

Construction of Jewish apartments in East Jerusalem continued at a steady pace. In December 1996 the Jerusalem District Housing Committee approved the construction of 132 housing units in the Palestinian village of Ras al-Amud, just outside the Old City walls. Financed by Irving Moskowitz, a Miami-based millionaire, and intended for Orthodox Jews, it had yet to receive ministerial sanction but was regarded as a particularly provocative proposal. According to the Israeli group, Peace Now, who supported Palestinian opposition to the development, its inauguration would mean that for the first time since 1967 an Israeli government had 'decided to plan a settlement in the heart of a Palestinian neighbourhood.' While the international community was pondering the likely effect on the peace process of such a development, Prime Minister Netanyahu gave his support to the construction of a massive new settlement on Jabal Abu Ghunaim, a forested hilltop straddling the southeastern municipal borders of Jerusalem and belonging to the Palestinian town of Beit Sahur. Construction of the new development (Har Homa) which was expected to comprise 6,500 housing units, would represent the completion of Arab Jerusalem's encirclement by exclusively Jewish settlements. Despite united local and international opposition to Har Homa, work began on its construction in mid-March 1997. Under US pressure the Netanyahu Government also announced that it would be granting 3,015 building permits to Palestinians in East Jerusalem to ensure 'equal rights and development for Jews and Arabs' in the city. But this intended palliative did little to lessen Palestinian opposition to Har Homa. It was observed that the granting of permits would be conditional on infrastructural development in Palestinian areas, something for which successive Israeli governments had an extremely poor track record.

Yasser Arafat's PNA responded to the commencement of work on Har Homa by calling a halt to negotiations on the Oslo Accords. Arafat stated that their resumption would be conditional on suspension of the project. The US Administration also supported the international community's expression of opposi-

tion to Israeli settlements in East Jerusalem. Nevertheless, Washington vetoed a UN resolution condemning the Har Homa decision because its wording categorized East Jerusalem as occupied territory. This, according to the US ambassador to the UN, prejudged future Israeli-Palestinian negotiations on the 'final status' of the city and was thus at odds with US policy. His remarks were considered disingenuous by many independent observers, since developments such as Har Homa, together with ongoing Jewish housing construction in other parts of East Jerusalem, were already creating the 'facts on the ground' that contravened the spirit, if not the letter, of the Oslo Accords.

With an increasing sense that the battle to preserve East Jerusalem as the future capital of an independent Palestinian state was being lost, there were belated signs of resistance. In April and May 1997 a campaign to raise US $100m. for real-estate development was conducted among Palestinian, Jordanian and Egyptian businessmen. In June Palestinian merchants also staged a one-day commercial strike in protest against tax raids initiated by Likud Mayor, Ehud Olmert, who claimed that the merchants owed the municipality $38m. In response, Palestinians claimed that their tax burden was too high, given that they comprised around 30% of the city's population but received only 7% of municipal funds. After the strike the Jerusalem Chamber of Commerce announced that it would maintain the tax boycott and would consider an indefinite strike if the raids continued.

The interruption to negotiations on the Oslo Accords caused by the Har Homa construction resulted in US pressure on the Netanyahu Government to take steps to ease tension over the settlement issue. In May 1997 Olmert announced a six-month moratorium on the demolition of unlicensed Palestinian dwellings in Jerusalem, and in July the Israeli Prime Minister declared his opposition to the controversial settlement of Ras al-Amud. This latter concession, together with reports that a temporary 'freeze' was being considered on the Har Homa development, was instrumental in an agreement by the Israeli Government and the PNA to restart formal negotiations suspended since March. The day after the announcement thirteen Israelis were killed in West Jerusalem's Mahane Yehuda market in a double suicide bombing by Islamist militants. Netanyahu immediately imposed a blockade of all PNA-controlled areas and announced that further negotiations on the Oslo Accords would be suspended until Arafat had satisfied Israeli demands for the apprehension of militant Islamist suspects. By the end of July the prospect of a solution to the Har Homa problem appeared to have receded. There were further suicide bombings in Jerusalem at the beginning of September. Three suspected Islamist bombers killed four Israelis and themselves in a co-ordinated attack in the west of the city.

The Jerusalem bomb attacks, and the deepening crisis in the Oslo peace process provided a sombre backdrop to the first official trip to the region by the new US Secretary of State Madeleine Albright. While in Israel in September 1997 she cautioned Israel against provocative settlement activity in the territories occupied by Israel in 1967. However within 48 hours of her leaving Israel, Jerusalem was once again the focus of media attention owing to settler action in the east of the city. On 14 September three Jewish families, escorted by armed settlers, occupied buildings in Ras al-Amud. The settler families claimed legitimacy of tenancy on the grounds that the buildings had been rented from Irving Moskowitz, the Miami-based financier who had initiated earlier plans for a settlement in the village and who had already bankrolled the activities of militant settlers in the Old City. Residents of the village, however, fiercely disputed Moskowitz's claim to ownership of the occupied buildings. After the Government negotiated with lawyers representing Moskowitz, Netanyahu announced a 'compromise' deal to end the stand-off, whereby the Jewish families agreed to vacate the buildings on the understanding that they would be occupied by 10 *yeshiva* students. The agreement was savaged by Arafat and the Israeli peace movement and denounced as farcical. It sustained fears that the village would continue to be a target for settlers and their allies in the Israeli Government. The Israeli Minister of National Infrastructure, Ariel Sharon, noted that the creation of a Jewish settlement in Ras al-Amud was critical if the Israeli state was to prevent 'Arab contiguity' between the Old City and the Palestinian villages that served as its hinterland. Palestinian-Israeli negotiations concerning the implementation of the Oslo Agreements, effectively stalled since the inauguration of work on the Har Homa project, remained deadlocked for much of 1997 and early 1998. Israel's refusal to undertake the scheduled redeployment of its forces in the West Bank was justified by the Israeli Government in terms of the continuing threat posed to Israel's security. However, there was also a widely-held belief that Netanyahu was hoping to secure an accelerated transition to 'final status' talks in which land settlements and the future of Jerusalem would be the most intractable issues for negotiation. Predictably, there was little sign that either Netanyahu's Government or the Labour opposition was prepared to countenance anything less than full Israeli sovereignty over the entire city. A corollary of this position was Israeli determination to undermine attempts by the PNA to develop an institutional base in the city. Indeed, a crucial precondition of the Netanyahu Government for moving towards redeployment in the West Bank was that the PNA end all political activity in East Jerusalem. Heightened political sensitivities over the Jerusalem issue were clearly underlined in March 1998 during a visit to the city by the British Secretary of State for Foreign and Commonwealth Affairs, Robin Cook. Cook's decision to visit the site of the Har Homa settlement provoked barely-concealed outrage from the Israeli Government; not only would the visit refocus world attention on Israel's settlement policy, but Cook announced that he intended to view the controversial building work in the company of Faisal Husseini, the Palestinian Minister with Responsibility for Jerusalem Affairs. Netanyahu declared such a visit 'unacceptable', and eventually it was agreed that the British politician would visit the site accompanied by Israel's cabinet secretary, a compromise that dismayed the Palestinians and appeared to do little to mollify Netanyahu. Cook was jeered and jostled at the site by right-wing settlers and was forced to make a swift retreat. However, the British politician later met Husseini in East Jerusalem where he laid a wreath to the victims of the 1948 massacre of Palestinians at Deir Yassin. Netanyahu reacted to the clear symbolism of Cook's itinerary by cancelling a planned dinner together, agreeing only to a brief 15-minute meeting with the visitor. At subsequent press conferences the Israeli Prime Minister promised 'thousands of homes in Har Homa'. For his part, Cook restated the position of the European Union. 'My visit to Har Homa was symbolic', he declared, 'one of the biggest obstacles to the peace process is the expansion of settlements . . . there has been no progress in the peace process since the decision to build Har Homa was made'.

If Cook's visit served to reinforce the Israeli Government's belief that they could expect little backing from Europe for their claim to exclusive sovereignty over Jerusalem, tours of the USA undertaken by Netanyahu in the first half of 1998 confirmed that there was no diminution in such support from US congressional leaders. Netanyahu won repeated standing ovations for a series of 'hardline' statements on Israeli attitudes towards relations with the Palestinians, none more enthusiastic than that which he received when he pledged that Israel would never give up a part of Jerusalem. In May, the city became the principal focus of Israel's 50th anniversary celebrations, during which time the city's West Bank borders were once again sealed to Palestinians. Large numbers of security personnel were deployed on the streets of Arab Jerusalem and the Old City to thwart Palestinian disruption of the celebrations. Nevertheless, serious rioting broke out in Arab quarters later in the month as Palestinians commemorated the *Nabka*, or 'catastrophe' of 1948 that had resulted in their dispossession.

On 23 May 1998 Israelis celebrated the 31st 'Jerusalem Day'. Sharing a platform with Irving Moskowitz, the Israeli Prime Minister reaffirmed his pledge that Jerusalem would remain united under Israeli sovereignty in perpetuity. The day also witnessed a march by some 13,000 Israeli troops through West Jerusalem, and symbolic attempts by right-wing extremist groups to occupy both the al-Aqsa mosque and Orient House. The following day members of the Ateret Kohanim movement (one of the most active settler organizations in East Jerusalem and largely funded by Moskowitz) began to lay the foundations of a new *yeshiva* in the Muslim quarter of the Old City. The site had originally housed a Palestinian charitable organization, but this had been one of the buildings demolished 21 months

previously by the Jerusalem municipality on the grounds that they had been built without a licence. Ateret Kohanim had reportedly been interested in purchasing the site for several months and had been in illegal occupation since the beginning of May. Two days after the building work began, seven temporary homes had been erected and supplied with water and electricity. Although the construction work was patently illegal, since no building permit had been granted, the site was protected throughout by units of the paramilitary Border Police. Israeli radio also broadcast reports that the settlers had been encouraged to build on the plot by Ariel Sharon. On 26 May members of the Palestinian Legislative Council attempted to enter the building compound; the ensuing scuffles with the Border Police resulted in injury to several Palestinian politicians (including Faisal Husseini) and the destruction of one of the homes. Israel's internal security ministry subsequently announced that the Jerusalem municipality and the Israeli Antiquities Department had obtained a restraining order on further building—this announcement was made after the latter body had cautioned that the construction work was endangering the perimeter wall of the Old City. In discussions with local police chiefs and the Mayor of Jerusalem, Ehud Olmert, the settlers agreed to halt development on the site on the condition that their members would remain *in situ* to provide security for any excavation work carried out by the Antiquities Department. A tender would later be submitted by Ateret Kohanim to build a *yeshiva* and 12 apartments for 400 religious students. Expectation was high that the tender would be approved. Left-wing Israelis and Palestinians criticized the agreement, describing it as a capitulation to religious nationalism and a further significant setback to the peace process.

On 21 June 1998 the Israeli Cabinet approved a proposal to create a 'Greater Jerusalem'. The plan envisaged the extension of the city's municipal boundaries westwards to incorporate Israeli commuter towns, and therefore guarantee a Jewish majority within the city. More controversially, the proposal also contained provision for the creation of an 'umbrella municipality' over eight Jewish settlements bordering the city but currently occupying the territories of the West Bank. These settlements would continue paying local property taxes and voting in their own jurisdictions but would fall under Jerusalem's municipal authority for certain services, including building and planning. The US Department of State described the plan as 'extremely provocative' and Ahmad Tibi, Yasser Arafat's economic adviser deemed it 'a total violation of the Oslo Agreement' and an attempt 'to annex Palestinian land'. Similar concerns were expressed by the European Union. Netanyahu responded to the mounting chorus of local and international criticism by stating that the proposal was 'entirely municipal, entirely administrative, with no political implications'.

In July 1998 the Arab representatives on the UN Security Council successfully lobbied for a debate on Israeli plans for the extension of Jerusalem's boundaries. The USA's Ambassador to the UN, Bill Richardson, reiterated his country's belief that the proposals were 'unhelpful', but added that the Security Council should not 'interject itself into issues' that needed to be resolved by the two parties concerned. The inevitability of the US veto being exercised to block a resolution critical of Israel led the Council to issue instead a strongly-worded statement condemning the Jerusalem plan. Notwithstanding these minor diplomatic achievements at the UN, Palestinians continued to accuse the Netanyahu Government of pursuing policies designed to ensure Israeli hegemony over the whole city. The 'Greater Jerusalem' plan was the most obvious example of Israel's intent to facilitate new political and demographic realities, but the PNA also complained of a steady erosion of Palestinian civil rights. Of prime concern was the removal of the right of residency for Palestinians for whom the Israeli authorities judged East Jerusalem not to be the centre of life. According to Israel's interior ministry, 436 Palestinians had their Jerusalem identity cards confiscated in the first half of 1998. It was also reported that the interior ministry refused to issue such cards to West Bank Palestinians who had married Jerusalem residents, or to the children of their union. By the end of 1998, some 4,000 families were reported to have been affected by this policy.

The Wye River Memorandum of October 1998 committed Israel and the PNA to commence negotiations on Oslo's 'final status' arrangements, including the future of Jerusalem, in November 1998. Israeli accusations that the PNA was not complying with its security commitments, coupled with a Knesset vote in December for early prime-ministerial and parliamentary elections, effectively stalled the peace process. The resulting hiatus added to a growing sense of Palestinian vulnerability. With the Oslo process suspended and the US Government eager for 'final status' negotiations to begin as soon as possible after the 17 May elections, there was a clear imperative for the Netanyahu Government and its allied settler groups to consolidate control over Jerusalem. In January 1999, the Israeli Prime Minister gave his consent for construction to begin on the Har Homa settlement at the cleared site of Jabal Abu Ghunaim, and final approval for the development of high-rise apartments in Ras al-Amud, in East Jerusalem. At the same time, there was mounting evidence that the Jerusalem municipality was preparing to shift the city's borders southwards and westwards, to encompass the territory between Jerusalem and Bethlehem. Shopkeepers and restaurant owners in the area complained that they had been instructed henceforth to pay taxes to the Jerusalem municipality, while residents of the village of Walaja received notification that the IDF was to demolish several buildings in the village, including the local mosque. Further land-seizures and confiscations were reported around Bethlehem in February. The ability of the Palestinians to challenge Likud's vision of a 'Greater Jerusalem' was undermined by the consensus within the Israeli political establishment. The Labour leader and premiership hopeful, Ehud Barak, subscribed to the same notion of a Jerusalem united in perpetuity under Israeli sovereignty as his predecessors. Indeed, the apparent Labour-Likud unanimity on the core issue of status, forced Netanyahu to seek alternative ways to demonstrate the Likud party campaign slogan 'only Bibi [Netanyahu] can save a unified Jerusalem'. In mid-March the Israeli Prime Minister once again soured relations with the EU by instructing foreign delegations not to visit the *de facto* PLO headquarters at Orient House. The German Government, as holders of the EU presidency, responded with the dispatch of a letter to the Israeli foreign ministry, reaffirming the European position that Jerusalem was a divided city and that Israeli sovereignty over occupied East Jerusalem was not recognized. As Netanyahu's fortunes suffered a reversal in the weeks prior to the elections, he appeared determined to make the closure of Orient House a centrepiece of his election campaign. Despite pleas from the international community to show restraint in the matter, he instructed his internal security minister to order the closure of Orient House by the evening of 9 May. The Palestinians refused to comply, and on the morning of 10 May hundreds of members of Arafat's Fatah movement formed a protective cordon around the building. As last-minute efforts to broker a compromise failed in the face of Palestinian determination to defy Netanyahu, violent confrontation appeared to be inevitable. Meanwhile, in a co-ordinated effort with the PNA, a group of Israeli peace activists was petitioning Israel's Supreme Court to delay the closure order on the grounds that it was 'motivated by electoral considerations' and 'could lead to bloodshed'. Their argument was accepted, and on 11 May a temporary injunction was served on the Israeli Government, preventing it from closing any offices at Orient House. Although the Supreme Court only delivered a stay of execution, the Palestinians regarded the verdict as a rare victory. Interestingly, however, Labour leader Barak, who went on to secure a comfortable vistory over Netanyahu in the contest for Prime Minister, remained resolutely silent throughout the affair.

DOCUMENTS ON PALESTINE

DECLARATION OF FIRST WORLD ZIONIST CONGRESS

*The Congress, convened in Basle by Dr Theodor Herzl in August 1897, adopted the following programme.**

The aim of Zionism is to create for the Jewish people a home in Palestine secured by public law.

The Congress contemplates the following means to the attainment of this end:

1. The promotion on suitable lines, of the settlement of Palestine by Jewish agriculturists, artisans and tradesmen.

2. The organization and binding together of the whole of Jewry by means of appropriate institutions, local and general, in accordance with the laws of each country.

3. The strengthening of Jewish sentiment and national consciousness.

4. Preparatory steps towards obtaining government consent as are necessary, for the attainment of the aim of Zionism.

McMAHON CORRESPONDENCE†

Ten letters passed between Sir Henry McMahon, British High Commissioner in Cairo, and Sherif Husain of Mecca from July 1915 to March 1916. Husain offered Arab help in the war against the Turks if Britain would support the principle of an independent Arab state. The most important letter is that of 24 October 1915, from McMahon to Husain:

. . . I regret that you should have received from my last letter the impression that I regarded the question of limits and boundaries with coldness and hesitation; such was not the case, but it appeared to me that the time had not yet come when that question could be discussed in a conclusive manner.

I have realized, however, from your last letter that you regard this question as one of vital and urgent importance. I have, therefore, lost no time in informing the Government of Great Britain of the contents of your letter, and it is with great pleasure that I communicate to you on their behalf the following statement, which I am confident you will receive with satisfaction:

The two districts of Mersina and Alexandretta and portions of Syria lying to the west of the districts of Damascus, Homs, Hama and Aleppo cannot be said to be purely Arab, and should be excluded from the limits demanded.

With the above modification, and without prejudice to our existing treaties with Arab chiefs, we accept those limits.

As for those regions lying within those frontiers wherein Great Britain is free to act without detriment to the interest of her ally, France, I am empowered in the name of the Government of Great Britain to give the following assurances and make the following reply to your letter:

(1) Subject to the above modifications, Great Britain is prepared to recognize and support the independence of the Arabs in all the regions within the limits demanded by the Sherif of Mecca.

(2) Great Britain will guarantee the Holy Places against all external aggression and will recognize their inviolability.

(3) When the situation admits, Great Britain will give to the Arabs her advice and will assist them to establish what may appear to be the most suitable forms of government in those various territories.

(4) On the other hand, it is understood that the Arabs have decided to seek the advice and guidance of Great Britain only, and that such European advisers and officials as may be required for the formation of a sound form of administration will be British.

(5) With regard to the *vilayets* of Baghdad and Basra, the Arabs will recognize that the established position and interests of Great Britain necessitate special administrative arrangements in order to secure these territories from foreign aggression, to promote the welfare of the local populations and to safeguard our mutual economic interests.

I am convinced that this declaration will assure you beyond all possible doubt of the sympathy of Great Britain towards the aspirations of her friends the Arabs and will result in a firm and lasting alliance, the immediate results of which will be the expulsion of the Turks from the Arab countries and the freeing of the Arab peoples from the Turkish yoke, which for so many years has pressed heavily upon them. . . .

ANGLO-FRANCO-RUSSIAN AGREEMENT (SYKES–PICOT AGREEMENT)

April-May 1916

The allocation of portions of the Ottoman empire by the three powers was decided between them in an exchange of diplomatic notes. The Anglo-French agreement‡ dealing with Arab territories became known to Sherif Husain only after publication by the new Bolshevik government of Russia in 1917:

1. That France and Great Britain are prepared to recognize and protect an independent Arab State or a Confederation of Arab States in the areas (A) and (B) marked on the annexed map, under suzerainty of an Arab Chief. That in area (A) France, and in area (B) Great Britain shall have priority of right of enterprises and local loans. France in area (A) and Great Britain in area (B) shall alone supply foreign advisers or officials on the request of the Arab State or the Confederation of Arab States.

2. France in the Blue area and Great Britain in the Red area shall be at liberty to establish direct or indirect administration or control as they may desire or as they may deem fit to establish after agreement with the Arab State or Confederation of Arab States.

3. In the Brown area there shall be established an international administration of which the form will be decided upon after consultation with Russia, and after subsequent agreement with the other Allies and the representatives of the Sherif of Mecca.

4. That Great Britain be accorded

(*a*) The ports of Haifa and Acre;

(*b*) Guarantee of a given supply of water from the Tigris and the Euphrates in area (A) for area (B).

His Majesty's Government, on their part, undertake that they will at no time enter into negotiations for the cession of Cyprus to any third Power without the previous consent of the French Government.

5. Alexandretta shall be a free port as regards the trade of the British Empire and there shall be no discrimination in treatment with regard to port dues or the extension of special privileges affecting British shipping and commerce; there shall be freedom of transit for British goods through Alexandretta and over railways through the Blue area, whether such goods are going to or coming from the Red area, area (A) or area (B); and there shall be no differentiation in treatment, direct or indirect, at the expense of British goods on any railway or of British goods and shipping in any port serving the areas in question.

Haifa shall be a free port as regards the trade of France, her colonies and protectorates, and there shall be no differentiation in treatment or privilege with regard to port dues against

French shipping and commerce. There shall be freedom of transit through Haifa and over British railways through the Brown area, whether such goods are coming from or going to the Blue area, area (A) or area (B), and there shall be no differentiation in treatment, direct or indirect, at the expense of French goods on any railway or of French goods and shipping in any port serving the areas in question.

6. In area (A), the Baghdad Railway shall not be extended southwards beyond Mosul, and in area (B), it shall not be extended northwards beyond Samarra, until a railway connecting Baghdad with Aleppo along the basin of the Euphrates will have been completed, and then only with the concurrence of the two Governments.

7. Great Britain shall have the right to build, administer and be the sole owner of the railway connecting Haifa with area (B). She shall have, in addition, the right in perpetuity and at all times of carrying troops on that line. It is understood by both Governments that this railway is intended to facilitate communication between Baghdad and Haifa, and it is further understood that, in the event of technical difficulties and expenditure incurred in the maintenance of this line in the Brown area rendering the execution of the project impracticable, the French Government will be prepared to consider plans for enabling the line in question to traverse the polygon formed by Banias-Umm Qais-Salkhad-Tall 'Osda-Mismieh before reaching area (B).

Clause 8 referred to customs tariffs.

9. It is understood that the French Government will at no time initiate any negotiations for the cession of their rights and will not cede their prospective rights in the Blue area to any third Power other than the Arab State or Confederation of Arab States, without the previous consent of His Majesty's Government who, on their part, give the French Government a similar undertaking in respect of the Red area.

10. The British and French Governments shall agree to abstain from acquiring and to withhold their consent to a third Power acquiring territorial possessions in the Arabian Peninsula; nor shall they consent to the construction by a third Power of a naval base in the islands on the eastern seaboard of the Red Sea. This, however, will not prevent such rectification of the Aden boundary as might be found necessary in view of the recent Turkish attack.

11. The negotiations with the Arabs concerning the frontiers of the Arab State or Confederation of Arab States shall be pursued through the same channel as heretofore in the name of the two Powers.

12. It is understood, moreover, that measures for controlling the importation of arms into the Arab territory will be considered by the two Governments.

BALFOUR DECLARATION

2 November 1917

Balfour was British Foreign Secretary, Rothschild the British Zionist leader.

Dear Lord Rothschild,

I have much pleasure in conveying to you on behalf of His Majesty's Government the following declaration of sympathy with Jewish Zionist aspirations, which has been submitted to and approved by the Cabinet.

'His Majesty's Government view with favour the establishment in Palestine of a national home for the Jewish people, and will use their best endeavours to facilitate the achievement of this object, it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country.'

I should be grateful if you would bring this declaration to the knowledge of the Zionist Federation.

Yours sincerely,
Arthur James Balfour.

HOGARTH MESSAGE*

4 January 1918

The following is the text of a message which Commander D. G. Hogarth, CMG, RNVR, of the Arab Bureau in Cairo, was instructed on 4 January 1918 to deliver to King Husain of the Hijaz at Jeddah:

1. The *Entente* Powers are determined that the Arab race shall be given full opportunity of once again forming a nation in the world. This can only be achieved by the Arabs themselves uniting, and Great Britain and her Allies will pursue a policy with this ultimate unity in view.

2. So far as Palestine is concerned, we are determined that no people shall be subject to another, but—

(*a*) In view of the fact that there are in Palestine shrines, Wakfs and Holy places, sacred in some cases to Moslems alone, to Jews alone, to Christians alone, and in others to two or all three, and inasmuch as these places are of interest to vast masses of people outside Palestine and Arabia, there must be a special régime to deal with these places approved of by the world.

(*b*) As regards the Mosque of Omar, it shall be considered as a Moslem concern alone, and shall not be subjected directly or indirectly to any non-Moslem authority.

3. Since the Jewish opinion of the world is in favour of a return of Jews to Palestine, and inasmuch as this opinion must remain a constant factor, and, further, as His Majesty's Government view with favour the realization of this aspiration, His Majesty's Government are determined that in so far as is compatible with the freedom of the existing population, both economic and political, no obstacle should be put in the way of the realization of this ideal.

In this connection the friendship of world Jewry to the Arab cause is equivalent to support in all States where Jews have political influence. The leaders of the movement are determined to bring about the success of Zionism by friendship and co-operation with the Arabs, and such an offer is not one to be lightly thrown aside.

ANGLO-FRENCH DECLARATION†

7 November 1918

The object aimed at by France and Great Britain in prosecuting in the East the war let loose by the ambition of Germany is the complete and definite emancipation of the peoples so long oppressed by the Turks and the establishment of national Governments and Administrations deriving their authority from the initiative and free choice of the indigenous populations.

In order to carry out these intentions France and Great Britain are at one in encouraging and assisting the establishments of indigenous Governments and Administrations in Syria and Mesopotamia, now liberated by the Allies, and in the territories the liberation of which they are engaged in securing and recognizing these as soon as they are actually established.

Far from wishing to impose on the populations of these regions any particular institutions they are only concerned to ensure by their support and by adequate assistance the regular working of Governments and Administrations freely chosen by the populations themselves. To secure impartial and equal justice for all, to facilitate the economic development of the country by inspiring and encouraging local initiative, to favour the diffusion of education, to put an end to dissensions that have too long been taken advantage of by Turkish policy which the two Allied Governments uphold in the liberated territories.

* British White Paper, Cmd. 5964, 1939.

† Report of a Committee set up to consider Certain Correspondence between Sir Henry McMahon and the Sherif of Mecca in 1915 and 1916, 16 March 1939 (British White Paper, Cmd. 5974).

RECOMMENDATIONS OF THE KING–CRANE COMMISSION‡

28 August 1919

The Commission was set up by President Wilson of the USA to determine which power should receive the Mandate for Palestine. The following are extracts from their recommendations on Syria:

1. We recommend, as most important of all, and in strict harmony with our Instructions, that whatever foreign administration (whether of one or more Powers) is brought into Syria, should come in, not at all as a colonising Power in the old sense of that term, but as a Mandatory under the League of Nations with the clear consciousness that 'the well-being and development' of the Syrian people form for it a 'sacred trust'.

2. We recommend, in the second place, that the unity of Syria be preserved, in accordance with the earnest petition of the great majority of the people of Syria.

3. We recommend, in the third place, that Syria be placed under one mandatory Power, as the natural way to secure real and efficient unity.

4. We recommend, in the fourth place, that Amir Faisal be made the head of the new united Syrian State.

5. We recommend, in the fifth place, serious modification of the extreme Zionist program for Palestine of unlimited immigration of Jews, looking finally to making Palestine distinctly a Jewish State.

(1) The Commissioners began their study of Zionism with minds predisposed in its favor, but the actual facts in Palestine, coupled with the force of the general principles proclaimed by the Allies and accepted by the Syrians have driven them to the recommendation here made.

(2) The Commission was abundantly supplied with literature on the Zionist program by the Zionist Commission to Palestine; heard in conferences much concerning the Zionist colonies and their claims; and personally saw something of what had been accomplished. They found much to approve in the aspirations and plans of the Zionists, and had warm appreciation for the devotion of many of the colonists, and for their success, by modern methods in overcoming great, natural obstacles.

(3) The Commission recognised also that definite encouragement had been given to the Zionists by the Allies in Mr Balfour's often-quoted statement, in its approval by other representatives of the Allies. If, however, the strict terms of the Balfour Statement are adhered to—favoring 'the establishment in Palestine of a national home for the Jewish people', 'it being clearly understood that nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine'—it can hardly be doubted that the extreme Zionist program must be greatly modified. For 'a national home for the Jewish people' is not equivalent to making Palestine into a Jewish State; nor can the erection of such a Jewish State be accomplished without the gravest trespass upon the 'civil and religious rights of existing non-Jewish communities in Palestine'. The fact came out repeatedly in the Commission's conference with Jewish representatives, that the Zionists looked forward to a practically complete dispossession of the present non-Jewish inhabitants of Palestine, by various forms of purchase.

In his address of 4 July 1918, President Wilson laid down the following principle as one of the four great 'ends for which the associated peoples of the world were fighting': 'The settlement of every question, whether of territory, of sovereignty, of economic arrangement, or of political relationship upon the basis of the free acceptance of that settlement by the people immediately concerned, and not upon the basis of the material interest or advantage of any other nation or people which may desire a different settlement for the sake of its own exterior influence or mastery.' If that principle is to rule, and so the wishes of Palestine's population are to be decisive as to what is to be done with Palestine, then it is to be remembered that the non-Jewish population of Palestine—nearly nine-tenths of the whole—are emphatically against the entire Zionist program. The tables show that there was no one thing upon which the population of Palestine were more agreed than upon this. To subject a people so minded to unlimited Jewish immigration, and to steady financial and social pressure to surrender the land, would be a gross violation of the principle just quoted, and of the people's rights, though it kept within the forms of law.

It is to be noted also that the feeling against the Zionist program is not confined to Palestine, but shared very generally by the people throughout Syria, as our conferences clearly showed. More then 72%—1,350 in all—of all the petitions in the whole of Syria were directed against the Zionist program. Only two requests—those for a united Syria and for independence—had a larger support. This general feeling was duly voiced by the General Syrian Congress in the seventh, eighth and tenth resolutions of their statement.

The Peace Conference should not shut its eyes to the fact that the anti-Zionist feeling in Palestine and Syria is intense and not lightly to be flouted. No British officer, consulted by the Commissioners, believed that the Zionist program could be carried out except by force of arms. The officers generally thought that a force of not less than 50,000 soldiers would be required even to initiate the program. That of itself is evidence of a strong sense of the injustice of the Zionist program, on the part of the non-Jewish populations of Palestine and Syria. Decisions requiring armies to carry out are sometimes necessary, but they are surely not gratuitously to be taken in the interests of serious injustice. For the initial claim, often submitted by Zionist representatives, that they have a 'right' to Palestine, based on an occupation of 2,000 years ago, can hardly be seriously considered.

There is a further consideration that cannot justly be ignored, if the world is to look forward to Palestine becoming a definitely Jewish State, however gradually that may take place. That consideration grows out of the fact that Palestine is the Holy Land for Jews, Christians, and Moslems alike. Millions of Christians and Moslems all over the world are quite as much concerned as the Jews with conditions in Palestine, especially with those conditions which touch upon religious feelings and rights. The relations in these matters in Palestine are most delicate and difficult. With the best possible intentions, it may be doubted whether the Jews could possibly seem to either Christians or Moslems proper guardians of the holy places, or custodians of the Holy Land as a whole.

The reason is this: The places which are most sacred to Christians—those having to do with Jesus—and which are also sacred to Moslems, are not only not sacred to Jews, but abhorrent to them. It is simply impossible, under those circumstances, for Moslems and Christians to feel satisfied to have these places in Jewish hands, or under the custody of Jews. There are still other places about which Moslems must have the same feeling. In fact, from this point of view, the Moslems, just because the sacred places of all three religions are sacred to them, have made very naturally much more satisfactory custodians of the holy places than the Jews could be. It must be believed that the precise meaning in this respect of the complete Jewish occupation of Palestine has not been fully sensed by those who urge the extreme Zionist program. For it would intensify, with a certainty like fate, the anti-Jewish feeling both in Palestine and in all other portions of the world which look to Palestine as the Holy Land.

In view of all these considerations, and with a deep sense of sympathy for the Jewish cause, the Commissioners feel bound to recommend that only a greatly reduced Zionist program be attempted by the Peace Conference, and even that, only very gradually initiated. This would have to mean that Jewish immigration should be definitely limited, and that the project for making Palestine distinctly a Jewish commonwealth should be given up.

There would then be no reason why Palestine could not be included in a united Syrian State, just as other portions of the country, the holy places being cared for by an international and inter-religious commission, somewhat as at present, under the oversight and approval of the Mandatory and of the League of Nations. The Jews, of course, would have representation upon this commission.

ARTICLE 22 OF THE COVENANT OF THE LEAGUE OF NATIONS

1. To those colonies and territories which as a consequence of the late War have ceased to be under the sovereignty of the States which formerly governed them and which are inhabited by peoples not yet able to stand by themselves under the strenuous conditions of the modern world, there should be applied the principle that the well-being and development of such peoples form a sacred trust of civilization and that securities for the performance of this trust should be embodied in this Covenant.

2. The best method of giving practical effect to this principle is that the tutelage of such peoples should be entrusted to advanced nations who by reason of their resources, their experience or their geographical position can best undertake this responsibility, and who are willing to accept it, and that this tutelage should be exercised by them as Mandatories on behalf of the League.

3. The character of the Mandate must differ according to the stage of the development of the people, the geographical situation of the territory, its economic conditions and other similar circumstances.

4. Certain communities formerly belonging to the Turkish Empire have reached a stage of development where their existence as independent nations can be provisionally recognized subject to the rendering of administrative advice and assistance by a Mandatory until such time as they are able to stand alone. The wishes of these communities must be a principal consideration in the selection of the Mandatory.

7. In every case of Mandate, the Mandatory shall render to the Council an annual report in reference to the territory committed to its charge.

8. The degree of authority, control, or administration to be exercised by the Mandatory shall, if not previously agreed upon by the Members of the League, be explicitly defined in each case by the Council.

9. A permanent Commission shall be constituted to receive and examine the annual reports of the Mandatories and to advise the Council on all matters relating to the observance of the Mandates.

MANDATE FOR PALESTINE*

24 July 1922

The Council of the League of Nations:

Whereas the Principal Allied Powers have agreed, for the purpose of giving effect to the provisions of Article 22 of the Covenant of the League of Nations to entrust to a Mandatory selected by the said Powers the administration of the territory of Palestine, which formerly belonged to the Turkish Empire, within such boundaries as may be fixed by them; and

Whereas the Principal Allied Powers have also agreed that the Mandatory should be responsible for putting into effect the declaration originally made on 2 November 1917 by the Government of His Britannic Majesty, and adopted by the said Powers, in favour of the establishment in Palestine of a National Home for the Jewish people, it being clearly understood that nothing should be done which might prejudice the civil and religious rights of existing non-Jewish communities in Palestine, or the rights and political status enjoyed by Jews in any other country; and

Whereas recognition has thereby been given to the historical connection of the Jewish people with Palestine and to the grounds for reconstituting their National Home in that country; and

Whereas the Principal Allied Powers have selected His Britannic Majesty as the Mandatory for Palestine; and

Whereas the Mandate in respect of Palestine has been formulated in the following terms and submitted to the Council of the League for approval; and

Whereas His Britannic Majesty has accepted the Mandate in respect of Palestine and undertaken to exercise it on behalf of the League of Nations in conformity with the following provisions; and

Whereas by the afore-mentioned Article 22 (paragraph 8), it is provided that the degree of authority, control or administration to be exercised by the Mandatory, not having been previously agreed upon by the Members of the League, shall be explicitly defined by the Council of the League of Nations;

Confirming the said Mandate, defines its terms as follows:

ARTICLE 1. The Mandatory shall have full powers of legislation and of administration, save as they may be limited by the terms of this Mandate.

ARTICLE 2. The Mandatory shall be responsible for placing the country under such political, administrative and economic conditions as will secure the establishment of the Jewish National Home, as laid down in the preamble, and the development of self-governing institutions, and also for safeguarding the civil and religious rights of all the inhabitants of Palestine, irrespective of race and religion.

ARTICLE 3. The Mandatory shall, so far as circumstances permit, encourage local autonomy.

ARTICLE 4. An appropriate Jewish Agency shall be recognized as a public body for the purpose of advising and co-operating with the Administration of Palestine in such economic, social and other matters as may affect the establishment of the Jewish National Home and the interests of the Jewish population in Palestine, and, subject always to the control of the Administration, to assist and take part in the development of the country.

The Zionist organization, so long as its organization and constitution are in the opinion of the Mandatory appropriate, shall be recognized as such agency. It shall take steps in consultation with His Britannic Majesty's Government to secure the co-operation of all Jews who are willing to assist in the establishment of the Jewish National Home.

ARTICLE 5. The Mandatory shall be responsible for seeing that no Palestine territory shall be ceded or leased to, or in any way placed under the control of, the Government of any foreign Power.

ARTICLE 6. The Administration of Palestine, while ensuring that the rights and position of other sections of the population are not prejudiced, shall facilitate Jewish immigration under suitable conditions and shall encourage, in co-operation with the Jewish Agency referred to in Article 4, close settlement by Jews on the land, including State lands and waste lands not required for public purposes.

ARTICLE 7. The Administration of Palestine shall be responsible for enacting a nationality law. There shall be included in this law provisions framed so as to facilitate the acquisition of Palestinian citizenship by Jews who take up their permanent residence in Palestine.

ARTICLE 13. All responsibility in connection with the Holy Places and religious buildings or sites in Palestine, including that of preserving existing rights and of securing free access to the Holy Places, religious buildings and sites and the free exercise of worship, while ensuring the requirements of public order and decorum, is assumed by the Mandatory, who shall be responsible solely to the League of Nations in all matters connected herewith, provided that nothing in this Article shall prevent the Mandatory from entering into such arrangements as he may deem reasonable with the Administration for the purpose of carrying the provisions of this Article into effect; and provided also that nothing in this Mandate shall be construed as conferring upon the Mandatory authority to interfere with the fabric of the management of purely Moslem sacred shrines, the immunities of which are guaranteed.

ARTICLE 14. A special Commission shall be appointed by the Mandatory to study, define and determine the rights and claims in connection with the Holy Places and the rights and claims relating to the different religious communities in Palestine. The method of nomination, the composition and the functions of this Commission shall be submitted to the Council of the League for its approval, and the Commission shall not be appointed or enter upon its functions without the approval of the Council.

ARTICLE 28. In the event of the termination of the Mandate hereby conferred upon the Mandatory, the Council of the League

* British White Paper, Cmd. 1785.

of Nations shall make such arrangements as may be deemed necessary for safe-guarding in perpetuity, under guarantee of the League, the rights secured by Articles 13 and 14, and shall use its influence for securing, under the guarantee of the League, that the Government of Palestine will fully honour the financial obligations legitimately incurred by the Administration of Palestine during the period of the Mandate, including the rights of public servants to pensions or gratuities.

CHURCHILL MEMORANDUM*

3 June 1922

The Secretary of State for the Colonies has given renewed consideration to the existing political situation in Palestine, with a very earnest desire to arrive at a settlement of the outstanding questions which have given rise to uncertainty and unrest among certain sections of the population. After consultation with the High Commissioner for Palestine the following statement has been drawn up. It summarizes the essential parts of the correspondence that has already taken place between the Secretary of State and a Delegation from the Moslem Christian Society of Palestine, which has been for some time in England, and it states the further conclusions which have since been reached.

The tension which has prevailed from time to time in Palestine is mainly due to apprehensions, which are entertained both by sections of the Arab and by sections of the Jewish population. These apprehensions, so far as the Arabs are concerned, are partly based upon exaggerated interpretations of the meaning of the Declaration favouring the establishment of a Jewish National Home in Palestine, made on behalf of His Majesty's Government on 2 November 1917. Unauthorized statements have been made to the effect that the purpose in view is to create a wholly Jewish Palestine. Phrases have been used such as that Palestine is to become 'as Jewish as England is English.' His Majesty's Government regard any such expectation as impracticable and have no such aim in view. Nor have they at any time contemplated, as appears to be feared by the Arab Delegation, the disappearance or the subordination of the Arabic population, language or culture in Palestine. They would draw attention to the fact that the terms of the Declaration referred to do not contemplate that Palestine as a whole should be converted into a Jewish National Home, but that such a Home should be founded *in Palestine*. In this connection it has been observed with satisfaction that at the meeting of the Zionist Congress, the supreme governing body of the Zionist Organization, held at Carlsbad in September 1921, a resolution was passed expressing as the official statement of Zionist aims 'the determination of the Jewish people to live with the Arab people on terms of unity and mutual respect, and together with them to make the common home into a flourishing community, the upbuilding of which may assure to each of its peoples an undisturbed national development.'

It is also necessary to point out that the Zionist Commission in Palestine, now termed the Palestine Zionist Executive, has not desired to possess, and does not possess, any share in the general administration of the country. Nor does the special position assigned to the Zionist Organization in Article IV of the Draft Mandate for Palestine imply any such functions. That special position relates to the measures to be taken in Palestine affecting the Jewish population, and contemplates that the Organization may assist in the general development of the country, but does not entitle it to share in any degree in its Government.

Further, it is contemplated that the status of all citizens of Palestine in the eyes of the law shall be Palestinian, and it has never been intended that they, or any section of them, should possess any other juridical status.

So far as the Jewish population of Palestine are concerned, it appears that some among them are apprehensive that His Majesty's Government may depart from the policy embodied in the Declaration of 1917. It is necessary, therefore, once more to affirm that these fears are unfounded, and that the Declaration, re-affirmed by the Conference of the Principal Allied Powers at San Remo and again in the Treaty of Sèvres, is not susceptible of change.

During the last two or three generations the Jews have recreated in Palestine a community, now numbering 80,000, of whom about one-fourth are farmers or workers upon the land. This community has its own political organs; an elected assembly for the direction of its domestic concerns; elected councils in the towns; and an organization for the control of its schools. It has its elected Chief Rabbinate and Rabbinical Council for the direction of its religious affairs. Its business is conducted in Hebrew as a vernacular language, and a Hebrew Press serves its needs. It has its distinctive intellectual life and displays considerable economic activity. This community, then, with its town and country population, its political, religious and social organizations, its own language, its own customs, its own life, has in fact 'national' characteristics. When it is asked what is meant by the development of the Jewish National Home in Palestine, it may be answered that it is not the imposition of a Jewish nationality upon the inhabitants of Palestine as a whole, but the further development of the existing Jewish community, with the assistance of Jews in other parts of the world, in order that it may become a centre in which the Jewish people as a whole may take, on grounds of religion and race, an interest and a pride. But in order that this community should have the best prospect of free development and provide a full opportunity for the Jewish people to display its capacities, it is essential that it should know that it is in Palestine as of right and not on sufferance. That is the reason why it is necessary that the existence of a Jewish National Home in Palestine should be internationally guaranteed, and that it should be formally recognized to rest upon ancient historic connection.

This, then, is the interpretation which His Majesty's Government place upon Declaration of 1917, and, so understood, the Secretary of State is of opinion that it does not contain or imply anything which need cause either alarm to the Arab population of Palestine or disappointment to the Jews.

For the fulfilment of this policy it is necessary that the Jewish community in Palestine should be able to increase its numbers by immigration. This immigration cannot be so great in volume as to exceed whatever may be the economic capacity of the country at the time to absorb new arrivals. It is essential to ensure that the immigrants should not be a burden upon the people of Palestine as a whole, and that they should not deprive any section of the present population of their employment. Hitherto the immigration has fulfilled these conditions. The number of immigrants since the British occupation has been about 25,000. . . .

REPORT OF PALESTINE ROYAL COMMISSION PEEL COMMISSION*

July 1937

The Commission under Lord Peel was appointed in 1936. The following are extracts from recommendations made in Ch. XXII:

Having reached the conclusion that there is no possibility of solving the Palestine problem under the existing Mandate (or even under a scheme of cantonization), the Commission recommend the termination of the present Mandate on the basis of Partition and put forward a definite scheme which they consider to be practicable, honourable and just. The scheme is as follows:

The Mandate for Palestine should terminate and be replaced by a Treaty System in accordance with the precedent set in Iraq and Syria.

Under Treaties to be negotiated by the Mandatory with the Government of Transjordan and representatives of the Arabs of Palestine on the one hand, and with the Zionist Organization on the other, it would be declared that two sovereign independent States would shortly be established—(1) an Arab State consisting of Transjordan united with that part of Palestine allotted to the Arabs, (2) a Jewish State consisting of that part of Palestine allotted to the Jews. The Mandatory would undertake to support any requests for admission to the League of Nations made by the Governments of the Arab and Jewish States. The Treaties would include strict guarantees for the

* Palestine, Correspondence with the Palestine Arab Delegation and the Zionist Organization (British White Paper, Cmd. 1700), pp. 17–21.

* *Palestine Royal Commission: Report*, 1937 (British Blue Book, Cmd. 5479).

protection of minorities. Military Conventions would be attached to the Treaties.

A new Mandate should be instituted to execute the trust of maintaining the sanctity of Jerusalem and Bethlehem and ensuring free and safe access to them for all the world. An enclave should be demarcated to which this Mandate should apply, extending from a point north of Jerusalem to a point south of Bethlehem, and access to the sea should be provided by a corridor extending from Jerusalem to Jaffa. The policy of the Balfour Declaration would not apply to the Mandated Area.

The Jewish State should pay a subvention to the Arab State. A Finance Commission should be appointed to advise as to its amount and as to the division of the public debt of Palestine and other financial questions.

In view of the backwardness of Transjordan, Parliament should be asked to make a grant of £2,000,000 to the Arab State.

WHITE PAPER†

May 1939

The main recommendations are extracted below:

10. . . . His Majesty's Government make the following declaration of their intentions regarding the future government of Palestine:

(i) The objective of His Majesty's Government is the establishment within ten years of an independent Palestine State in such treaty relations with the United Kingdom as will provide satisfactorily for the commercial and strategic requirements of both countries in the future. This proposal for the establishment of the independent State would involve consultation with the Council of the League of Nations with a view to the termination of the Mandate.

(ii) The independent State should be one in which Arabs and Jews share in government in such a way as to ensure that the essential interests of each community are safeguarded.

(iii) The establishment of the independent State will be preceded by a transitional period throughout which His Majesty's Government will retain responsibility for the government of the country. During the transitional period the people of Palestine will be given an increasing part in the government of their country. Both sections of the population will have an opportunity to participate in the machinery of government, and the process will be carried on whether or not they both avail themselves of it.

(iv) As soon as peace and order have been sufficiently restored in Palestine steps will be taken to carry out this policy of giving the people of Palestine an increasing part in the government of their country, the objective being to place Palestinians in charge of all the Departments of Government, with the assistance of British advisers and subject to the control of the High Commissioner. With this object in view His Majesty's Government will be prepared immediately to arrange that Palestinians shall be placed in charge of certain Departments, with British advisers. The Palestinian heads of Departments will sit on the Executive Council, which advises the High Commissioner. Arab and Jewish representatives will be invited to serve as heads of Departments approximately in proportion to their respective populations. The number of Palestinians in charge of Departments will be increased as circumstances permit until all heads of Departments are Palestinians, exercising the administrative and advisory functions which are at present performed by British officials. When that stage is reached consideration will be given to the question of converting the Executive Council into a Council of Ministers with a consequential change in the status and functions of the Palestinian heads of Departments.

(v) His Majesty's Government make no proposals at this stage regarding the establishment of an elective legislature. Nevertheless they would regard this as an appropriate constitutional development, and, should public opinion in Palestine hereafter show itself in favour of such a development, they will be prepared, provided that local conditions permit, to establish the necessary machinery.

† British White Paper, Cmd. 6019.

(vi) At the end of five years from the restoration of peace and order, an appropriate body representative of the people of Palestine and of His Majesty's Government will be set up to review the working of the constitutional arrangements during the transitional period and to consider and make recommendations regarding the Constitution of the independent Palestine State.

(vii) His Majesty's Government will require to be satisfied that in the treaty contemplated by sub-paragraph (i) or in the Constitution contemplated by sub-paragraph (vi) adequate provision has been made for:

(*a*) the security of, and freedom of access to, the Holy Places, and the protection of the interests and property of the various religious bodies;

(*b*) the protection of the different communities in Palestine in accordance with the obligations of His Majesty's Government to both Arabs and Jews and for the special position in Palestine of the Jewish National Home;

(*c*) such requirements to meet the strategic situation as may be regarded as necessary by His Majesty's Government in the light of the circumstances then existing.

His Majesty's Government will also require to be satisfied that the interests of certain foreign countries in Palestine, for the preservation of which they are presently responsible, are adequately safeguarded.

(viii) His Majesty's Government will do everything in their power to create conditions which will enable the independent Palestine State to come into being within ten years. If, at the end of ten years, it appears to His Majesty's Government that, contrary to their hope, circumstances require the postponement of the establishment of the independent State, they will consult with representatives of the people of Palestine, the Council of the League of Nations and the neighbouring Arab States before deciding on such a postponement. If His Majesty's Government come to the conclusion that postponement is unavoidable, they will invite the co-operation of these parties in framing plans for the future with a view to achieving the desired objective at the earliest possible date.

14. . . . they believe that they will be acting consistently with their Mandatory obligations to both Arabs and Jews, and in the manner best calculated to serve the interests of the whole people of Palestine by adopting the following proposals regarding immigration:

(i) Jewish immigration during the next five years will be at a rate which, if economic absorptive capacity permits, will bring the Jewish population up to approximately one-third of the total population of the country. Taking into account the expected natural increase of the Arab and Jewish populations, and the number of illegal Jewish immigrants now in the country, this would allow for the admission, as from the beginning of April this year, of some 75,000 immigrants over the next five years. These immigrants would, subject to the criterion of economic absorptive capacity, be admitted as follows:

(*a*) For each of the next five years a quota of 10,000 Jewish immigrants will be allowed, on the understanding that a shortage in any one year may be added to the quotas for subsequent years, within the five-year period, if economic absorptive capacity permits.

(*b*) In addition, as a contribution towards the solution of the Jewish refugee problem, 25,000 refugees will be admitted as soon as the High Commissioner is satisfied that adequate provision for their maintenance is ensured, special consideration being given to refugee children and dependants.

(ii) The existing machinery for ascertaining economic absorptive capacity will be retained, and the High Commissioner will have the ultimate responsibility for deciding the limits of economic capacity. Before each periodic decision is taken, Jewish and Arab representatives will be consulted.

(iii) After the period of five years no further Jewish immigration will be permitted unless the Arabs of Palestine are prepared to acquiesce in it.

(iv) His Majesty's Government are determined to check illegal immigration, and further preventive measures are

being adopted. The numbers of any Jewish illegal immigrants who, despite these measures, may succeed in coming into the country and cannot be deported will be deducted from the yearly quotas.

15. His Majesty's Government are satisfied that, when the immigration over five years which is now contemplated has taken place they will not be justified in facilitating, nor will they be under any obligation to facilitate, the further development of the Jewish National Home by immigration regardless of the wishes of the Arab population.

16. The Administration of Palestine is required, under Article 6 of the Mandate, 'while ensuring that the rights and position of other sections of the population are not prejudiced,' to encourage 'close settlement by Jews on the land,' and no restriction has been imposed hitherto on the transfer of land from Arabs to Jews. The Reports of several expert Commissions have indicated that, owing to the natural growth of the Arab population and the steady sale in recent years of Arab land to Jews, there is now in certain areas no room for further transfers of Arab land, whilst in some other areas such transfers of land must be restricted if Arab cultivators are to maintain their existing standard of life and a considerable landless Arab population is not soon to be created. In these circumstances, the High Commissioner will be given general powers to prohibit and regulate transfers of land. These powers will date from the publication of this statement of Policy and the High Commissioner will retain them throughout the transitional period.

17. The policy of the Government will be directed towards the development of the land and the improvement, where possible, of methods of cultivation. In the light of such development it will be open to the High Commissioner, should he be satisfied that the 'rights and position' of the Arab population will be duly preserved, to review and modify any orders passed relating to the prohibition or restriction of the transfer of land.

BILTMORE PROGRAMME*

11 May 1942

The following programme was approved by a Zionist Conference held in the Biltmore Hotel, New York City:

1. American Zionists assembled in this Extraordinary Conference reaffirm their unequivocal devotion to the cause of democratic freedom and international justice to which the people of the United States, allied with the other United Nations, have dedicated themselves, and give expression to their faith in the ultimate victory of humanity and justice over lawlessness and brute force.

2. This Conference offers a message of hope and encouragement to their fellow Jews in the Ghettos and concentration camps of Hitler-dominated Europe and prays that their hour of liberation may not be far distant.

3. The Conference sends its warmest greetings to the Jewish Agency Executive in Jerusalem, to the Va'ad Leumi, and to the whole Yishuv in Palestine, and expresses its profound admiration for their steadfastness and achievements in the face of peril and great difficulties. . . .

4. In our generation, and in particular in the course of the past twenty years, the Jewish people have awakened and transformed their ancient homeland; from 50,000 at the end of the last war their numbers have increased to more than 500,000. They have made the waste places to bear fruit and the desert to blossom. Their pioneering achievements in agriculture and in industry, embodying new patterns of co-operative endeavour, have written a notable page in the history of colonization.

5. In the new values thus created, their Arab neighbours in Palestine have shared. The Jewish people in its own work of national redemption welcomes the economic, agricultural and national development of the Arab peoples and states. The Conference reaffirms the stand previously adopted at Congresses of the World Zionist Organization, expressing the readiness and the desire of the Jewish people for full co-operation with their Arab neighbours.

6. The Conference calls for the fulfilment of the original purpose of the Balfour Declaration and the Mandate which *'recognizing the historical connexion of the Jewish people with Palestine'* was to afford them the opportunity, as stated by President Wilson, to found there a Jewish Commonwealth.

The Conference affirms its unalterable rejection of the White Paper of May 1939 and denies its moral or legal validity. The White Paper seeks to limit, and in fact to nullify Jewish rights to immigration and settlement in Palestine, and, as stated by Mr Winston Churchill in the House of Commons in May 1939, constitutes 'a breach and repudiation of the Balfour Declaration'. The policy of the White Paper is cruel and indefensible in its denial of sanctuary to Jews fleeing from Nazi persecution; and at a time when Palestine has become a focal point in the war front of the United Nations, and Palestine Jewry must provide all available manpower for farm and factory and camp, it is in direct conflict with the interests of the allied war effort.

7. In the struggle against the forces of aggression and tyranny, of which Jews were the earliest victims, and which now menace the Jewish National Home, recognition must be given to the right of the Jews of Palestine to play their full part in the war effort and in the defence of their country, through a Jewish military force fighting under its own flag and under the high command of the United Nations.

8. The Conference declares that the new world order that will follow victory cannot be established on foundations of peace, justice and equality, unless the problem of Jewish homelessness is finally solved.

The Conference urges that the gates of Palestine be opened; that the Jewish Agency be vested with control of immigration into Palestine and with the necessary authority for upbuilding the country, including the development of its unoccupied and uncultivated lands; and that Palestine be established as a Jewish Commonwealth integrated in the structure of the new democratic world.

Then and only then will the age old wrong to the Jewish people be righted.

UN GENERAL ASSEMBLY RESOLUTION ON THE FUTURE GOVERNMENT OF PALESTINE (PARTITION RESOLUTION)

29 November 1947

The General Assembly,

Having met in special session at the request of the mandatory Power to constitute and instruct a special committee to prepare for the consideration of the question of the future government of Palestine at the second regular session;

Having constituted a Special Committee and instructed it to investigate all questions and issues relevant to the problem of Palestine, and to prepare proposals for the solution of the problem, and

Having received and examined the report of the Special Committee (document A/364) including a number of unanimous recommendations and a plan of partition with economic union approved by the majority of the Special Committee,

Considers that the present situation in Palestine is one which is likely to impair the general welfare and friendly relations among nations;

Takes note of the declaration by the mandatory Power that it plans to complete its evacuation of Palestine by 1 August 1948;

Recommends to the United Kingdom, as the mandatory Power for Palestine, and to all other Members of the United Nations the adoption and implementation, with regard to the future government of Palestine, of the Plan of Partition with Economic Union set out below;

Requests that

(a) The Security Council take the necessary measures as provided for in the plan for its implementation;

(b) The Security Council consider, if circumstances during the transitional period require such consideration, whether the situation in Palestine constitutes a threat to the peace. If it decides that such a threat exists, and in order to maintain international peace and security, the Security Council should supplement the authorization of the General Assembly by taking measures, under Articles 39 and 41 of the Charter, to empower the United Nations Commission, as provided in this resolution,

* Text supplied by courtesy of Josef Fraenkel.

to exercise in Palestine the functions which are assigned to it by this resolution;

(*c*) The Security Council determine as a threat to the peace, breach of the peace or act of aggression, in accordance with Article 39 of the Charter, any attempt to alter by force the settlement envisaged by this resolution;

(*d*) The Trusteeship Council be informed of the responsibilities envisaged for it in this plan;

Calls upon the inhabitants of Palestine to take such steps as may be necessary on their part to put this plan into effect;

Appeals to all Governments and all peoples to refrain from taking any action which might hamper or delay the carrying out of these recommendations . . .

Official Records of the second session of the General Assembly, Resolutions, p. 131.

UN GENERAL ASSEMBLY RESOLUTION 194 (III)

11 December 1948

The resolution's terms have been reaffirmed every year since 1948.

11. . . . the refugees wishing to return to their homes and live at peace with their neighbours should be permitted to do so at the earliest practicable date, and that compensation should be paid for the property of those choosing not to return and for the loss of or damage to property which, under principles of international law or in equity, should be made good by the Governments or authorities responsible;

Official Records of the third session of the General Assembly, Part I, Resolutions, p. 21.

UN GENERAL ASSEMBLY RESOLUTION ON THE INTERNATIONALIZATION OF JERUSALEM

9 December 1949

The General Assembly,

Having regard to its resolution 181 (II) of 29 November 1947 and 194 (III) of 11 December 1948,

Having studied the reports of the United Nations Conciliation Commission for Palestine set up under the latter resolution,

I. Decides

In relation to Jerusalem,

Believing that the principles underlying its previous resolutions concerning this matter, and in particular its resolution of 29 November 1947, represent a just and equitable settlement of the question,

1. To restate, therefore, its intention that Jerusalem should be placed under a permanent international regime, which should envisage appropriate guarantees for the protection of the Holy Places, both within and outside Jerusalem, and to confirm specifically the following provisions of General Assembly resolution 181 (II): (1) The City of Jerusalem shall be established as a *corpus separatum* under a special international regime and shall be administered by the United Nations; (2) The Trusteeship Council shall be designated to discharge the responsibilities of the Administering Authority . . .; and (3) The City of Jerusalem shall include the present municipality of Jerusalem plus the surrounding villages and towns, the most eastern of which shall be Abu Dis; the most southern, Bethlehem; the most western, Ein Karim (including also the built-up area of Motsa); and the most northern, Shu'fat, as indicated on the attached sketchmap; . . . [*map not reproduced: Ed.*]

Official Records of the fourth session of the General Assembly, Resolutions, p. 25.

TEXT OF UN SECURITY COUNCIL RESOLUTION 242

22 November 1967

The Security Council,

Expressing its continued concern with the grave situation in the Middle East,

Emphasizing the inadmissibility of the acquisition of territory by war and the need to work for a just and lasting peace in which every state in the area can live in security,

Emphasizing further that all Member States in their acceptance of the Charter of the United Nations have undertaken a commitment to act in accordance with Article 2 of the Charter

1. *Affirms* that the fulfilment of Charter principles requires the establishment of a just and lasting peace in the Middle East which should include the application of both the following principles:

(i) Withdrawal of Israel armed forces from territories occupied in the recent conflict;

(ii) Termination of all claims or states of belligerency and respect for the acknowledgement of the sovereignty, territorial integrity and political independence of every State in the area and their right to live in peace within secure and recognized boundaries free from threats or acts of force.

2. *Affirms further* the necessity

(*a*) For guaranteeing freedom of navigation through international waterways in the area;

(*b*) For achieving a just settlement of the refugee problem;

(*c*) For guaranteeing the territorial inviolability and political independence of every State in the area, through measures including the establishment of demilitarized zones;

3. *Requests* the Secretary-General to designate a Special Representative to proceed to the Middle East to establish and maintain contacts with the States concerned in order to promote agreement and assist efforts to achieve a peaceful and accepted settlement in accordance with the provisions and principles in this resolution;

4. *Requests* the Secretary-General to report to the Security Council on the progress of the efforts of the Special Representative as soon as possible.

PALESTINIAN NATIONAL CHARTER (PLO COVENANT)

Resolutions of the Palestine National Council, July 1–17, 1968

In September 1993 Yasser Arafat declared those articles of the PLO Covenant which deny Israel's right to exist or are inconsistent with the PLO's commitments to Israel under the terms of subsequent accords to be invalid. Revision of those articles, presented here in italics, was to be undertaken as part of the ongoing peace process.

The following is the complete and unabridged text of the Palestinian National Covenant, as published officially in English by the PLO.

Article I:

Palestine is the homeland of the Arab Palestinian people; it is an indivisible part of the Arab homeland, and the Palestinian people are an integral part of the Arab nation.

Article II:

Palestine, with the boundaries it had during the British Mandate, is an indivisible territorial unit.

Article III:

The Palestinian Arab people possess the legal right to their homeland and have the right to determine their destiny after achieving the liberation of their country in accordance with their wishes and entirely of their own accord and will.

Article IV:

The Palestinian identity is a genuine, essential, and inherent characteristic; it is transmitted from parents to children. The Zionist occupation and the dispersal of the Palestinian Arab people, through the disasters which befell them, do not make them lose their Palestinian identity and their membership in the Palestinian community, nor do they negate them.

Article V:

The Palestinians are those Arab nationals who, until 1947, normally resided in Palestine regardless of whether they were evicted from it or have stayed there. Anyone born, after that date, of a Palestinian father—whether inside Palestine or outside it—is also a Palestinian.

Article VI:

The Jews who had normally resided in Palestine until the beginning of the Zionist invasion will be considered Palestinians.

Article VII:

That there is a Palestinian community and that it has material, spiritual, and historical connection with Palestine are indisputable facts. It is a national duty to bring up individual Palestinians in an Arab revolutionary manner. All means of information and education must be adopted in order to acquaint the Palestinian with his country in the most profound manner, both spiritual and material, that is possible. He must be prepared for the armed struggle and ready to sacrifice his wealth and his life in order to win back his homeland and bring about its liberation.

Article VIII:

The phase in their history, through which the Palestinian people are now living, is that of national (watani) struggle for the liberation of Palestine. Thus the conflicts among the Palestinian national forces are secondary, and should be ended for the sale of the basic conflict that exists between the forces of Zionism and of imperialism on the one hand, and the Palestinian Arab people on the other. On this basis the Palestinian masses, regardless of whether they are residing in the national homeland or in diaspora (mahajir) constitute—both their organizations and the individuals—one national front working for the retrieval of Palestine and its liberation through armed struggle.

Article IX:

Armed struggle is the only way to liberate Palestine. This is the overall strategy, not merely a tactical phase. The Palestinian Arab people assert their absolute determination and firm resolution to continue their armed struggle and to work for an armed popular revolution for the liberation of their country and their return to it. They also assert their right to normal life in Palestine and to exercise their right to self-determination and sovereignty over it.

Article X:

Commando action constitutes the nucleus of the Palestinian popular liberation war. This requires its escalation, comprehensiveness, and the mobilization of all the Palestinian popular and educational efforts and their organization and involvement in the armed Palestinian revolution. It also requires the achieving of unity for the national (watani) struggle among the different groupings of the Palestinian people, and between the Palestinian people and the Arab masses, so as to secure the continuation of the revolution, its escalation, and victory.

Article XI:

The Palestinians will have three mottoes: national (wataniyya) unity, national (qawmiyya) mobilization, and liberation.

Article XII:

The Palestinian people believe in Arab unity. In order to contribute their share toward the attainment of that objective, however, they must, at the present stage of their struggle, safeguard their Palestinian identity and develop their consciousness of that identity, and oppose any plan that may dissolve or impair it.

Article XIII:

Arab unity and the liberation of Palestine are two complementary objectives, the attainment of either of which facilitates the attainment of the other. Thus, Arab unity leads to the liberation of Palestine, the liberation of Palestine leads to Arab unity; and work towards the realization of one objective proceeds side by side with work towards the realization of the other.

Article XIV:

The destiny of the Arab nation, and indeed Arab existence itself, depend upon the destiny of the Palestine cause. From this interdependence springs the Arab nation's pursuit of, and striving for, the liberation of Palestine. The people of Palestine play the role of the vanguard in the realization of this sacred (qawmi) goal.

Article XV:

The liberation of Palestine, from an Arab viewpoint, is a national (qawmi) duty and it attempts to repel the Zionist and imperialist aggression against the Arab homeland, and aims at the elimination of Zionism in Palestine. Absolute responsibility for this falls upon the Arab nation—peoples and governments—with the Arab people of Palestine in the vanguard. Accordingly, the Arab nation must mobilize all its military, human, moral, and spiritual capabilities to participate actively with the Palestinian people in the liberation of Palestine. It must, particularly in the phase of the armed Palestinian revolution, offer and furnish the Palestinian people with all possible help, and material and human support, and make available to them the means and opportunities that will enable them to continue to carry out their leading role in the armed revolution, until they liberate their homeland.

Article XVI:

The liberation of Palestine, from a spiritual point of view, will provide the Holy Land with an atmosphere of safety and tranquility, which in turn will safeguard the country's religious sanctuaries and guarantee freedom of worship and of visit to all, without discrimination of race, color, language, or religion. Accordingly, the people of Palestine look to all spiritual forces in the world for support.

Article XVII:

The liberation of Palestine, from a human point of view, will restore to the Palestinian individual his dignity, pride, and freedom. Accordingly the Palestinian Arab people look forward to the support of all those who believe in the dignity of man and his freedom in the world.

Article XVIII:

The liberation of Palestine, from an international point of view, is a defensive action necessitated by the demands of self-defense. Accordingly the Palestinian people, desirous as they are of the friendship of all people, look to freedom-loving, and peace-loving states for support in order to restore their legitimate rights in Palestine, to re-establish peace and security in the country, and to enable its people to exercise national sovereignty and freedom.

Article XIX:

The partition of Palestine in 1947 and the establishment of the state of Israel are entirely illegal, regardless of the passage of time, because they were contrary to the will of the Palestinian people and to their natural right in their homeland, and inconsistent with the principles embodied in the Charter of the United Nations, particularly the right to self-determination.

Article XX:

The Balfour Declaration, the Mandate for Palestine, and everything that has been based upon them, are deemed null and void. Claims of historical or religious ties of Jews with Palestine are incompatible with the facts of history and the true conception of what constitutes statehood. Judaism, being a religion, is not an independent nationality. Nor do Jews constitute a single nation with an identity of its own; they are citizens of the states to which they belong.

Article XXI:

The Arab Palestinian people, expressing themselves by the armed Palestinian revolution, reject all solutions which are substitutes for the total liberation of Palestine and reject all proposals aiming at the liquidation of the Palestinian problem, or its internationalization.

Article XXII:

Zionism is a political movement organically associated with international imperialism and antagonistic to all action for liberation and to progressive movements in the world. It is racist and fanatic in its nature, aggressive, expansionist, and colonial in its aims, and fascist in its methods. Israel is the instrument of Zionist movement, and geographical base for world imperialism placed strategically in the midst of the Arab homeland to combat the hopes of the Arab nation for liberation, unity, and progress. Israel is a constant source of threat vis-à-vis peace in the Middle East and the whole world. Since the liberation of Palestine will destroy the Zionist and imperalist presence and will contribute to the establishment of peace in the Middle East, the Palestinian people look for the support of all the progressive and peaceful forces and urge them all, irrespective of their affiliations and beliefs, to offer the Palestinian people all aid and support in their just struggle for the liberation of their homeland.

Article XXIII:

The demand of security and peace, as well as the demand of right and justice, require all states to consider Zionism an

illegitimate movement, to outlaw its existence, and to ban its operations, in order that friendly relations among peoples may be preserved, and the loyalty of citizens to their respective homelands safeguarded.

Article XXIV:

The Palestinian people believe in the principles of justice, freedom, sovereignty, self-determination, human dignity, and in the right of all peoples to exercise them.

Article XXV:

For the realization of the goals of this Charter and its principles, the Palestine Liberation Organization will perform its role in the liberation of Palestine in accordance with the Constitution of this Organization.

Article XXVI:

The Palestine Liberation Organization, representative of the Palestinian revolutionary forces, is responsible for the Palestinian Arab people's movement in its struggle—to retrieve its homeland, liberate and return to it and exercise the right to self-determination in it—in all military, political, and financial fields and also for whatever may be required by the Palestine case on the inter-Arab and international levels.

Article XXVII:

The Palestine Liberation Organization shall co-operate with all Arab states, each according to its potentialities; and will adopt a neutral policy among them in the light of the requirements of the war of liberation; and on this basis it shall not interfere in the internal affairs of any Arab state.

Article XXVIII:

The Palestinian Arab people assert the genuineness and independence of their national (wataniyya) revolution and reject all forms of intervention, trusteeship, and subordination.

Article XXIV:

The Palestinian people possess the fundamental and genuine legal right to liberate and retrieve their homeland. The Palestinian people determine their attitude toward all states and forces on the basis of the stands they adopt vis-à-vis to the Palestinian revolution to fulfil the aims of the Palestinian people.

Article XXX:

Fighters and carriers of arms in the war of liberation are the nucleus of the popular army which will be the protective force for the gains of the Palestinian Arab people.

Article XXXI:

The Organization shall have a flag, an oath of allegiance, and an anthem. All this shall be decided upon in accordance with a special regulation.

Article XXXII:

Regulations, which shall be known as the Constitution of the Palestinian (sic) Liberation Organization, shall be annexed to this Charter. It will lay down the manner in which the Organization, and its organs and institutions, shall be constituted; the respective competence of each; and the requirements of its obligation under the Charter.

Article XXXIII:

This Charter shall not be amended save by [vote of] a majority of two-thirds of the total membership of the National Congress of the Palestine Liberation Organization [taken] at a special session convened for that purpose.

English rendition as published in Basic Political Documents of the Armed Palestinian Resistance Movement; Leila S. Kadi (Ed.), Palestine Research Centre, Beirut, December 1969, pp. 137–141.

UN SECURITY COUNCIL RESOLUTION ON JERUSALEM

25 September 1971

The resolution, No. 298 (1971), was passed nem. con., *with the abstention of Syria.*

The Security Council,

Recalling its resolutions 252 (1968) of 21 May 1968, and 267 (1969) of 3 July 1969, and the earlier General Assembly resolution 2253 (ES-V) and 2254 (ES-V) of 4 and 14 July 1967, concerning measures and actions by Israel designed to change the status of the Israeli-occupied section of Jerusalem,

Having considered the letter of the Permanent Representative of Jordan on this situation in Jerusalem and the reports of the Secretary-General, and having heard the statements of the parties concerned in the question,

Recalling the principle that acquisition of territory by military conquest is inadmissible,

Noting with concern the non-compliance by Israel with the above-mentioned resolutions,

Noting with concern also that since the adoption of the above-mentioned resolutions Israel has taken further measures designed to change the status and character of the occupied section of Jerusalem.

1. *Reaffirms* its resolutions 252 (1968) and 267 (1969);

2. *Deplores* the failure of Israel to respect the previous resolutions adopted by the United Nations concerning measures and actions by Israel purporting to affect the status of the City of Jerusalem;

3. *Confirms* in the clearest possible terms that all legislative and administrative actions taken by Israel to change the status of the City of Jerusalem, including expropriation of land and properties, transfer of populations and legislation aimed at the incorporation of the occupied section, are totally invalid and cannot change that status;

4. *Urgently calls upon* Israel to rescind all previous measures and actions and to take no further steps in the occupied section of Jerusalem which may purport to change the status of the City, or which would prejudice the rights of the inhabitants and the interests of the international community, or a just and lasting peace;

5. *Requests* the Secretary-General, in consultation with the President of the Security Council and using such instrumentalities as he may choose, including a representative or a mission, to report to the Council as appropriate and in any event within 60 days on the implementation of the present resolution.

Source: UN Document S/RES/298 (1971).

UN SECURITY COUNCIL RESOLUTION 338

22 October 1973

UN Resolutions between 1967 and October 1973 reaffirmed Security Council Resolution 242 (see above). *In an attempt to end the fourth Middle East war, which had broken out between the Arabs and Israel on 6 October 1973, the UN Security Council passed the following Resolution:*

The Security Council,

1. *Calls upon* all parties to the present fighting to cease all firing and terminate all military activity immediately, not later than 12 hours after the moment of the adoption of the decision, in the positions they now occupy;

2. *Calls upon* the parties concerned to start immediately after the ceasefire the implementation of Security Council Resolution 242 (1967) in all of its parts;

3. *Decides that,* immediately and concurrently with the ceasefire negotiations start between the parties concerned under appropriate auspices aimed at establishing a just and durable peace in the Middle East.

Source: UN Document PR/73/29 (1973).

UN SECURITY COUNCIL RESOLUTION 340

25 October 1973

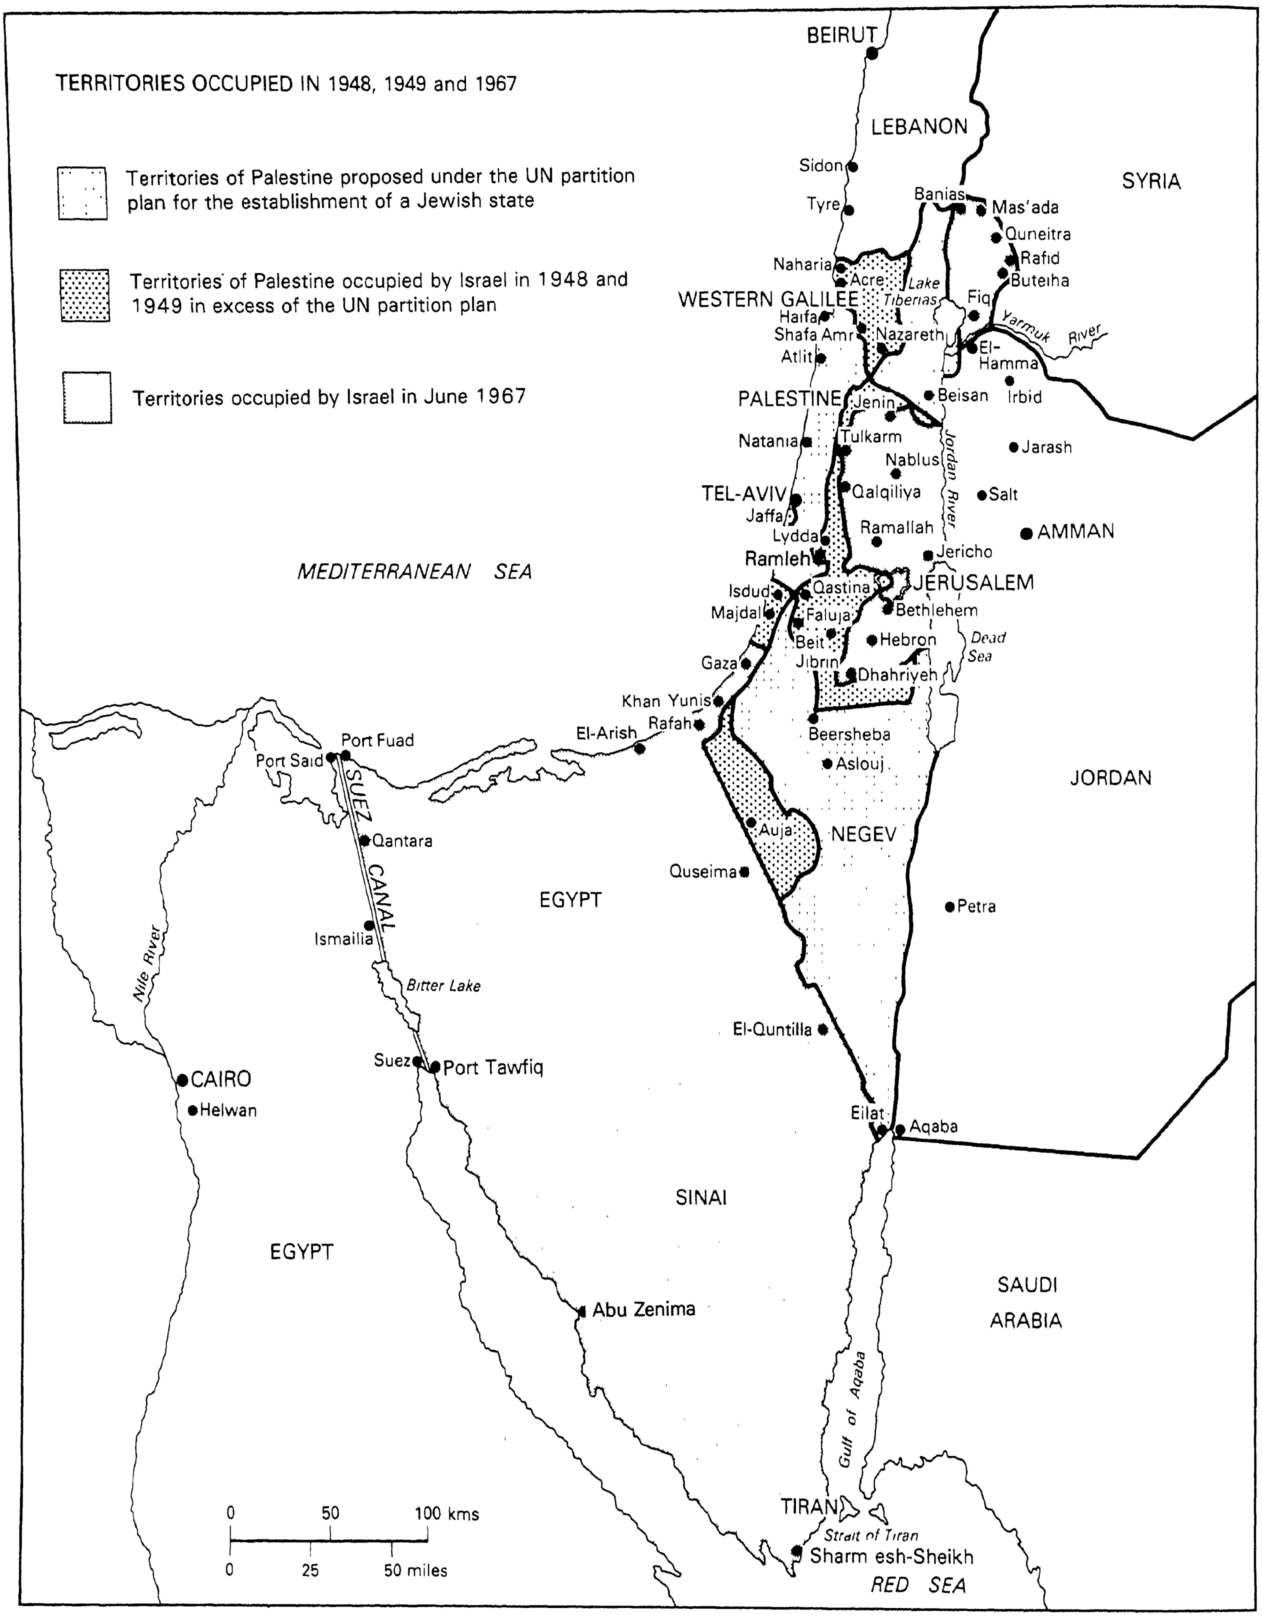
The Security Council,

Recalling its Resolutions 338 (1973) of 22 October 1973 and 339 (1973) of 23 October 1973,

Noting with regret the reported repeated violations of the ceasefire in non-compliance with Resolutions 338 (1973) and 339 (1973),

Noting with concern from the Secretary-General's report that the UN military observers have not yet been enabled to place themselves on both sides of the ceasefire line,

1. *Demands* that an immediate and complete ceasefire be observed and that the parties withdraw to the positions occupied by them at 16.50 hours GMT on 22 October 1973;



Territories occupied by Israel. See also map on page 110

2. *Requests* the Secretary-General as an immediate step to increase the number of UN military observers on both sides;

3. *Decides* to set up immediately under its authority a UN emergency force to be composed of personnel drawn from member states of the UN, except the permanent members of the Security Council, and requests the Secretary-General to report within 24 hours on the steps taken to this effect.

4. *Requests* the Secretary-General to report to the Council on an urgent and continuing basis on the state of implementation of this Resolution, as well as Resolutions 338 (1973) and 339 (1973);

5. *Requests* all member states to extend their full co-operation to the UN in the implementation of this Resolution, as well as Resolutions 338 (1973) and 339 (1973).

Source: UN Document PR/73/31 (1973).

DECLARATION OF EEC FOREIGN MINISTERS ON THE MIDDLE EAST SITUATION

6 November 1973

The Nine Governments of the European Community have exchanged views on the situation in the Middle East. While emphasizing that the views set out below are only a first contribution on their part to the search for a comprehensive solution to the problem, they have agreed on the following:

1. They strongly urge that the forces of both sides in the Middle East conflict should return immediately to the positions they occupied on 22 October in accordance with Resolutions 339 and 340 of the Security Council. They believe that a return to these positions will facilitate a solution to other pressing problems concerning prisoners of war and the Egyptian Third Army.

2. They have the firm hope that, following the adoption by the Security Council of Resolution 338 of 22 October, negotiations will at last begin for the restoration in the Middle East of a just and lasting peace through the application of Security Council Resolution 242 in all of its parts. They declare themselves ready to do all in their power to contribute to that peace. They believe that those negotiations must take place in the framework of the United Nations. They recall that the Charter has entrusted to the Security Council the principal responsibility for international peace and security. The Council and the Secretary-General have a special role to play in the making and keeping of peace through the application of Council Resolutions 242 and 338.

3. They consider that a peace agreement should be based particularly on the following points:

(i) the inadmissibility of the acquisition of territory by force;

(ii) the need for Israel to end the territorial occupation which it has maintained since the conflict of 1967;

(iii) respect for the sovereignty, territorial integrity and independence of every state in the area and their right to live in peace within secure and recognized boundaries;

(iv) recognition that in the establishment of a just and lasting peace account must be taken of the legitimate rights of the Palestinians.

Article 4 calls for the dispatch of peace-keeping forces to the demilitarized zones.

EGYPTIAN-ISRAELI AGREEMENT ON DISENGAGEMENT OF FORCES IN PURSUANCE OF THE GENEVA PEACE CONFERENCE

(signed by the Egyptian and Israeli Chiefs of Staff, 18 January 1974)

This agreement was superseded by the second Egyptian-Israeli Disengagement Agreement signed in September 1975 (see p. 111 below) and then by the Peace Treaty between Egypt and Israel signed on 26 March 1979 (see p. 112 below). A map showing the boundaries of the first agreement is reproduced in this edition (p. 110) and the terms can be found in the 1975–76 edition of The Middle East and North Africa.

DISENGAGEMENT AGREEMENT BETWEEN SYRIAN AND ISRAELI FORCES AND PROTOCOL TO AGREEMENT ON UNITED NATIONS DISENGAGEMENT OBSERVER FORCE (UNDOF)

(signed in Geneva, Friday 31 May 1974)

(Annex A)

A. Israel and Syria will scrupulously observe the cease-fire on land, sea and air and will refrain from all military actions against each other, from the time of signing this document in implementation of the United Nations Security Council Resolution 338 dated 22 October 1973.

B. The military forces of Israel and Syria will be separated in accordance with the following principles:

1. All Israeli military forces will be west of a line designated line A on the map attached hereto (reproduced below), except in Quneitra (Kuneitra) area, where they will be west of a line A-1.
2. All territory east of line A will be under Syrian administration and Syrian civilians will return to this territory.
3. The area between line A and the line designated as line B on the attached map will be an area of separation. In this area will be stationed UNDOF established in accordance with the accompanying Protocol.
4. All Syrian military forces will be east of a line designated as line B on the attached map.
5. There will be two equal areas of limitation in armament and forces, one west of line A and one east of line B as agreed upon.

C. In the area between line A and line A-1 on the attached map there shall be no military forces.

D. *Paragraph D deals with practical details of signing and implementation.*

E. Provisions of paragraphs A, B and C shall be inspected by personnel of the United Nations comprising UNDOF under the Agreement.

F. *Paragraphs F and G deal with repatriation of prisoners and return of bodies of dead soldiers.*

H. This Agreement is not a peace agreement. It is a step towards a just and durable peace on the basis of the Security Council Resolution 338 dated 22 October 1973.

A. Protocol to the Disengagement Agreement outlined the functions of the United Nations Disengagement Observer Force (UNDOF).

RESOLUTION OF CONFERENCE OF ARAB HEADS OF STATE

Rabat, 28 October 1974

The Conference of the Arab Heads of State:

1. *Affirms* the right of the Palestinian people to return to their homeland and to self-determination.

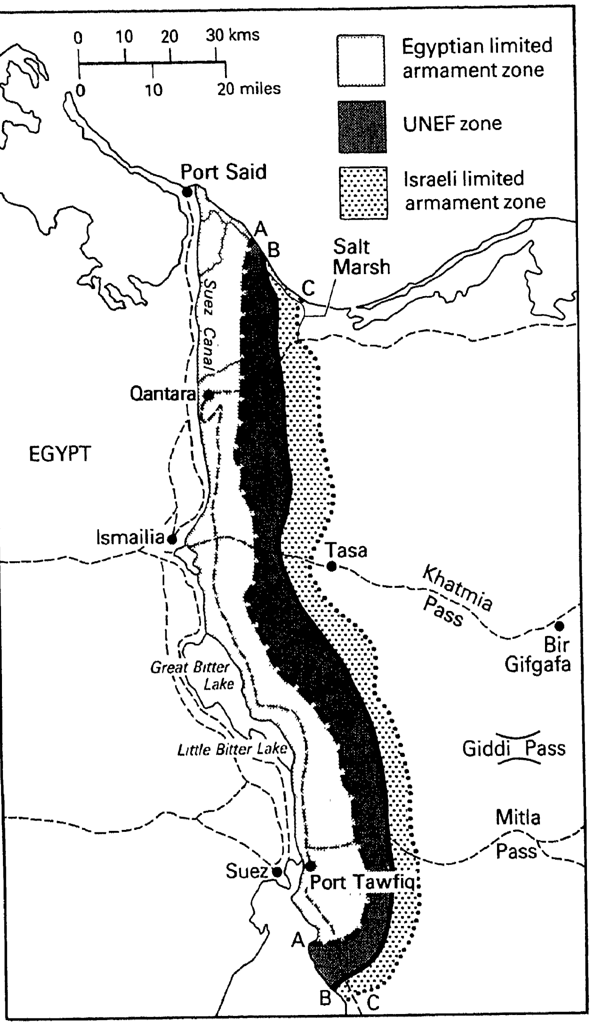
2. *Affirms* the right of the Palestinian people to establish an independent national authority, under the leadership of the PLO in its capacity as the sole legitimate representative of the Palestine people, over all liberated territory. The Arab States are pledged to uphold this authority, when it is established, in all spheres and at all levels.

3. *Supports* the PLO in the exercise of its national and international responsibilities, within the context of the principle of Arab solidarity.

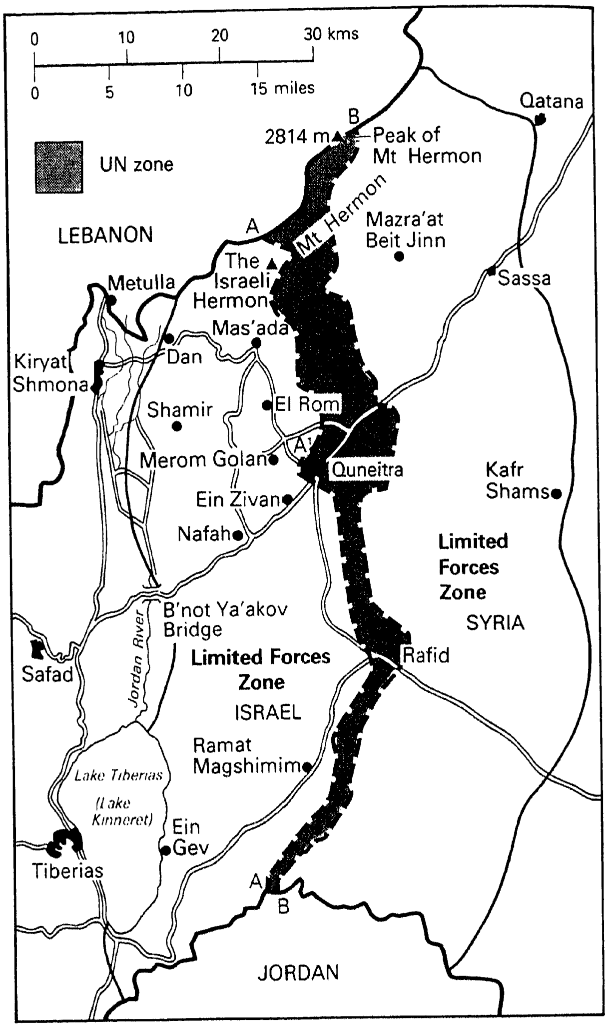
4. *Invites* the kingdom of Jordan, Syria and Egypt to formalize their relations in the light of these decisions and in order that they be implemented.

5. *Affirms* the obligation of all Arab States to preserve Palestinian unity and not to interfere in Palestinian internal affairs.

Sources: *Le Monde: Problèmes Politiques et Sociaux,* 7 March 1975; *Arab Report and Record.*



Disengagement Agreement of 18 January 1974 between Israel and Egypt.



Disengagement Agreement of 30 May 1974 between Israel and Syria.

UN GENERAL ASSEMBLY RESOLUTION 3236 (XXIX)

22 November 1974

The General Assembly,

Having considered the question of Palestine,

Having heard the statement of the Palestine Liberation Organization, the representative of the Palestinian people,

Having also heard other statements made during the debate,

Deeply concerned that no just solution to the problem of Palestine has yet been achieved and recognizing that the problem of Palestine continues to endanger international peace and security,

Recognizing that the Palestinian people is entitled to self-determination in accordance with the Charter of the United Nations,

Expressing its grave concern that the Palestinian people has been prevented from enjoying its inalienable rights, in particular its right to self-determination,

Guided by the purposes and principles of the Charter,

Recalling its relevant resolutions which affirm the right of the Palestinian people to self-determination,

1. *Reaffirms* the inalienable rights of Palestinian people in Palestine, including:

(*a*) The right to self-determination without external interference;

(*b*) The right to national independence and sovereignty;

2. *Reaffirms also* the inalienable right of the Palestinians to return to their homes and property from which they have been displaced and uprooted, and calls for their return;

3. *Emphasizes* that full respect for and the realization of these inalienable rights of the Palestinian people are indispensable for the solution of the question of Palestine;

4. *Recognizes* that the Palestinian people is a principal party in the establishment of a just and durable peace in the Middle East;

5. *Further Recognizes* the right of the Palestinian people to regain its rights by all means in accordance with the purposes and principles of the Charter of the United Nations;

6. *Appeals* to all States and international organizations to extend their support to the Palestinian people in its struggle to restore its rights, in accordance with the Charter;

7. *Requests* the Secretary-General to establish contacts with the Palestinian Liberation Organization on all matters concerning the question of Palestine;

8. *Requests* the Secretary-General to report to the General Assembly at its thirtieth session on the implementation of the present resolution;

9. *Decides* to include the item 'Question of Palestine' in the provisional agenda of its thirtieth session.

SECOND INTERIM PEACE AGREEMENT BETWEEN EGYPT AND ISRAEL

(signed 4 September 1975)

This agreement was superseded by the Peace Treaty between Egypt and Israel signed on 26 March 1979 (see p. 112 below). A map showing the boundaries of the Second Interim Peace Agreement is reproduced in the 1979–80 edition and the terms can be found in the 1978–79 edition of The Middle East and North Africa.

DEVELOPMENTS 1975–78

At the 30th Meeting of the UN General Assembly in November 1975, General Assembly Resolution 3236 (XXIX) was reaffirmed and a 20-nation Committee (the Committee on Palestine Rights) was set up to report on the 'Exercise of the Inalienable Right of the Palestine People' by 1 June 1976.

At the UN Security Council a draft resolution which would have affirmed the rights of the Palestinian people to self-determination, including the right to establish an independent state, was vetoed by the USA on 26 January 1976. A Security Council draft resolution criticizing Israeli policies in East Jerusalem and on the West Bank of the Jordan was also vetoed by the USA on 25 March 1976.

The Committee on Palestine Rights presented its report in June 1976 and recommended that Israel should withdraw from all occupied territories by June 1977. A resolution in the Security Council, stemming from the report, affirmed the 'inalienable rights of the Palestinians' and called for the creation of a 'Palestine entity' in the West Bank and Gaza. This resolution was vetoed by the USA on 29 June 1976. The Committee on Palestine Rights then submitted its report to the UN General Assembly in November 1976 in the form of a resolution. The resolution (No. 20, of 24 November 1976) was adopted by a vote of 90 to 16 (30 members abstained; 10 were absent). The USA and 10 other Western countries (including the UK) opposed the resolution.

Other General Assembly resolutions in December 1976 called for the reconvening of the Geneva Middle East peace conference by March 1977 and the participation in the negotiations of the PLO. Neither of these resolutions was implemented.

After a meeting in London of the nine EC heads of government at the end of June 1977, a statement was issued reaffirming earlier statements and stating that 'The Nine have affirmed their belief that a solution to the conflict in the Middle East will be possible only if the legitimate rights of the Palestinian people to give effective expression to its national identity is translated into fact, which would take into account the need for a homeland for the Palestinian people. . . . In the context of an overall settlement Israel must be ready to recognize the legitimate rights of the Palestinian people; equally, the Arab side must be ready to recognize the right of Israel to live in peace within secure and recognized boundaries'.

A UN General Assembly Resolution of 25 November 1977 (32/30) 'called anew' for the early convening of the Geneva Middle East peace conference.

A further UN General Assembly Resolution (33/29 of 7 December 1978) repeated the call for the convening of the Geneva Middle East peace conference. The main focus of attention, however, had now moved away from the UN. President Sadat of Egypt visited Jerusalem in November 1977, and after protracted negotiations, President Sadat and Menachem Begin first of all signed two agreements at Camp David in the USA under the auspices of the US President, Jimmy Carter, and subsequently signed a Peace Treaty in Washington on 26 March 1979. The Arab League Council, angry at Egypt's unilateral action, met in Baghdad on 27 March and passed a series of resolutions aimed at isolating Egypt from the Arab world.

CAMP DAVID: THE FRAMEWORK FOR PEACE IN THE MIDDLE EAST

Muhammad Anwar as-Sadat, President of the Arab Republic of Egypt, and Menachem Begin, Prime Minister of Israel, met with President Carter of the USA at Camp David from 5 September to 17 September 1978, and agreed on the following framework for peace in the Middle East. They invited other parties to the Arab-Israeli conflict to adhere to it.

Preamble:

The search for peace in the Middle East must be guided by the following:

The agreed basis for a peaceful settlement of the conflict between Israel and its neighbours is UN Security Council Resolution 242 in all its parts.

The historic initiative by President Sadat in visiting Jerusalem and the reception accorded to him by the Parliament, Government and people of Israel, and the reciprocal visit of Prime Minister Begin to Ismailia, the peace proposals made by both leaders, as well as the warm reception of these missions by the peoples of both countries, have created an unprecedented opportunity for peace which must not be lost if this generation and future generations are to be spared the tragedies of war.

The provisions of the Charter of the UN and the other accepted norms of international law and legitimacy now provide accepted standards for the conduct of relations between all states.

To achieve a relationship of peace, in the spirit of article 2 of the UN Charter, future negotiations between Israel and any neighbour prepared to negotiate peace and security with it, are necessary for the purpose of carrying out all the provisions and principles of Resolutions 242 and 338.

Peace requires respect for the sovereignty, territorial integrity and political independence of every state in the area and their right to live in peace within secure and recognized boundaries free from threats or acts of force. Progress toward that goal can accelerate movement towards a new era of reconciliation in the Middle East marked by co-operation in promoting economic development, in maintaining stability and in assuring security. . . .

Framework

Taking these factors into account, the parties are determined to reach a just, comprehensive and durable settlement of the Middle East conflict through the conclusion of peace treaties based on Security Council Resolutions 242 and 338 in all their parts. Their purpose is to achieve peace and good neighbourly relations. They recognize that, for peace to endure, it must involve all those who have been most deeply affected by the conflict. They therefore agree that this framework as appropriate is intended by them to constitute a basis for peace not only between Egypt and Israel but also between Israel and each of its other neighbours which is prepared to negotiate peace with Israel on this basis. With that objective in mind, they have agreed to proceed as follows:

A. West Bank and Gaza

1. Egypt, Israel, Jordan and the representatives of the Palestinian people should participate in negotiations on the resolution of the Palestinian problem in all its aspects to achieve that objective, negotiations relating to the West Bank and Gaza should proceed in three stages.

(A) Egypt and Israel agree that, in order to ensure a peaceful and orderly transfer of authority, and taking into account the security concerns of all the parties, there should be transitional arrangements for the West Bank and Gaza for a period not exceeding five years. In order to provide full autonomy to the inhabitants, under these arrangements the Israeli military government and its civilian administration will be withdrawn as soon as a self-governing authority has been freely elected by the inhabitants of these areas to replace the existing military government.

To negotiate the details of transitional arrangement, the Government of Jordan will be invited to join the negotiations on the basis of this framework. These new arrangements should give due consideration to both the principle of self-government by the inhabitants of these territories and to the legitimate security concerns of the parties involved.

(B) Egypt, Israel and Jordan will agree on the modalities for establishing the elected self-governing authority in the West Bank and Gaza. The delegations of Egypt and Jordan may include Palestinians from the West Bank and Gaza or other Palestinians as mutually agreed. The parties will negotiate an agreement which will define the powers and responsibilities of the self-governing authority to be exercised in the West Bank and Gaza. A withdrawal of Israeli armed forces will take place and there will be a redeployment of the remaining Israeli forces into specified security locations.

The negotiations shall be based on all the provisions and principles of UN Security Council Resolution 242. The negotiations will resolve, among other matters, the location of the boundaries and the nature of the security arrangements. The solution from the negotiations must also recognize the legitimate rights of the Palestinian people and their just requirements. In this way, the Palestinians will participate in the determination of their own future through:

(i) The negotiations among Egypt, Israel, Jordan and the representatives of the inhabitants of the West Bank and Gaza to agree on the final status of the West Bank and Gaza and other outstanding issues by the end of the transitional period.

(ii) Submitting their agreement to a vote by the elected representatives of the inhabitants of the West Bank and Gaza.

(iii) Providing for the elected representatives of the inhabitants of the West Bank and Gaza to decide how they shall govern themselves consistent with the provisions of their agreement.

(iv) Participating as stated above in the work of the committee negotiating the peace treaty between Israel and Jordan.

The agreement will also include arrangements for assuring internal and external security and public order. A strong local police force will be established, which may include Jordanian citizens. In addition, Israeli and Jordanian forces will participate in joint patrols and in the manning of control posts to assure the security of the borders.

(C) When the self-governing authority (administrative council) in the West Bank and Gaza is established and inaugurated, the transitional period of five years will begin. As soon as possible, but not later than the third year after the beginning of the transitional period, negotiations will take place to determine the final status of the West Bank and Gaza and its relationship with its neighbours, and to conclude a peace treaty between Israel and Jordan by the end of the transitional period. These negotiations will be conducted among Egypt, Israel, Jordan and the elected representatives of the inhabitants of the West Bank and Gaza.

Two separate but related committees will be convened; one committee, consisting of representatives of the four parties which will negotiate and agree on the final status of the West Bank and Gaza, and its relationship with its neighbours, and the second committee, consisting of representatives of Israel and representatives of Jordan to be joined by the elected representatives of the inhabitants of the West Bank and Gaza, to negotiate the peace treaty between Israel and Jordan, taking into account the agreement reached on the final status of the West Bank and Gaza.

2. All necessary measures will be taken and provisions made to assure the security of Israel and its neighbours during the transitional period and beyond. To assist in providing such security, a strong local police force will be constituted by the self-governing authority. It will be composed of inhabitants of the West Bank and Gaza. The police will maintain continuing liaison on internal security matters with the designated Israeli, Jordanian and Egyptian officers.

3. During the transitional period, the representatives of Egypt, Israel, Jordan and the self-governing authority will constitute a continuing committee to decide by agreement on the modalities of admission of persons displaced from the West Bank and Gaza in 1967, together with necessary measures to prevent disruption and disorder. Other matters of common concern may also be dealt with by this committee.

4. Egypt and Israel will work with each other and with other interested parties to establish agreed procedures for a prompt, just and permanent implementation of the resolution of the refugee problem.

B. Egypt-Israel

1. Egypt and Israel undertake not to resort to the threat or the use of force to settle disputes. Any disputes shall be settled by peaceful means in accordance with the provisions of article 33 of the Charter of the UN.

2. In order to achieve peace between them, the parties agree to negotiate in good faith with a goal of concluding within three months from the signing of this framework a peace treaty between them, while inviting the other parties to the conflict to proceed simultaneously to negotiate and conclude similar peace treaties with a view to achieving a comprehensive peace in the area. The framework for the conclusion of a peace treaty between Egypt and Israel will govern the peace negotiations between them. The parties will agree on the modalities and the timetable for the implementation of their obligations under the treaty.

Associated principles

1. Egypt and Israel state that the principles and provisions described below should apply to peace treaties between Israel and each of its neighbours—Egypt, Jordan, Syria and Lebanon.

2. Signatories shall establish among themselves relationships normal to states at peace with one another. To this end, they should undertake to abide by all the provisions of the Charter of the UN. Steps to be taken in this respect include:

(a) Full recognition.

(b) Abolishing economic boycotts.

(c) Guaranteeing that under their jurisdiction the citizens of the other parties shall enjoy the protection of the due process of law.

3. Signatories should explore possibilities for economic development in the context of final peace treaties, with the objective of contributing to the atmosphere of peace, co-operation, and friendship which is their common goal.

4. Claims commissions may be established for the mutual settlement of all financial claims.

5. The United States shall be invited to participate in the talks on matters related to the modalities of the implementation of the agreements and working out the time-table for the carrying out of the obligation of the parties.

6. The UN Security Council shall be requested to endorse the peace treaties and ensure that their provisions shall not be violated. The permanent members of the Security Council shall be requested to underwrite the peace treaties and ensure respect for their provisions. They shall also be requested to conform their policies and actions with the undertakings contained in this framework.

The second agreement signed at Camp David was a framework for the conclusion of a peace treaty between Egypt and Israel. The actual Treaty was signed on 26 March 1979, and is reproduced below.

THE PEACE TREATY BETWEEN EGYPT AND ISRAEL SIGNED IN WASHINGTON ON 26 MARCH 1979

The Government of the Arab Republic of Egypt and the Government of the State of Israel:

Preamble

Convinced of the urgent necessity of the establishment of a just, comprehensive and lasting peace in the Middle East in accordance with Security Council Resolutions 242 and 338:

Reaffirming their adherence to the 'Framework for Peace in the Middle East agreed at Camp David', dated 17 September 1978:

Noting that the aforementioned framework as appropriate is intended to constitute a basis for peace not only between Egypt and Israel but also between Israel and each of the other Arab neighbours which is prepared to negotiate peace with it on this basis:

Desiring to bring to an end the state of war between them and to establish a peace in which every state in the area can live in security:

Convinced that the conclusion of a treaty of peace between Egypt and Israel is an important step in the search for comprehensive peace in the area and for the attainment of the settlement of the Arab-Israeli conflict in all its aspects:

Inviting the other Arab parties to this dispute to join the peace process with Israel guided by and based on the principles of the aforementioned framework:

Desiring as well to develop friendly relations and co-operation between themselves in accordance with the UN Charter and the principles of international law governing international relations in times of peace:

Agree to the following provisions in the free exercise of their sovereignty, in order to implement the 'framework for the conclusion of a peace treaty between Egypt and Israel'.

Article I

1. The state of war between the parties will be terminated and peace will be established between them upon the exchange of instruments of ratification of this treaty.

2. Israel will withdraw all its armed forces and civilians from the Sinai behind the international boundary between Egypt and Mandated Palestine, as provided in the annexed protocol (annexed), and Egypt will resume the exercise of its full sovereignty over the Sinai.

3. Upon completion of the interim withdrawal provided for in Annex 1, the parties will establish normal and friendly relations, in accordance with Article II (3).

Article II

The permanent boundary between Egypt and Israel is the recognized international boundary between Egypt and the former Mandated Territory of Palestine, as shown on the map at Annex 2, without prejudice to the issue of the status of the Gaza Strip. The parties recognize this boundary as inviolable. Each will respect the territorial integrity of the other, including their territorial waters and airspace.

Article III

1. The parties will apply between them the provisions of the Charter of the UN and the principles of international law governing relations among states in times of peace.

In particular:

A. They recognize and will respect each other's sovereignty, territorial integrity and political independence.

B. They recognize and will respect each other's right to live in peace within their secure and recognized boundaries.

C. They will refrain from the threat of use of force, directly or indirectly, against each other and will settle all disputes between them by peaceful means.

2. Each party undertakes to ensure that acts or threats of belligerency, hostility, or violence do not originate from and are not committed from within its territory, or by any forces subject to its control or by any other forces stationed on its territory, against the population, citizens or property of the other party. Each party also undertakes to refrain from organizing, instigating, inciting, assisting or participating in acts or threats of belligerency, hostility, subversion or violence against the other party, anywhere, and undertakes to ensure that perpetrators of such acts are brought to justice.

3. The parties agree that the normal relationship established between them will include full recognition, diplomatic, economic and cultural relations, termination of economic boycotts and discriminatory barriers to the free movement of people and goods, and will guarantee the mutual enjoyment by citizens of the due process of law. The process by which they undertake to achieve such a relationship parallel to the implementation of other provisions of this treaty is set out in the annexed protocol (Annex 3).

Article IV

1. In order to provide maximum security for both parties on the basis of reciprocity, agreed security arrangements will be established including limited force zones in Egyptian and Israeli territory, and UN forces and observers, described in detail as to nature and timing in Annex 1, and other security arrangements the parties may agree upon.

2. The parties agree to the stationing of UN personnel in areas described in Annex 1, the parties agree not to request withdrawal of the UN personnel and that these personnel will not be removed unless such removal is approved by the Security Council of the UN, with the affirmative vote of the five members, unless the parties otherwise agree.

3. A joint commission will be established to facilitate the implementation of the treaty, as provided for in Annex 1.

4. The security arrangements provided for in paragraphs 1 and 2 of this article may at the request of either party be reviewed and amended by mutual agreement of the parties.

Article V

Article V deals with rights of passage of shipping through the Suez Canal, the Strait of Tiran and the Gulf of Aqaba.

Article VI

1. This treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of the parties under the Charter of the UN.

2. The parties undertake to fulfil in good faith their obligations under this treaty, without regard to action or inaction of any other party and independently of any instrument external to this treaty.

3. They further undertake to take all the necessary measures for the application in their relations of the provisions of the multilateral conventions to which they are parties. Including the submission of appropriate notification to the Secretary-General of the UN and other depositories of such conventions.

4. The parties undertake not to enter into any obligation in conflict with this treaty.

5. Subject to Article 103 of the UN Charter, in the event of a conflict between the obligations of the parties under the present treaty and any of their other obligations, the obligations under this treaty will be binding and implemented.

Article VII

1. Disputes arising out of the application or interpretation of this treaty shall be resolved by negotiations.

2. Any such disputes which cannot be settled by negotiations shall be resolved by conciliation or submitted to arbitration.

Article VIII

The parties agree to establish a claims commission for the mutual settlement of all financial claims.

Article IX

1. This treaty shall enter into force upon exchange of instruments of ratification.

2. This treaty supersedes the agreement between Egypt and Israel of September 1975.

3. All protocols, annexes, and maps attached to this treaty shall be regarded as an integral part hereof.

4. The treaty shall be communicated to the Secretary-General of the UN for registration in accordance with the provisions of Article 102 of the Charter of the UN.

Annex 1—military and withdrawal arrangements:

Israel will complete withdrawal of all its armed forces and civilians from Sinai within three years of the date of exchange of instruments of ratification of the treaty. The withdrawal will be accomplished in two phases, the first, within nine months, to a line east of Al Arish and Ras Muhammad; the second to behind the international boundary. During the three-year period, Egypt and Israel will maintain a specified military presence in four delineated security zones (see map), and the UN will continue its observation and supervisory functions. Egypt will exercise full sovereignty over evacuated territories in Sinai upon Israeli withdrawal. A joint commission will supervise the withdrawal, and security arrangements can be reviewed when either side asks but any change must be by mutual agreement.

Annex 2—maps.

Annex 3—normalization of relations:

Ambassadors will be exchanged upon completion of the interim withdrawal. All discriminatory barriers and economic boycotts will be lifted and, not later than six months after the completion of the interim withdrawal, negotiations for a trade and commerce agreement will begin. Free movement of each other's nationals and transport will be allowed and both sides agree to promote 'good neighbourly relations'. Egypt will use the airfields left by Israel near Al Arish, Rafah, Ras an-Naqb and Sharm ash-Shaikh, only for civilian aircraft. Road, rail, postal, telephone, wireless and other forms of communications will be opened between the two countries on completion of interim withdrawal.

Exchange of letters

Negotiations on the West Bank and Gaza—Negotiations on autonomy for the West Bank and Gaza will begin within one month of the exchange of the instruments of ratification. Jordan will be invited to participate and the Egyptian and Jordanian delegations may include Palestinians from the West Bank and Gaza, or other Palestinians as mutually agreed. If Jordan decides not to take part, the negotiations will be held by Egypt and Israel. The objective of the negotiations is the establishment of a self-governing authority in the West Bank and Gaza 'in order to provide full autonomy to the inhabitants'.

Egypt and Israel hope to complete negotiations within one year so that elections can be held as soon as possible. The self-governing authority elected will be inaugurated within one month of the elections at which point the five year transitional period will begin. The Israeli military Government and its civilian administration will be withdrawn, Israeli armed forces withdrawn and the remaining forces redeployed 'into specified security locations'.

MAIN POINTS OF THE RESOLUTIONS PASSED BY THE ARAB LEAGUE COUNCIL IN BAGHDAD ON 27 MARCH 1979

—To withdraw the ambassadors of the Arab states from Egypt immediately.

—To recommend the severance of political and diplomatic relations with the Egyptian Government. The Arab governments will adopt the necessary measures to apply this recommendation within a maximum period of one month from the date of the issue of this decision, in accordance with the constitutional measures in force in each country.

—To consider the suspension of the Egyptian Government's membership in the Arab League as operative from the date of the Egyptian Government's signing of the peace treaty with the Zionist enemy. This means depriving it of all rights resulting from that membership.

—To make the city of Tunis, capital of the Tunisian Republic, the temporary headquarters of the Arab League, its general secretariat, the competent ministerial councils and the permanent technical committees, as of the date of signing of the treaty between the Egyptian Government and the Zionist enemy. This shall be communicated to all international and regional organizations and bodies. They will also be informed that dealings with the Arab League will be conducted with its secretariat in its new temporary headquarters.

—To condemn the policy that the United States is practising regarding its role in concluding the Camp David agreements and the Egyptian-Israeli treaty.

The Arab League Council, at the level of Arab Foreign and Economy Ministers, has also decided the following:

—To halt all bank loans, deposits, guarantees or facilities, as well as all financial or technical contributions and aid by Arab Governments or their establishments to the Egyptian Government and its establishments as of the treaty-signing date.

—To ban the extension of economic aid by the Arab funds, banks and financial establishments within the framework of the Arab League and the joint Arab co-operation to the Egyptian Government and its establishments.

—The Arab governments and institutions shall refrain from purchasing the bonds, shares, postal orders and public credit loans that are issued by the Egyptian Government and its financial foundations.

—Following the suspension of the Egyptian Government's membership in the Arab League, its membership will also be suspended from the institutions, funds and organisations deriving from the Arab League.

—In view of the fact that the ill-omened Egyptian-Israeli treaty and its appendices have demonstrated Egypt's commitment to sell oil to Israel, the Arab states shall refrain from providing Egypt with oil and its derivatives.

—Trade exchanges with the Egyptian state and with private establishments that deal with the Zionist enemy shall be prohibited.

UN SECURITY COUNCIL RESOLUTION ON ISRAELI SETTLEMENTS

1 March 1980

The resolution, No. 465, was adopted unanimously by the 15 members of the Council. The USA repudiated its vote in favour of the resolution on 3 March 1980 (see below).

The Security Council, taking note of the reports of the Commission of the Security Council established under resolution 446 (1979) to examine the situation relating to the settlements in the Arab territories occupied since 1967, including Jerusalem, contained in documents S/13450 and S/13679,

—Taking note also of letters from the permanent representative of Jordan (S/13801) and the permanent representative of Morocco, Chairman of the Islamic Group (S/13802),

—Strongly deploring the refusal by Israel to co-operate with the Commission and regretting its formal rejection of resolutions 446 (1979) and 452 (1979),

—Affirming once more that the fourth Geneva Convention relative to the protection of civilian persons in time of war of 12 August 1949 is applicable to the Arab territories occupied by Israel since 1967, including Jerusalem,

—Deploring the decision of the Government of Israel to officially support Israeli settlement in the Palestinian and other Arab territories occupied since 1967,

—Deeply concerned over the practices of the Israeli authorities in implementing that settlement policy in the occupied Arab territories, including Jerusalem, and its consequences for the local Arab and Palestinian population,

—Taking into account the need to consider measures for the impartial protection of private and public land and property, and water resources,

—Bearing in mind the specific status of Jerusalem and, in particular, the need for protection and preservation of the unique spiritual and religious dimension of the holy places in the city,

—Drawing attention to the grave consequences which the settlement policy is bound to have on any attempt to reach a comprehensive, just and lasting peace in the Middle East,

—Recalling pertinent Security Council resolutions, specifically resolutions 237 (1967) of 14 June 1967, 252 (1968) of 21 May 1968, 267 (1969) of 3 July 1969, 271 (1969) of 15 September 1969 and 298 (1971) of 25 September 1971, as well as the consensus statement made by the President of the Security Council on 11 November 1976,

—Having invited Mr Fahd Qawasmah, Mayor of Al-Khalil (Hebron), in the occupied territories, to supply it with information pursuant to rule 39 of provisional rules of procedure,

1. Commends the work done by the Commission in preparing the report contained in document S/13679,

2. Accepts the conclusions and recommendations contained in the above-mentioned report of the Commission,

3. Calls upon all parties, particularly the Government of Israel, to co-operate with the Commission,

4. Strongly deplores the decision of Israel to prohibit the free travel of Mayor Fahd Qawasmah in order to appear before the

Security Council, and requests Israel to permit his free travel to the United Nations headquarters for that purpose,

5. Determines that all measures taken by Israel to change the physical character, demographic composition, institutional structure or status of the Palestinian and other Arab territories occupied since 1967, including Jerusalem, or any part thereof, have no legal validity and that Israel's policy and practices of settling parts of its population and new immigrants in those territories constitute a flagrant violation of the Fourth Geneva Convention relative to the protection of civilian persons in time of war and also constitute a serious obstruction to achieving a comprehensive, just and lasting peace in the Middle East,

6. Strongly deplores the continuation and persistence of Israel in pursuing those policies and practices and calls upon the Government and people of Israel to rescind those measures, to dismantle the existing settlements and in particular to cease, on an urgent basis, the establishment, construction and planning of settlements in the Arab territories occupied since 1967, including Jerusalem,

7. Calls upon all states not to provide Israel with any assistance to be used specifically in connection with settlements in the occupied territories,

8. Requests the Commission to continue to examine the situation relating to settlements in the Arab territories occupied since 1967 including Jerusalem, to investigate the reported serious depletion of natural resources, particularly the water resources, with a view of ensuring the protection of those important natural resources of the territories under occupation, and to keep under close scrutiny the implementation of the present resolution,

9. Requests the Commission to report to the Security Council before 1 September 1980, and decides to convene at the earliest possible date thereafter in order to consider the report and the full implementation of the present resolution.

PRESIDENT CARTER'S STATEMENT REPUDIATING US VOTE IN SUPPORT OF UN SECURITY COUNCIL RESOLUTION 465

3 March 1980

I want to make it clear that the vote of the US in the Security Council of the UN does not represent a change in our position regarding the Israeli settlements in the occupied areas nor regarding the status of Jerusalem.

While our opposition to the establishment of the Israeli settlements is long-standing and well-known, we made strenuous efforts to eliminate the language with reference to the dismantling of settlements in the resolution. This call for dismantling was neither proper nor practical. We believe that the future disposition of the existing settlements must be determined during the current autonomy negotiations.

As to Jerusalem, we strongly believe that Jerusalem should be undivided with free access to the holy places for all faiths, and that its status should be determined in the negotiations for a comprehensive peace settlement.

The US vote in the UN was approved with the understanding that all references to Jerusalem would be deleted. The failure to communicate this clearly resulted in a vote in favour of the resolution rather than abstention.

EEC STATEMENT ON THE MIDDLE EAST

Issued in Venice, 13 June 1980

1. The heads of state and government and the ministers of foreign affairs held a comprehensive exchange of views on all aspects of the present situation in the Middle East, including the state of negotiations resulting from the agreements signed between Egypt and Israel in March 1979. They agreed that growing tensions affecting this region constitute a serious danger and render a comprehensive solution to the Israeli-Arab conflict more necessary and pressing than ever.

2. The nine member-states of the European Community consider that the traditional ties and common interests which link Europe to the Middle East oblige them to play a special role and now require them to work in a more concrete way towards peace.

3. In this regard, the nine countries of the Community base themselves on Security Council resolutions 242 and 338 and the positions which they have expressed on several occasions, notably in their declarations of 29 June 1977, 19 September 1978, 26 March and 18 June 1979, as well as the speech made on their behalf on 25 September 1979, by the Irish Minister of Foreign Affairs at the thirty-fourth United Nations General Assembly.

4. On the bases thus set out, the time has come to promote the recognition and implementation of the two principles universally accepted by the international community: the right to existence and to security of all the states in the region, including Israel, and justice for all the peoples which implies the recognition of the legitimate rights of the Palestinian people.

5. All of the countries in the area are entitled to live in peace within secure, recognized and guaranteed borders. The necessary guarantees for a peace settlement should be provided by the United Nations by a decision of the Security Council and, if necessary, on the basis of other mutually agreed procedures. The Nine declared that they are prepared to participate within the framework of a comprehensive settlement in a system of concrete and binding international guarantees, including (guarantees) on the ground.

6. A just solution must finally be found to the Palestinian problem, which is not simply one of refugees. The Palestinian people, which is conscious of existing as such, must be placed in a position, by an appropriate process defined within the framework of the comprehensive peace settlement, to exercise fully its right to self-determination.

7. The achievement of these objectives requires the involvement and support of all the parties concerned in the peace settlement which the Nine are endeavouring to promote in keeping with the principles formulated in the declaration referred to above. These principles apply to all the parties concerned, and thus the Palestinian people, and to the PLO, which will have to be associated with the negotiations.

8. The Nine recognize the special importance of the role played by the question of Jerusalem for all the parties concerned. The Nine stress that they will not accept any unilateral initiative designed to change the status of Jerusalem and that any agreement on the city's status should guarantee freedom of access for everyone to the holy places.

9. The Nine stress the need for Israel to put an end to the territorial occupation which it has maintained since the conflict of 1967, as it has done for part of Sinai. They are deeply convinced that the Israeli settlements constitute a serious obstacle to the peace process in the Middle East. The Nine consider that these settlements, as well as modifications in population and property in the occupied Arab territories, are illegal under international law.

10. Concerned as they are to put an end to violence, the Nine consider that only the renunciation of force or the threatened use of force by all the parties can create a climate of confidence in the area, and constitute a basic element for a comprehensive settlement of the conflict in the Middle East.

11. The Nine have decided to make the necessary contacts with all the parties concerned. The objective of these contacts would be to ascertain the position of the various parties with respect to the principles set out in this declaration and in the light of the result of this consultation process to determine the form which such an initiative on their part could take.

Subsequent UN Resolutions (General Assembly Resolutions ES-7/2, 29 July 1980; Security Council Resolution 478, 20 August 1980; General Assembly Resolutions 35-169 and 35-207 of 15 and 16 December 1980, etc.) have reaffirmed earlier resolutions and condemned the Israeli 'Jerusalem Bill' of July 1980, which stated explicitly that Jerusalem should be for ever the undivided Israeli capital and seat of government, parliament and judiciary. A UN General Assembly Resolution of 6 February 1982, condemned Israel's annexation of the Golan Heights. UN Resolutions in June 1982 condemned the Israeli invasion of Lebanon, and called for the withdrawal of Israeli forces.

THE FAHD PLAN

In August 1981 Crown Prince Fahd of Saudi Arabia launched an 8-point peace plan for the Middle East. During the remainder of 1981 some Arab States showed their support, but failure to

agree on the 'Fahd Plan' caused the break-up of the Fez Arab Summit in November only a few hours after it had opened. The plan is as follows:

1. Israel to withdraw from all Arab territory occupied in 1967, including Arab Jerusalem.

2. Israeli settlements built on Arab land after 1967 to be dismantled.

3. A guarantee of freedom of worship for all religions in holy places.

4. An affirmation of the right of the Palestinian Arab people to return to their homes, and compensation for those who do not wish to return.

5. The West Bank and Gaza Strip to have a transitional period under the auspices of the United Nations for a period not exceeding several months.

6. An independent Palestinian state should be set up with Jerusalem as its capital.

7. All states in the region should be able to live in peace.

8. The UN or member-states of the UN to guarantee carrying-out of these principles.

THE REAGAN PLAN

After the Israeli invasion of Lebanon in June 1982, and the consequent evacuation of the PLO from Beirut, the US Government made strenuous efforts to continue the Camp David peace process and find a permanent solution that would ensure peace in the Middle East. On 1 September 1982 President Reagan outlined the following proposals in a broadcast to the nation from Burbank, California:

'. . . First, as outlined in the Camp David accords, there must be a period of time during which the Palestinian inhabitants of the West Bank and Gaza will have full autonomy over their own affairs. Due consideration must be given to the principle of self-government by the inhabitants of the territories and to the legitimate security concerns of the parties involved.

The purpose of the 5-year period of transition, which would begin after free elections for a self-governing Palestinian authority, is to prove to the Palestinians that they can run their own affairs and that such Palestinian autonomy poses no threat to Israel's security.

The United States will not support the use of any additional land for the purpose of settlements during the transition period. Indeed, the immediate adoption of a settlement freeze by Israel, more than any other action, could create the confidence needed for wider participation in these talks. Further settlement activity is in no way necessary for the security of Israel and only diminishes the confidence of the Arabs that a final outcome can be freely and fairly negotiated.

I want to make the American position well understood: The purpose of this transition period is the peaceful and orderly transfer of authority from Israel to the Palestinian inhabitants of the West Bank and Gaza. At the same time, such a transfer must not interfere with Israel's security requirements.

Beyond the transition period, as we look to the future of the West Bank and Gaza, it is clear to me that peace cannot be achieved by the formation of an independent Palestinian state in those territories. Nor is it achievable on the basis of Israeli sovereignty or permanent control over the West Bank and Gaza.

So the United States will not support the establishment of an independent Palestinian state in the West Bank and Gaza, and we will not support annexation or permanent control by Israel.

There is, however, another way to peace. The final status of these lands must, of course, be reached through the give-and-take of negotiations. But it is the firm view of the United States that self-government by the Palestinians of the West Bank and Gaza in association with Jordan offers the best chance for a durable, just and lasting peace.

We base our approach squarely on the principle that the Arab-Israeli conflict should be resolved through negotiations involving an exchange of territory for peace. This exchange is enshrined in UN Security Council Resolution 242, which is, in turn, incorporated in all its parts in the Camp David agreements. UN Resolution 242 remains wholly valid as the foundation stone of America's Middle East peace effort.

It is the United States' position that—in return for peace—the withdrawal provision of Resolution 242 applies to all fronts, including the West Bank and Gaza.

When the border is negotiated between Jordan and Israel, our view on the extent to which Israel should be asked to give up territory will be heavily affected by the extent of true peace and normalization and the security arrangements offered in return.

Finally, we remain convinced that Jerusalem must remain undivided, but its final status should be decided through negotiations.

In the course of the negotiations to come, the United States will support positions that seem to us fair and reasonable compromises and likely to promote a sound agreement. We will also put forward our own detailed proposals when we believe they can be helpful. And, make no mistake, the United States will oppose any proposal—from any party and at any point in the negotiating process—that threatens the security of Israel. America's commitment to the security of Israel is ironclad. And, I might add, so is mine.'

FEZ SUMMIT PEACE PROPOSAL

A further Fez Arab Summit was held in September 1982, and produced a set of peace proposals. The following excerpts are from the official English-language text of the final declaration on 9 September 1982, and are reproduced from American Arab Affairs, No 2:

I. The Israeli-Arab conflict:

The summit adopted the following principles:

1. The withdrawal of Israel from all Arab territories occupied in 1967 including Arab Al Qods (East Jerusalem).

2. The dismantling of settlements established by Israel on the Arab territories after 1967.

3. The guarantee of freedom of worship and practice of religious rites for all religions in the holy shrine.

4. The reaffirmation of the Palestinian people's right to self-determination and the exercise of its imprescriptible and inalienable national rights under the leadership of the Palestine Liberation Organization (PLO), its sole and legitimate representative, and the indemnification of all those who do not desire to return.

5. Placing the West Bank and Gaza Strip under the control of the United Nations for a transitory period not exceeding a few months.

6. The establishment of an independent Palestinian state with Al Qods as its capital.

7. The Security Council guarantees peace among all states of the region including the independent Palestinian state.

8. The Security Council guarantees the respect of these principles.

II. The Israeli aggression against Lebanon:

The summit was informed of the Lebanese Government's decision to put an end to the mission of the Arab deterrent forces in Lebanon. To this effect, the Lebanese and Syrian governments will start negotiations on measures to be taken in the light of the Israeli withdrawal from Lebanon.

JOINT JORDAN–PLO PEACE PROPOSALS

After a series of negotiations which began in January 1984, establishing a platform for joint action, King Hussein of Jordan and Yasser Arafat, Chairman of the PLO, announced their proposals for a Middle East peace settlement in Amman, on 23 February 1985. The failure of these proposals to further the peace process was acknowledged by King Hussein on 19 February 1986, when he abandoned Jordan's political collaboration with the PLO. The PLO did not formally abrogate the Amman agreement until the 18th session of the PNC in Algiers in April 1987. The following is the entire text of the joint agreement in an English-language version distributed by the Jordanian Government.

A PLAN OF JOINT ACTION

Proceeding from the spirit of the Fez summit resolutions approved by the Arab states and from UN resolutions on the

Palestinian question, in accordance with international legitimacy, and proceeding from a common understanding on the building of a special relationship between the Jordanian and Palestinian peoples, the Government of the Hashemite Kingdom of Jordan and the Palestine Liberation Organization have agreed to work together with a view to a just and peaceful settlement of the Middle East crisis and to the termination of the occupation by Israel of the occupied Arab territories, including Jerusalem, on the basis of the following principles:

1. The return of all territories occupied in 1967 in exchange for a comprehensive peace, as stipulated in the resolutions of the United Nations and its Security Council.

2. The right of the Palestinian people to self-determination: in this respect the Palestinians will exercise their inalienable right to self-determination within the context of the formation of the proposed confederated states of Jordan and Palestine.

3. The solution of the Palestinian refugee problem in accordance with United Nations resolutions.

4. The solution of all aspects of the Palestinian question.

5. On this basis, negotiations should be undertaken under the auspices of an international conference to be attended by the five permanent members of the United Nations Security Council and all parties to the conflict, including the Palestine Liberation Organization, which is the sole legitimate representative of the Palestinian people, in the form of a joint delegation (a joint Jordanian–Palestinian delegation).

THE SHULTZ PLAN

At the beginning of February 1988 the Government of the USA announced a new plan for the resolution of the Palestine issue, which came to be known as the 'Shultz Plan', after the US Secretary of State, George Shultz. The presentation of the plan followed more than a year of diplomatic activity during which the idea of an international peace conference under the auspices of the UN, which had been agreed in principle by Shimon Peres, the Israeli Minister of Foreign Affairs, and King Hussein of Jordan, had won increasing support. The main provisions of the plan, as they were subsequently clarified, were for a six-month period of negotiations between Israel and a joint Jordanian/Palestinian delegation, to determine the details of a transitional autonomy arrangement for the West Bank and the Gaza Strip, which would last for three years; during the transitional period a permanent settlement would be negotiated by the Israeli and Jordanian/Palestinian delegations; both sets of negotiations would run concurrently with and, if necessary, with reference to, an international peace conference, involving the five permanent members of the UN Security Council and all the interested parties (including the Palestinians in a joint Jordanian/Palestinian delegation), which, like the separate Israeli-Jordanian/Palestinian negotiations, would be conducted on the basis of all the participants' acceptance of UN Security Council resolutions 242 and 338, but would have no power to impose a settlement.

On 6 March 1988, the Israeli newspaper, Yedioth Aharonoth, *published a photocopy of a letter from George Shultz to the Israeli Prime Minister, Itzhak Shamir, containing details of his peace proposals. The contents of the letter, identical versions of which were believed to have been delivered to the governments of Egypt, Jordan and Syria, were as follows:*

Dear Mr. Prime Minister,

I set forth below the statement of understandings which I am convinced is necessary to achieve the prompt opening of negotiations on a comprehensive peace. This statement of understandings emerges from discussions held with you and other regional leaders. I look forward to the letter of reply of the government of Israel in confirmation of this statement.

The agreed objective is a comprehensive peace providing for the security of all the States in the region and for the legitimate rights of the Palestinian people.

Negotiations will start on an early date certain between Israel and each of its neighbors which is willing to do so. Those negotiations could begin by May 1, 1988. Each of these negotiations will be based on United Nations Security Council Resolutions 242 and 338, in all their parts. The parties to each bilateral negotiation will determine the procedure and agenda of their negotiation. All participants in the negotiations must state their willingness to negotiate with one another.

As concerns negotiations between the Israeli delegation and Jordanian-Palestinian delegation, negotiations will begin on arrangements for a transitional period, with the objective of completing them within six months. Seven months after transitional negotiations begin, final status negotiations will begin, with the objective of completing them within one year. These negotiations will be based on all the provisions and principles of the United Nations Security Council Resolution 242. Final status talks will start before the transitional period begins. The transitional period will begin three months after the conclusion of the transitional agreement and will last for three years. The United States will participate in both negotiations and will promote their rapid conclusion. In particular, the United States will submit a draft agreement for the parties' consideration at the outset of the negotiations on transitional arrangements.

Two weeks before the opening of negotiations, an international conference will be held. The Secretary-General of the United Nations will be asked to issue invitations to the parties involved in the Arab-Israeli conflict and the five permanent members of the United Nations Security Council. All participants in the conference must accept United Nations Security Council Resolutions 242 and 338, and renounce violence and terrorism. The parties to each bilateral negotiations may refer reports on the status of their negotiations to the conference, in a manner to be agreed. The conference will not be able to impose solutions or veto agreements reached.

Palestinian representation will be within the Jordanian-Palestinian delegation. The Palestinian issue will be addressed in the negotiations between the Jordanian-Palestinian and Israeli delegations. Negotiations between the Israeli delegation and the Jordanian-Palestinian delegation will proceed independently of any other negotiations.

This statement of understandings is an integral whole. The United States understands that your acceptance is dependent on the implementation of each element in good faith.

Sincerely yours,
George P. Shultz.

DECLARATION OF PALESTINIAN INDEPENDENCE

In November 1988, the 19th session of the Palestine National Council (PNC) culminated in the declaration 'in the name of God and the Palestinian Arab people' of the independent State of Palestine, with the Holy City of Jerusalem as its capital. The opportunity for the PLO to assert sovereignty over a specific area arose through the decision of King Hussein of Jordan, in July 1988, to sever Jordan's 'administrative and legal links' with the West Bank. The Declaration of Independence cited United Nations General Assembly Resolution 181 of 1947, which partitioned Palestine into two states, one Arab and one Jewish, as providing the legal basis for the right of the Palestinian Arab people to national sovereignty and independence. At the end of the session, the PNC issued a political statement. Details of the Declaration of Independence, and of the political statement, set out below, are taken from an unofficial English-language translation of the proceedings, distributed by the PLO.

'The National Council proclaims, in the name of God and the Palestinian Arab people, the establishment of the State of Palestine on our Palestinian land, with the Holy City of Jerusalem as its capital.

The State of Palestine is the state of Palestinians wherever they may be. In it they shall develop their national and cultural identity and enjoy full equality in rights. Their religious and political beliefs and their human dignity shall be safeguarded under a democratic parliamentary system of government built on the freedom of opinion; and on the freedom to form parties; and on the protection of the rights of the minority by the majority and respect of the decisions of the majority by the minority; and on social justice and equal rights, free of ethnic, religious, racial or sexual discrimination; and on a constitution that guarantees the rule of law and the independence of the judiciary; and on the basis of total allegiance to the centuries-old spiritual and civilizational Palestinian heritage of religious tolerance and coexistence.

The State of Palestine is an Arab state, an integral part of the Arab nation and of that nation's heritage, its civilization and its aspiration to attain its goals of liberation, development, democracy and unity. Affirming its commitment to the Charter

of the League of Arab states and its insistence on the reinforcement of joint Arab action, the State of Palestine calls on the people of its nation to assist in the completion of its birth by mobilizing their resources and augmenting their efforts to end the Israeli occupation.

The State of Palestine declares its commitment to the principles and objectives of the United Nations, and to the Universal Declaration of Human Rights, and to the principles and policy of non-alignment.

The State of Palestine, declaring itself a peace-loving state committed to the principles of peaceful coexistence, shall strive with all states and peoples to attain a permanent peace built on justice and respect of rights, in which humanity's constructive talents can prosper, and creative competition can flourish, and fear of tomorrow can be abolished, for tomorrow brings nothing but security for the just and those who regain their sense of justice.

As it struggles to establish peace in the land of love and peace, the State of Palestine exhorts the United Nations to take upon itself a special responsibility for the Palestinian Arab people and their homeland; and exhorts the peace-loving, freedom-cherishing peoples and states of the world to help it attain its objectives and put an end to the tragedy its people are suffering by providing them with security and endeavouring to end the Israeli occupation of the Palestinian territories.

The State of Palestine declares its belief in the settlement of international and regional disputes by peaceful means in accordance with the Charter and resolutions of the United Nations; and its rejection of threats of force or violence or terrorism and the use of these against its territorial integrity and political independence or the territorial integrity of any other state, without prejudice to its natural right to defend its territory and independence.

The Palestine National Council resolves:

First: On the escalation and continuity of the *intifada*

A. To provide all the means and capabilities needed to escalate our people's *intifada* in various ways and on various levels to guarantee its continuation and intensification.

B. To support the popular institutions and organizations in the occupied Palestinian territories.

C. To bolster and develop the Popular Committees and other specialized popular and trade union bodies, including the attack group and the popular army, with a view to expanding their role and increasing their effectiveness.

D. To consolidate the national unity that emerged and developed during the *intifada*.

E. To intensify efforts on the international level for the release of the detainees, the repatriation of the deportees, and the termination of the organized, official acts of repression and terrorism against our children, our women, our men, and our institutions.

F. To call on the United Nations to place the occupied Palestinian land under international supervision for the protection of our people and the termination of the Israeli occupation.

G. To call on the Palestinian people outside our homeland to intensify and increase their support, and to expand the family-assistance program.

H. To call on the Arab nation, its people, forces, institutions and governments, to increase their political, material and informational support of the *intifada*.

I. To call on all free and honorable people worldwide to stand by our people, our revolution, our *intifada* against the Israeli occupation, the repression, and the organized, fascist official terrorism to which the occupation forces and the armed fanatic settlers are subjecting our people, our universities, our institutions, our national economy, and our Islamic and Christian holy places.

Second: In the political field

Proceeding from the above, the Palestine National Council, being responsible to the Palestinian people, their national rights and their desire for peace as expressed in the Declaration of Independence issued on November 15, 1988; and in response to the humanitarian quest for international entente, nuclear disarmament and the settlement of regional conflicts by peaceful means, affirms the determination of the Palestine Liberation Organization to arrive at a political settlement of the Arab-Israeli conflict and its core, the Palestinian issue, in the framework of the UN Charter, the principles and rules of international legitimacy, the edicts of international law, the resolutions of the United Nations, the latest of which are Security Council Resolutions 605, 607 and 608, and the resolutions of the Arab summits, in a manner that assures the Palestinian Arab people's right to repatriation, self-determination and the establishment of their independent state on their national soil, and that institutes arrangements for the security and peace of all states in the region.

Towards the achievement of this, the Palestine National Council affirms:

1. The necessity of convening an international conference on the issue of the Middle East and its core, the Palestinian issue, under the auspices of the United Nations and with the participation of the permanent members of the Security Council and all parties to the conflict in the region, including, on an equal footing, the Palestine Liberation Organization, the sole legitimate representative of the Palestinian people; on the understanding that the international conference will be held on the basis of Security Council Resolutions 242 and 338 and the safeguarding of the legitimate national rights of the Palestinian people, foremost among which is the right to self-determination, in accordance with the principles and provisions of the UN Charter as they pertain to the right of peoples to self-determination, and the inadmissibility of the acquisition of others' territory by force or military conquest, and in accordance with the UN resolutions relating to the Palestinian issue.

2. The withdrawal of Israel from all the Palestinian and Arab territories it occupied in 1967, including Arab Jerusalem.

3. The annulment of all expropriation and annexation measures and the removal of the settlements established by Israel in the Palestinian and Arab territories since 1967.

4. Endeavouring to place the occupied Palestinian territories, including Arab Jerusalem, under the supervision of the United Nations for a limited period, to protect our people, to create an atmosphere conducive to the success of the proceedings of the international conference toward the attainment of a comprehensive political settlement and the achievement of peace and security for all on the basis of mutual consent, and to enable the Palestinian state to exercise its effective authority in these territories.

5. The settlement of the issue of the Palestinian refugees in accordance with the pertinent United Nations resolutions.

6. Guaranteeing the freedom of worship and the right to engage in religious rites for all faiths in the holy place in Palestine.

7. The Security Council shall draw up and guarantee arrangements for the security of all states concerned and for peace between them, including the Palestinian state.

The Palestine National Council confirms its past resolutions that the relationship between the fraternal Jordanian and Palestinian peoples is a privileged one and that the future relationship between the states of Jordan and Palestine will be built on confederal foundations, on the basis of the two fraternal peoples' free and voluntary choice, in consolidation of the historic ties that bind them and the vital interests they hold in common.

The National Council also renews its commitment to the United Nations resolutions that affirm the right of peoples to resist foreign occupation, imperialism and racial discrimination, and their right to fight for their independence; and it once more announces its rejection of terrorism in all its forms, including state terrorism, emphasizing its commitment to the resolutions it adopted in the past on this subject, and to the resolutions of the Arab summit in Algiers in 1988, and to UN Resolutions 42/159 of 1967 and 61/40 of 1985, and to what was stated in this regard in the Cairo Declaration of 7/11/85.

Third: In the Arab and international fields

The Palestine National Council emphasizes the importance of the unity of Lebanon in its territory, its people and its institutions, and stands firmly against the attempts to partition the

land and disintegrate the fraternal people of Lebanon. It further emphasizes the importance of the joint Arab effort to participate in a settlement of the Lebanese crisis that helps crystallize and implement solutions that preserve Lebanese unity. The Council also stresses the importance of consecrating the right of the Palestinians in Lebanon to engage in political and informational activity and to enjoy security and protection; and of working against all the forms of conspiracy and aggression that target them and their right to work and live; and of the need to secure the conditions that assure them the ability to defend themselves and provide them with security and protection.

The Palestine National Council affirms its solidarity with the Lebanese nationalist Islamic forces in their struggle against the Israeli occupation and its agents in the Lebanese South; expresses its pride in the allied struggle of the Lebanese and Palestinian peoples against the aggression and toward the termination of the Israeli occupation of parts of the South; and underscores the importance of bolstering this kinship between our people and the fraternal, combative people of Lebanon.

And on this occasion, the Council addresses a reverent salute to the long-suffering people of our camps in Lebanon and its South, who are enduring the aggression, massacres, murder, starvation, air raids, bombardments and sieges perpetrated against the Palestinian camps and Lebanese villages by the Israeli army, air force and navy, aided and abetted by hireling forces in the region; and it rejects the resettlement conspiracy, for the Palestinians' homeland is Palestine.

The Council emphasizes the importance of the Iraq–Iran cease-fire resolution toward the establishment of a permanent peace settlement between the two countries and in the Gulf Region; and calls for an intensification of the efforts being exerted to ensure the success of the negotiations toward the establishment of peace on stable and firm foundations; affirming, on this occasion, the price of the Palestinian Arab people and the Arab nation as a whole in the steadfastness and triumphs of fraternal Iraq as it defended the eastern gate of the Arab nation.

The National Council also expresses its deep pride in the stand taken by the peoples of our Arab nation in support of our Palestinian Arab people and of the Palestine Liberation Organization and of our people's *intifada* in the occupied homeland; and emphasizes the importance of fortifying the bonds of combat among the forces, parties and organizations of the Arab national liberation movement, in defense of the right of the Arab nation and its peoples to liberation, progress, democracy and unity. The Council calls for the adoption of all measures needed to reinforce the unity of struggle among all members of the Arab national liberation movement.

The Palestine National Council, as it hails the Arab states and thanks them for their support of our people's struggle, calls on them to honour the commitments they approved at the summit conference in Algiers in support of the Palestinian people and their blessed *intifada*. The Council, in issuing this appeal, expresses its great confidence that the leaders of the Arab nation will remain, as we have known them, a bulwark of support for Palestine and its people.

The Palestine National Council reiterates the desire of the Palestine Liberation Organization for Arab solidarity as the framework within which the Arab nation and its states can organize themselves to confront Israel's aggression and American support of that aggression, and within which Arab prestige can be enhanced and the Arab role strengthened to the point of influencing international policies to the benefit of Arab rights and causes.

The Palestine National Council expresses its deep gratitude to all the states and international forces and organizations that support the national rights of the Palestinians; affirms its desire to strengthen the bonds of friendship and co-operation with the Soviet Union, the People's (Republic of) China, the other socialist countries, the non-aligned states, the Islamic states, the African states, the Latin American states and the other friendly states; and notes with satisfaction the signs of positive evolution in the positions of some West European states and Japan in the direction of support for the rights of the Palestinian people, applauds this development, and urges intensified efforts to increase it.

The National Council affirms the fraternal solidarity of the Palestinian people and the Palestine Liberation Organization with the struggle of the peoples of Asia, Africa and Latin America for their liberation and the reinforcement of their independence; and condemns all American attempts to threaten the independence of the states of Central America and interfere in their affairs.

The Palestine National Council expresses the support of the Palestine Liberation Organization for the national liberation movements in South Africa and Namibia . . . .

The Council notes with considerable concern the growth of the Israeli forces of fascism and extremism and the escalation of their open calls for the implementation of the policy of annihilation and individual and collective expulsion of our people from their homeland, and calls for intensified efforts in all areas to confront this fascist peril. The Council at the same time expresses its appreciation of the role and courage of the Israeli peace forces as they resist and expose the forces of fascism, racism and aggression, support our people's struggle and their valiant *intifada* and back our people's right to self-determination and the establishment of an independent state. The Council confirms its past resolutions regarding the reinforcement and development of relations with these democratic forces.

The Palestine National Council also addresses itself to the American people, calling on them all to strive to put an end to the American policy that denies the Palestinian people's national rights, including their sacred right to self-determination, and urging them to work toward the adoption of policies that conform to the Declaration of Human Rights and the international conventions and resolutions and serve the quest for peace in the Middle East and security for all its peoples, including the Palestinian people.

The Council charges the Executive Committee with the task of completing the formation of the Committee for the Perpetuation of the Memory of the Martyr-Symbol Abu Jihad, which shall initiate its work immediately upon the adjournment of the Council.

The Council sends its greetings to the United Nations Committee on the Exercise of the Inalienable Rights of the Palestinian People, and to the fraternal and friendly international and non-governmental institutions and organizations, and to the journalists and media that have stood and still stand by our people's struggle and *intifada*.

The National Council expresses deep pain at the continued detention of hundreds of combatants from among our people in a number of Arab countries, strongly condemns their continued detention, and calls upon those countries to put an end to these abnormal conditions and release those fighters to play their role in the struggle.

In conclusion, the Palestine National Council affirms its complete confidence that the justice of the Palestinian cause and of the demands for which the Palestinian people are struggling will continue to draw increasing support from honorable and free people around the world; and also affirms its complete confidence in victory on the road to Jerusalem, the capital of our independent Palestinian state.'

THE ISRAELI PEACE INITIATIVE

In May 1989 the Government of Israel approved a four-point peace initiative for a resolution of the Middle East conflict, the details of which had first been announced during a meeting between US President George Bush and Israeli Prime Minister, Itzhak Shamir, in Washington on 6 April. Based largely on peace proposals made by Israeli Defence Minister, Itzhak Rabin, in January 1989, the new plan followed increased international diplomatic pressure on Israel to respond to the uprising in the Occupied Territories with constructive action to end the conflict. The main proposals of the Israeli initiative were that elections should be held in the West Bank and Gaza Strip in order to facilitate the formation of a delegation of appropriate interlocutors (i.e. non-PLO representatives) to take part in negotiations on a transitional settlement, when a self-ruling authority might be established. The transitional period would serve as a test of co-operation and coexistence and would be followed by negotiations on a final agreement in which Israel would be prepared to discuss any option presented; that Israel, Egypt and the USA

should reconfirm their commitment to the Camp David Agreements of 1979; that the USA and Egypt should seek to persuade Arab countries to desist from hostility towards Israel; and that an international effort should be made to solve the 'humanitarian issue' of the inhabitants of refugee camps in Judaea, Samaria and the Gaza Strip. In July 1989 four amendments to the Israeli peace initiative were approved by the central committee of the Likud. These stipulated that residents of East Jerusalem would not be allowed to take part in the proposed elections in the West Bank and Gaza; that violent attacks by Palestinians must cease before elections could be held in the Occupied Territories; that Jewish settlement should continue in the Territories and that foreign sovereignty should not be conceded in any part of Israel; and that the establishment of a Palestinian state west of the River Jordan was out of the question, as were negotiations with the PLO. At the end of July, however, the Israeli Cabinet once again endorsed the peace initiative in its original form.

In September 1989 President Mubarak of Egypt sought ten assurances from the Israeli Government with regard to its peace initiative: (i) a commitment to accept the results of the elections proposed by the peace initiative; (ii) the vigilance of international observers at the elections; (iii) the granting of immunity to all elected representatives; (iv) the withdrawal of the Israel Defence Force from the balloting area; (v) a commitment by the Israeli Government to begin talks on the final status of the Occupied Territories on a specific date within three to five years; (vi) an end to Jewish settlement activities in the Occupied Territories; (vii) a ban on election propaganda; (viii) a ban on the entry of Israelis into the Occupied Territories on the day of the proposed elections; (ix) permission for residents of East Jerusalem to participate in the elections; (x) a commitment by the Israeli Government to the principle of exchanging land for peace. Mubarak also offered to host talks between Palestinian and Israeli delegations prior to the holding of the elections, but a proposal by the Labour component of the Israeli Government to accept his invitation was rejected by Israel's 'inner' Cabinet in October 1989. In the same month the US Secretary of State, James Baker, put forward a series of unofficial proposals which aimed to give new impetus to the Israeli peace initiative and the subsequent clarification proposed by President Mubarak. On the basis of its understanding that a dialogue between Israeli and Palestinian delegations would take place, the USA, through the 'Baker plan', sought assurances that Egypt could not and would not substitute itself for the Palestinians in any future negotiations, and that both Israel and the Palestinians would take part in any future dialogue on the basis of the 'Shamir plan'.

THE 1991 MIDDLE EAST PEACE CONFERENCE

On 30 October 1991 the first, symbolic session of a Middle East peace conference, sponsored by the USA and the USSR and attended by Israeli, Syrian, Egyptian, Lebanese and Palestinian / Jordanian delegations, commenced in Madrid, Spain. The text of the invitation sent to the participants by the US and Soviet Presidents is reproduced from Al-Hayat, London

After extensive consultations with Arab states, Israel and the Palestinians, the US and the Soviet Union believe that an historic opportunity exists to advance the prospects for genuine peace throughout the region. The US and the Soviet Union are prepared to assist the parties to achieve a just, lasting and comprehensive peace settlement, through direct negotiations along two tracks, between Israel and the Palestinians, based on UN Security Council resolutions 242 and 338. The objective of this process is real peace.

Towards that end, the president of the US and the president of the USSR invite you to a peace conference, which their countries will co-sponsor, followed immediately by direct negotiations. The conference will be convened in Madrid on 30 October 1991.

President Bush and President Gorbachev request your acceptance of this invitation no later than 6.00pm Washington time, 23 October 1991, in order to ensure proper organisation and preparation of the conference.

Direct bilateral negotiations will begin four days after the opening of the conference. Those parties who wish to attend multilateral negotiations will convene two weeks after the opening of the conference to organise those negotiations. The co-sponsors believe that those negotiations should focus on regionwide issues such as arms control and regional security, water, refugee issues, environment, economic development, and other subjects of mutual interest.

The co-sponsors will chair the conference which will be held at ministerial level. Governments to be invited include Israel, Syria, Lebanon and Jordan. Palestinians will be invited and attend as part of a joint Jordanian-Palestinian delegation. Egypt will be invited to the conference as a participant. The EC will be a participant in the conference alongside the US and Soviet Union and will be represented by its presidency. The GCC will be invited to send its secretary-general to the conference as an observer, and GCC member states will be invited to participate in organising the negotiations on multilateral issues. The UN will be invited to send an observer, representing the secretary-general.

DECLARATION OF PRINCIPLES ON PALESTINIAN SELF-RULE

13 September 1993

The Government of the State of Israel and the Palestinian team (in the Jordanian-Palestinian delegation to the Middle East Peace Conference) (the 'Palestinian Delegation') representing the Palestinian people, agree that it is time to put an end to decades of confrontation and conflict, recognize their mutual legitimate and political rights, and strive to live in peaceful coexistence and mutual dignity and security and achieve a just, lasting and comprehensive peace settlement and historic reconciliation through the agreed political process.

Accordingly, the two sides agree to the following principles:

Article I

Aim of the negotiations

The aim of the Israeli-Palestinian negotiations within the current Middle East peace process is, among other things, to establish a Palestinian Interim Self-Government Authority, the elected Council, (the 'Council') for the Palestinian people in the West Bank and the Gaza Strip, for a transitional period not exceeding five years, leading to a permanent settlement based on Security Council Resolutions 242 and 338.

It is understood that the interim arrangements are an integral part of the overall peace process and that final status negotiations will lead to the implementation of Security Council Resolutions 242 and 338.

Article II

Framework for the interim period

The agreed framework for the interim period is set forth in the Declaration of Principles.

Article III

Elections

1. In order that the Palestinian people in the West Bank and Gaza Strip may govern themselves according to democratic principles, direct, free and general political elections will be held for the Council under agreed supervision and international observation, while the Palestinian police will ensure public order.

2. An agreement will be concluded on the exact mode and conditions of the elections in accordance with the protocol attached as Annex I, with the goal of holding the elections not later than nine months after the entry into force of this Declaration of Principles.

3. These elections will constitute a significant interim preparatory step toward the realization of the legitimate rights of the Palestinian people and their just requirements.

Article IV

Jurisdiction of the Council will cover West Bank and Gaza Strip territory, except for issues that will be negotiated in the permanent status negotiations. The two sides view the West Bank and the Gaza Strip as a single territorial unit, whose integrity will be preserved during the interim period.

Article V

Transitional period and permanent status negotiations

1. The five-year transitional period will begin upon the withdrawal from the Gaza Strip and Jericho area.

2. Permanent status negotiations will commence as soon as possible, but not later than the beginning of the third year of the interim period, between the Government of Israel and the Palestinian people representatives.

3. It is understood that these negotiations shall cover remaining issues, including Jerusalem, refugees, settlements, security arrangements, borders, relations and co-operation with other neighbours, and other issues of common interest.

4. The two parties agree that the outcome of the permanent status negotiations should not be prejudiced or pre-empted by agreements reached for the interim period.

Article VI

Preparatory transfer of powers and responsibilities

1. Upon the entry into force of this Declaration of Principles and the withdrawal from the Gaza Strip and Jericho area, a transfer of authority from the Israeli military government and its Civil Administration to the authorized Palestinians for this task, as detailed herein, will commence. This transfer of authority will be of preparatory nature until the inauguration of the Council.

2. Immediately after the entry into force of this Declaration of Principles and the withdrawal from the Gaza Strip and Jericho area, with the view to promoting economic development in the West Bank and Gaza Strip, authority will be transferred to the Palestinians in the following spheres: education and culture, health, social welfare, direct taxation, and tourism. The Palestinian side will commence in building the Palestinian police force, as agreed upon. Pending the inauguration of the Council, the two parties may negotiate the transfer of additional powers and responsibilities as agreed upon.

Article VII

Interim agreement

1. The Israeli and Palestinian delegations will negotiate an agreement on the interim period (the 'Interim Agreement').

2. The Interim Agreement shall specify, among other things, the structure of the Council, the number of its members, and the transfer of powers and responsibilities from the Israeli military government and its Civil Administration to the Council. The Interim Agreement shall also specify the Council's executive authority, legislative authority in accordance with Article IX below, and the independent Palestinian judicial organs.

3. The Interim Agreement shall include arrangements, to be implemented upon the inauguration of the Council, for the assumption by the Council of all of the powers and responsibilities transferred previously in accordance with Article VI above.

4. In order to enable the Council to promote economic growth, upon its inauguration, the Council will establish, among other things, a Palestinian Electricity Authority, a Gaza Sea Port Authority, a Palestinian Development Bank, a Palestinian Export Promotion Board, a Palestinian Environmental Authority, a Palestinian Land Authority and a Palestinian Water Administration Authority, and any other authorities agreed upon, in accordance with the Interim Agreement that will specify their powers and responsibilities.

5. After the inauguration of the Council, the Civil Administration will be dissolved, and the Israeli military government will be withdrawn.

Article VIII

Public order and security

In order to guarantee public order and internal security for the Palestinians of the West Bank and the Gaza Strip, the Council will establish a strong police force, while Israel will continue to carry the responsibility for defending against external threats, as well as the responsibility for overall security of the Israelis to protect their internal security and public order.

Article IX

Laws and military orders

1. The Council will be empowered to legislate, in accordance with the Interim Agreement, within all authorities transferred to it.

2. Both parties will review jointly laws and military orders presently in force in remaining spheres.

Article X

Joint Israeli-Palestinian liaison committee

In order to provide for a smooth implementation of this Declaration of Principles and any subsequent agreements pertaining to the interim period, upon the entry into force of this Declaration of Principles, a Joint Israeli-Palestinian Liaison Committee will be established in order to deal with issues requiring co-ordination, other issues of common interest, and disputes.

Article XI

Israeli-Palestinian co-operation in economic fields

Recognizing the mutual benefit of co-operation in promoting the development of the West Bank, the Gaza Strip and Israel, upon the entry into force of this Declaration of Principles, an Israeli-Palestinian Economic Co-operation Committee will be established in order to develop and implement in a co-operative manner the programmes identified in the protocols attached as Annex III and Annex IV.

Article XII

Liaison and co-operation with Jordan and Egypt

The two parties will invite the Governments of Jordan and Egypt to participate in establishing further liaison and co-operation arrangements between the Government of Israel and the Palestinian representatives, on one hand, and the Governments of Jordan and Egypt, on the other hand, to promote co-operation between them. These arrangements will include the constitution of a Continuing Committee that will decide by agreement on the modalities of the admission of persons displaced from the West Bank and Gaza Strip in 1967, together with necessary measures to prevent disruption and disorder. Other matters of common concern will be dealt with by this Committee.

Article XIII

Redeployment of Israeli forces

1. After the entry into force of this Declaration of Principles, and not later than the eve of elections for the Council, a redeployment of Israeli military forces in the West Bank and the Gaza Strip will take place, in addition to withdrawal of Israeli forces carried out in accordance with Article XIV.

2. In redeploying its military forces, Israel will be guided by the principle that its military forces should be redeployed outside the populated areas.

3. Further redeployments to specified locations will be gradually implemented commensurate with the assumption of responsibility for public order and internal security by the Palestinian police force pursuant to Article VIII above.

Article XIV

Israeli withdrawal from the Gaza Strip and Jericho area

Israel will withdraw from the Gaza Strip and Jericho area, as detailed in the protocol attached as Annex II.

Article XV

Resolution of disputes

1. Disputes arising out of the application or interpretation of this Declaration of Principles, or any subsequent agreements pertaining to the interim period, shall be resolved by negotiations through the Joint Liaison Committee to be established pursuant to Article X above.

2. Disputes which cannot be settled by negotiations may be resolved by a mechanism of conciliation to be agreed upon by the parties.

3. The parties may agree to submit to arbitration disputes relating to the interim period, which cannot be settled through conciliation. To this end, upon the agreement of both parties, the parties will establish an Arbitration Committee.

Article XVI

Israel-Palestinian co-operation concerning regional programs

Both parties view the multilateral working groups as an appropriate instrument for promoting a 'Marshall Plan,' the regional programs and other programs, including special programs for the West Bank and Gaza Strip, as indicated in the protocol atttached as Annex IV.

Article XVII

Miscellaneous provisions

1. This Declaration of Principles will enter into force one month after its signing.

2. All protocols annexed to this Declaration of Principles and Agreed Minutes pertaining thereto shall be regarded as an integral part hereof.

Annex 1—protocol on the mode and conditions of elections

1. Palestinians of Jerusalem who live there will have the right to participate in the election process, according to an agreement between the two sides.

2. In addition, the election agreement should cover, among other things, the following issues:

a. the system of elections,

b. the mode of the agreed supervision and international observation and their personal composition, and

c. rules and regulations regarding election campaign, including agreed arrangements for the organizing of mass media, and the possibility of licensing a broadcasting and TV station.

3. The future status of displaced Palestinians who were registered on 4th June 1967 will not be prejudiced because they are unable to participate in the election process due to practical reasons.

Annex 2—protocol on withdrawal of Israeli forces from the Gaza Strip and Jericho Area

1. The two sides will conclude and sign within two months from the date of entry into force of this Declaration of Principles, an agreement on the withdrawal of Israeli military forces from the Gaza Strip and Jericho area. This agreement will include comprehensive arrangements to apply in the Gaza Strip and the Jericho area subsequent to the Israeli withdrawal.

2. Israel will implement an accelerated and scheduled withdrawal of Israeli military forces from the Gaza Strip and Jericho area, beginning immediately with the signing of the agreement on the Gaza Strip and Jericho area and to be completed within a period not exceeding four months after the signing of this agreement.

3. The above agreement will include, among other things:

a. Arrangements for a smooth and peaceful transfer of authority from the Israeli military government and its Civil Administration to the Palestinian representatives.

b. structure, powers and responsibilities of the Palestinian authority in these areas, except, external security, settlements, Israelis, foreign relations, and other subjects mutually agreed upon.

c. Arrangements for assumption of internal security and public order by the Palestinian police force consisting of police officers recruited locally and from abroad (holding Jordanian passports and Palestinian documents issued by Egypt). Those who will participate in the Palestinian police force coming from abroad should be trained as police and police officers.

d. A temporary international or foreign presence, as agreed upon.

e. Establishment of a joint Palestinian-Israeli co-ordination and co-operation committee for mutual security purposes.

f. An economic development and stablization program, including the establishment of an Emergency Fund, to encourage foreign investment, and financial and economic support. Both sides will co-ordinate and co-operate jointly and unilaterally with regional and international parties to support these aims.

g. Arrangements for a safe passage for persons and transportation between the Gaza Strip and Jericho area.

4. The above agreement will include arrangements for co-ordination between both parties regarding passages:

a. Gaza – Egypt; and

b. Jericho – Jordan.

5. The offices responsible for carrying out the powers and responsibilities of the Palestinian authority under this Annex II and Article VI of the Declaration of Principles will be located in the Gaza Strip and in the Jericho area pending the inauguration of the Council.

6. Other than these agreed arrangements, the status of the Gaza Strip and Jericho area will continue to be an integral part of the West Bank and Gaza Strip, and will not be changed in the interim period.

PROTOCOL ON ISRAELI-PALESTINIAN CO-OPERATION IN ECONOMIC AND DEVELOPMENT PROGRAMS

The two sides agree to establish an Israeli-Palestinian Continuing Committee for Economic Co-operation, focusing, among other things, on the following:

1. Co-operation in the field of water, including a Water Development Program prepared by experts from both sides, which will also specify the mode of co-operation in the management of water resources in the West Bank and Gaza Strip, and will include proposals for studies and plans on water rights of each party, as well as on the equitable utilization of joint water resources for implementation in and beyond the interim period.

2. Co-operation in the field of electricity, including an Electricity Development Program, which will also specify the mode of co-operation for the production, maintenance, purchase and sale of electricity resources.

3. Co-operation in the field of energy, including an Energy Development Program, which will provide for the exploitation of oil and gas for industrial purposes, particularly in the Gaza Strip and in the Negev, and will encourage further joint exploitation of other energy resources. This Program may also provide for the construction of a Petrochemical industrial complex in the Gaza Strip and the construction of oil and gas pipelines.

4. Co-operation in the field of finance, including a Financial Development and Action Program for the encouragement of international investment in the West Bank and the Gaza Strip, and in Israel, as well as the establishment of a Palestinian Development Bank.

5. Co-operation in the fields of transport and communications, including a Program, which will define guidelines for the establishment of a Gaza Sea Port Area, and will provide for the establishing of transport and communications lines to and from the West Bank and the Gaza Strip to Israel and to other countries. In addition, this Program will provide for carrying out the necessary construction of roads, railways, communications lines, etc.

6. Co-operation in the field of trade, including studies, and Trade Promotion Programs, which will encourage local, regional and inter-regional trade, as well as a feasiblity study of creating free trade zones in the Gaza Strip and in Israel, mutual access to these zones, and co-operation in other areas related to trade and commerce.

7. Co-operation in the field of industry, including industrial Development Programs, which will provide for the establishment of joint Israeli-Palestinian Research and Development Centers, will promote Palestinian-Israeli joint ventures, and provide guidelines for co-operation in the textile, food, pharmaceutical, electronics, diamonds, computer and science-based industries.

8. A program for co-operation in, and regulation of, labour relations and co-operation in social welfare issues.

9. A Human Resources Development and Co-operation Plan, providing for joint Israeli-Palestinian workshops and seminars, and for the establishment of joint vocational training centres, research institutes and data banks.

10. An Environmental Protection Plan, providing for joint and/or co-ordinated measures in this sphere.

11. A program for developing co-ordination and co-operation in the field of communication and media.

12. Any other programs of mutual interest.

PROTOCOL ON ISRAELI-PALESTINIAN CO-OPERATION CONCERNING REGIONAL DEVELOPMENT PROGRAMS

1. The two sides will co-operate in the context of the multilateral peace efforts in promoting a Development Program for the region, including the West Bank and the Gaza Strip, to be initiated by the G-7. The parties will request the G-7 to seek the participation in this program of other interested states, such as members of the Organization for Economic Co-operation and Development, regional Arab states and institutions, as well as members of the private sector.

2. The Development Program will consist of two elements:
   a) an Economic Development Program for the West Bank and the Gaza Strip;
   b) a Regional Economic Development Program

A. The Economic Development Program for the West Bank and the Gaza Strip will consist of the following elements:

(1) A Social Rehabilitation Program, including a Housing and Construction Program.
(2) A Small and Medium Business Development Plan.
(3) An Infrastructure Development Program (water, electricity, transportation and communications, etc.)
(4) A Human Resources Plan.
(5) Other programs.

B. The Regional Economic Development Program may consist of the following elements:

(1) The establishment of a Middle East Development Fund, as a first step, and a Middle East Development Bank, as a second step.
(2) The development of a joint Israeli-Palestinian-Jordanian Plan for co-ordinated exploitation of the Dead Sea area.
(3) The Mediterranean Sea (Gaza)—Dead Sea Canal.
(4) Regional Desalinization and other water development projects.
(5) A regional plan for agricultural development, including a co-ordinated regional effort for the prevention of desertification.
(6) Interconnection of electricity grids.
(7) Regional co-operation for the transfer, distribution and industrial exploitation of gas, oil and other energy resources.
(8) A regional Tourism, Transportation and Telecommunications Development Plan.
(9) Regional co-operation in other spheres.

3. The two sides will encourage the multilateral working groups, and will co-ordinate towards its success. The two parties will encourage international activities, as well as pre-feasibility and feasibility studies, within the various multilateral working groups.

AGREED MINUTES TO THE DECLARATION OF PRINCIPLES ON INTERIM SELF-GOVERNMENT ARRANGEMENTS

A. General Understandings and Agreements

Any powers and responsibilites transferred to the Palestinians pursuant to the Declaration of Principles prior to the inauguration of the Council will be subject to the same principles pertaining to Article IV, as set out in these Agreed Minutes below.

B. Specific Understandings and Agreements

Article IV

It is understood that:

1. Jurisdiction of the Council will cover West Bank and Gaza Strip territory, except for issues that will be negotiated in the permanent status negotiations: Jerusalem, settlements, military locations and Israelis.

2. The Council's jurisdiction will apply with regard to the agreed powers, responsibilities, spheres and authorities transferred to it.

Article VI (2)

It is agreed that the transfer of authority will be as follows:

(1) The Palestinian side will inform the Israeli side of the names of the authorized Palestinians who will assume the powers, authorities and responsibilities that will be transferred to the Palestinians according to the Declaration of Principles in the following fields: education and culture, health, social welfare, direct taxation, tourism, and any other authorities agreed upon.

(2) It is understood that the rights and obligations of these offices will not be affected.

(3) Each of the spheres described above will continue to enjoy existing budgetary allocations in accordance with arrangements to be mutually agreed upon. These arrangements also will provide for the necessary adjustments required in order to take into account the taxes collected by the direct taxation office.

(4) Upon the execution of the Declaration of Principles, the Israeli and Palestinian delegations will immediately commence negotiations on a detailed plan for the transfer of authority on the above offices in accordance with the above understandings.

Article VII (2)

The Interim Agreement will also include arrangements for co-ordination and co-operation.

Article VII (5)

The withdrawal of the military government will not prevent Israel from exercising the powers and responsibilities not transferred to the Council.

Article VIII

It is understood that the Interim Agreement will include arrangements for co-operation and co-ordination between the two parties in this regard. It is also agreed that the transfer of powers and responsibilities to the Palestinian police will be accomplished in a phased manner, as agreed in the Interim Agreement.

Article X

It is agreed that, upon the entry into force of the Declaration of Principles, the Israeli and Palestinian delegations will exchange the names of the individuals designated by them as members of the Joint Israeli-Palestinian Liaison Committee.

It is further agreed that each side will have an equal number of members in the Joint Committee. The Joint Committee will reach decisions by agreement. The Joint Committee may add other technicians and experts, as necessary. The Joint Committee will decide on the frequency and place or places of its meetings.

Annex II

It is understood that, subsequent to the Israeli withdrawal, Israel will continue to be responsible for external security, and for internal security and public order of settlements and Israelis. Israeli military forces and civilians may continue to use roads freely within the Gaza Strip and the Jericho area.

Article XVI

Israeli-Palestinian Co-operation Concerning Regional Programs

Both parties view the multilateral working groups as an appropriate instrument for promoting a 'Marshall Plan,' the regional programs and other programs, including special programs for the West Bank and Gaza Strip, as indicated in the protocol attached as Annex IV.

Article XVII

Miscellaneous Provisions

1. This Declaration of Principles will enter into force one month after its signing.

2. All protocols annexed to this Declaration of Principles and Agreed Minutes pertaining thereto shall be regarded as an integral part hereof.

THE CAIRO AGREEMENT ON THE GAZA STRIP AND JERICHO

4 May 1994

The Government of the State of Israel and the Palestine Liberation Organization (hereinafter 'the PLO'), the representative of the Palestinian people;

Preamble

Within the framework of the Middle East peace process initiated at Madrid in October 1991;

Reaffirming their determination to live in peaceful co-existence, mutual dignity and security, while recognizing their mutual legitimate and political rights;

Reaffirming their desire to achieve a just, lasting and comprehensive peace settlement through the agreed political process;

Reaffirming their adherence to the mutual recognition and commitments expressed in the letters dated September 9, 1993, signed by and exchanged between the Prime Minister of Israel and the Chairman of the PLO;

Reaffirming their understanding that the interim self-government arrangements, including the arrangements to apply in the Gaza Strip and the Jericho Area contained in this Agreement, are an integral part of the whole peace process and that the negotiations on the permanent status will lead to the implementation of Security Council Resolutions 242 and 338;

Desirous of putting into effect the Declaration of Principles on Interim Self-Government Arrangements signed at Washington, D.C. on September 13, 1993, and the agreed minutes thereto (hereinafter 'The Declaration of Principles'), and in particular the protocol on withdrawal of Israeli forces from the Gaza Strip and the Jericho Area:

Hereby agree to the following arrangements regarding the Gaza Strip and the Jericho Area:

Article I

Definitions

For the purpose of this Agreement:

a. The Gaza Strip and the Jericho Area are delineated on Map Nos. 1 and 2 attached to this Agreement (*Maps not reproduced—Ed.*);

b. 'The settlements' means the Gush Katif and Erez settlement areas, as well as the other settlements in the Gaza Strip, as shown on attached Map No. 1;

c. 'The military installation area' means the Israeli military installation area along the Egyptian border in the Gaza Strip, as shown on Map No. 1; and

d. The term 'Israelis' shall also include Israeli statutory agencies and corporations registered in Israel.

Article II

Scheduled withdrawal of Israeli military forces

1. Israel shall implement an accelerated and scheduled withdrawal of Israeli military forces from the Gaza Strip and from the Jericho Area to begin immediately with the signing of this Agreement. Israel shall complete such withdrawal within three weeks from this date.

2. Subject to the arrangements included in the Protocol concerning withdrawal of Israeli military forces and security arrangements attached as Annex I, the Israeli withdrawal shall include evacuating all military bases and other fixed installations to be handed over to the Palestinian Police, to be established pursuant to Article IX below (hereinafter 'the Palestinian Police').

3. In order to carry out Israel's responsibility for external security and for internal security and public order of settlements and Israelis, Israel shall, concurrently with the withdrawal, redeploy its remaining military forces to the settlements and the military installation area, in accordance with the provisions of this Agreement. Subject to the provisions of this Agreement, this redeployment shall constitute full implementation of Article XIII of the Declaration of Principles with regard to the Gaza Strip and the Jericho Area only.

4. For the purposes of this Agreement, 'Israeli military forces' may include Israeli police and other Israeli security forces.

5. Israelis, including Israeli military forces, may continue to use roads freely within the Gaza Strip and the Jericho Area. Palestinians may use public roads crossing the settlements freely, as provided for in Annex I.

6. The Palestinian Police shall be deployed and shall assume responsibility for public order and internal security of Palestinians in accordance with this Agreement and Annex I.

Article III

Transfer of authority

1. Israel shall transfer authority as specified in this Agreement from the Israeli military government and its Civil Administration to the Palestinian Authority, hereby established, in accordance with Article V of this Agreement, except for the authority that Israel shall continue to excercise as specified in this Agreement.

2. As regards the transfer and assumption of authority in civil spheres, powers and responsibilities shall be transferred and assumed as set out in the Protocol concerning civil affairs attached as Annex II.

3. Arrangements for a smooth and peaceful transfer of the agreed powers and responsibilities are set out in Annex II.

4. Upon the completion of the Israeli withdrawal and the transfer of powers and responsibilities as detailed in Paragraphs 1 and 2 above and in Annex II, the Civil Administration in the Gaza Strip and the Jericho Area will be dissolved and the Israeli military government will be withdrawn. The withdrawal of the military government shall not prevent it from continuing to excercise the powers and responsibilities specified in this Agreement.

5. A joint Civil Affairs Co-ordination and Co-operation Committee (hereinafter 'the CAC') and two joint regional civil affairs subcommittees for the Gaza Strip and the Jericho Area respectively shall be established in order to provide for co-ordination and co-operation in civil affairs between the Palestinian Authority and Israel, as detailed in Annex II.

6. The offices of the Palestinian Authority shall be located in the Gaza Strip and the Jericho Area pending the inauguration of the council to be elected pursuant to the Declaration of Principles.

Article IV

Structure and composition of the Palestinian Authority

1. The Palestinian Authority will consist of one body of 24 members which shall carry out and be responsible for all the legislative and executive powers and responsibilities transferred to it under this Agreement, in accordance with this article, and shall be responsible for the excercise of judicial functions in accordance with Article VI, subparagraph 1.b of this Agreement.

2. The Palestinian Authority shall administer the departments transferred to it and may establish, within its jurisdiction, other departments and subordinate administrative units as necessary for the fulfilment of its responsibilities. It shall determine its own internal procedures.

3. The PLO shall inform the Government of Israel of the names of the members of the Palestinian Authority and any change of members. Changes in the membership of the Palestinian Authority will take effect upon an exchange of letters between the PLO and the Government of Israel.

4. Each member of the Palestinian Authority shall enter into office upon undertaking to act in accordance with this Agreement.

Article V

Jurisdiction

1. The authority of the Palestinian Authority encompasses all matters that fall within its territorial, functional and personal jurisdiction, as follows:

a. The territorial jurisdiction covers the Gaza Strip and the Jericho Area territory, as defined in Article I, except for settlements and the military installation area.

Territorial jurisdiction shall include land, subsoil and territorial waters, in accordance with the provisions of this Agreement.

b. The functional jurisdiction encompasses all powers and responsibilities as specified in this Agreement. This jurisdiction does not include foreign relations, internal security and public order of settlements and the military installation area and Israelis, and external security.

c. The personal jurisdiction extends to all persons within the territorial jurisdiction referred to above, except for Israelis, unless otherwise provided in this Agreement.

2. The Palestinian Authority has, within its authority, legislative, executive and judicial powers and responsibilities, as provided for in this Agreement.

3.a. Israel has authority over the settlements, the military installation area, Israelis, external security, internal security and public order of settlements, the military installation area and Israelis, and those agreed powers and responsibilities specified in this Agreement.

b. Israel shall exercise its authority through its military government, which for that end, shall continue to have the necessary legislative, judicial and executive powers and responsibilities, in accordance with international law. This provision shall not derogate from Israel's applicable legislation over Israelis in personam.

4. The exercise of authority with regard to the electromagnetic sphere and airspace shall be in accordance with the provisions of this Agreement.

5. The provisions of this article are subject to the specific legal arrangements detailed in the Protocol concerning legal matters attached as Annex III. Israel and the Palestinian Authority may negotiate further legal arrangements.

6. Israel and the Palestinian Authority shall co-operate on matters of legal assistance in criminal and civil matters through the legal subcommittee of the CAC.

Article VI

Powers and responsibilities of the Palestinian Authority

1. Subject to the provisions of this Agreement, the Palestinian Authority, within its jurisdiction:

a. has legislative powers as set out in Article VII of this Agreement, as well as executive powers;

b. will administer justice through an independent judiciary:

c. will have, inter alia, power to formulate policies, supervise their implementation, employ staff, establish departments, authorities and institutions, sue and be sued and conclude contracts; and

d. will have, inter alia, the power to keep and administer registers and records of the population, and issue certificates, licenses and documents.

2.a. In accordance with the Declaration of Principles, the Palestinian Authority will not have powers and responsibilities in the sphere of foreign relations, which sphere includes the establishment abroad of embassies, consulates or other types of foreign missions and posts or permitting their establishment in the Gaza Strip or the Jericho Area, the appointment of or admission of diplomatic and consular staff, and the exercise of diplomatic functions.

b. Notwithstanding the provisions of this paragraph, the PLO may conduct negotiations and sign agreements with states or international organizations for the benefit of the Palestinian Authority in the following cases only:

(1) Economic agreements, as specifically provided in Annex IV of this Agreement;

(2) Agreements with donor countries for the purpose of implementing arrangements for the provision of assistance to the Palestinian Authority;

(3) Agreements for the purpose of implementing the regional development plans detailed in Annex IV of the Declaration of Principles or in agreements entered into in the framework of the multilateral negotiations; and

(4) Cultural, scientific and education agreements.

c. Dealings between the Palestinian Authority and representatives of foreign states and international organizations, as well as the establishment in the Gaza Strip and the Jericho Area of representative offices other than those described in subparagraph 2.a, above, for the purpose of implementing the agreements referred to in subparagraph 2.b above, shall not be considered foreign relations.

Article VII

Legislative powers of the Palestinian Authority

1. The Palestinian Authority will have the power, within its jurisdiction, to promulgate legislation, including basic laws, laws, regulations and other legislative acts.

2. Legislation promulgated by the Palestinian Authority shall be consistent with the provisions of this Agreement.

3. Legislation promulgated by the Palestinian Authority shall be communicated to a legislation subcommittee to be established by the CAC (hereinafter 'the Legislation Subcommittee'). During a period of 30 days from the communication of the legislation, Israel may request that the Legislation Subcommittee decide whether such legislation exceeds the jurisdiction of the Palestinian Authority or is otherwise inconsistent with the provisions of this Agreement.

4. Upon receipt of the Israeli request, the Legislation Subcommittee shall decide, as an initial matter, on the entry into force of the legislation pending its decision on the merits of the matter.

5. If the Legislation Subcommittee is unable to reach a decision with regard to the entry into force of the legislation within 15 days, this issue will be referred to a Board of Review. This Board of Review shall be comprised of two judges, retired judges or senior jurists (hereinafter 'Judges'), one from each side, to be appointed from a compiled list of three judges proposed by each.

6. Legislation referred to the Board of Review shall enter into force only if the Board of Review decides that it does not deal with a security issue which falls under Israel's responsibility, that it does not seriously threaten other significant Israeli interests protected by this Agreement and that the entry into force of the legislation could not cause irreparable damage or harm.

7. The Legislation Subcommitte shall attempt to reach a decision on the merits of the matter within 30 days from the date of the Israeli request. If this subcommittee is unable to reach such a decision within this period of 30 days, the matter shall be referred to the joint Israeli-Palestinian Liaison Committee referred to in Article XV below (hereinafter 'the Liaison Committee'). This Liaison Committee will deal with the matter immediately and will attempt to settle it within 30 days.

8. Where the legislation has not entered into force pursuant to paragraphs 5 or 7 above, this situation shall be maintained pending the decision of the Liaison Committee on the merits of the matter, unless it has decided otherwise.

9. Laws and military orders in effect in the Gaza Strip or the Jericho Area prior to the signing of this Agreement shall remain in force, unless amended or abrogated in accordance with this Agreement.

Article VIII

Arrangements for security and public order

1. In order to guarantee public order and internal security for the Palestinians of the Gaza Strip and the Jericho Area, the Palestinian Authority shall establish a strong police force, as set out in Article IX below. Israel shall continue to carry the responsibility for defence against external threats, including the responsibility for protecting the Egyptian border and the Jordanian line, and for defence against external threats from the sea and from the air, as well as the responsibility for overall security of Israelis and settlements, for the purpose of safeguarding their internal security and public order, and will have all the powers to take the steps necessary to meet this responsibility.

2. Agreed security arrangements and co-ordination mechanisms are specified in Annex I.

3. A Joint Co-ordination and Co-operation committee for mutual security purposes (hereinafter 'the JSC'), as well as three joint district co-ordination and co-operation offices for the

Gaza District, the Khan Younis District and the Jericho District respectively (hereinafter 'the DCOS') are hereby established as provided for in Annex I.

4. The security arrangements provided for in this Agreement and in Annex I may be reviewed at the requests of either party and may be amended by mutual agreement of the parties. Specific review arrangements are included in Annex I.

Article IX

The Palestinian Directorate of Police Force

1. The Palestinian Authority shall establish a strong police force, the Palestinian Directorate of Police Force (hereinafter 'the Palestinian Police'). The duties, functions, structure, deployment and composition of the Palestinian Police, together with provisions regarding its equipment and operation, are set out in Annex I, Article III. Rules of conduct governing the activities of the Palestinian Police are set out in Annex I, Article VIII.

2. Except for the Palestinian Police referred to in this article and the Israeli military forces, no other armed forces shall be established or operate in the Gaza Strip or the Jericho Area.

3. Except for the arms, ammunition and equipment of the Palestinian Police described in Annex I, Article III, and those of the Israeli military forces, no organization or individual in the Gaza Strip and the Jericho Area shall manufacture, sell, acquire, possess, import or otherwise introduce into the Gaza Strip or the Jericho Area any firearms, ammunition, weapons, explosives, gunpowder or any related equipment, unless otherwise provided for in Annex I.

Article X

Passages

Arrangements for co-ordination between Israel and the Palestinian Authority regarding the Gaza–Egypt and Jericho–Jordan passages, as well as any other agreed international crossings, are set out in Annex 1.

Article XI

Safe passage between the Gaza Strip and the Jericho Area

Arrangements for safe passage of persons and transportation between the Gaza Strip and the Jericho Area are set out in Annex I, Article IX.

Article XII

Relations between Israel and the Palestinian Authority

1. Israel and the Palestinian Authority shall seek to foster mutual understanding and tolerance and shall accordingly abstain from incitement, including hostile propaganda, against each other and, without derogating from the principle of freedom of expression, shall take legal measures to prevent such incitement by any organizations, groups or individuals within their jurisdiction.

2. Without derogating from the other provisions of this agreement, Israel and the Palestinian Authority shall co-operate in combating criminal activity which may affect both sides, including offences related to trafficking in illegal drugs and psychotropic substances, smuggling, and offences against property, including offences related to vehicles.

Article XIII

Economic relations

The economic relations between the two sides are set out in the Protocol on Economic Relations signed in Paris on April 29, 1994 and the appendixes thereto, certified copies of which are attached as Annex IV, and will be governed by the relevant provisions of this agreement and its annexes.

Article XIV

Human rights and the rule of law

Israel and the Palestinian Authority shall exercise their powers and responsibilities pursuant to this Agreement with due regard to internationally-accepted norms and principles of human rights and the rule of law.

Article XV

The Joint Israeli-Palestinian Liaison Committee

1. The Liaison Committee established pursuant to Article X of the Declaration of Principles shall ensure the smooth implementation of this Agreement. It shall deal with issues requiring co-ordination, other issues of common interest and disputes.

2. The Liaison Committee shall be composed of an equal number of members from each party. It may add other technicians and experts as necessary.

3. The Liaison Committee shall adopt its rules of procedure, including the frequency and place or places of its meetings.

4. The Liaison Committee shall reach its decision by agreement.

Article XVI

Liaison and Co-operation with Jordan and Egypt

1. Pursuant to Article XII of the Declaration of Principles, the two parties shall invite the governments of Jordan and Egypt to participate in establishing further Liaison and Co-operation Arrangements between the Government of Israel and the Palestinian Representatives on the one hand, and the governments of Jordan and Egypt on the other hand, to promote co-operation between them. These arrangements shall include the constitution of a Continuing Committee.

2. The Continuing Committee shall decide by agreement on the modalities of admission of persons displaced from the West Bank and the Gaza Strip in 1967, together with necessary measures to prevent disruption and disorder.

3. The Continuing Committee shall deal with other matters of common concern.

Article XVII

Settlement of differences and disputes

Any difference relating to the application of this agreement shall be referred to the appropriate co-ordination and co-operation mechanism established under this agreement. The provisions of Article XV of the Declaration of Principles shall apply to any such difference which is not settled through the appropriate co-ordination and co-operation mechanism, namely:

1. Disputes arising out of the application or interpretation of this agreement or any subsequent agreements pertaining to the interim period shall be settled by negotiations through the Liaison Committee.

2. Disputes which cannot be settled by negotiations may be settled by a mechanism of conciliation to be agreed between the parties.

3. The parties may agree to submit to arbitration disputes relating to the interim period, which cannot be settled through conciliation. To this end, upon the agreement of both parties, the parties will establish an arbitration committee.

Article XVIII

Prevention of hostile acts

Both sides shall take all measures necessary in order to prevent acts of terrorism, crime and hostilities directed against each other, against individuals falling under the other's authority and against their property, and shall take legal measures against offenders. In addition, the Palestinian side shall take all measures necessary to prevent such hostile acts directed against the settlements, the infrastructure serving them and the military installation area, and the Israeli side shall take all measures necessary to prevent such hostile acts emanating from the settlements and directed against Palestinians.

Article XIX

Missing persons

The Palestinian Authority shall co-operate with Israel by providing all necessary assistance in the conduct of searches by Israel within the Gaza Strip and the Jericho Area for missing Israelis, as well as by providing information about missing Israelis. Israel shall co-operate with the Palestinian Authority in searching for, and providing necessary information about, missing Palestinians.

Article XX

Confidence-building measures

With a view to creating a positive and supportive public atmosphere to accompany the implementation of this agreement, and to establish a solid basis of mutual trust and good faith, both parties agree to carry out confidence-building measures as detailed herewith:

1. Upon the signing of this agreement, Israel will release, or turn over, to the Palestinian Authority within a period of 5 weeks, about 5,000 Palestinian detainees and prisoners, residents of the West Bank and the Gaza Strip. Those released will be free to return to their homes anywhere in the West Bank or the Gaza Strip. Prisoners turned over to the Palestinian Authority shall be obliged to remain in the Gaza Strip or the Jericho Area for the remainder of their sentence.

2. After the signing of this Agreement, the two parties shall continue to negotiate the release of additional Palestinian prisoners and detainees, building on agreed principles.

3. The implementation of the above measures will be subject to the fulfilment of the procedures determined by Israeli law for the release and transfer of detainees and prisoners.

4. With the assumption of Palestinian Authority, the Palestinian side commits itself to solving the problem of those Palestinians who were in contact with the Israeli authorities. Until an agreed solution is found, the Palestinian side undertakes not to prosecute these Palestinians or to harm them in any way.

5. Palestinians from abroad whose entry into the Gaza Strip and the Jericho Area is approved pursuant to this agreement, and to whom the provisions of this article are applicable, will not be prosecuted for offences committed prior to September 13, 1993.

Article XXI

Temporary international presence

1. The parties agree to a temporary international or foreign presence in the Gaza Strip and the Jericho Area (hereinafter 'the TIP'), in accordance with the provisions of this article.

2. The TIP shall consist of 400 qualified personnel, including observers, instructors and other experts, from 5 or 6 of the donor countries.

3. The two parties shall request the donor countries to establish a special fund to provide finance for the TIP.

4. The TIP will function for a period of 6 months. The TIP may extend this period, or change the scope of its operation, with the agreement of the two parties.

5. The TIP shall be stationed and operative within the following cities and villages: Gaza, Khan Younis, Rafah, Deir al-Balah, Jabalya, Absan, Beit Hanun and Jericho.

6. Israel and the Palestinian Authority shall agree on a special protocol to implement this article, with the goal of concluding negotiations with the donor countries contributing personnel within two months.

Article XXII

Rights, liabilities and obligations

1.a. The transfer of all powers and responsibilities to the Palestinian Authority, as detailed in Annex II, includes all related rights, liabilities and obligations arising with regard to acts or omissions which occurred prior to the transfer. Israel will cease to bear any financial responsibility regarding such acts or omissions and the Palestinian Authority will bear all financial responsibility for these and for its own functioning.

b. Any financial claim made in this regard against Israel will be referred to the Palestinian Authority.

c. Israel shall provide the Palestinian Authority with the information it has regarding pending and anticipated claims brought before any court or tribunal against Israel in this regard.

d. Where legal proceedings are brought in respect of such a claim, Israel will notify the Palestinian Authority and enable it to participate in defending the claim and raise any arguments on its behalf.

e. In the event that an award is made against Israel by any court or tribunal in respect of such a claim, the Palestinian Authority shall reimburse Israel the full amount of the award.

f. Without prejudice to the above, where a court or tribunal hearing such a claim finds that liability rests solely with an employee or agent who acted beyond the scope of the powers assigned to him or her, unlawfully or with willful malfeasance, the Palestinian Authority shall not bear financial responsibility.

2. The transfer of authority in itself shall not affect rights, liabilities and obligations of any person or legal entity, in existence at the date of signing of this Agreement.

Article XXIII

Final clauses

1. This Agreement shall enter into force on the date of its signing.

2. The arrangements established by this Agreement shall remain in force until and to the extent superseded by the Interim Agreement referred to in the Declaration of Principles or any other Agreement between the parties.

3. The five-year Interim Period referred to in the Declaration of Principles commences on the date of the signing of this Agreement.

4. The parties agree that, as long as this Agreement is in force, the security fence erected by Israel around the Gaza Strip shall remain in place and that the line demarcated by the fence, as shown on attached Map No. 1, shall be authoritative only for the purpose of this Agreement.

5. Nothing in this Agreement shall prejudice or pre-empt the outcome of the negotiations on the Interim Agreement or on the Permanent Status to be conducted pursuant to the Declaration of Principles. Neither party shall be deemed, by virtue of having entered into this Agreement, to have renounced or waived any of its existing rights, claims or positions.

6. The two parties view the West Bank and the Gaza Strip as a single territorial unit, the integrity of which will be preserved during the Interim Period.

7. The Gaza Strip and the Jericho Area shall continue to be an integral part of the West Bank and the Gaza Strip, and their status shall not be changed for the period of this Agreement. Nothing in this Agreement shall be considered to change this status.

8. The preamble to this Agreement, and all Annexes, Appendices and Maps attached hereto, shall constitute an integral part hereof.

ISRAELI-PALESTINIAN INTERIM AGREEMENT ON THE WEST BANK AND THE GAZA STRIP

28 September 1995

The Interim Agreement was signed by the Chairman of the PLO, Yasser Arafat, and the Israeli Minister of Foreign Affairs, Shimon Peres, in Washington, DC, USA. The Agreement was witnessed by representatives of the USA, Russia, Egypt, Jordan, Norway and the European Union (EU). Considerable additional detail was contained in seven annexes (not reproduced here) to the Agreement (the most expansive of which—Annex I—concerned redeployment and security arrangements) and a map (also not reproduced here) in which the boundaries of first-phase redeployment areas 'A' and 'B' were defined.

The Government of the State of Israel and the Palestine Liberation Organization (hereinafter the 'PLO'), the representative of the Palestinian people;

Preamble

WITHIN the framework of the Middle East peace process initiated at Madrid in October 1991;

REAFFIRMING their determination to put an end to decades of confrontation and to live in peaceful coexistence, mutual dignity and security, while recognizing their mutual legitimate and political rights;

REAFFIRMING their desire to achieve a just, lasting and comprehensive peace settlement and historic reconciliation through the agreed political process;

RECOGNIZING that the peace process and the new era that it has created, as well as the new relationship established between the two Parties as described above, are irreversible, and the determination of the two Parties to maintain, sustain and continue the peace process;

RECOGNIZING that the aim of the Israeli-Palestinian negotiations within the current Middle East peace process is, among other things, to establish a Palestinian Interim Self-Government Authority, i.e. the elected Council (hereinafter 'the Council' or 'the Palestinian Council'), and the elected Ra'ees of the Executive Authority, for the Palestinian people in the West Bank and the Gaza Strip, for a transitional period not exceeding five years from the date of signing the Agreement on the Gaza Strip and the Jericho Area (hereinafter 'the Gaza-Jericho Agreement') on May 4, 1994, leading to a permanent settlement based on Security Council Resolutions 242 and 338;

REAFFIRMING their understanding that the interim self-government arrangements contained in this Agreement are an integral part of the whole peace process, that the negotiations on the permanent status, that will start as soon as possible but not later than May 4, 1996, will lead to the implementation of Security Council Resolutions 242 and 338, and that the Interim Agreement shall settle all the issues of the interim period and that no such issues will be deferred to the agenda of the permanent status negotiations;

REAFFIRMING their adherence to the mutual recognition and commitments expressed in the letters dated September 9, 1993, signed by and exchanged between the Prime Minister of Israel and the Chairman of the PLO;

DESIROUS of putting into effect the Declaration of Principles on Interim Self-Government Arrangements signed at Washington, DC on September 13, 1993, and the Agreed Minutes thereto (hereinafter 'the DOP') and in particular Article III and Annex I concerning the holding of direct, free and general political elections for the Council and the Ra'ees of the Executive Authority in order that the Palestinian people in the West Bank, Jerusalem and the Gaza Strip may democratically elect accountable representatives;

RECOGNIZING that these elections will constitute a significant interim preparatory step toward the realization of the legitimate rights of the Palestinian people and their just requirements and will provide a democratic basis for the establishment of Palestinian institutions;

REAFFIRMING their mutual commitment to act, in accordance with this Agreement, immediately, efficiently and effectively against acts or threats of terrorism, violence or incitement, whether committed by Palestinians or Israelis;

FOLLOWING the Gaza-Jericho Agreement; the Agreement on Preparatory Transfer of Powers and Responsibilities signed at Erez on August 29, 1994 (hereinafter 'the Preparatory Transfer Agreement'); and the Protocol on Further Transfer of Powers and Responsibilities signed at Cairo on August 27, 1995 (hereinafter 'the Further Transfer Protocol'); which three agreements will be superseded by this Agreement;

HEREBY AGREE as follows:

CHAPTER 1—THE COUNCIL

ARTICLE I

Transfer of Authority

1. Israel shall transfer powers and responsibilities as specified in this Agreement from the Israeli military government and its Civil Administration to the Council in accordance with this Agreement. Israel shall continue to exercise powers and responsibilities not so transferred.

2. Pending the inauguration of the Council, the powers and responsibilities tranferred to the Council shall be exercised by the Palestinian Authority established in accordance with the Gaza-Jericho Agreement, which shall also have all the rights, liabilities and obligations to be assumed by the Council in this regard. Accordingly, the term 'Council' throughout this Agreement shall, pending the inauguration of the Council, be construed as meaning the Palestinian Authority.

3. The transfer of powers and responsibilities to the police force established by the Palestinian Council in accordance with Article XIV below (hereinafter 'the Palestinian Police') shall be accomplished in a phased manner, as detailed in this Agreement and in the Protocol concerning Redeployment and Security Arrangements attached as Annex I to this Agreement (hereinafter 'Annex I').

4. As regards the transfer and assumption of authority in civil spheres, powers and responsibilities shall be transferred and assumed as set out in the Protocol Concerning Civil Affairs attached as Annex III to this Agreement (hereinafter 'Annex III').

5. After the inauguration of the Council, the Civil Administration in the West Bank will be dissolved, and the Israeli military government shall be withdrawn. The withdrawal of the military government shall not prevent it from exercising the powers and responsibilities not transferred to the Council.

6. A Joint Civil Affairs Co-ordination and Co-operation Committee (hereinafter 'the CAC'), Joint Regional Civil Affairs Subcommittees, one for the Gaza Strip and the other for the West Bank, and District Civil Liaison Offices in the West Bank shall be established in order to provide for co-ordination and co-operation in civil affairs between the Council and Israel, as detailed in Annex III.

7. The offices of the Council, and the offices of its Ra'ees and its Executive Authority and other committees, shall be located in areas under Palestinian territorial jurisdiction in the West Bank and the Gaza Strip.

ARTICLE II

Elections

1. In order that the Palestinian people of the West Bank and the Gaza Strip may govern themselves according to democratic principles, direct, free and general political elections will be held for the Council and the Ra'ees of the Executive Authority of the Council in accordance with the provisions set out in the Protocol concerning Elections attached as Annex II to this Agreement (hereinafter 'Annex II').

2. These elections will constitute a significant interim preparatory step towards the realization of the legitimate rights of the Palestinian people and their just requirements and will provide a democratic basis for the establishment of Palestinian institutions.

3. Palestinians of Jerusalem who live there may participate in the election process in accordance with the provisions contained in this Article and in Article VI of Annex II (Election Arrangements concerning Jerusalem).

4. The elections shall be called by the Chairman of the Palestinian Authority immediately following the signing of this Agreement to take place at the earliest practicable date following the redeployment of Israeli forces in accordance with Annex I, and consistent with the requirements of the election timetable as provided in Annex II, the Election Law and the Election Regulations, as defined in Article I of Annex II.

ARTICLE III

Structure of the Palestinian Council

1. The Palestinian Council and the Ra'ees of the Executive Authority of the Council constitute the Palestinian Interim Self-Government Authority, which will be elected by the Palestinian people of the West Bank, Jerusalem and the Gaza Strip for the transitional period agreed in Article I of the DOP.

2. The Council shall possess both legislative power and executive power, in accordance with Articles VII and IX of the DOP. The Council shall carry out and be responsible for all the legislative and executive powers and responsibilities transferred to it under this Agreement. The exercise of legislative powers shall be in accordance with Article XVIII of this Agreement (Legislative Powers of the Council).

3. The Council and the Ra'ees of the Executive Authority of the Council shall be directly and simultaneously elected by the Palestinian people of the West Bank, Jerusalem and the Gaza Strip, in accordance with the provisions of this Agreement and the Election Law and Regulations, which shall not be contrary to the provisions of this Agreement.

4. The Council and the Ra'ees of the Executive Authority of the Council shall be elected for a transitional period not ex-

ceeding five years from the signing of the Gaza-Jericho Agreement on May 4, 1994.

5. Immediately upon its inauguration, the Council will elect from among its members a Speaker. The Speaker will preside over the meetings of the Council, administer the Council and its committees, decide on the agenda of each meeting, and lay before the Council proposals for voting and declare their results.

6. The jurisdiction of the Council shall be as determined in Article XVII of this Agreement (Jurisdiction).

7. The organization, structure and functioning of the Council shall be in accordance with this Agreement and the Basic Law for the Palestinian Interim Self-Government Authority, which Law shall be adopted by the Council. The Basic Law and any regulations made under it shall not be contrary to the provisions of this Agreement.

8. The Council shall be responsible under its executive powers for the offices, services and departments transferred to it and may establish, within its jurisdiction, ministries and subordinate bodies, as necessary for the fulfillment of its responsibilities.

9. The Speaker will present for the Council's approval proposed internal procedures that will regulate, among other things, the decision-making processes of the Council.

ARTICLE IV

Size of the Council

The Palestinian Council shall be composed of 82 representatives and the Ra'ees of the Executive Authority, who will be directly and simultaneously elected by the Palestinian people of the West Bank, Jerusalem and the Gaza Strip.

ARTICLE V

The Executive Authority of the Council

1. The Council will have a committee that will exercise the executive authority of the Council, formed in accordance with paragraph 4 below (hereinafter 'the Executive Authority').

2. The Executive Authority shall be bestowed with the executive authority of the Council and will exercise it on behalf of the Council. It shall determine its own internal procedures and decision making processes.

3. The Council will publish the names of the members of the Executive Authority immediately upon their initial appointment and subsequent to any changes.

4.a. The Ra'ees of the Executive Authority shall be an ex officio member of the Executive Authority.

b. All of the other members of the Executive Authority, except as provided in subparagraph c. below, shall be members of the Council, chosen and proposed to the Council by the Ra'ees of the Executive Authority and approved by the Council.

c. The Ra'ees of the Executive Authority shall have the right to appoint some persons, in number not exceeding twenty percent of the total membership of the Executive Authority, who are not members of the Council, to exercise executive authority and participate in government tasks. Such appointed members may not vote in meetings of the Council.

d. Non-elected members of the Executive Authority must have a valid address in an area under the jurisdiction of the Council.

ARTICLE VI

Other Committees of the Council

1. The Council may form small committees to simplify the proceedings of the Council and to assist in controlling the activity of its Executive Authority.

2. Each committee shall establish its own decision-making processes within the general framework of the organization and structure of the Council.

ARTICLE VII

Open Government

1. All meetings of the Council and of its committees, other than the Executive Authority, shall be open to the public, except upon a resolution of the Council or the relevant committee on the grounds of security, or commercial or personal confidentiality.

2. Participation in the deliberations of the Council, its committees and the Executive Authority shall be limited to their respective members only. Experts may be invited to such meetings to address specific issues on an ad hoc basis.

ARTICLE VIII

Judicial Review

Any person or organization affected by any act or decision of the Ra'ees of the Executive Authority of the Council or of any member of the Executive Authority, who believes that such act or decision exceeds the authority of the Ra'ees or of such member, or is otherwise incorrect in law or procedure, may apply to the relevant Palestinian Court of Justice for a review of such activity or decision.

ARTICLE IX

Powers and Responsibilities of the Council

1. Subject to the provisions of this Agreement, the Council will, within its jurisdiction, have legislative powers as set out in Article XVIII of this Agreement, as well as executive powers.

2. The executive power of the Palestinian Council shall extend to all matters within its jurisdiction under this Agreement or any future agreement that may be reached between the two Parties during the interim period. It shall include the power to formulate and conduct Palestinian policies and to supervise their implementation, to issue any rule or regulation under powers given in approved legislation and administrative decisions necessary for the realization of Palestinian self-government, the power to employ staff, sue and be sued and conclude contracts, and the power to keep and administer registers and records of the population, and issue certificates, licenses and documents.

3. The Palestinian Council's executive decisions and acts shall be consistent with the provisions of this Agreement.

4. The Palestinian Council may adopt all necessary measures in order to enforce the law and any of its decisions, and bring proceedings before the Palestinian courts and tribunals.

5.a. In accordance with the DOP, the Council will not have powers and responsibilities in the sphere of foreign relations, which sphere includes the establishment abroad of embassies, consulates or other types of foreign missions and posts or permitting their establishment in the West Bank or the Gaza Strip, the appointment of or admission of diplomatic and consular staff, and the exercise of diplomatic functions.

b. Notwithstanding the provisions of this paragraph, the PLO may conduct negotiations and sign agreements with states or international organizations for the benefit of the Council in the following cases only:

(1) Economic agreements, as specifically provided in Annex V of this Agreement;

(2) Agreements with donor countries for the purpose of implementing arrangements for the provision of assistance to the Council;

(3) Agreements for the purpose of implementing the regional development plans detailed in Annex IV of the DOP or in agreements entered into in the framework of the multilateral negotiations; and

(4) Cultural, scientific and educational agreements.

c. Dealings between the Council and representatives of foreign states and international organizations, as well as the establishment in the West Bank and the Gaza Strip of representative offices other than those described in subparagrah 5.a above, for the purpose of implementing the agreements referred to in subparagraph 5.b above, shall not be considered foreign relations.

6. Subject to the provisions of this Agreement, the Council shall, within its jurisdiction, have an independent judicial system composed of independent Palestinian courts and tribunals.

CHAPTER 2—REDEPLOYMENT AND SECURITY ARRANGEMENTS

ARTICLE X

Redeployment of Israeli Military Forces

1. The first phase of the Israeli military forces redeployment will cover populated areas in the West Bank—cities, towns, villages, refugee camps and hamlets—as set out in Annex I, and will be completed prior to the eve of the Palestinian elections, i.e., 22 days before the day of the elections.

2. Further redeployments of Israeli military forces to specified military locations will commence after the inauguration of the Council and will be gradually implemented commensurate with the assumption of responsibility for public order and internal security by the Palestinian Police, to be completed within 18 months from the date of the inauguration of the Council as detailed in Articles XI (Land) and XIII (Security), below and in Annex I.

3. The Palestinian Police shall be deployed and shall assume responsibility for public order and internal security for Palestinians in a phased manner in accordance with Article XIII (Security) below and Annex I.

4. Israel shall continue to carry the responsibility for external security, as well as the responsibility for overall security of Israelis for the purpose of safeguarding their internal security and public order.

5. For the purpose of this Agreement, 'Israeli military forces' includes Israeli Police and other Israeli security forces.

ARTICLE XI

Land

1. The two sides view the West Bank and the Gaza Strip as a single territorial unit, the integrity and status of which will be preserved during the interim period.

2. The two sides agree that West Bank and Gaza Strip territory, except for issues that will be negotiated in the permanent status negotiations, will come under the jurisdiction of the Palestinian Council in a phased manner, to be completed within 18 months from the date of the inauguration of the Council, as specified below:

a. Land in populated areas (Areas A and B), including government and Al Waqf land, will come under the jurisdiction of the Council during the first phase of redeployment.

b. All civil powers and responsibilities, including planning and zoning, in Areas A and B, set out in Annex III, will be transferred to and assumed by the Council during the first phase of redeployment.

c. In Area C, during the first phase of redeployment Israel will transfer to the Council civil powers and responsibilities not relating to territory, as set out in Annex III.

d. The further redeployments of Israeli military forces to specified military locations will be gradually implemented in accordance with the DOP in three phases, each to take place after an interval of six months, after the inauguration of the Council, to be completed within 18 months from the date of the inauguration of the Council.

e. During the further redeployment phases to be completed within 18 months from the date of the inauguration of the Council, powers and responsibilities relating to territory will be transferred gradually to Palestinian jurisdiction that will cover West Bank and Gaza Strip territory, except for the issues that will be negotiated in the permanent status negotiations.

f. The specified military locations referred to in Article X, paragraph 2 above will be determined in the further redeployment phases, within the specified time-frame ending not later than 18 months from the date of the inauguration of the Council, and will be negotiated in the permanent status negotiations.

3. For the purpose of this Agreement and until the completion of the first phase of the further redeployments:

a. 'Area A' means the populated areas delineated by a red line and shaded in brown on attached map No. 1;

b. 'Area B' means the populated areas delineated by a red line and shaded in yellow on attached map No. 1, and the built-up area of the hamlets listed in Appendix 6 to Annex I; and

c. 'Area C' means areas of the West Bank outside Areas A and B, which, except for the issues that will be negotiated in the permanent status negotiations, will be gradually transferred to Palestinian jurisdiction in accordance with this Agreement.

ARTICLE XII

Arrangements for Security and Public Order

1. In order to guarantee public order and internal security for the Palestinians of the West Bank and the Gaza Strip, the Council shall establish a strong police force as set out in Article XIV below. Israel shall continue to carry the responsibility for defence against external threats, including the responsibility for protecting the Egyptian and Jordanian borders, and for defence against external threats from the sea and from the air, as well as the responsibility for overall security of Israelis and Settlements, for the purpose of safeguarding their internal security and public order, and will have all the powers to take the steps necessary to meet this responsibility.

2. Agreed security arrangements and co-ordination mechanisms are specified in Annex I.

3. A Joint Co-ordination and Co-operation Committee for Mutual Security Purposes (hereinafter 'the JSC'), as well as Joint Regional Security Committees (hereinafter 'RSCs') and Joint District Co-ordination Offices (hereinafter 'DCOs'), are hereby established as provided for in Annex I.

4. The security arrangements provided for in this Agreement and in Annex I may be reviewed at the request of either Party and may be amended by mutual agreement of the Parties. Specific review arrangements are included in Annex I.

5. For the purpose of this Agreement, 'the Settlements' means, in the West Bank—the settlements in Area C; and in the Gaza Strip—the Gush Katif and Erez settlement areas, as well as the other settlements in the Gaza Strip, as shown on attached map No. 2 (*not reproduced—Ed.*).

ARTICLE XIII

Security

1. The Council will, upon completion of the redeployment of Israeli military forces in each district, as set out in Appendix 1 to Annex I, assume the powers and responsibilities for internal security and public order in Area A in that district.

2.a. There will be a complete redeployment of Israeli military forces from Area B. Israel will transfer to the Council and the Council will assume responsibility for public order for Palestinians. Israel shall have the overriding responsibility for security for the purpose of protecting Israelis and confronting the threat of terrorism.

b. In Area B the Palestinian Police shall assume the responsibility for public order for Palestinians and shall be deployed in order to accommodate the Palestinian needs and requirements in the following manner:

(1) The Palestinian Police shall establish 25 police stations and posts in towns, villages, and other places listed in Appendix 2 to Annex I and as delineated on map No. 3 (*not reproduced—Ed.*). The West Bank RSC may agree on the establishment of additional police stations and posts, if required.

(2) The Palestinian Police shall be responsible for handling public order incidents in which only Palestinians are involved.

(3) The Palestinian Police shall operate freely in populated places where police stations and posts are located, as set out in paragraph b(1) above.

(4) While the movement of uniformed Palestinian policemen in Area B outside places where there is a Palestinian police station or post will be carried out after co-ordination and confirmation through the relevant DCO, three months after the completion of redeployment from Area B, the DCOs may decide

that movement of Palestinian policemen from the police stations in Area B to Palestinian towns and villages in Area B on roads that are used only by Palestinian traffic will take place after notifying the DCO.

(5) The co-ordination of such planned movement prior to confirmation through the relevant DCO shall include a scheduled plan, including the number of policemen, as well as the type and number of weapons and vehicles intended to take part. It shall also include details of arrangements for ensuring continued co-ordination through appropriate communication links, the exact schedule of movement to the area of the planned operation, including the destination and routes thereto, its proposed duration and the schedule for returning to the police station or post.

The Israeli side of the DCO will provide the Palestinian side with its response, following a request for movement of policemen in accordance with this paragraph, in normal or routine cases within one day and in emergency cases no later than 2 hours.

(6) The Palestinian Police and the Israeli military forces will conduct joint security activities on the main roads as set out in Annex 1.

(7) The Palestinian Police will notify the West Bank RSC of the names of the policemen, number plates of police vehicles and serial numbers of weapons, with respect to each police station and post in Area B.

(8) Further redeployments from Area C and transfer of internal security responsibility to the Palestinian Police in Areas B and C will be carried out in three phases, each to take place after an interval of six months, to be completed 18 months after the inauguration of the Council, except for the issues of permanent status negotiations and of Israel's overall responsibility for Israelis and borders.

(9) The procedures detailed in this paragraph will be reviewed within six months of the completion of the first phase of redeployment.

ARTICLE XIV

The Palestinian Police

1. The Council shall establish a strong police force. The duties, functions, structure, deployment and composition of the Palestinian Police, together with provisions regarding its equipment and operation, as well as rules of conduct, are set out in Annex I.

2. The Palestinian police force established under the Gaza-Jericho Agreement will be fully integrated into the Palestinian Police and will be subject to the provisions of this Agreement.

3. Except for the Palestinian Police and the Israeli military forces, no other armed forces shall be established or operate in the West Bank and the Gaza Strip.

4. Except for the arms, ammunition and equipment of the Palestinian Police described in Annex I, and those of the Israeli military forces, no organization, group or individual in the West Bank and the Gaza Strip shall manufacture, sell, acquire, possess, import or otherwise introduce into the West Bank or the Gaza Strip any firearms, ammunition, weapons, explosives, gunpowder or any related equipment, unless otherwise provided for in Annex I.

ARTICLE XV

Prevention of Hostile Acts

1. Both sides shall take all measures necessary in order to prevent acts of terrorism, crime and hostilities directed against each other, against individuals falling under the other's authority and against their property, and shall take legal measures against offenders.

2. Specific provisions for the implementation of this Article are set out in Annex I.

ARTICLE XVI

Confidence Building Measures

With a view to fostering a positive and supportive public atmosphere to accompany the implementation of this Agreement, to establish a solid basis of mutual trust and good faith, and in order to facilitate the anticipated co-operation and new relations between the two peoples, both Parties agree to carry out confidence building measures as detailed herewith:

1. Israel will release or turn over to the Palestinian side, Palestinian detainees and prisoners, residents of the West Bank and the Gaza Strip. The first stage of release of these prisoners and detainees will take place on the signing of this Agreement and the second stage will take place prior to the date of the elections. There will be a third stage of release of detainees and prisoners. Detainees and prisoners will be released from among categories detailed in Annex VII (Release of Palestinian Prisoners and Detainees). Those released will be free to return to their homes in the West Bank and the Gaza Strip.
2. Palestinians who have maintained contact with the Israeli authorities will not be subjected to acts of harassment, violence, retribution or prosecution. Appropriate ongoing measures will be taken, in co-ordination with Israel, in order to ensure their protection.
3. Palestinians from abroad whose entry into the West Bank and the Gaza Strip is approved pursuant to this Agreement, and to whom the provisions of this Article are applicable, will not be prosecuted for offences committed prior to September 13, 1993.

CHAPTER 3—LEGAL AFFAIRS

ARTICLE XVII

Jurisdiction

1. In accordance with the DOP, the jurisdiction of the Council will cover West Bank and Gaza Strip territory as a single territorial unit, except for:

a. Issues that will be negotiated in the permanent status negotiations: Jerusalem, settlements, specified military locations, Palestinian refugees, borders, foreign relations and Israelis; and

b. Powers and responsibilities not transferred to the Council.

2. Accordingly, the authority of the Council encompasses all matters that fall within its territorial, functional and personal jurisdiction, as follows:

a. The territorial jurisdiction of the Council shall encompass Gaza Strip territory, except for the Settlements and the Military Installation Area shown on map No. 2, and West Bank territory, except for Area C which, except for the issues that will be negotiated in the permanent status negotiations, will be gradually transferred to Palestinian jurisdiction in three phases, each to take place after an interval of six months, to be completed 18 months after the inauguration of the Council. At this time, the jurisdiction of the Council will cover West Bank and Gaza Strip territory, except for the issues that will be negotiated in the permanent status negotiations.

Territorial jurisdiction includes land, subsoil and territorial waters, in accordance with the provisions of this Agreement.

b. The functional jurisdiction of the Council extends to all powers and responsibilities transferred to the Council, as specified in this Agreement or in any future agreements that may be reached between the Parties during the interim period.

c. The territorial and functional jurisdiction of the Council will apply to all persons, except for Israelis, unless otherwise provided in this Agreement.

d. Notwithstanding subparagraph a. above, the Council shall have functional jurisdiction in Area C, as detailed in Article IV of Annex III.

3. The Council has, within its authority, legislative, executive

and judicial powers and responsibilities, as provided for in this Agreement.

4.a. Israel, through its military government, has the authority over areas that are not under the territorial jurisdiction of the Council, powers and responsibilities not transferred to the Council and Israelis.

b. To this end, the Israeli military government shall retain the necessary legislative, judicial and executive powers and responsibilities, in accordance with international law. This provision shall not derogate from Israel's applicable legislation over Israelis in personam.

5. The exercise of authority with regard to the electromagnetic sphere and air space shall be in accordance with the provisions of this Agreement.

6. Without derogating from the provisions of this Article, legal arrangements detailed in the Protocol Concerning Legal Matters attached as Annex IV to this Agreement (hereinafter 'Annex IV') shall be observed. Israel and the Council may negotiate further legal arrangements.

7. Israel and the Council shall co-operate on matters of legal assistance in criminal and civil matters through a legal committee (hereinafter 'the Legal Commmittee'), hereby established.

8. The Council's jurisdiction will extend gradually to cover West Bank and Gaza Strip territory, except for the issues to be negotiated in the permanent status negotiations, through a series of redeployments of the Israeli military forces. The first phase of the redeployment of Israeli military forces will cover populated areas in the West Bank—cities, towns, refugee camps and hamlets, as set out in Annex I—and will be completed prior to the eve of the Palestinian elections, i.e. 22 days before the day of the elections. Further redeployments of Israeli military forces to specified military locations will commence immediately upon the inauguration of the Council and will be effected in three phases, each to take place after an interval of six months, to be concluded no later than eighteen months from the date of the inauguration of the Council.

ARTICLE XVIII

Legislative Powers of the Council

1. For the purposes of this Article, legislation shall mean any primary and secondary legislation, including basic laws, laws, regulations and other legislative acts.

2. The Council has the power, within its jurisdiction as defined in Article XVII of this Agreement, to adopt legislation.

3. While the primary legislative power shall lie in the hands of the Council as a whole, the Ra'ees of the Executive Authority of the Council shall have the following legislative powers:

a. The power to initiate legislation or to present proposed legislation to the Council;

b. The power to promulgate legislation adopted by the Council; and

c. The power to issue secondary legislation, including regulations, relating to any matters specified and within the scope laid down in any primary legislation adopted by the Council.

4.a. Legislation, including legislation which amends or abrogates existing laws or military orders, which exceeds the jurisdiction of the Council or which is otherwise inconsistent with the provisions of the DOP, this Agreement, or of any other agreement that may be reached between the two sides during the interim period, shall have no effect and shall be void ab initio.

b. The Ra'ees of the Executive Authority of the Council shall not promulgate legislation adopted by the Council if such legislation falls under the provisions of this paragraph.

5. All legislation shall be communicated to the Israeli side of the Legal Committee.

6. Without derogating from the provisions of paragraph 4 above, the Israeli side of the Legal Committee may refer for the attention of the Committee any legislation regarding which Israel considers the provisions of paragraph 4 apply, in order to discuss issues arising from such legislation. The Legal Committee will consider the legislation referred to it at the earliest opportunity.

ARTICLE XIX

Human Rights and the Rule of Law

Israel and the Council shall exercise their powers and responsibilities pursuant to this Agreement with due regard to internationally-accepted norms and principles of human rights and the rule of law.

ARTICLE XX

Rights, Liabilities and Obligations

1.a. Transfer of powers and responsibilities from the Israeli military government and its civil administration to the Council, as detailed in Annex III, includes all related rights, liabilities and obligations arising with regard to acts or omissions which occurred prior to such transfer. Israel will cease to bear any financial responsibility regarding such acts or omissions and the Council will bear all financial responsibility for these and for its own functioning.

b. Any financial claim made in this regard against Israel will be referred to the Council.

c. Israel shall provide the Council with the information it has regarding pending and anticipated claims brought before any court or tribunal against Israel in this regard.

d. Where legal proceedings are brought in respect of such a claim, Israel will notify the Council and enable it to participate in defending the claim and raise any arguments on its behalf.

e. In the event that an award is made against Israel by any court or tribunal in respect of such a claim, the Council shall immediately reimburse Israel the full amount of the award.

f. Without prejudice to the above, where a court or tribunal hearing such a claim finds that liability rests solely with an employee or agent who acted beyond the scope of the powers assigned to him or her, unlawfully or with willful malfeasance, the Council shall not bear financial responsibility.

2.a. Notwithstanding the provisions of paragraphs 1.d through 1.f above, each side may take the necessary measures, including promulgation of legislation, in order to ensure that such claims by Palestinians, including pending claims in which the hearing of evidence has not yet begun, are brought only before Palestinian courts or tribunals in the West Bank and the Gaza Strip, and are not brought before or heard by Israeli courts or tribunals.

b. Where a new claim has been brought before a Palestinian court or tribunal subsequent to the dismissal of the claim pursuant to subparagraph a. above, the Council shall defend it and, in accordance with subparagraph 1.a above, in the event that an award is made for the plaintiff, shall pay the amount of the award.

c. The Legal Committee shall agree on arrangements for the transfer of all materials and information needed to enable the Palestinian courts or tribunals to hear such claims as referred to in subparagrah b. above, and, when necessary, for the provision of legal assistance by Israel to the Council in defending such claims.

3. The transfer of authority in itself shall not affect rights, liabilities and obligations of any person or legal entity, in existence at the date of signing of this Agreement.

4. The Council, upon its inauguration, will assume all the rights, liabilities and obligations of the Palestinian Authority.

5. For the purpose of this Agreement, 'Israelis' also includes Israeli statutory agencies and corporations registered in Israel.

ARTICLE XXI

Settlement of Differences and Disputes

Any difference relating to the application of this Agreement shall be referred to the appropriate co-ordination and co-operation mechanism established under this Agreement. The provisions

of Article XV of the DOP shall apply to any such difference which is not settled through the appropriate co-ordination and co-operation mechanism, namely:

1. Disputes arising out of the application or interpretation of this Agreement or any related agreements pertaining to the interim period shall be settled through the Liaison Committee.
2. Disputes which cannot be settled by negotiations may be settled by a mechanism of conciliation to be agreed between the Parties.
3. The Parties may agree to submit to arbitration disputes relating to the interim period, which cannot be settled through conciliation. To this end, upon the agreement of both Parties, the Parties will establish an Arbitration Committee.

CHAPTER 4—CO-OPERATION

ARTICLE XXII

Relations between Israel and the Council

1. Israel and the Council shall seek to foster mutual understanding and tolerance and shall accordingly abstain from incitement, including hostile propaganda, against each other and, without derogating from the principle of freedom of expression, shall take legal measures to prevent such incitement by any organizations, groups or individuals within their jurisdiction.

2. Israel and the Council will ensure that their respective educational systems contribute to the peace between the Israeli and Palestinian peoples and to peace in the entire region, and will refrain from the introduction of any motifs that could adversely affect the process of reconciliation.

3. Without derogating from the other provisions of this Agreement, Israel and the Council shall co-operate in combating criminal activity which may affect both sides, including offenses related to trafficking in illegal drugs and psychotropic substances, smuggling, and offenses against property, including offenses related to vehicles.

ARTICLE XXIII

Co-operation with Regard to Transfer of Powers and Responsibilities

In order to ensure a smooth, peaceful and orderly transfer of powers and responsibilities, the two sides will co-operate with regard to the transfer of security powers and responsibilities in accordance with the provisions of Annex I, and the transfer of civil powers and responsibilities in accordance with the provisions of Annex III.

ARTICLE XXIV

Economic Relations

The economic relations between the two sides are set out in the Protocol on Economic Relations, signed in Paris on April 29, 1994, and the Appendices thereto, and the Supplement to the Protocol on Economic Relations, all attached as Annex V, and will be governed by the relevant provisions of this Agreement and its Annexes.

ARTICLE XXV

Co-operation Programmes

1. The Parties agree to establish a mechanism to develop programmes of co-operation between them. Details of such co-operation are set out in Annex VI.

2. A Standing Co-operation Committee to deal with issues arising in the context of this co-operation is hereby established as provided for in Annex VI.

ARTICLE XXVI

The Joint Israeli-Palestinian Liaison Committee

1. The Liaison Committee established pursuant to Article X of the DOP shall ensure the smooth implementation of this Agreement. It shall deal with issues requiring co-ordination, other issues of common interest and disputes.

2. The Liaison Committee shall be composed of an equal number of members from each Party. It may add other technicians and experts as necessary.

3. The Liaison Committee shall adopt its rules of procedures, including the frequency and place or places of its meetings.

4. The Liaison Committee shall reach its decisions by agreement.

5. The Liaison Committee shall establish a subcommittee that will monitor and steer the implementation of this Agreement (hereinafter 'the Monitoring and Steering Committee'). It will function as follows:

a. The Monitoring and Steering Committee will, on an ongoing basis, monitor the implementation of this Agreement, with a view to enhancing the co-operation and fostering the peaceful relations between the two sides.
b. The Monitoring and Steering Committee will steer the activities of the various joint committees established in this Agreement (the JSC, the CAC, the Legal Committee, the Joint Economic Committee and the Standing Co-operation Committee) concerning the ongoing implementation of the Agreement, and will report to the Liaison Committee.
c. The Monitoring and Steering Committee will be composed of the heads of the various committees mentioned above.
d. The two heads of the Monitoring and Steering Committee will establish its rules of procedures, including the frequency and places of its meetings.

ARTICLE XXVII

Liaison and Co-operation with Jordan and Egypt

1. Pursuant to Article XII of the DOP, the two Parties have invited the Governments of Jordan and Egypt to participate in establishing further liaison and co-operation arrangements between the Government of Israel and the Palestinian representatives on the one hand, and the Governments of Jordan and Egypt on the other hand, to promote co-operation between them. As part of these arrangements a Continuing Committee has been constituted and has commenced its deliberations.

2. The Continuing Committee shall decide by agreement on the modalities of admission of persons displaced from the West Bank and the Gaza Strip in 1967, together with necessary measures to prevent disruption and disorder.

3. The Continuing Committee shall also deal with other matters of common concern.

ARTICLE XXVIII

Missing Persons

1. Israel and the Council shall co-operate by providing each other with all necessary assistance in the conduct of searches for missing persons and bodies of persons which have not been recovered, as well as by providing information about missing persons.

2. The PLO undertakes to co-operate with Israel and to assist it in its efforts to locate and to return to Israel Israeli soldiers who are missing in action and the bodies of soldiers which have not been recovered.

CHAPTER 5—MISCELLANEOUS PROVISIONS

ARTICLE XXIX

Safe Passage between the West Bank and the Gaza Strip

Arrangements for safe passage of persons and transportation between the West Bank and the Gaza Strip are set out in Annex 1.

ARTICLE XXX

Passages

Arrangements for co-ordination between Israel and the Council regarding passage to and from Egypt and Jordan, as well as any other agreed international crossings, are set out in Annex I.

ARTICLE XXXI

Final Clauses

1. This Agreement shall enter into force on the date of its signing.

2. The Gaza-Jericho Agreement, the Preparatory Transfer Agreement and the Further Transfer Protocol will be superseded by this Agreement.

3. The Council, upon its inauguration, shall replace the Palestinian Authority and shall assume all the undertakings and obligations of the Palestinian Authority under the Gaza-Jericho Agreement, the Preparatory Transfer Agreement, and the Further Transfer Protocol.

4. The two sides shall pass all necessary legislation to implement this Agreement.

5. Permanent status negotiations will commence as soon as possible, but not later than May 4, 1996, between the Parties. It is understood that these negotiations shall cover remaining issues, including: Jerusalem, refugees, settlements, security arrangements, borders, relations and co-operation with other neighbours, and other issues of common interest.

6. Nothing in this Agreement shall prejudice or preempt the outcome of the negotiations on the permanent status to be conducted pursuant to the DOP. Neither Party shall be deemed, by virtue of having entered into this Agreement, to have renounced or waived any of its existing rights, claims or positions.

7. Neither side shall initiate or take any step that will change the status of the West Bank and the Gaza Strip pending the outcome of the permanent status negotiations.

8. The two Parties view the West Bank and the Gaza Strip as a single territorial unit, the integrity and status of which will be preserved during the interim period.

9. The PLO undertakes that, within two months of the date of the inauguration of the Council, the Palestinian National Council will convene and formally approve the necessary changes in regard to the Palestinian Covenant, as undertaken in the letters signed by the Chairman of the PLO and addressed to the Prime Minister of Israel, dated September 9, 1993 and May 4, 1994.

10. Pursuant to Annex I, Article IX of this Agreement, Israel confirms that the permanent checkpoints on the roads leading to and from the Jericho Area (except those related to the access road leading from Mousa Alami to the Allenby Bridge) will be removed upon the completion of the first phase of redeployment.

11. Prisoners who, pursuant to the Gaza-Jericho Agreement, were turned over to the Palestinian Authority on the condition that they remain in the Jericho Area for the remainder of their sentence, will be free to return to their homes in the West Bank and the Gaza Strip upon the completion of the first phase of redeployment.

12. As regards relations between Israel and the PLO, and without derogating from the commitments contained in the letters signed by and exchanged between the Prime Minister of Israel and the Chairman of the PLO, dated September 9, 1993 and May 4, 1994, the two sides will apply between them the provisions contained in Article XXII, paragraph 1, with the necessary changes.

13.a. The Preamble to this Agreement, and all Annexes, Appendices and maps attached hereto (*not reproduced—Ed.*), shall constitute an integral part hereof.

b. The Parties agree that the maps (*not reproduced—Ed.*) attached to the Gaza-Jericho Agreement as:

a. map No. 1 (The Gaza Strip), an exact copy of which is attached to this Agreement as map No. 2 (in this Agreement 'map No. 2');

b. map No. 4 (Deployment of Palestinian Police in the Gaza Strip), an exact copy of which is attached to this Agreement as map No. 5 (in this Agreement 'map No. 5'); and

c. map No. 6 (Maritime Activity Zones), an exact copy of which is attached to this Agreement as map No. 8 (in this Agreement 'map No. 8');

are an integral part hereof and will remain in effect for the duration of this Agreement.

14. While the Jeftlik area will come under the functional and personal jurisdiction of the Council in the first phase of redeployment, the area's transfer to the territorial jurisdiction of the Council will be considered by the Israeli side in the first phase of the further redeployment phases.

THE WYE RIVER MEMORANDUM

The Wye River Memorandum was signed by Israeli Prime Minister Binyamin Netanyahu and PNA President Yasser Arafat, and witnessed by US President Bill Clinton, on 23 October 1998 at the Wye Plantation, Maryland, USA. The Memorandum was to enter into force 10 days after this date. An attachment to the Memorandum detailed a 'time line' for the implementation of the terms of the Interim Agreement and the Memorandum.

The following are steps to facilitate implementation of the Interim Agreement on the West Bank and Gaza Strip of September 28, 1995 (the 'Interim Agreement') and other related agreements including the Note for the Record of January 17, 1997 (hereinafter referred to as 'the prior agreements') so that the Israeli and Palestinian sides can more effectively carry out their reciprocal responsibilities, including those relating to further redeployments and security respectively. These steps are to be carried out in a parallel phased approach in accordance with this Memorandum and the attached time line. They are subject to the relevant terms and conditions of the prior agreements and do not supersede their other agreements.

I. FURTHER REDEPLOYMENTS

A. Phase One and Two Further Redeployments

1. Pursuant to the Interim Agreement and subsequent agreements, the Israeli side's implementation of the first and second F.R.D. will consist of the transfer to the Palestinian side of 13% from Area C as follows:

1% to Area (A)

12% to Area (B)

The Palestinian side has informed that it will allocate an area/areas amounting to 3% from the above Area (B) to be designated as Green Areas and/or Nature Reserves. The Palestinian side has further informed that they will act according to the established scientific standards, and that therefore there will be no changes in the status of these areas, without prejudice to the rights of the existing inhabitants in these areas including Bedouins; while these standards do not allow new construction in these areas, existing roads and buildings may be maintained.

The Israeli side will retain in these Green Areas/Nature Reserves the overriding security responsibility for the purpose of protecting Israelis and confronting the threat of terrorism. Activities and movements of the Palestinian Police forces may be carried out after co-ordination and confirmation; the Israeli side will respond to such requests expeditiously.

2. As part of the foregoing implementation of the first and second F.R.D., 14.2% from Area (B) will become Area (A).

B. Third Phase of Further Redeployments

With regard to the terms of the Interim Agreement and of Secretary Christopher's letters to the two sides of January 17, 1997 relating to the further redeployment process, there will be a committee to address this question. The United States will be briefed regularly.

II. SECURITY

In the provisions on security arrangements of the Interim Agreement, the Palestinian side agreed to take all measures necessary in order to prevent acts of terrorism, crime and hostilities directed against the Israeli side, against individuals falling under the Israeli side's authority and against their property, just as the Israeli side agreed to take all measures necessary in order to prevent acts of terrorism, crime and hostilities directed against the Palestinian side, against individuals falling under the Palestinian side's authority and against their property. The two sides also agreed to take legal measures against offenders within their jurisdiction and to prevent incitement against each other by any organizations, groups or individuals within their jurisdiction.

Both sides recognize that it is in their vital interests to combat terrorism and fight violence in accordance with Annex I of the Interim Agreement and the Note for the Record. They also recognize that the struggle against terror and violence must be comprehensive in that it deals with terrorists, the terror support structure, and the environment conducive to the support of terror. It must be continuous and constant over a long-term, in

that there can be no pauses in the work against terrorists and their structure. It must be co-operative in that no effort can be fully effective without Israeli-Palestinian co-operation and the continuous exchange of information, concepts, and actions.

Pursuant to the prior agreements, the Palestinian side's implementation of its responsibilities for security, security co-operation, and other issues will be as detailed below during the time periods specified in the attached time line:

A. Security Actions

1. Outlawing and Combating Terrorist Organizations

a. The Palestinian side will make known its policy of zero tolerance for terror and violence against both sides.

b. A work plan developed by the Palestinian side will be shared with the U.S. and thereafter implementation will begin immediately to ensure the systematic and effective combat of terrorist organizations and their infrastructure.

c. In addition to the bilateral Israeli-Palestinian security co-operation, a U.S.-Palestinian committee will meet biweekly to review the steps being taken to eliminate terrorist cells and the support structure that plans, finances, supplies and abets terror. In these meetings, the Palestinian side will inform the U.S. fully of the actions it has taken to outlaw all organizations (or wings of organizations, as appropriate) of a military, terrorist or violent character and their support structure and to prevent them from operating in areas under its jurisdiction.

d. The Palestinian side will apprehend the specific individuals suspected of perpetrating acts of violence and terror for the purpose of further investigation, and prosecution and punishment of all persons involved in acts of violence and terror.

e. A U.S.-Palestinian committee will meet to review and evaluate information pertinent to the decisions on prosecution, punishment or other legal measures which affect the status of individuals suspected of abetting or perpetrating acts of violence and terror.

2. Prohibiting Illegal Weapons

a. The Palestinian side will ensure an effective legal framework is in place to criminalize, in conformity with the prior agreements, any importation, manufacturing or unlicensed sale, acquisition or possession of firearms, ammunition or weapons in areas under Palestinian jurisdiction.

b. In addition, the Palestinian side will establish and vigorously and continuously implement a systematic programme for the collection and appropriate handling of all such illegal items in accordance with the prior agreements. The U.S. has agreed to assist in carrying out this programme.

c. A U.S.-Palestinian-Israeli committee will be established to assist and enhance co-operation in preventing the smuggling or other unauthorized introduction of weapons or explosive materials into areas under Palestinian jurisdiction.

3. Preventing Incitement

a. Drawing on relevant international practice and pursuant to Article XXII (1) of the Interim Agreement and the Note for the Record, the Palestinian side will issue a decree prohibiting all forms of incitement to violence or terror, and establishing mechanisms for acting systematically against all expressions or threats of violence or terror. This decree will be comparable to the existing Israeli legislation which deals with the same subject.

b. A U.S.-Palestinian-Israeli committee will meet on a regular basis to monitor cases of possible incitement to violence or terror and to make recommendations and reports on how to prevent such incitement. The Israeli, Palestinian and U.S. sides will each appoint a media specialist, a law enforcement representative, an educational specialist and a current or former elected official to the committee.

B. Security Co-operation

The two sides agree that their security co-operation will be based on a spirit of partnership and will include, among other things, the following steps:

1. Bilateral Co-operation

There will be full bilateral security co-operation between the two sides which will be continuous, intensive and comprehensive.

2. Forensic Co-operation

There will be an exchange of forensic expertise, training, and other assistance.

3. Trilateral Committee

In addition to the bilateral Israeli-Palestinian security co-operation, a high-ranking U.S.-Palestinian-Israeli committee will meet as required and not less than biweekly to assess current threats, deal with any impediments to effective security co-operation and co-ordination and address the steps being taken to combat terror and terrorist organizations. The committee will also serve as a forum to address the issue of external support for terror. In these meetings, the Palestinian side will fully inform the members of the committee of the results of its investigations concerning terrorist suspects already in custody and the participants will exchange additional relevant information. The committee will report regularly to the leaders of the two sides on the status of co-operation, the results of the meetings and its recommendations.

C. Other Issues

1. Palestinian Police Force

a. The Palestinian side will provide a list of its policemen to the Israeli side in conformity with the prior agreements.

b. Should the Palestinian side request technical assistance, the U.S. has indicated its willingness to help meet their needs in co-operation with other donors.

c. The Monitoring and Steering Committee will, as part of its functions, monitor the implementation of this provision and brief the U.S.

2. PLO Charter

The Executive Committee of the Palestine Liberation Organization and the Palestinian Central Council will reaffirm the letter of 22 January 1998 from PLO Chairman Yasser Arafat to President Clinton concerning the nullification of the Palestinian National Charter provisions that are inconsistent with the letters exchanged between the PLO and the Government of Israel on 9–10 September 1993. PLO Chairman Arafat, the Speaker of the Palestine National Council, and the Speaker of the Palestinian Council will invite the members of the PNC, as well as the members of the Central Council, the Council, and the Palestinian Heads of Ministries to a meeting to be addressed by President Clinton to reaffirm their support for the peace process and the aforementioned decisions of the Executive Committee and the Central Council.

3. Legal Assistance in Criminal Matters

Among other forms of legal assistance in criminal matters, the requests for arrest and transfer of suspects and defendants pursuant to Article II (7) of Annex IV of the Interim Agreement will be submitted (or resubmitted) through the mechanism of the Joint Israeli-Palestinian Legal Committee and will be responded to in conformity with Article II (7) (f) of Annex IV of the Interim Agreement within the twelve week period. Requests submitted after the eighth week will be responded to in conformity with Article II (7) (f) within four weeks of their submission. The U.S. has been requested by the sides to report on a regular basis on the steps being taken to respond to the above requests.

4. Human Rights and the Rule of Law

Pursuant to Article XI (1) of Annex I of the Interim Agreement, and without derogating from the above, the Palestinian Police will exercise powers and responsibilities to implement this Memorandum with due regard to internationally accepted norms of human rights and the rule of law, and will be guided by the need to protect the public, respect human dignity, and avoid harassment.

III. INTERIM COMMITTEES AND ECONOMIC ISSUES

1. The Israeli and Palestinian sides reaffirm their commitment to enhancing their relationship and agree on the need actively to promote economic development in the West Bank and Gaza. In this regard, the parties agree to continue or to reactivate all standing committees established by the Interim Agreement, including the Monitoring and Steering Committee, the Joint Economic Committee (JEC), the Civil Affairs Committee (CAC), the Legal Committee, and the Standing Co-operation Committee.

2. The Israeli and Palestinian sides have agreed on arrangements which will permit the timely opening of the Gaza Industrial Estate. They also have concluded a 'Protocol Regarding the Establishment and Operation of the International Airport in the Gaza Strip During the Interim Period'.

3. Both sides will renew negotiations on Safe Passage immediately. As regards the southern route, the sides will make best efforts to conclude the agreement within a week of the entry into force of this Memorandum. Operation of the southern route will start as soon as possible thereafter. As regards the northern route, negotiations will continue with the goal of reaching agreement as soon as possible. Implementation will take place expeditiously thereafter.

4. The Israeli and Palestinian sides acknowledge the great importance of the Port of Gaza for the development of the Palestinian economy, and the expansion of Palestinian trade. They commit themselves to proceeding without delay to conclude an agreement to allow the construction and operation of the port in accordance with the prior agreements. The Israeli-Palestinian Committee will reactivate its work immediately with a goal of concluding the protocol within sixty days, which will allow commencement of the construction of the port.

5. The two sides recognize that unresolved legal issues adversely affect the relationship between the two peoples. They therefore will accelerate efforts through the Legal Committee to address outstanding legal issues and to implement solutions to these issues in the shortest possible period. The Palestinian side will provide to the Israeli side copies of all of its laws in effect.

6. The Israeli and Palestinian sides will launch a strategic economic dialogue to enhance their economic relationship. They will establish within the framework of the JEC an Ad Hoc Committee for this purpose. The committee will review the following four issues: (1) Israeli purchase tax; (2) co-operation in combating vehicle theft; (3) dealing with unpaid Palestinian debts; and (4) the impact of Israeli standards as barriers to trade and the expansion of the A1 and A2 lists. The committee will submit an interim report within three weeks of the entry into force of this Memorandum, and within six weeks will submit its conclusions and recommendations to be implemented.

7. The two sides agree on the importance of continued international donor assistance to facilitate implementation by both sides of agreements reached. They also recognize the need for enhanced donor support for economic development in the West Bank and Gaza. They gree jointly to approach the donor community to organize a Ministerial Conference before the end of 1998 to seek pledges for enhanced levels of assistance.

IV. PERMANENT STATUS NEGOTIATIONS

The two sides will immediately resume permanent status negotiations on an accelerated basis and will make a determined effort to achieve the mutual goal of reaching an agreement by May 4, 1999. The negotiations will be continuous and without interruption. The U.S. has expressed its willingness to facilitate these negotiations.

V. UNILATERAL ACTIONS

Recognizing the necessity to create a positive environment for the negotiations, neither side shall initiate or take any step that will change the status of the West Bank and the Gaza Strip in accordance with the Interim Agreement.

SHARM ESH-SHEIKH MEMORANDUM ON THE IMPLEMENTATION TIMELINE OF OUTSTANDING COMMITMENTS OF AGREEMENTS SIGNED AND THE RESUMPTION OF PERMANENT STATUS NEGOTIATIONS (WYE TWO)

The implementation of the Wye River Memorandum having stalled under the Netanyahu administration in Israel (largely owing to the continuing terrorist activities of Palestinian guerrilla organizations and the consequent refusal by Netanyahu to authorize the release of Palestinian political prisoners as agreed under the terms of the Wye River Memorandum), in September 1999 the new Israeli Prime Minister, Ehud Barak, and the Palestinian leader, Yasser Arafat, met in the Egyptian resort of Sharm esh-Sheikh to discuss the possible reactivation of the Memorandum. On 4 September the two leaders signed the Sharm esh-Sheikh Memorandum on the Implementation Timeline of Outstanding Commitments of Agreements Signed and the Resumption of Permanent Status Negotiations (also known as Wye Two), which detailed a revised timetable for the outstanding provisions of the October 1998 Memorandum, including: the conclusion of permanent status negotiations within one year of the resumption of talks on this issue (to be commenced not later than 13 September 1999), with an agreed framework for these negotiations to be concluded by 13 February 2000; Israeli redeployments from a further 10% of the West Bank to be undertaken on 5 September 1999, 15 November 1999 and 20 January 2000; 200 Palestinian prisoners to be released on 5 September 1999, and a further 150 to be released on 8 October 1999; southern safe passage to become operational from 1 October 1999, location of northern safe passage to be agreed by 5 October 1999; construction of Gaza sea port to begin on 1 October 1999; increased, immediate and effective security co-operation to be undertaken.

OIL IN THE MIDDLE EAST AND NORTH AFRICA

PETER BILD

Updated for this edition by SIMON CHAPMAN

INTRODUCTION

At the time of writing, in mid-July 1999, crude oil prices had recovered strongly from the near-record low levels at which they had stagnated as recenty as late 1998. As prices re-entered what had formerly been considered as the long-term, sustainable trading range—US $15–$20 per barrel—before the onset, from the second half of 1996, of a 24-month period of instability, a new mood of optimism characterized analysts' predictions for the second half of 1999. Some even forecast that, by September, market conditions would be comparable with those pertaining in the second half of 1996, when fears had been expressed that further increases in the price of oil might pose a threat to global economic growth.

OPEC's credibility restored

For the time being, at least, faith in the ability of OPEC—and its partners—to manage the market for oil from the supply side had been restored. It was widely agreed that the key factor behind the resurrection of the price of oil had been compliance with the agreement, announced in March 1999 after talks between Saudi Arabia, Iran, Algeria, Venezuela and Mexico, to reduce OPEC output by a further 1.7m. barrels per day (b/d, excluding Iraq) to 22.976m. b/d for a period of 12 months from 1 April 1999. Voluntary cuts in production by non-OPEC Mexico, Norway, Oman and Russia were to boost the latest reduction in supplies of crude oil to 2.1m. b/d. The agreement was subsequently ratified at the OPEC ministerial conference held in Vienna, Austria, on 23 March. It appeared that a dispute over Iran's compliance with previous agreements to reduce production had now been resolved, with Iran accepting that its quota should be calculated from a production level of 3.6m. b/d and not 3.9m. b/d as it had previously insisted. Saudi Arabia, the UAE and Kuwait, meanwhile, agreed to take responsibility for the outstanding Iranian reduction of some 300,000 b/d that had been agreed in July 1998. There was thus evidence, at last, of OPEC's determination to resolve its internal differences in order to maximize its potential to influence the market.

Despite the absence of any other alteration to the fundamentally bearish factors which had caused the collapse of world markets for crude oil from late 1997, the response to the latest OPEC agreement was immediate, with prices rising by some US $3.50 per barrel during the remainder of March 1999. By June it was estimated that OPEC production had declined to an average of some 23.25m. b/d. The rate of compliance with the March agreement, almost 90%, thus exceeded the level of adherence OPEC had managed to sustain in implementing previous reductions in supplies. Other favourable factors at mid-July 1999 included stronger demand resulting from more optimistic forecasts of global economic growth, and, especially, predictions of a swifter economic recovery in Asia than had previously been expected. Stronger demand and reduced supplies had finally begun to combine to erode inventories of crude oil and products, which had risen to their highest levels ever during 1998. Moreover, Iraq's capacity to negate any agreements to reduce production was generally agreed to have diminished, with that country unable to increase its production without further substantial investment in its oil-industry infrastructure.

OPEC's restored (if precarious) credibility contrasted strongly with the increasing marginalization of the Organization and the widespread predictions of its demise that succeeded its decision, taken in November 1997, to raise its production quota (to 27.5m. b/d) for the first time in four years. From December 1997 the market for oil began to collapse as the severity of the economic crisis in East Asia became apparent; and while OPEC's decision to raise its quota was not the only, or even the principal, cause of the collapse, it was understandably regarded as a serious misjudgement in view of the conditions of excessive supply prevailing at the time it was taken.

By mid-June 1998 the price of Saudi Arabia's marker crude, Arab Light, was only slightly higher than the level to which it had fallen during the collapse of the market in 1986. This was despite the announcement in early June of an agreement between Saudi Arabia, Venezuela and Mexico to reduce production by a further 450,000 b/d from 1 July 1998. Quite simply, the market did not believe that OPEC and its allies would be able to muster sufficient discipline to make the new reduction effective. Compliance with production cuts agreed in March 1998 was estimated at only about 75%. It seemed fanciful, in any case, to suppose that full compliance with the March agreement would have reversed the decline in demand caused by the East Asian economic crisis, by generally mild winter weather conditions in the northern hemisphere in 1997/98, and by an increase in world oil stocks of some 1.5m. b/d during the first half of 1998. Furthermore, as a result of increased Iraqi production the net effect of the March 1998 agreement had been the removal of only some 500,000 b/d in supplies.

Friction within OPEC

At the ministerial conference held in Vienna on 24 June 1998, OPEC agreed to reduce production by a further 1.355m. b/d (to 24.387m. b/d) from 1 July 1998 for a period of 12 months. However, the consensus of opinion among oil industry analysts was that this would not be enough to reverse the decline in prices. OPEC's belief in its capacity to make any difference appeared to have been eroded too. Following the ministerial conference Saudi Arabia's Minister of Petroleum and Mineral Resources described the system of national production quotas as outdated and suggested that a more informal grouping of producers might evolve from the current difficult market conditions. Saudi Arabia's frustration at quota violation by other OPEC members was well known. Ironically, in early July Venezuela, which had been consistently identified as one of the main offenders, complained that Iranian violations had been responsible for the failure of the Riyadh agreement concluded in March 1998. This latest, very public evidence of friction within OPEC, together with the news that Iraqi exports had risen as high as an average of 2.4m. b/d in the second half of June, scarcely augured well for the new attempt to restrain production.

In mid-August 1998 crude oil markets remained subject to the burden of very substantial oversupply. On 11 August the price of the September contract of the UK marker Brent—US $11.55 per barrel—was barely above its lowest level ever, to which it had fallen in October 1988. High stocks were the cause of this latest collapse: world-wide stores were reported to be almost full, and the Paris-based International Energy Agency (IEA) forecast that no significant decline in inventories was likely to occur until 1999 was well advanced. It was estimated that, by the end of July, OPEC compliance with the June 1998 agreement to reduce production further amounted to only about 60%. Oil industry analysts remained convinced that OPEC and its partners would have to implement more drastic cuts still in order to revive prices. By the end of August Reuters estimated that OPEC had achieved compliance of 90% with the June 1998 agreement, production have averaged 27.11m. b/d in that month. In September, according to the same source, compliance improved further, to 94%, as OPEC production declined to an estimated average of 27m. b/d. However, the market remained largely resistant to OPEC's efforts. While a slight recovery in prices had occurred after mid-August, this was attributed to ephemeral factors, such as adverse weather conditions in the USA and Mexico. The fragility of this 'recovery' was underlined in the first week of October, when spot prices discarded more

than 25% of their recent gains. High stocks continued to depress markets and the latest favourable estimates of OPEC compliance with the June agreement were by no means universally accepted. Increases in Iraqi exports—Iraqi production was reported to have risen to 2.49m. b/d in September—also continued to undermine OPEC's efforts to raise prices. There was no indication, at a meeting of the oil ministers of Saudi Arabia, Venezuela and Mexico in early October, of the likelihood of any further tightening of supplies.

By the time of the next OPEC ministerial conference, held in Vienna on 25 November 1998, there were still no signs that the measures hitherto adopted by the Organization had been—or would be—successful. Inventories—already at saturation point—had continued to increase during the third quarter of the year. As the winter in the northern hemisphere approached it was thought certain that stocks would decline, but the effects of the decline on prices were unlikely, in the opinion of most analysts, to be felt until well into 1999. It had been hoped that the agreements to reduce production concluded earlier in the year would bring about a recovery in prices to US $17–$18 per barrel by November. Instead, they remained below $12 per barrel and there was increasing concern that OPEC would no longer be able to sustain the discipline necessary to continue implementing the cuts in production already agreed, to say nothing of implementing further reductions. Kuwait, supported by Algeria, had been actively seeking a further reduction in OPEC production, but the influence of these countries within OPEC was slight. Oil industry observers generally concurred that it would be difficult to obtain Saudi Arabia's agreement to a further supply-side reduction without reciprocal commitments from Mexico and Venezuela, as further reductions by Saudi Arabia threatened to compromise its long-term strategy of gaining US market share.

Market calls OPEC's bluff

On the positive side, while prices had not even begun to approach the levels hoped for earlier in the year, they did, by November 1998, appear to have stabilized. Forecasts for demand in 1999 had also improved. The IEA, for example, predicted that it would rise to an average of 75.6m. b/d, compared with the average of 74.3m. b/d forecast for 1998. However, these positive factors were of little consequence. One week before the November ministerial conference prices sank to their lowest levels of the year, with Arab Light, the Saudi Arabian marker crude, trading at US $8.28 per barrel. On the day that the ministerial conference opened London futures prices fell to their lowest level—$10.65 per barrel—for 12 years. It appeared that the market had foreseen, correctly, that OPEC would do nothing that it regarded as significant to supplement the reductions in supplies already implemented. It proved impossible, at the ministerial conference, to obtain an agreement to extend the production cuts agreed in June 1998 by a further six months, until the end of 1999. Instead, OPEC undertook to improve compliance with the June agreement, which had been estimated at about 90% in October. It was reported that the average price of the OPEC 'basket' of crudes had fallen to $12.71 per barrel during the first nine months of 1998, compared with $18.81 per barrel during the corresponding period of 1997. At a summit meeting in early December 1998 the six member states of the Gulf Co-operation Council (GCC) took the initiative from OPEC and announced their own decision to extend the June agreement until the end of 1999. On the following day, however, the price of Arab Light fell to only $7.29 per barrel at one stage during trading.

In the second week of December 1998 Iraq's capacity to exert a positive (as well as negative) influence on the market was evident as the country's persistent dispute with the UN over weapons inspections provoked air-strikes by US and UK forces. Although Iraq's oil-export facilities were not targeted, the renewal of military action combined with speculation that representatives of Saudi Arabia, Venezuela and Mexico would meet shortly to consider further cuts in production to raise both spot and term prices. However, these gains were short-lived, with the price of Brent crude falling from about US $10.90 per barrel on 16 December to less than $10 per barrel the following day. Nor did the meeting of Saudi Arabian, Venezuelan and Mexican oil ministers produce any lasting effect, although Venezuela agreed that it would continue to implement the June 1998 agreement until the end of 1999. In its monthly report for December, the London-based Centre for Global Energy Studies (CGES) forecast that, without a reduction in the size of inventories and an additional reduction in OPEC supplies of about 1m. b/d, prices were unlikely to recover in 1999. The CGES regarded prevailing conditions as unfavourable for achieving a further supply-side reduction and predicted that prices would average no more than $11 per barrel in the new year.

High stocks remain key influence

At the beginning of 1999 the key influence on global markets for oil remained the very high levels of crude and products in storage: sufficient, according to some estimates, to meet industrial demand for about 60 days during the first six months of 1999. Given this level, the consensus of opinion among analysts was that prices would not recover without a further reduction in OPEC supplies. The Organization's failure to implement a further reduction at the ministerial conference in November 1998 was regarded as another misjudgement, and it was noted that compliance with the cuts in production already agreed had averaged only about 70% up to the end of December. In the absence of any improvement in compliance, it was regarded as unlikely that Saudi Arabia would agree to reduce its own production below 8m. b/d. Furthermore, Iran remained at odds with other OPEC members in its refusal to recognize the base figure from which the latest cuts were supposed to proceed. On a more positive note, low prices had led to reductions in non-OPEC supplies and these were expected to begin to affect stock levels during the second half of the year. However, the forecast for growth in world demand for oil remained very low at little more than 1%.

In January 1999 OPEC's ability to implement the reductions it had already agreed was called further into question. According to Reuters, compliance with existing agreements was only 66% during the month, with production totalling 27.81m. b/d, compared with 27.45m. b/d in December 1998. This, in combination with further increases in Iraqi production, meant that OPEC production had fallen only 1m. b/d below the level of production in February 1998 from which the cuts were measured. Continued near-record levels of stocks of crude and products in the OECD counties emphasized the urgent need for further action by OPEC. It was reported that in January, rather than having declined as usual at this time of the year, OECD inventories had actually risen by some 30m. barrels.

As noted above, the uplifting effect on prices of the March 1999 OPEC agreement—concluded in desperate circumstances—to implement a further reduction in supplies was immediate. While the increases were not sustained consistently during the ensuing months, it seemed clear by July that cuts in supplies had at last begun to reduce world stocks of crude and products towards levels regarded as normal. It remained open to question, however, whether OPEC would be able to maintain compliance with the March quotas if, as predicted, prices were to rise above US $20 per barrel in the final quarter of 1999.

The 1998 collapse in markets for crude oil has highlighted once again the vulnerability of many of the economies of the Middle East and North Africa which depend excessively on one, volatile commodity. While the recovery of oil prices will alleviate in the short term the budgetary difficulties of some of these states, some analysts have expressed concern that it may also lessen their resolve to implement economic reforms as a step towards diversification and restructuring. Others, meanwhile, believe that a new realism with regard to the price of oil has begun permanently to transform the business of oil globally. Saudi Arabia's willingness to renew co-operation with the major oil companies, although very much on its own terms, is one example of this realism. Another is the expectation of further consolidation among the oil majors following the merger of British Petroleum and Amoco announced in August 1998. Both developments appear to be founded on the recognition that there will be no lasting return to the high prices for oil that characterized the early 1990s.

For many observers, oil and money in the Middle East and North Africa mean the same thing. Inseparable they may be, but they are not the whole story. For all but the technical expert, it is the activities of governments, as represented by their

politicians, civil servants and oil market experts, which constitute the history of oil. During the 1950s and 1960s, as the Middle East and North Africa came to dominate world supplies, this history was relatively simple: world demand for oil grew steadily and rapidly on the basis of low prices and rapid economic growth in the industrialized world. Although governments tried increasingly to become involved and to take more direct control of their economic destinies, it was the major international oil companies (the so-called 'seven sisters'), in concert with the governments of Europe and the USA, that played the key role. These companies assessed demand for oil products and balanced it internally with supplies that they both owned and controlled. The first 'oil shock' in 1973 changed the situation in two important ways. The quadrupling of prices, together with the embargoes and reductions in production imposed by Arab governments, focused the attention of Western governments on oil. The cost of oil imports became a major element in international monetary affairs, creating massive but unequal balance-of-payments deficits in the West. It also gave rise to fears that the 'petrodollars' of the newly-rich Middle Easterners would exacerbate monetary upheavals and vastly increase already existing inflationary pressures. The IEA, essentially a rich oil consumers' club, was set up in an atmosphere of hostility and confrontation. More significantly for the oil-producing states of the Middle East and North Africa today, the IEA caused the fragmentation of the hitherto integrated operations of the international oil companies, forcing governments with little experience in handling major international economic forces to deal with the consequences of their decisions on prices. The disintegration of the oil industry, as governments took control of production, coincided with huge, unprecedented reversals in the previously growing role of oil as the industrialized world's chief source of energy. High prices, combined with the widespread belief that 'rapacious' Middle Eastern governments would again hold the Western world to ransom, by raising prices *ad infinitum* or by cutting off supplies or both, provoked a new wave of exploration and development which brought oil on to world markets just as demand was dropping most steeply in the early 1980s. The spiralling price increases in 1979–81 (the second 'oil shock'), and the initially determined effort by OPEC members to keep them at a peak of almost 10 times their level of only 10 years previously led inevitably to the third 'oil shock' of 1986, when prices and revenues in real inflation-adjusted terms declined to well below their pre-1973 levels.

From a dominant position in 1973 when OPEC supplied 65% of the oil produced outside the centrally-planned economies, its share had declined to only 40% by 1985, the year in which OPEC finally abandoned its attempt to maintain oil prices at unrealistic levels. For the Middle East and North Africa, the loss in market share was even more drastic and was concentrated in the short period of six years from 1979 to 1985. From a peak of nearly 24m. b/d in 1979, the eight OPEC members in the Middle East and North Africa were forced by falling demand and the availability of new supplies to reduce production by almost one-half to 13m. b/d in 1985. At that level of production, control over world oil prices became ever more difficult to maintain.

Today's problems stem largely from that time and were exacerbated by Iraq's ill-fated Kuwaiti adventure. The peoples of the Middle East and North Africa, naturally, but unwisely, regarded their enormously enhanced revenues as the pattern for the future, spending and over-spending their annual revenues on gigantic domestic infrastructural and industrial development projects. Adapting to the loss of up to 80% of national income in the space of four or five years would have been a major trauma even if the governments in question had had the discipline and foresight to treat their 1980/81 income levels as the temporary boon they turned out to be. However, governments and whole nations had borrowed and invested in the belief that these income levels would be sustained into the future.

On a day-to-day level, it was the unwillingness of major oil companies to buy what they regarded as over-priced oil that forced OPEC members to wage an ultimately self-defeating price war, and it became politically convenient to blame the 'conspiracies' of Western companies and governments for the oil states' inability to sell as much crude as they had hoped, and at a price which they themselves had determined. While it is still true that relationships with the major international oil companies are the everyday reality for government officials charged with marketing crude oil, these relationships are a symptom rather than the cause of long-term developments. The time is past when the oil companies could be grouped together by the oil exporters as 'the enemy'. The reality that oil-exporting governments now recognize to a greater or lesser extent is that the market is impartial. They are also aware that the regulation of oil supplies is the only way they can influence the market. This, in turn, means that their relationships amongst themselves determine oil prices in the short- to medium-term. The 'enemy', if there is one, is within.

At the same time, in describing the geopolitics of the oil industry, it is easy to overlook the complexity of the everyday operations that take place out of sight of the general public. Producing, separating, treating, piping, storing, shipping, refining, marketing and distributing the oil are each major and complex industries in their own right, with their own economic rules and political logic. Equally, it is important to remember that it is the oil producers' resources which provide the framework for the operations of the oil industry.

Whilst it is true that the distribution of oil resources is the most important factor in determining the ultimate winners and losers in the 'oil game', the skill with which these resources are managed, the financial and political strengths and weaknesses of the countries involved are what makes the industry fascinating and crucial to all those who depend on oil. These strengths and weaknesses significantly augment or diminish the intrinsic value of naturally distributed resources. Nowhere in the world is this more true than in the Middle East and North Africa.

Oil is not the only thing that Middle Eastern and North African countries have in common. They have been linked (and sometimes divided) by permutations of religion, language, ethnic similarities, by conquest from within and without, and by the social and political legacy these conquerors have left behind. The unremitting thirst of the industrialized countries and their oil companies for the huge, though still unquantified, reserves of oil and gas is only the latest in a long line of 'Acts of God' and 'Acts of Man' to impinge on the countries of the Middle East and North Africa. With all they have in common, it would be natural to expect them to act in harmony, to imagine that oil producers would always think the same way about the important decisions and developments that confront them all in promoting and operating their oil industries, which are their major source of money and wealth. It is all the more puzzling, then, that so many major divisions should occur regarding policy. But those who are prepared to step back from their own political concerns in Europe and the USA and, simultaneously, to look more closely at the realities of the Middle Eastern and North African countries should not really be surprised by this. Common interests in Europe, which led to the establishment of the EC, sprang from the ravages of two hugely destructive wars in this century, but these same common interests have not prevented major policy disputes within the EC.

The diplomatic history that preceded the founding of OPEC in 1960 is an instructive pointer to the problems of today. It took the intervention of far-sighted statesmen from Venezuela to overcome the political and personal rivalries endemic to the Middle East to create OPEC in the first place, and for more than a decade after its establishment, even some of its more ardent admirers would have admitted, based on its apparent achievements, that it might as well never have been created. Today, in OPEC's 39th year, all of its members, particularly the Middle Eastern and North African countries, can point to impressive achievements and economic developments in which they have all shared. Likewise, they share many of the social and political problems that accompany economic upheavals. However, neither massive increases in monetary reserves, nor the subsequent devastating reduction in national income have been sufficient to overcome the obstacles to a common policy that all OPEC members recognize as being desirable. Within OPEC, the 'awkwardness' of the Arab countries, especially those in the Gulf, is a constant complaint of representatives of other countries. However, although they portray themselves as the victims of the Arab countries, their problem, in trying to reach agreements on oil prices or production, results from their own

disunity rather than the unity of the Middle Eastern and North African countries.

The recent vicissitudes of the oil markets illustrate the need to look for the detailed national differences which lie beyond superficial similarities in the geological, social, political, economic and religious structures of the Middle Eastern and North African countries in order to understand their actions in the international arena.

As they entered the 1990s, the oil exporters of the Middle East and North Africa looked forward to healthier demand for their oil. 1988 and 1989 were eventful years, bringing both achievements and set-backs. They were years in which some long-standing problems were solved, but in which new problems also arose. Iraq agreed to abide by a production allocation equal to that of its erstwhile enemy Iran. However, the relief experienced by all oil exporters at the agreement of all 13 OPEC members to restrict output and observe a price target of $18 per barrel was shattered in the spring of 1989 when Kuwait declined to accept its quota within an overall production ceiling of 19.5m. b/d. Again, the stumbling block was a disagreement over policy objectives within the Middle Eastern and North African countries, rather than any clash between them and their counterparts in Asia, South America and West Africa. As prices began to weaken during the summer of 1989, after peaking at a level close to OPEC's official price target, many exporters felt they had almost exhausted all possibilities in their search for policies that all could accept.

It is worth recalling the geological, financial and political situations of the principal oil producers, which will continue to shape their attitudes on the fundamental questions facing oil exporters: what price should they aim to achieve in the short-, medium- and long-term, and to what extent are they prepared to achieve their objectives by reducing production? After the 'boom and bust' cycle of the period 1973–1986, producers are aware that the demand for oil is 'price elastic'. Sudden price increases do reduce the demand for oil, high prices do stimulate exploration, development and the production of new oil which competes with and replaces OPEC supplies. There were many economists and political leaders in the Middle East and North Africa who believed that oil's importance to the industrial economies was so great that it was immune to the conventional laws of supply and demand. Even though these laws are no longer in dispute, oil producers still respond to them in different ways.

For producers with relatively small remaining reserves, the long-term demand for and price of oil is of relatively little concern. Algeria, for example, can reasonably argue that it is not concerned that high oil prices may lead to exploitation of alternative sources of energy and/or alternative supplies of oil in twenty or thirty years' time. The same is true for Dubai and Qatar whose wealth depends on obtaining the highest possible price for their exports while resources last. On the other hand, Saudi Arabia, Kuwait, Iran, Iraq and Abu Dhabi, with a minimum of 100 years of oil reserves, regard excessively high prices as likely to deprive them of any source of revenue in the years ahead.

For all their cultural affinities, the perceived objectives of countries in the same reserves category differ in accordance with their domestic political systems.

The ability of those countries which possess high reserves of oil to accept lower prices at the expense of immediate income varies according to their financial strength and political stability. Kuwait's careful investment of its oil revenues over many years created an investment income comparable with its national income for oil exports. Saudi Arabia's decision in 1973 to build a modern physical infrastructure across its huge territory, its need to raise an enormously expensive army to defend its long borders with troublesome neighbours, and the financial needs of its ruling family have left it vulnerable to unexpected reductions in oil income. During the Iran–Iraq War, Iraq, which received massive financial support from Saudi Arabia and Kuwait, regarded lower prices as beneficial since they deprived Iran of the means to replace military equipment. Following the cease-fire declared in July 1988 both Iran and Iraq pursued a high-price policy in order to finance the rebuilding of their shattered economies. In Iran the ascendancy of more pragmatic politicians has modified this policy such that reasonably high prices, together with the development of alternatives to crude petroleum, are now the main aim. Iraq's adventure in Kuwait, which was ostensibly motivated by Kuwait's persistent flouting of its OPEC quota, has left its economy in a state of collapse. Kuwait, having followed a path dictated almost entirely by self-interest, could have expected some retaliation from its less fortunate OPEC partners. The invasion by Iraq and its vicious policy of destruction went far beyond the avowed aim of bringing a recalcitrant OPEC partner back into line, giving the lie to assertions of regional solidarity.

OWNERSHIP OF THE INDUSTRY AND SUPPLY CONTRACTS

Concessions

Until the end of 1972 the bulk of the Middle East's and North Africa's output was produced under the traditional concession agreements. The first of the concessions was granted in 1901 in Iran by Muzzaffareddin Shah to William Knox D'Arcy, in return for £20,000 in cash and the promise of a further £20,000 in shares. Oil was finally discovered in 1908 at Masjid-i-Sulaiman, and just before the beginning of the First World War, the Anglo-Persian Oil Company, which had been formed to take over the concession, began exports through the port of Abadan. (APOC was renamed the Anglo-Iranian Oil Company in 1935 and British Petroleum in 1954.)

During the 1920s and 1930s further concessions were granted in Iraq and in the states of the Arabian Peninsula—and in every case the concessionaire companies were made up chiefly by members of the seven major oil companies which have dominated the world oil business throughout this century. In approximate order of size these were: Standard Oil of New Jersey (which changed its name to Exxon in 1972 and markets its products in Europe under the name Esso), the Royal Dutch/Shell group, Texaco, Standard Oil of California (known as Socal and marketed as Chevron), Mobil, Gulf and British Petroleum. The only other company to participate in the early days was Compagnie Française des Pétroles (CFP—marketing as Total but known as Total-CFP since 1985), which is considerably smaller than the big seven, but is often regarded as an eighth major company because of the world-wide spread of its operations.

At first these companies held exclusive rights for drilling, production, sales, the ownership at the wellhead of all oil produced, and immunity from taxes and customs dues. The governments' receipts, apart from an initial downpayment and a rental, came either as a share of profits (which is how Iran's income was worked out until 1933, when Iran negotiated a fixed royalty plus share of company dividends formula) or as a fixed royalty of four gold shillings a ton (22 cents per barrel).

In view of the vast amounts of oil discovered during the 1930s and 1940s, and the extremely low cost of production, the Middle Eastern governments by the later 1940s no longer felt that the companies had been as generous as they had originally believed, and all aspects of the concessions came under attack. The main complaints, apart from criticism of the financial terms, were that the concessions were too large in area and their duration too long, that they were run almost entirely by foreign nationals, that the companies had appropriated for themselves a quasi-colonial authority, and that the host governments had no control over the amount of drilling carried out nor the volume of exports. The strength of the producers' feelings was only reinforced when Kuwait in 1948 and Saudi Arabia in 1949 granted concessions in their respective halves of the Neutral Zone (otherwise known as the Partitioned Zone) to independent US companies, Aminoil and Getty, on conditions which were very much more favourable than those obtained earlier from the Kuwait Oil Company (BP and Gulf) and Aramco (Exxon, Socal, Texaco and Mobil).

The major change in the financial terms of the concessions which followed did not, however, stem from events in the Middle East, but from Venezuela, where, after the first free elections in the country's history, the Acción Democrática party in November 1948 passed an income tax law giving the government 50% of the companies' profits. A year later Venezuela sent a delegation to the Gulf to explain the advantages of the new legislation, and the companies, realizing that such a revolutionary change could not be confined to one country, and that they would be able to deduct tax payments made abroad from tax paid in their home countries, promptly offered the same deal to the Middle

Eastern governments. Under the new system, introduced in Saudi Arabia at the end of 1950 and in Iraq and Kuwait a few months later, the companies' 'profits', arrived at by deducting the production cost per barrel from the posted price, were divided equally between the companies and the governments. Assuming that no special discounts off the posted price were given, this arrangement increased the producers' revenue per barrel from 22 cents to about 80 cents.

The only country not to receive the 50-50 profit split at this time was Iran. Despite various revisions in concession terms during the inter-war years, relations between Anglo-Iranian and the Government were bedevilled not only by financial disputes, but also by the Iranian population's view of the company as the symbol of their country's subjugation to foreign influence and of Britain's colonial power—which had involved Iran being invaded in 1941 (so that the allies could secure a supply route to the Soviet armies in the Caucasus) and Reza Shah's deportation. In 1949, Anglo-Iranian and the Government resolved their differences in a Supplemental Agreement which gave Iran royalty and profit-sharing terms as good as those concluded in the Arab states 18 months later. But the Iranian National Assembly was dissatisfied with the deal, and during the following months, Dr Muhammad Mussadiq, the chairman of the Assembly's Oil Committee, managed to discredit the agreement totally. In December 1950, the Government, which had hoped that it would be able to solve the issue peacefully by negotiating minor revisions, was forced to renounce the agreement altogether. Anglo-Iranian immediately suggested further talks leading to a 50-50 settlement, while Mussadiq in February 1951 suggested nationalization, and, with Iran slipping into a state of internal chaos, the Shah on 1 May was forced to give his assent to the nationalization bill and appoint Mussadiq as Prime Minister.

Over the next two years, Mussadiq refused all compromise solutions offered to him, Iranian oil exports, embargoed by all the companies, rapidly ceased, and the economy collapsed. In July 1953, having tried to dismiss Mussadiq, the Shah was forced to flee to Rome; but within a few days, Mussadiq was overthrown by a coup, and the Shah returned. In subsequent negotiations, the principle of nationalization was recognized, but the National Iranian Oil Company (NIOC) was forced to grant a lease (which was a concession in all but name) incorporating the 50–50 profit split to Iranian Oil Participants (known as 'the Consortium') made up of BP, Shell, CFP and the five US majors—who were later obliged by the US Government to give a 5% shareholding to a group of US independents.

The Mussadiq debacle provided a reminder of the strength of the majors and although in 1961 the revolutionary Government of Gen. Kassem expropriated more than 99.5% of the concession held by the Iraq Petroleum Company group (BP, Shell, CFP, Exxon, Mobil and Gulbenkian), on the grounds that this area was not being exploited by the companies, no Middle Eastern government again nationalized an important productive operation until 1971—when Algeria seized a majority share of the local operations of CFP and the French State company, ERAP.

Partnerships, contracts and production sharing

Although, at the time, the nationalization of AIOC was a disaster for Iran, the dispute marked the end of the period in which Middle Eastern governments gave 75- or 95-year concessions, covering their whole country, to a single group. New concessions signed in the Arabian Peninsula states during the later 1950s and 1960s had a duration of 35 to 45 years, covered much smaller areas, and contained relatively tough terms, with bigger signature bonuses and provisions for the rapid relinquishment of acreage. Even in Libya, where the financial terms of the concessions let at the end of the 1950s were considerably more generous than those applying in the Gulf, the available acreage was divided among more than 10 different groups.

From 1957 the concession concept began to be replaced by new arrangements giving the state a degree of direct participation, and placing heavier financial burdens and greater risks on the companies. The first of the new arrangements was the partnership of Société Irano-Italienne des Pétroles (SIRIP) between the NIOC and the Italian state concern ENI. ENI's subsidiary, AGIP, agreed to bear the whole exploration cost (only to be repaid half if oil was found), and undertook to spend not less than \$22m. on exploration. It was arranged that half of any oil produced would be owned by NIOC and sold by AGIP on Iran's behalf, while half would be owned by the Italian company and taxed at the normal 50% rate—giving the government a 75-25 profit split, and valuable experience.

One year later Iran substantially improved its terms when it formed IPAC, a partnership with Amoco (a subsidiary of Standard Oil of Indiana). During the early 1960s and early 1970s, it signed further partnerships containing cash bonuses, production bonuses, minimum exploration guarantees and minimum development expenditure guarantees. Eventually four of the partnerships struck oil.

With certain variations Iran's example was followed in the allocation of new acreage by Saudi Arabia and Kuwait in the Neutral Zone, where in 1957, a few months after the formation of SIRIP, the two countries obtained a stake of 10% each when offshore acreage was let to a group of Japanese companies. Other countries that copied Iran were Kuwait, in leasing some of its own territory to Hispanoil (in an unsuccessful partnership with the Kuwaiti national oil company which was later abandoned), Egypt, and Algeria, which has applied partnerships to all areas let since 1973. In Qatar, Abu Dhabi, Tunisia and Kuwait (with its offshore areas granted to Shell), the governments have concluded carried interest arrangements, where acreage has been let originally as a concession, with the proviso that the state has the right to negotiate a shareholding once oil is discovered. In few cases have these ventures been successful, so the carried interest charges have seldom come into operation. In all countries, the tax terms have been adjusted to reflect current OPEC rates.

In 1966 Iran introduced the still more radical idea of service contracts, relinquishing Consortium acreage to a French group, SOFIRAN. Like the foreign companies in partnership arrangements, SOFIRAN agreed to bear the whole cost of exploration; but if oil was struck it was to be refunded completely, and NIOC was also to provide all development capital. NIOC was to be the sole owner of all oil produced, while the foreign contractor was to act as a broker for the national company on a commission of 2% of the realized price, being paid by the guaranteed purchase of between 35% and 45% of production at cost plus 2%. Of the difference between this sum and the realized price 50% was to be payable as income tax—though when oil was brought on stream the financial terms were to be adjusted.

After 1966 Iran signed a further seven service contracts, the last (in 1974) allowing the foreign companies to purchase about half of production at discounts of up to 5%. But only SOFIRAN brought oil on stream. Iraq signed three service contracts, which it later cancelled. One of these, involving ERAP, brought the Buzurgan, Abu Ghrab and Fuka fields on stream. None of the other Middle Eastern or North African states has concluded service contracts (service contractors should not be confused with ordinary foreign drilling contractors, such as Santa Fé and the South Eastern Drilling Company—SEDCO, which are employed on a straight fee basis by almost all oil companies and oil producing governments).

Not dissimilar to service contracts are 'production-sharing' arrangements, of a type pioneered by Indonesia. Production sharing arrangements have been concluded by Egypt (which invited Western companies to bid for new acreage in 1973, following a period in which oil exploration had been given over to the USSR), and by Libya in 1974. In the mid-1970s Syria signed a number of production-sharing agreements, allowing Western companies into the country for the first time since 1964. There are considerable variations in this type of agreement, but in most cases the foreign company is compensated for its share of expenditure in cash or kind, or by favourable tax terms, while production is divided in a ratio of between 75:25 and 85:15 in favour of the state.

After the Islamic Revolution in Iran, the new Government decided to end its four successful production partnerships—SIRIP, IPAC (with Amoco), LAPCO (with Arco, Murphy, Sun and Unocal) and IMINOCO (with AGIP, Phillips and the Indian Oil and Natural Gas Commission). The Government took over the foreign partners' shareholdings and in August 1980 announced that, in future, their operations were to be run by a new Continental Shelf Oil Company. This was to be supervised by a specially created directorate in the Ministry of Oil.

The drive for participation, and Algerian take-overs

In the 1960s producer governments sought participation in existing concessions. This idea was originally put by Saudi Arabia to Aramco in 1964, and in 1968 it was given formal voice in OPEC's Declaratory Statement of Petroleum Policy. Apart from being satisfactory on nationalist grounds, and giving the producers a more direct say in such matters as the relinquishment of acreage, the employment of nationals, production rates and investment in new capacity, the governments felt that participation would later enable them to mount their own crude oil sales operations, or expand their national companies downstream into tankering, refining and marketing. The producers, however, did not feel strong enough to press their claim until after the appearance of a seller's market and their success in the Teheran price negotiations of February 1971; and so it was not until OPEC's 25th Conference in Vienna in July 1971 that the members decided to call the companies to formal talks on participation.

By this time a precedent had already been set by Algeria. For political reasons Algeria had nationalized its US concessionaires and Shell in 1967, without causing itself economic harm. This left the French companies, CFP and ERAP, which were responsible for most of the country's production, and were in a special position under the 1965 Franco-Algerian Evian Agreement. Hopes of a satisfactory relationship under this agreement were not fulfilled, and in 1969, under the terms of the agreement, Algeria opened negotiations for higher prices. The talks were inconclusive, and in July 1970 Algeria increased its prices unilaterally. After further fruitless discussions, it seized 51% of the two French companies on 24 February 1971. France sponsored a highly effective boycott, but in June CFP settled its differences with the Government—Algeria agreeing to pay $60m. compensation, while CFP paid $40m. in backpayments and accepted a higher price. Five months later ERAP also came to terms, agreeing that compensation and backpayments should cancel each other out and entering into a minority partnership with Sonatrach in the Hassi Messaoud South field. In 1975 CFP agreed to extend its partnership with Sonatrach for a further five years, but ERAP allowed its agreement to lapse at the end of the year.

The take-over of CFP and ERAP was not directly related to the formal OPEC participation demand, being very much a Franco-Algerian affair, but it increased the confidence of the other producers when they began negotiations with the companies in Geneva in January 1972. The countries concerned in these negotiations were just the five Arab producers in the Gulf (Venezuela and Indonesia having already achieved a degree of participation or close involvement in the running of their oil industries, and Iran, Libya and Nigeria having made it clear that they would pursue their own negotiations), and in practice the talks were conducted by Sheikh Ahmad Zaki Yamani of Saudi Arabia, representing the producers, and Aramco, representing the companies. Yamani's initial demand was for an immediate 25% share rising to 51%, with compensation to be at net book value, and that part of the government share of production sold back to the companies should be priced between the posted price and the tax paid cost (government revenue plus production cost). The companies' counter-proposal, offering 50-50 joint ventures on new acreage, showed how big the gap between the two sides was at this point. In March, however, the companies agreed in principle to surrender 20% of their operations, and in October, by which time Iraq, having nationalized IPC five months earlier, was no longer concerned in the negotiations, an outline agreement was reached in New York.

The General Agreement of 1972

The details of the General Agreement on Participation were finalized in December 1972, and ratified by Saudi Arabia, Qatar and Abu Dhabi at the turn of the year. Under the Agreement the producers took an immediate 25% stake in the concessionaire companies. The earliest date for majority participation laid down was 1 January 1982, with the initial shareholding rising by 5% in 1978, 1979, 1980 and 1981 and by 6% in 1982. This timetable was designed to make for a smooth transition and to enable all the companies to adjust their supply arrangements over the following decade.

The need to ease company problems also accounted for the complex arrangements for pricing and disposing of the states' 25% share of production. The 75% companies' entitlement, which became known as 'equity crude', remained subject to the provisions of the Teheran Agreement of February 1971, but the balance belonging to the producing states was divided into three categories, each priced in a different way. A small proportion of production (only 10% of the states' share or 2.5% of total output in 1973) the governments undertook to sell on the open market for whatever price they could get. The other two categories of crude were 'bridging crude' and 'phase-in crude', both priced at above the normal tax paid cost and both set to decline in volume as the states' direct sales were to increase. Within nine months of the General Agreement taking effect, however, the Gulf producers decided that both bridging and phase-in crude should be treated on the same basis, and priced at 93% of the posting—this being the price Saudi Arabia had obtained in the sale of its own 2.5% crude entitlement in May.

For compensation under the General Agreement the criterion adopted was 'updated book value' which took account of the cost of replacement of the companies' assets. This was a compromise between the producers' demand for compensation to be on a net book value basis (i.e. after depreciation) and the companies' efforts to obtain a formula which would repay them for some of the value of the proven reserves discovered in their concessions. In the event, the system adopted involved Saudi Arabia paying Aramco $500m., Abu Dhabi paying $162m. in almost equal parts to Abu Dhabi Marine Areas and the Abu Dhabi Petroleum Company, and Qatar paying $28m. to the Qatar Petroleum Company and $43m. to Shell.

Iraqi nationalization

Iraq ceased to have any involvement in the participation negotiations in 1972, when it nationalized the Iraq Petroleum Company. For 20 years relations between the government and the company had been poor. In the later 1950s, a dispute had arisen over the fact that IPC and its sisters, the Basra Petroleum Company in the south and the Mosul Petroleum Company in the north, had developed only a very minor part of their 160,000-square-mile concession. Combined with disagreements over the group's accounting procedures, this led to Law 80 of 1961 expropriating more than 99.5% of the group's acreage. The companies never accepted the expropriation and, although attempts were made to settle this and many other outstanding differences over the next 10 years, the two parties were forced to accept a position of stalemate, in which Iraqi production expanded very slowly.

In June 1971, as part of the agreement on Iraqi Mediterranean crude prices which followed the Teheran pact in February, the IPC group undertook to increase production, but in the following spring, the company found itself obliged to cut the throughput of its pipeline from Kirkuk to the Mediterranean terminals of Banias (Syria) and Tripoli (Lebanon). In a period of low Gulf/Europe freight rates, the high prices negotiated for all Mediterranean crudes in the previous years made it uneconomic for its owners to run the pipe at more than half capacity. The Iraqi Government claimed that the cut-back was politically motivated, and presented IPC with alternatives: either the company was to restore Kirkuk production to normal levels and hand the extra production over to the Government, or it was to surrender the field entirely and concentrate production on BPC's acreage in the south. This conflict was exacerbated by IPC's threats of legal action to prevent the sale of the Iraq National Oil Company's crude from North Rumaila (in expropriated BPC acreage), and by a number of old issues, including an Iraqi claim for royalty backpayments dating from 1964, which IPC had refused to pay until it received the compensation it was claiming for the acreage expropriated in 1971. On 31 May IPC presented its answers to the Iraqi ultimatum. These did not satisfy the government, and on the next day, IPC was nationalized. The affiliates, BPC and MPC, were not immediately affected.

In mid-July negotiations commenced, with Nadim Pachachi, then Secretary-General of OPEC, and M. Jean Duroc-Danner of CFP acting as mediators. IPC promptly announced that it would not pursue legal action against buyers of Kirkuk crude while mediation efforts were in progress, and Iraq was able to

sell substantial amounts of oil—including a deal in February 1973 under which CFP agreed to take 23.75% of Kirkuk's output (equivalent to the company's stake in IPC) over 10 years. On 28 February 1973, IPC and the Government finally reached agreement. IPC accepted the expropriations of 1961 and the nationalization of the Kirkuk producing area, and at the same time handed over MPC and paid the Government $141m. of outstanding royalty backpayments. In return it was promised 15m. tons of oil in two batches in 1973 and 1974, and was given some assurance of the long-term security of its investment and growth of output from BPC's southern fields, where it agreed to more than double production from 640,000 b/d in 1972 to 1,626,000 b/d in 1976.

In the event, it was only seven months before BPC suffered the seizure, during the October war, of the holdings of Exxon and Mobil, and 60% of Shell's share (a proportion relating to the Dutch-registered part of the group) as a political gesture against the USA's and the Netherlands' association with Israel. Later the 5% share of the Participations and Explorations Corporations (owned by the Gulbenkian family) was seized on the grounds that the company was registered in Portugal, which was pursuing racist policies in Africa. Thereafter the Government watched the progress of the takeover negotiations in Saudi Arabia and Kuwait, and a few days after a final agreement had been signed in Kuwait, it nationalized the remaining Western-owned share in BPC. It then held negotiations with the BPC partners over compensation and supply arrangements.

Iranian Sales and Purchase Agreement

Although it was clear from the beginning of the Saudi Arabian-Aramco negotiations in January 1972 that Iran was not interested in the type of participation envisaged by the Gulf states, the Shah did not decide exactly what Iran would demand instead until early 1973. On 23 January the Shah gave the Consortium an ultimatum: Iran would not extend its lease, and the companies could either continue under existing arrangements until the expiry of their lease in 1979 and then become ordinary buyers under contract, or they could negotiate an entirely new agency agreement immediately. The Consortium opted for the latter plan, and, under the Iranian Sales and Purchase Agreement signed in Teheran in May, NIOC took formal control of the management of the Consortium's entire production operation and the Abadan refinery. The agreement laid down that NIOC would provide 60% of the capital for expanding production and that the companies would contribute 40% of the funds needed in the first five years (then expected to be the period of greatest expansion) in return for a 22 cents discount on their liftings.

Under the Sales and Purchase Agreement, though NIOC became owner/manager, the Consortium members established a service company, the Oil Service Company of Iran (OSCO), to carry out operations on NIOC's behalf for an initial period of five years, which could be renewed. NIOC undertook to raise total installed production capacity to 8m. b/d by October 1976. It was agreed that the national company would be entitled to take the oil needed for internal consumption and a 'stated quantity' for export, which was to rise from 200,000 b/d in 1973 to 1.5m. b/d in 1981, and therefore, except in certain cases of *force majeure*, would remain in the same proportion to total crude available for export as 1.5m. b/d represented to oil available for export in 1981. The balance of crude production went to the Consortium members, which were guaranteed security of supply for 20 years.

Libya asserts 51% control

Only weeks after OPEC had made its formal call for participation in July 1971, Libya, ever anxious to be first among the producers in militancy and to upstage any participation agreement negotiated by Saudi Arabia, announced that it would be interested in nothing less than an immediate 51% share. Four months later, at the beginning of December 1971, Libya nationalized outright BP's half-share of the Sarir field, but this was a purely political gesture (against alleged British connivance in the Iranian invasion of the Tunbs Islands some 24 hours before Britain's withdrawal from the Gulf)—and for the next year the Libyan Government made no move while it awaited the outcome of the participation negotiations in the Gulf.

Talks on Libya's demand for majority control began in early 1973, with the government adopting its usual policy of negotiating on a company by company basis; but they made no progress. In June Libya nationalized outright the American independent Nelson Bunker Hunt. This company had been BP's 50% partner in the Sarir field, and the government had chosen it for its first negotiations because it had no other source of oil outside the USA and seemed therefore to be especially vulnerable. Bunker Hunt, however, resisted hard. Being a private company it did not have shareholders to worry about and it was confident in the Libyan operators' secret agreement, under which the companies had promised to meet the supply commitments of any one of their number whose concession was expropriated. Col Qaddafi, the Libyan leader, correctly characterized the Bunker Hunt seizure as 'a warning to the companies to respond to the demands of the Libyan Arab Republic'. From circumstantial evidence it seems that Libya fully decided on nationalizing Bunker Hunt when it concluded that it would have no difficulty in selling the oil to markets apart from the Eastern bloc. This followed the judgment of a local court in Sicily which dismissed a suit brought by BP against the importers and refiners of its expropriated Sarir oil.

Following its nationalization of Bunker Hunt, the Libyan Government proceeded in August to seize 51% of Occidental's operations. Faced with the threat of having the rest of its assets seized and being deprived of its most vital source of oil outside the USA, Occidental announced its 'acquiescence' in the measure. For the other companies the significance of this 'acquiescence' lay in the fiscal terms. The companies had in fact been prepared to offer Libya a nominal 51% on the condition that the financial results gave parity with those deriving from the participation agreements with the Gulf producers and Nigeria—but this was not so in the terms settled with Occidental. Compensation was agreed on at book value, rather than the updated book value formula used in the Gulf, and the buy-back price was set above the posting, rather than between the posting and the tax paid cost.

Five days after the Occidental seizure, three independent companies in the Oasis group, Continental, Marathon and Amerada Hess, accepted a majority takeover on similar terms, though Shell, the only major in Oasis, did not comply. Then in September the Government announced 51% take-overs of all the other significant producing groups. Gelsenberg, a German concern in partnership with Mobil, and W. R. Grace, a small shareholder in the Esso Sirte venture, agreed to Libya's terms; but Atlantic Richfield (another partner in Esso Sirte) and the majors, Mobil, Esso (which held a concession on its own as well as the biggest share in Esso Sirte) and the Texaco-Socal company, Amoseas, joined Shell in resisting any sort of arrangement which might have undermined their participation agreements in the Gulf.

In February 1974 Libya seized all of the remaining assets of Texaco, Socal and Atlantic Richfield; and in the following month, Shell too was nationalized. Finally Mobil, in March, and Esso, in April, accepted the 51% seizure of the previous September.

Exxon and Mobil eventually withdrew from their concessions on their own initiative in November 1981 and April 1982. Exxon's liftings had stopped in the summer of 1981 and Mobil's liftings by the time of its withdrawal had fallen to only 10,000 b/d. Some months after its withdrawal Exxon negotiated an agreement with the Libyan Government whereby it received compensation for the assets of its two former concessionaires—Esso Sirte and Esso Standard Libya—at about 70% of net book value. The Libyans established the Sirte Oil Company, wholly owned by the National Oil Corporation, to run both operations formerly managed by Exxon. The W. R. Grace interest in the Sirte concession was unaffected.

Gulf states achieve 60% participation

The General Agreement on Participation concluded at the end of 1972 had satisfied the Kuwaiti Government, and had been signed by the Minister of Finance and Oil, Abd ar-Rahman Atiqi, at the beginning of January 1973; but the Kuwait National Assembly refused its approval. The determination of a handful of radicals opposed to the measure was fortified by Iraq's success in settling its dispute with IPC in February and by the signature of Iran's Sale and Purchase Agreement in May; and by the

summer of 1973 it was clear that the Government would not, as it had originally hoped, be able to rally sufficient support to get the General Agreement accepted. On 13 June, the Ruler formally requested a revision of the accord, and during the autumn, when Libya announced its series of 51% take-overs, the other Gulf producers followed Kuwait's example. In November Sheikh Ahmad Zaki Yamani announced that Saudi Arabia would not accept a simple majority holding, and it was made clear early in 1974 that the Saudi Government would be negotiating a complete takeover of Aramco's operations.

Negotiations between the Kuwait Government and the Kuwait Oil Company shareholders, BP and Gulf, during the winter, resulted at the end of January in the state gaining a holding of 60%, which, after several months of further wrangling in the national assembly, was ratified on 14 May 1974. The new agreement was made valid from 1 January, meaning that the companies had conceded the principle of retroactivity on which they had held so firm in the past, and was to last for six years—though the Government reserved the right to call fresh negotiations at any point before the end of 1974. The compensation formula agreed was net book value (giving KOC $112m.), rather than updated book value, but there was no settlement of buy-back terms, with the volume and price of oil being left for more hard bargaining over the summer. In fact Kuwait did not conclude a buy-back deal with BP and Gulf until after it had rejected all bids put in for its 60% crude share at an auction in July. For the third quarter of the year, the Government then sold rather over 55% of its entitlement to the two companies at 94.8% of the posted price; and for the last quarter, BP and Gulf bought two-thirds of the state's crude at 93% of the posting.

Three months before the ratification of the Kuwaiti participation agreement, Qatar concluded a similar accord with its concessionaires (the Qatar Petroleum Company and Shell) in February, and in April it settled buy-back arrangements for the following six months. These involved the two companies purchasing 60% of the state entitlement (about 36% of total output) at 93% of the posted price—the same level as that agreed in September 1973 in the original modification of the terms of the General Agreement. Then in June, after the Kuwait ratification, Saudi Arabia concluded an 'interim' 60% participation agreement with Aramco though no details emerged about the buy-back arrangements. Finally, in September, Abu Dhabi negotiated a 60% share in the Abu Dhabi Petroleum Company and Abu Dhabi Marine Areas, backdated to the beginning of the year.

Aramco take-over negotiations

Although Saudi Arabia had decided to ask for more than a simple majority stake in Aramco in November 1973, it was not until early 1974 (shortly before the Government took 60% of Aramco as an interim measure in June) that it became clear that the Government sought a complete take-over. This was to be linked to sales and contracting arrangements similar to those agreed between Iran and the Consortium in May 1973. Within weeks the Government and Aramco were reported to be close to clinching the deal, but over the next six years changing circumstances in the Middle East, in Saudi Arabia and in the world oil market continually postponed the conclusion of an agreement.

There was an initial breakthrough in November 1974 when Aramco conceded the principle of a complete take-over, and during the following 18 months in successive rounds of negotiations general agreement was reached on all major practical issues. Indeed the two sides said as much in an announcement made after talks in Panama City, Florida, in March 1976. It was reported at this time that compensation was to be a little more than $1,500m. for 75% of Aramco's assets (which had expanded considerably since 1973) at net book value. In due course part of this sum was transferred to the Aramco partners, bringing the compensation they had received for their assets up to the 60% level. It was also reported from Florida that the companies would continue to take the bulk of Saudi production; that they would be paid a fee of 15 cents a barrel for production operations plus six cents a barrel for new reserves discovered; and that they would continue to put up part of the risk capital in exploration—only being refunded in the event of success.

During the four years that followed the announcement in Florida there were further rounds of negotiations, but an almost complete lack of news as to the substance of the talks. It was known that there were problems over the fees that Aramco would be paid: the four Aramco partners feared that under some of the formulae put forward their fees would not be big enough to cover their share of investment. On one occasion the companies were known to be objecting to a formula under which their fee would come out of a 75 cents per barrel margin allowed after deducting operating costs and payments to the government. This margin was supposed to cover exploration and the expansion of production capacity as well as the companies' fees.

Other problems centred on the companies' crude oil entitlements. The original understanding of 1976 and 1977 was that the Aramco partners should take up to 7.3m. barrels a day. But early in 1979 when Saudi Arabia's output was raised from the normal 8.5m. b/d to 9.5m. b/d in an attempt to stabilize the market in the aftermath of the Iranian Revolution, the companies' entitlement was increased for a short time to 8.1m. b/d. In 1980 this figure was cut to 7.2m. b/d, at which level it was maintained through the early part of 1981. For short periods during the three years from 1977 to 1980 the government cut Aramco's entitlement to below 7m. b/d—for different reasons on each occasion.

The Aramco partners always argued against short-term cuts in their entitlements, and in the longer term they were worried about their entitlements undergoing a progressive, permanent reduction. This seemed likely to be caused mainly by Saudi Arabia developing its own crude oil sales. It had long been Saudi policy to sell more oil directly to Third World countries and to the national oil companies of the industrial powers, rather than selling it through the integrated chains of the majors. (From just 190,000 b/d in 1973, Petromin's own sales by early 1981 had risen to some 2m. b/d.) It was also clear that the amounts of crude available to Aramco would gradually be reduced further by three other developments. These were the rise in domestic consumption, supplies to new export refineries, and allocations of 'incentive crude' being promised to foreign companies agreeing to invest in refineries and petrochemical plants in Saudi Arabia. An example of the volumes of crude involved in these deals—in this case applying to an Aramco partner—was provided by Mobil's commitment to invest in a petrochemical plant and a refinery at Yanbu. Over 15 years, beginning at the time of the project's start-up, Mobil was to receive 1,400m. barrels of oil, an average of 225,000 b/d. Although Exxon, Socal and Texaco were all involved in their own projects with the Saudi Government—albeit on a smaller scale than Mobil—most of the companies which concluded such deals in 1979 and 1980 were not Aramco partners. (In 1981 the Saudi Government announced that incentive crude would only be given to companies that had already signed agreements to participate in Saudi industrial projects. It was thought that the economics of Arabian industrialization had improved sufficiently since 1979 for prospective future partners not to need special incentives.)

In the background there was the further possibility of the Aramco partners' supplies being reduced by the government cutting production for internal or external political reasons—or because supplies from other producers had increased. A cut-back was also thought likely to follow the government achieving its aim of stabilizing prices.

In 1980 the Aramco partners reckoned that if the Saudi Government were to return production to its 'normal' 8.5m. b/d 'ceiling', they would be lucky to receive 5m. b/d. (In practice, when Saudi production was reduced to 8.5m. b/d in November 1981, it was thought that the Aramco partners were getting 5.4m. b/d. This compared with some 6.5m. b/d–7.0m. b/d when the government was running production at 9m. or 10m. b/d, or more.) A cut-back in overall production to 5m. b/d, as advocated by the Saudi conservationists, would leave the Aramco partners with virtually no oil.

Both of the issues in dispute—the companies' fee and their crude entitlements—were apparently resolved early in 1980. In April the Saudi Government transferred to the companies the final instalment of compensation for their assets—$1,500m., in respect of the 40% share in Aramco retained by the companies since the second participation accord was reached in 1974. At

the same time the government completed its take-over of the Ras Tanura refinery and natural gas liquids facilities, which had been excluded from the 60% participation deal and for several years after 1974 had remained 100% Aramco owned. The government then announced in April 1981 that it was taking 50% of Tapline, in which the Aramco partners each had the same shares as they had in Aramco itself. Exports via Tapline had been suspended for economic reasons in February 1975 and the pipeline had been used only sporadically since.

Exactly what commitments the government had given the companies on crude oil entitlements were not revealed. However, it was known that as of 1980 the Aramco partners were receiving a fee of 27 cents per barrel produced—though again there was no announcement of the details of the formula on which the fee was based. Nor was there any announcement on the form of the new state oil corporation which would hold the government's production assets; only the Ras Tanura refinery had been handed over to the existing state oil company, Petromin. Likewise nothing official was said about what arrangements were to be made by the Aramco partners to form a service company to run the industry on behalf of the new state corporation.

In practice, while the negotiations with Aramco were in progress the oil industry in Saudi Arabia was run as if the government had total control—in other words the government made decisions but the daily operations were managed by Aramco. The process of participation had involved the government's acquisition of the company's assets in Saudi Arabia and its decision-making powers over exploration, the development of production capacity and the volume and allocation of output. Technically Aramco remained (and remains) a wholly US-owned and US-registered company. Before the completion of the take-over it was part owner of the Saudi production operation; after the signing of the take-over agreement it was assumed in 1981 that its status would change to that of owner of a service company. For practical purposes within Saudi Arabia Aramco was seen both before and after the complete take-over as a giant foreign contractor and contract manager working for the government.

Take-over in Kuwait

Over a year before Aramco and the Saudi Government reached even the general agreement in Panama City on the major issues of the take-over, the initiative in the movement towards complete ownership of oil-producing operations in the Arabian Peninsula had been taken up by Kuwait, which announced on 5 March 1975 that as of that date it had taken over all assets of the Kuwait Oil Company and would be beginning negotiations to settle the terms with BP and Gulf retroactively. The Kuwaitis made it clear that they wanted a continuing relationship with the KOC owners, but that they felt quite capable of running the production operations themselves. Since geological and topographical conditions made Kuwaiti oil extremely cheap and easy to produce, and as the state had been fairly thoroughly explored and did not require large-scale new exploration or development work, the continued presence of the major companies was very much less necessary for Kuwait than it was for Saudi Arabia and Abu Dhabi, where there were large potentially oil-bearing areas still to be opened up. For this reason it was felt at the time of the announcement that Kuwait might have decided on a complete take-over after consultation with the other Gulf producers—wanting to use Kuwait's negotiations to gauge what conditions the major companies might be prepared to accept.

Successive rounds of negotiations, however, stuck on the problems of compensation, the service fee and credit terms, but at the beginning of December 1975 an agreement was announced. This involved: compensation of $66m.; a discount on the 93% of postings third party selling price of 15 cents per barrel reflecting BP's and Gulf's continuing provision of technical services and technical personnel, the large size of their purchases and their undertakings to buy Kuwait's bunker fuel and use Kuwaiti tankers; and commitments by BP to take an average of 450,000 b/d between 1 January 1976 and 1 April 1980 and by Gulf to take 500,000 b/d over the same period. The two companies received an option on a further 400,000 b/d. All of these quantities were subject to the normal plus or minus 12.5% variations.

Since the completion of the take-over the special relationship between Gulf and BP and the Kuwaiti oil industry has been reduced virtually to nothing. As Kuwait has successfully Arabized many of the technical jobs in oil production and launched its own direct expatriate recruitment programmes to fill those jobs for which it has been unable to find experienced Arab personnel, the numbers seconded by BP and Gulf have fallen to a nominal level. The two companies' purchases of Kuwaiti crude were greatly reduced when their supply contracts were renegotiated in early 1980. Gulf took only 75,000 b/d at the official government selling price (GSP) under a two-and-a-half-year contract, while BP took 75,000 b/d at the GSP plus a further 75,000 b/d for one year (to 1 April 1981) at a premium price. When these contracts were negotiated the original 15 cents discount of 1975 was eliminated.

Beginning in early 1981, the main traditional customers for Kuwaiti crude, Gulf, BP and Shell (which had bought much of Gulf's entitlement in the old concession days), began further to reduce their purchases of Kuwaiti crude. Shell and BP opted out of their contracts altogether in November 1981, and Gulf in January 1982 cut its liftings to just 35,000 b/d.

Take-overs in the Lower Gulf

The take-over in Kuwait in 1975 opened the way for other producers to take 100% of their former concessionaires. Within days of the announcement in December 1975 Iraq nationalized the Basra Petroleum Company, and in February 1976 Kuwait began negotiations for the take-over of Aminoil in its half of the Neutral Zone (while stating that it did not intend to change the status of the Arabian Oil Company's operation offshore). Negotiations did not go well and in September 1977 Kuwait nationalized the company. For a few months a Kuwaiti Wafra Oil Company was established to run operations, until in April 1978 it was decided that KOC should take over the production operation and KNPC the Mina Abdullah refinery, which had processed Aminoil's entire output.

Starting in June 1976 Qatar negotiated the complete take-over of its two concessionaires, signing broadly similar agreements with QPC in September that year and, after a somewhat tougher series of talks, with Shell in February 1977. Compensation was calculated on the basis of net book value, involving the payment of $14m. for Shell's remaining assets and $18m. for QPC's; both companies established new contracting subsidiaries (Dukan Oil Services and Qatar Shell Service Company) to second personnel to run the industry for the state oil corporation; and both companies accepted a fee of 15 cents per barrel of oil produced. This fee, which compared with the Kuwaiti terms of a 15 cents per barrel discount on just that part of production sold back to BP and Gulf, reflected the much bigger oil company presence retained in Qatar. (These fees, although invariably referred to as being 15 cents, were in fact tied to the official government selling prices, which meant that by mid-1980 the fee had risen to 42 cents.) Furthermore it was agreed that Shell should be paid an unspecified lump sum bonus as a condition of its undertaking further exploration (for gas) for QGPC on a contracting basis.

The five-year operating agreements between the Qatar Government, the QPC group and Shell expired at the end of 1981 and early 1982. Dukan Oil Services and the Qatar Shell Service Company continued their work without interruption. It was assumed that the government would renegotiate the onshore contract with just one of QPC's shareholders—probably BP.

In Bahrain the government announced the take-over of the production operations of BAPCO in April 1978, the arrangement being backdated to the beginning of January. The Sitra refinery was left in the hands of BAPCO (owned by Caltex—50-50 Texaco and Socal) until May 1980, when the government took a stake of 60%.

In Abu Dhabi, meanwhile, the government made it clear that it felt that its big potential for further discoveries and the technical problems involved in its offshore production made it very much in the state's interest for the companies to retain an equity participation and that the 60–40 agreement would be maintained. Payment for the companies' services in Abu Dhabi came out of the margin between the GSP and the lower price, known as the tax paid cost, at which the companies got the 40% of their supplies represented by their equity stakes. (See prices

section below.) In 1978 the companies' margin of their 40% crude entitlement worked out at 65 cents per barrel. With the oil price rises of 1979/80 this figure rose to $1.60, which the Abu Dhabi Government felt was excessive. It was therefore agreed in 1980 that the margin would be reduced to $1, which averaged over the full amount of production worked out at 40 cents per barrel.

The policy of retaining the concessionaire as a partner also applied in Oman. There were several reasons for this: the small size of the country's oil industry, its shortage of financial resources, the complexity of Oman's oil fields and the Sultanate's acute lack of trained manpower, which made the government reluctant to undertake any inessential commitments. In practice, the foreign company 'presence' in Oman was considerably bigger than in Abu Dhabi. Shell not only provided virtually all of the staff and did the purchasing of equipment, it also seemed to take many of the management decisions.

The end of the Iranian Consortium

In the true tradition of agreements of its type in the Middle East, it was not long before most of the Iranian Sales and Purchase Agreement became out of date. Whereas at one stage in 1973 the Shah had suggested that Iran's reserves might turn out to be more than 100,000m. barrels, in 1975 and 1976 it came to be realized quite suddenly that this was grossly over-optimistic. To add anything to the country's recoverable reserves beyond 65,000m. barrels, or even to recover that volume of oil, the Iranians realized that they would have to invest huge sums in a gas reinjection secondary recovery system.

At the end of 1975 the Consortium ceased contributing the 40% of development capital which it was supposed to invest under the Agreement, and in return NIOC reduced the Consortium's 22 cents per barrel discount to take account of interest accruing on the capital which NIOC saw itself as investing on the Consortium's behalf. Unsuccessful talks on a revision of the Agreement were held in late 1975 and early 1976. However, it was not until the beginning of 1978, after two years in which NIOC-Consortium relations had been further complicated by occasional big falls in Iranian production and by NIOC periodically lifting more than its share, that the two sides sat down to work out a complete replacement for the Agreement. After several rounds of difficult talks the negotiations were made irrelevant by the Iranian Revolution of February 1979.

The disturbances of the autumn that preceded the Revolution had disrupted production (which normally ran at just below 6m. b/d) and in January and February 1979 exports stopped altogether. Production ran at only 235,000 b/d, not even enough to meet domestic demand of 700,000 b/d. At the end of February, soon after the Ayatollah Khomeini had appointed his government, the NIOC Chairman, Hassan Nazih, announced that Iran was to have nothing to do with the Consortium ever again. It was reckoned that if Iran ran production at about two-thirds of its previous level, closing the more complex production areas and halting the development of its gas reinjection system, NIOC could carry out its work with minimal foreign assistance.

On 5 March exports started again, with production rising rapidly to over 4m. b/d, though this level was trimmed back by the beginning of May. It slowly emerged that government policy was not to allow production to exceed 4m. b/d, leaving about 3.3m. b/d for export. Later it was made known that the optimal production level was considered to be 3m. b/d, a figure which was still being quoted occasionally when the Iran–Iraq War broke out in the autumn of 1980. In practice during most of 1980 Iranian production ran at a level far below 3m. b/d.

Early sales contracts after the Revolution were with former direct customers of NIOC and the Consortium and former Consortium members, though by mid-May 1979 NIOC was talking to a number of entirely new companies. In total the Consortium members, who had been lifting 3.3m. b/d before the Revolution, got 1.1m. b/d, of which BP took 450,000 b/d and Shell 235,000 b/d. Up to 1.9m. b/d was allocated for about 50 other companies—some 30 of which had signed by mid-May—including among the biggest buyers old NIOC and Consortium customers such as Japan, Ashland, Petrofina (of Belgium), Amerada Hess and Marathon. All buyers soon found their contracts subject to volume reductions, which NIOC made in order to have more crude available for new customers. As contracts came up for renewal the trend away from traditional customers continued. For a long period in late 1979 and 1980 the major companies stopped liftings entirely—partly because the premiums being charged by Iran were too high and partly because it was the policy of the companies (acting under pressure from the US Government) not to take Iranian oil while the American diplomats in Teheran were held hostage. A further disruptive element was introduced by the outbreak of the Iran–Iraq War in the autumn of 1980, which temporarily brought production to a standstill.

THE DEVELOPMENT OF PRICES

The 1940s and 1950s

In the years before the introduction of the 50-50 profit split in 1950 and 1951, when most producers received their revenues on the basis of the fixed royalty arrangements (22 cents per barrel) the development of prices was of only academic interest to the Middle Eastern governments. For all of the 1930s, and the first half of the 1940s, the pricing formula applied was the 'US Gulf Plus' system, which was worked out by the chairmen of Shell, Standard of New Jersey and Anglo-Persian when they drew up their famous cartel agreement at Achnacarry House in 1928. The US Gulf Plus system laid down that the price of oil in every export centre throughout the world should be the same as that obtaining in the Gulf of Mexico, but that the price at the point of delivery should be made up of the Gulf of Mexico price plus the cost of freight to that point from the Gulf of Mexico. It made no difference to the buyer where the oil actually came from. If a buyer in Bombay, for example, placed an order with a cartel company, the oil would probably be supplied from Persia, but he would still be charged the same freight cost as if the oil had been brought from the USA—and the saving, known as 'phantom freight', would go to the cartel company. This system could also work in reverse. A shipment of Persian oil to London, which was nearer to the US than to the Middle East, would still be priced at the Gulf of Mexico price plus freight from the Gulf of Mexico to London—leading to the company accepting an element of 'freight absorption'. The explanation for this peculiar system lay in the fact that the major companies, as a group, had their biggest and most valuable investments in the USA, and therefore had an interest in maintaining the biggest possible market for US oil.

Given that all of the other major companies and most of the larger US independents joined the cartel, the US Gulf Plus system operated successfully until near the end of the Second World War, when the British Government objected to paying phantom freight for bunker fuel supplied to the navy in the Indian Ocean, and forced the companies to institute a Persian Gulf base. Under the new system, crudes f.o.b. the Persian Gulf were given the same price as similar crudes f.o.b. the Gulf of Mexico, and at the point of delivery only real freight was levied on top. This resulted in crude oils from the two producing areas finding their natural markets (which met in the Mediterranean near Italy)—though if Middle East oil was landed in north-west Europe, the company would, of course, still have to bear an element of freight absorption if its oil was to be competitive.

It was not long, however, before the Persian Gulf Base system itself began to come under attack from the governments of the importing countries. Immediately after the war, the USA changed from being a big net exporter to being a small net importer (a position it maintained for the next 25 years), and as soon as domestic price controls were removed in 1946, prices in the Gulf of Mexico rose quickly. Persian Gulf prices followed automatically, and because the production cost of Middle Eastern oil was very much lower than that of Texan oil, the companies made enormous profits. Despite the freight disadvantage they were able to import Middle Eastern oil into the US and undercut domestic oil as far inland as the mid-West. In 1948 the companies, influenced in part by criticism from the US Government, lowered their Persian Gulf prices so that the delivered prices of Middle Eastern and Texan oil equalized at London; and in 1949 the US Government forced a further cut in the Persian Gulf so that the delivered prices of Texan and Middle Eastern oil were made to equalize at New York. This reduction, of course, affected only the profits of the companies in their sales to third parties, and made no difference to the profits down their integrated chain of affiliates.

The large profits made by the companies in this period were a major factor behind the Middle Eastern governments' demands in the late 1940s for better financial terms—demands which were met in 1950 and 1951 by the introduction of the 50-50 profit split (see 'Concessions' above). The new financial terms (which increased government revenues on Saudi Arabian Light from some \$0.22 per barrel to about \$0.80—depending on the fluctuations of prices in Texas) served to make the producers price-conscious. In retrospect they did not fail to notice that the price adjustments of the later 1940s had been to their disadvantage.

The producers also noticed soon after the introduction of 50-50 that the profit split was not quite as even as it seemed, because the companies were always able to press them into giving discounts and the marketing allowance (which was hardly justified when almost all production was sold to affiliates of the operator or to major companies under long-term contracts). In fact, Abdullah Tariki, the radical Saudi Arabian Minister of Oil during the 1950s, calculated soon after 50-50 came into force that the effective split of profits was 32-68 in favour of the companies.

Worse still, in the early 1950s, the price discrepancies between Texan, Venezuelan and Gulf crudes continued to expand, destroying the principle of the three crudes equalizing at New York. This ushered in a new era in which the price of Gulf crudes was to be determined by the supply and demand situation in Europe rather than in the USA—which directly or indirectly had been the basis for all quotations for Gulf crudes since 1929. The growing availability of production capacity in the Middle East, and increasing competition in the European market, led the companies to start giving their own discounts on the posted price for sales to third parties. It was at this stage that posted (or tax reference) prices and f.o.b. (or market) prices in the Gulf began to part company. Given that the 50-50 profit split was still worked out on the basis of the posting, this meant that the producer government's effective share of profits began to climb back towards the 50% it was always supposed to have been.

Then in 1957, after the closure of the Suez Canal, all prices went up—and although in the Middle East the increase was smaller than in Texas or Venezuela, the new price of \$2.12 represented the highest posting for Saudi Arabian Light since 1948. These levels were maintained until February 1959, when there was a general reduction, in which Gulf crudes fell by more than the others. Two months later, the Venezuelan price was lowered again, and in August 1960, the Gulf price was reduced without any parallel reduction being made elsewhere. Thus the discrepancy between Arabian Light and Texan crude had expanded from zero in 1948 (when both crudes were priced at \$2.68) to \$1.20 in 1960—when Texan crude stood at \$3.00 and the Saudi Arabian Light posting at \$1.80.

From the point of view of the governments in the Middle Eastern capitals and Caracas, the price cuts of 1959 and 1960 (about which they were never consulted) were very damaging—affecting the size of their budgets and their development prospects. In April 1959, at the first Arab Petroleum Congress in Cairo (to which Iranian and Venezuelan representatives were invited as observers), the oil ministers of Saudi Arabia and Venezuela, Abdullah Tariki and Juan Pablo Pérez Alfonso, sponsored the formation of the Oil Consultation Commission. Then in September 1960, a month after the further reduction of Middle Eastern prices, the ministers of Iran, Iraq, Saudi Arabia, Kuwait and Venezuela met again in an atmosphere of crisis in Baghdad. The Oil Consultation Commission was already defunct, having met opposition from Iran and Iraq who objected to the inclusion of Egypt, and the ministers decided to create a permanent and stronger institution. The body that emerged was OPEC—the Organization of Petroleum Exporting Countries.

Since OPEC's formation, the original five members have been joined by Qatar in 1961, Libya and Indonesia in 1962, Abu Dhabi in 1967, Algeria in 1969, Nigeria in 1971, Ecuador in 1973 and Gabon—as an associate member in 1973 and a full member in 1975. The membership of Abu Dhabi was transferred to the UAE in 1974. In late 1992 Ecuador announced its decision to exchange full for associate membership of the Organization. Gabon withdrew from OPEC at the end of 1996.

OPEC in the 1960s

At first the major companies ignored OPEC. In accordance with a resolution passed at the Organization's fourth conference in June 1962, the members addressed protests to the companies against the price cuts of August 1960, and demanded that prices be restored to their previous level. But the companies refused to enter into any collective negotiations, and in their individual replies they argued that the development of prices did not depend on their own will, but was determined by economic factors over which they had no control.

OPEC realized that the only way to restore posted prices would be to force up market prices, and this the producers decided would best be done by limiting the annual growth in their output. So over two years (from mid-1965 to mid-1967) the members worked out a joint production programme. In both years they overestimated the overall growth in demand for their oil, and at the same time certain members, notably Libya and Saudi Arabia, and, to a lesser extent, Iran, made no effort to keep within their quotas. The obvious conclusion was that in a period when prices were low enough to cause a tight budgeting condition in some states, those countries which were either new exporters and/or had big oil reserves and expensive development programmes, would not be willing to make a temporary sacrifice and await an improvement in the unit price of their oil, but would be tempted to increase revenues by maximizing the volume of their output.

However, OPEC did manage to increase its members' effective share of profits during the 1960s. First in 1963 the companies accepted a cut in the marketing allowance (which they were able to deduct as an expense before making the profit split) from some \$0.01–\$0.02, depending on arrangements in different states, to a uniform half-cent through the Gulf. Secondly, and more important, the Organization negotiated two agreements on the expensing of royalties. These agreements the Middle Eastern members saw as removing an anomaly in their fiscal arrangements, and as bringing their taxes into line with the system prevailing in Venezuela. Although the producers' revenues since 1950 had nominally been made up of a royalty of 12.5% of the posted price (as payment for the oil itself) and income tax (representing the 50% tax on the profits from the sale of this oil), payments made under the heading of royalties had always been totally deducted from tax. The producers, referring to the normal internationally accepted arrangements, under which the royalty payer was entitled to deduct the royalty only from his gross income when computing his tax liability, wanted royalties to be treated as an expense in their own countries also—and in 1964 this was what was agreed. As part of a package deal the companies received various further discounts on the posted price in respect of 'royalty expensing' and 'gravity differential'. These discounts were to be reduced each year—this process being accelerated by a second agreement in 1968, which arranged for the complete disappearance of the royalty expensing discount in 1972 and of the gravity allowance in 1975. Under the new system the companies deducted their production cost, the 12.5% royalty, and the applicable allowances and discounts from the posted price, then split the remainder 50-50, and then added the royalty on the government's share. For Arabian Light, the royalty expensing agreements and the reduction of the marketing allowance increased government take from \$0.84 at the end of 1960 to about \$0.90 in 1968.

The independents in Libya

It was not, however, OPEC's achievements in improving its members' share of profits that were to be of the greatest long-term significance for the oil industry in the 1960s. In 1957, oil had been found in Libya. Unlike the governments in the Gulf, Libya had not awarded all its acreage to a single group, and as the discoveries were brought on stream in the early 1960s, it became clear that some of the largest fields lay in concessions held by independent US companies. These companies had originally ventured out of the USA in the late 1940s with the intention of finding new supplies for their marketing operations at home, but when the US Government imposed import controls in 1959, they were forced either to launch themselves downstream in Europe, as Occidental (marketing as VIP or Oxy) and

Continental (marketing as Conoco or Jet) did, or to sell their crude to others, as Marathon and Amerada Hess did.

Libya proved to be an ideal source of crude for such operations. Its oil yielded a high proportion of high value products such as gasoline and heating oils, and had a low sulphur content. The country's position gave its crude a big freight advantage over Gulf crudes (an advantage only enhanced by the closure of the Suez Canal in 1967), concession terms were uniquely generous, and for the first half of the decade the profit split was made not on posted prices, but on the much lower realized prices. In the mid-1960s these advantages were reduced when Libya seized the occasion of the first royalty expensing agreement as an opportunity to renegotiate its profit split on the basis of postings. The majors in Libya, who did not favour the independents having access to crude on terms so much more generous than those applying to their own production in the Gulf, agreed to Libya's request in 1965, but the independents only gave in in 1966, after a bitter struggle in which the government threatened to stop exports or nationalize their assets. Even with these new terms, Libyan crude was very competitive with Gulf crudes in Europe, because its posted prices, while higher than those in the Gulf, only partially reflected its freight advantage.

Given the relatively low price, Libyan production expanded extremely fast—from 20,000 b/d in 1962 to 3.3m. b/d in 1970—and throughout the decade prices in Europe fell. The majors' response to the independents' sales and marketing operations was to seek economies of scale in building ever larger tankers, refineries and storage and distribution facilities; but because larger units become most attractive when operated at near full capacity, this led the majors themselves to look for the highest possible market share, and led to an acceleration of price cutting. Although this process was most apparent at the downstream end of the industry, there was also an erosion of market prices in the Gulf, and because the existence of OPEC prevented a lowering of postings, the majors' margins were squeezed. The net earnings per barrel on the seven majors' eastern hemisphere operations dropped from $0.60 in 1958 to $0.33 in 1970, while the effective profit split in the Gulf climbed to about 70-30 in favour of the governments.

Teheran and Tripoli Agreements

In 1970 the marginal surpluses which had been so strong a feature of the previous decade suddenly disappeared. A combination of higher than expected demand as the Western economies entered a period of upturn, a shortage of tankers and a growing tightness of European refinery capacity, led to an unusually tight supply situation, which left the oil industry with very little flexibility to deal with any disruption which might occur in the Middle East.

These conditions coincided with a series of negotiations in Libya, where in January the new revolutionary regime of Col Qaddafi had started pursuing a claim, originally formulated by King Idris' government in 1969, for higher prices which would reflect the true freight advantage enjoyed by Libyan crude since the closure of the Suez Canal, and would incorporate a premium for the oil's high quality. During the early months of 1970, the government took a notably moderate stance, but negotiations made rather slow progress, and although it seemed that they might still be brought to a satisfactory conclusion, by the beginning of the summer the government's position had hardened. In part the regime's determination stemmed from an agreement in the spring to co-ordinate its efforts with Algeria, which was engaged in similar negotiations with its French concessionaires, but at the same time, Libya could see that its bargaining position as a short-haul supplier was being considerably strengthened by events in the tanker market. The economic upturn in Europe was resulting in a rapid rise in demand for industrial fuel oils of the type derived from the heavier Gulf crudes, and this additional pull on long-haul supplies increased the demand for tanker charters. The strain was only made worse by the loss of several of the new class of mammoth tankers in mysterious explosions early in the year; and in May the situation deteriorated further when a Syrian bulldozer broke Tapline, running from Saudi Arabia to the Mediterranean port of Sidon, and deprived the industry of 480,000 b/d of short-haul crude.

In the same month, Libya ordered Occidental, a particularly vulnerable independent which derived nearly a third of its earnings from its Libyan concession, to reduce its production. Whether this decision was made for conservation reasons, or because the government realized what chaos a further reduction in the supply of short-haul crude would cause, remains unclear—but, either way, Libya soon appreciated the value of production cuts as a lever in their price negotiations, and they quickly imposed further reductions on Occidental and on the other companies. By September, the industry had lost about 1m. b/d of Libyan production, and freight rates soared as extra supplies had to be brought in from the Gulf. One by one the companies surrendered—led, naturally, by Occidental and followed by the other independents in the Oasis group. The majors held out a bit longer, but finally Texaco and Socal broke ranks, and then Esso, Mobil and, eventually, Shell gave in too. The Libyans achieved a price rise of $0.30, rising to $0.40 over the next five years, and their tax rate rose from 50% to amounts varying from 54% to 58% in payment for what the government claimed should have been higher prices since 1965.

Although in theory these changes were made only to reflect the freight and quality advantages of Libyan crudes, the majors realized that they would be bound to result in higher prices in the Gulf, and they promptly decided to pay the Gulf producers a higher tax rate of 55% and an extra $0.09 on heavier crudes (which although normally regarded as of lower quality, were in particularly high demand in 1970). Then in December 1970, at OPEC's 21st Conference, in Caracas, the members decided that the Gulf countries should press for further price increases.

The oil industry, with the support of the consumer governments, formed itself into the united front combining majors, independents and European national companies. When talks with the producers' representatives began in Teheran in January 1971, the companies agreed in principle to a price revision, but insisted that negotiations should cover all OPEC states, so as to avoid the leap-frogging of the past few months. The companies were forced to concede this point and a parallel series of negotiations was begun in Libya. During the second half of January the gap between the Gulf producers and the companies gradually narrowed, but on 2 February the talks collapsed. OPEC then held an extraordinary conference, and all members resolved to legislate a price increase if the companies did not respond to their minimum demands by 15 February. But none of the parties wanted a confrontation, and one day before the OPEC deadline, the companies gave in. The producers were given: an immediate $0.33 basic increase, $0.02 for freight disparities, half a cent for every degree API by which any crude fell below 40° API, the elimination of all remaining discounts and allowances, and provision for prices to increase by 2.5% and $0.05 on 1 June 1971, and 1 January 1973, 1974 and 1975. This took 34° API Saudi Arabian Light from $1.80 to $2.18. In return, the companies were guaranteed that there would be no further claims until after 31 December 1975, no more leap-frogging if the Mediterranean producers concluded better terms, and no embargoes.

Later, in March, negotiations were resumed in Libya, and on 2 April an agreement was signed giving Libya $0.90, a uniform 55% tax rate, and provision for annual price increases of 2.5% and $0.07. Subsequent negotiations secured similar terms for Iraqi and Saudi crude arriving at Mediterranean terminals through the IPC pipe and Tapline.

The price explosion

It was hoped that the Teheran and Tripoli Agreements would give a full five years of price stability—but it was only months before they came under strain. In August 1971, President Nixon's decision to float the dollar (leading to a formal devaluation in December) produced OPEC claims for compensation—though in a notably moderate tone. The claim was settled on 20 January 1972, when the companies agreed in Geneva to an immediate price rise of 8.49% in the Gulf; and later, in May, after rather tougher negotiations, the same was agreed for Libya.

In February 1973 the dollar was devalued a second time by 10% and under the terms of the Geneva Agreement prices were duly raised by 5.8% on 1 April. The OPEC states were disappointed by the time the adjustment mechanism took to operate, and by the small size of their compensation, and, after a further series of discussions with the companies, on 1 June a second dollar compensation agreement was signed in Geneva.

The producers obtained an 11.9% increase (which included the 5.8% increase in April plus compensation for the further slide in the dollar's parity during May) and it was agreed that prices would in future be adjusted monthly according to a weighted average movement of 11 major currencies against the dollar. This formula resulted in further rises in August and September and a reduction in October.

The companies presented the Geneva agreements as supplementary to the Teheran Agreement—although they both involved a significant rise in revenues, and could equally be characterized as a breach of the five-year price programme. Similarly, the participation arrangement negotiated in 1972 meant a significant increment in government receipts and a modification of the fiscal structure; and a still more drastic alteration came in September 1973 when Saudi Arabia agreed with Aramco that both categories of buy-back crude should be priced at 93% of postings—this being the price obtained by the Saudis in May at the first auction of their own direct crude entitlement.

In the summer of 1973, there were, however, much more fundamental forces undermining the Teheran Agreement. As production in the USA began to fall after 1970, the world's biggest consumer began to look to the eastern hemisphere not only to make up for its declining domestic output, but also for an annual increment in supplies that was nearly as big as the annual increase demanded by the whole of Western Europe. US imports from the Arab countries and Iran grew from 0.6m. b/d in 1971, to 1.0m. b/d in 1972, and to 1.7m. b/d in 1973. It was in 1973 that US demand became really noticeable in the Middle East, and prices on the open market began to rise accordingly.

The OPEC states profited from this situation in as much as they received bids close to postings for the small amounts of crude they were selling on the market themselves; but, with the fiscal terms applied to the bulk of their production still tied to modified 1971 prices, they were for the most part excluded from sharing in the boom, and the main benefit went to the companies. The producers calculated that the effective profit split had changed from about 80-20 in their favour at the time of the Teheran Agreement to about 64-36, and they suggested that the companies were making excessive profits, and that the whole set of prices negotiated two years earlier had become obsolete. These arguments were backed up by the producers pointing out that the small annual increments agreed at Teheran were not keeping up with the rate of world inflation.

At the OPEC conference in Vienna on 15 and 16 September the members agreed to call the companies to negotiations in the following month, and to seek a sizeable lump increase in posted prices to bring them sufficiently above market realizations to permit them to resume their function as a realistic tax reference, while establishing a mechanism whereby the desired differential between posted and realized prices could be maintained in future. The six Gulf members of the Organization began meetings with a company delegation in Vienna on 8 October, two days after the beginning of the Arab-Israeli October war, but the two sides' positions were far apart. The producers demanded an increase of some 70% and the companies offered only 20%. At the end of the week, the companies requested a fortnight's adjournment. The producers immediately held a meeting of their own, and decided to hold a conference in Kuwait four days later on 16 October 'to decide on a course of collective action to determine the true value of the oil they produced'.

When the producers met again, they quickly abandoned the idea of holding any further consultations with the companies, and raised their posted prices by 70%. For the Arabian Light 'marker' crude, the posting rose from $3.01 to $5.12, while government take went up by a slightly larger proportion from $1.77 to $3.05. Subsequently, Libya raised its price by 94% from $4.60 to $8.92, thereby widening further the differential between Gulf and Mediterranean crudes. The new prices were designed to be 40% above the market price for any given crude as determined by the direct sales of governments to third parties, and OPEC announced that the movement of prices would in future be determined for each quarter by actual market realizations. Both the size of the October increase and the fact that it was made unilaterally were unprecedented, and signalled the final complete transfer of control over the price system, which until 1971 had been in the hands of the companies, into the hands of the producers—after a transitional three-and-a-half-year period of negotiated prices.

The price increase of 16 October was an important milestone in oil politics, but immediately, for the world economy, the meeting of Arab producers in Kuwait on the following day was far more cataclysmic. Gathering under the aegis of the Organization of Arab Petroleum Exporting Countries (OAPEC), they decided to use the 'oil weapon' in support of Egypt and Syria in their war with Israel. With Iraq opting out, the other nine members of OAPEC decided upon a policy of 5% cumulative monthly cuts in production from the levels of September—to continue until the political objective of Israeli withdrawal from the territories occupied in 1967 and the 'restoration of the rights of the Palestinians' had been achieved. The meeting was far from being an occasion of complete unanimity, and the decision on 5% cuts was taken with a degree of hesitancy on the part of some members and amounted to something of a compromise. But once the cuts had started, they escalated rapidly. Within days all of the Arab producers (including Iraq) placed embargoes on the USA and the Netherlands and reduced their production by equivalent additional amounts, while Saudi Arabia and Kuwait also incorporated the 5% reduction scheduled for November in their initial cut-back. Irritated by the lack of response from the West, the Arab producers then decided at a further meeting in Kuwait on 4 November to reduce output across the board by 25% of the September level, and gave notice of a further 5% cut in December. But in practice, the cut-back again turned out to be rather larger than it appeared to be on paper, and by the middle of November output in the two biggest Arab producers, Saudi Arabia and Kuwait, was down by between 30% and 40%.

With winter setting in, the Arab cuts had a dramatic effect on the market. Cargoes of Algerian and Nigerian short-haul crude fetched as much as $16 a barrel, and in December the National Iranian Oil Company, in an auction of its crude entitlement under the Sales and Purchase Agreement, sold oil at the staggering price of $17.40. In these conditions, the OPEC Economic Commission's search for a market price on which to base the quarterly revision of postings became impossible, and the views of company representatives, who suggested in November in a brief exchange in Vienna that no changes should be made until the market had become more stable, were discounted. When the Gulf producers met in Teheran on 22 December, the new price level set was an arbitrary one dictated largely by the Shah of Iran, who suggested a price of $14, while Sheikh Ahmad Zaki Yamani, the Saudi Oil Minister, argued for a price of about $7.50—though he did not, perhaps, put his plea for restraint as strongly as King Faisal would have wished. The other ministers gave Sheikh Yamani little backing, although they resented the way in which the Shah took control of the meeting, and it was eventually decided that the posted price should be increased by nearly 130% from $5.12 to $11.65—taking the government revenue from $3.05 to $7.00. The Libyan price rise which followed was rather more modest in percentage terms—from $8.92 to $15.76.

1974—changing the tax system

The OPEC conference at Geneva on 17–19 January 1974, revealed the full extent of Saudi Arabia's opposition to the price increase announced in the previous month—although in the conference chamber itself, Sheikh Yamani did not raise a formal objection. As it was, members endorsed the new prices while deciding on a three-month freeze. This was extended for a further quarter, after a rather tougher argument, at the next meeting in March.

Coinciding with the OPEC conference in March, was another review by the Arab states of their embargo policy. In effect the cuts had come to an end in December, when they announced that they would not be imposing a further 5% reduction in January, and reclassified most of the EC and Japan as 'favoured nations' for which they were prepared to run production as normal. But it was not until their meeting in March, by which time Dr Kissinger had arranged the Egyptian-Israeli disengagement, that they lifted the embargo on the USA (with Libya and Iraq temporarily dissenting) and only in July was the embargo on the Netherlands lifted. The resumption of normal exports to the USA was accompanied by a decision to restore output to

September 1973 levels, and Saudi Arabia, with an eye on the coming price battle within OPEC, which it saw would not be settled without reference to actual market realizations, let it be known that it would raise its output somewhat above September levels.

Inevitably, market prices weakened over the following months. After the failure of several participation crude auctions and price cuts of up to $3 by non-Gulf producers, in August, in the biggest single sale of 1974, the Kuwaitis failed to sell any of their 60% of production at the 97% of postings demanded. For the third quarter of the year they subsequently sold rather over 55% of the oil on offer to BP and Gulf at 94.8% of postings.

As Saudi Arabia had hoped in March, the excess of supply assumed a critical importance in the struggle within OPEC over pricing policy. In June Sheikh Yamani indicated the size of the reduction sought when he formally proposed that the marker crude posting should be lowered by $2.50. But when OPEC held its third meeting of the year at Quito, Ecuador, in June, the other members argued for formulas which would have raised the cost of oil to the consumers by as much as $1.50. Saudi Arabia again threatened a unilateral lowering of prices, and a cheap auction of its participation crude entitlement, and the result was a stalemate in which it was decided (with Saudi Arabia dissenting) to increase the royalty rate on the companies' 40% crude entitlement (known as equity oil) from 12.5% to 14.5%.

Although within OPEC in the summer of 1974 a major battle was being fought over the level of postings, there was at the same time a considerable (and unopposed) increase in government take (and therefore in the cost of oil to the consumers) as a result of the 60% participation agreements, concluded in the middle of the year but backdated to the beginning of 1974. In that the states' participation crude was either sold back to the companies at a level well above the governments' take on equity crude, or was sold on the open market at roughly similar prices, the average government revenue over their whole production was increased, even though on participation crude the governments had to bear the production cost themselves. In 1973, under the 25% regime, the overall effect of participation was fairly small—increasing average government revenues by about $0.10 in the first nine months of the year and by $0.15/20 from September, when the 93% of postings buy-back price came into force. But in mid-1974, under the 60% participation regime, the weighted average revenue worked out, in theory, at some $2 above the government revenue on equity crude (which after the December 1973 increases was about $7.00). In practice, however, there were considerable variations between the different producers in the amount by which the weighted average revenue exceeded the take on equity crude, and in every case, the actual weighted average was lower than it appeared to be in theory. A relatively small factor in determining the variations between the states was the different percentages of postings (93% or 94.8%) charged to the companies for buy-back crude. Much more important was that, following the failure of their auctions (or, in Saudi Arabia's case, in the event of their not holding an auction), the governments kept part of their crude entitlement in the ground, and thus lowered the proportion of participation crude in their overall output, and reduced their weighted average revenues. In Kuwait, for instance, during the third quarter of the year, the ratio of the two types of crude was 65% equity and 35% participation.

One of the consequences of this dual pricing system was that the companies got their crude on average at a price well below that demanded by governments for their direct sales. The OPEC states realized that the companies' own sales of this relatively cheap crude to third parties were not only undercutting state prices and causing the failure of the auctions, but were also giving the companies large windfall profits. It was these problems that the producers tackled during the latter part of 1974. When OPEC held its fourth meeting of the year in Vienna on 12 and 13 September the members decided on a further increase in the royalty rate on equity crude to 16.67%, and an increase in the tax rate on equity crude from 55% to 65.65%. Saudi Arabia argued that these tax increases should have been accompanied by a cut in postings, and again declined to implement the changes. It was only in the following month that Saudi Arabia, increasingly irritated by the companies' profits, decided to call on Aramco for back-payments to cover the Quito and Vienna tax adjustments.

In November Saudi Arabia took a more decisive step. A Saudi delegation held a meeting with the Qatar and Abu Dhabi oil ministers in Abu Dhabi and agreed with effect from the beginning of the month to raise the royalty rate on equity crude to 20% and the tax rate to 85%. At the same time $0.40 was cut from postings. This was meant to further narrow the gap between the weighted average cost of crude to the companies and the prices demanded at state sales—as well as reducing the impact of the changes on the consumers.

When OPEC met in Vienna for its fifth and final conference of 1974, on 13 and 14 December, the other members endorsed the new arrangements, and decided that from 1 January 1975 (the date to which it was assumed the final takeover of Aramco would be backdated) all of the Gulf states would apply the new weighted average cost to all of their production exported by their concessionaire companies, and that the new price levels should be frozen for nine months. The distinction between equity and participation crude, and the possibility of variations in the weighted average cost being caused by alterations in the ratio between the two crudes, therefore ceased to exist—even though the notion of a 40-60 split was still used to work out the new cost, known afterwards as the 'acquisition price'. The new single price system involved a big jump in government revenue, not only because it was based in part on the higher tax and royalty rates agreed at Abu Dhabi but also because it was based on a 40-60 equity-participation crude ratio which in practice had not existed before. The government revenue on the 'market' crude rose to $10.13, and the acquisition price for the companies to $10.25, reflecting the notional 'marker' production cost of $0.12. The gap between the acquisition price and the 93% of postings, $10.46, which remained the official sale price, was narrowed to $0.21.

Over the following years the acquisition price applied only in countries where the companies retained a 40% equity stake—which soon meant just Abu Dhabi and Saudi Arabia, among the bigger producers. In Kuwait and Qatar the former concessionaires got their crude at the government selling price (93% of postings) less a discount. This gave the companies a smaller margin than in Abu Dhabi and Saudi Arabia, which reflected the fact that in Kuwait and Qatar the companies were no longer investing capital. In Iran, where until the end of 1975 the companies continued to invest capital, the discount off the state selling price was bigger. In practice it was the state selling prices, in all countries, that became henceforth the important prices for OPEC.

Differentials—1975–78

December 1974 marked the end of the oil price explosion; in the space of 15 months government revenues and the cost of oil to the consumer had multiplied almost exactly five times. From then until 1 January 1979 there were only two OPEC price rises. One was agreed in Vienna in September 1975, when the state selling price was raised by 10%, and the other in Doha, in December 1976, when the majority of OPEC members raised their prices by a further 10%—causing a split with Saudi Arabia and the UAE.

During much of the four-year period 1975–78, demand was rather weak. There was something of a revival in the market in 1976, but in late 1977 and most of 1978 there was a serious glut caused by the new Mexican fields, Alaska and the North Sea, which had a significant impact on the world market at the same time. In these conditions OPEC members' attention became focused mainly on differentials—the different margins between crudes of different qualities in different locations. This problem was an important theme (sometimes the only theme) in at least half a dozen OPEC meetings: at Vienna in September and December 1975, Geneva in April 1976, Bali in May 1976, Stockholm in July 1977 and Caracas in December 1977.

Although ministers reached a flexible understanding on differential adjustments at the Bali meeting in May 1976, and periodically referred the matter to special committees (at Geneva in April 1976 and Stockholm in July 1977), the Organization could not agree on any comprehensive new system. Adjustments were made unilaterally, sometimes in accordance with guidelines laid down by one of the committees, but more often they took place

when a state experienced a particularly embarrassing fall in demand, or when a price rise (in October 1975 or January 1977) produced an opportunity for producers to adjust their own crudes by implementing a fractionally bigger or smaller rise than that announced of the marker crude.

Apart from the differentials issue, OPEC meetings in 1975–78 were marked by quite frequent battles over price rises. Iraq and Libya were always numbered amongst the 'hawks' (often with Iran, Algeria and Nigeria), and Saudi Arabia generally stood as the single 'dove'—though sometimes it had the support of the UAE, Qatar and occasionally Kuwait. Although Saudi Arabia was forced to compromise in September 1975 and before Stockholm in July 1977, it succeeded in preventing rises at Bali, at Caracas in December 1977 and at Geneva in June 1978.

Other recurrent issues were production programming (the artificial limiting of output so as to influence the state of the market) and the protection of oil prices against the dollar's fluctuations. Saudi Arabia invariably rejected the idea of production programming, or even to discuss its own output, on which any programme would have hinged. On the matter of dollar compensation mechanisms, which was an issue in early 1975 (at Vienna and Libreville) and late 1977/early 1978, Saudi Arabia was less adamant, but still doubtful of the value of any of the formulas proposed.

OPEC split and reconciliation—December 1976–December 1977

The major event in OPEC—and the major confrontation over prices—in 1975–78 occurred at Doha in December 1976. Saudi Arabia, with the support of the UAE, refused to countenance the increases demanded by other OPEC members, ranging upwards from 10%, though it emerged later that had compromise been possible it would have been prepared to accept 7%. The outcome was that Saudi Arabia and the UAE opted for an immediate 5% increase for the whole of 1977, while the other members decided on 10% for the first six months of the year with an additional 5% to take effect on 1 July.

In part the Saudi policy at Doha stemmed from a hard-headed realization that the health of the OPEC economies is linked to that of the Western economies, and that inflation caused by oil price rises rebounds on the OPEC members; but at the same time there is no doubt that Saudi Arabia felt a genuine sense of responsibility for the West's economic well-being.

After the Doha meeting Saudi Arabia announced that it was raising its production ceiling from 8.5m. b/d to 10m. b/d, and immediately there were big drops in the production of some of the other states. Yet there was no increase in Saudi production at the beginning of the year; indeed output in January and February fell from the record levels of late 1976 (9.2m. b/d in December) to only 8.2m. b/d and 8.7m. b/d respectively. During the next four months, however, production rose, reaching over 10m. b/d at one point. There was some mystery surrounding the reasons for this performance. On one hand, it was suggested that the initial drop in output was caused either by the inevitable time-lag that would elapse before Saudi Arabia could sign up new customers or by Saudi Arabia realizing that the expansion of production might be more effective as a threat than as a *fait accompli*. On the other hand, there was evidence that Saudi Arabia had tried from the start to raise production to 10m. b/d but had been frustrated partly by bad weather preventing tankers loading, and partly by the realization that although it had rather more than 10m. b/d of capacity installed in hardware terms and was planning to expand this to some 12m. b/d by the end of the year, it did not have the personnel and management systems needed to maintain output at these levels.

Throughout the early months of 1977 attempts were made to heal the rift in OPEC. At quite an early stage it became clear that the 11 upper-tier countries would agree to a compromise involving Saudi Arabia and the UAE raising their prices by 5% in July and the rest at the same time forgoing their own scheduled 5% increase, but it was not until sometime in June that it emerged that Saudi Arabia would accept this formula. Some two weeks before the OPEC conference at Stockholm on 12 July, which it had been agreed should not be held unless a solution had been reached in advance, the two sides made their compromise public. The Stockholm meeting itself concentrated on the issue of differentials. At the later meeting in Caracas in December 1977 prices remained frozen, not because of a consensus, but because Saudi Arabia managed to assemble behind it Iran, Kuwait, the UAE and Qatar.

The second oil crisis—1979

Despite the oil glut of most of 1978, relations between OPEC members improved from the middle of the year. On 6 and 7 May the ministers held an informal exchange of ideas on long-term strategy in Ta'if, Saudi Arabia. The relaxed atmosphere, free of the pressures of decision-making, was enhanced by the steps that Saudi Arabia was taking to cut its output. Late in 1977 it had reimposed its 8.5m. b/d ceiling, and in early 1978 it had decided to limit liftings of Arabian Light to not more than 65% of total liftings (compared with 72%–80% in 1975–77). The market, however, was unable to absorb the extra amounts of heavy crude that this ratio implied at prevailing production rates, so for the first nine months of the year Saudi output fell sharply.

The broad drift of the ministers' discussions at Ta'if assumed that the glut would begin to come to an end in later 1978 or 1979, that there would then be a period of balance in the market—how long a period depending on the consumers' growth rates and their success or failure at developing alternatives and conserving energy—and that at some point in the 1980s the world would return to conditions of shortage. In these circumstances it was felt that the market itself would look after oil prices and that OPEC might possibly orient itself to using its increased bargaining power for bringing about the new international economic order which had failed to emerge from the North-South dialogue in Paris. To study these questions the meeting established another ministerial committee composed of Saudi Arabia, Iran, Iraq, Kuwait, Venezuela (the five founder-members) and Algeria.

The turn-round in the market came much sooner than expected. At the end of October 1978 the strikes in Iran which were paralysing the Shah's regime began to affect oil production. During the next two months Iranian production varied between its norm of about 5.8m. b/d and 1.2m. b/d, but at the end of December it fell to 235,000 b/d (insufficient to meet domestic demand), at which point it remained until March 1979.

Up to the end of the year the companies made up the shortfall by increasing liftings elsewhere; Saudi output in December ran at a record 10m. b/d—it being permissible for Aramco to exceed the 8.5m. b/d limit for a month or so as long as it kept within it over the whole year. The Iranian crisis had no effect on the spot market. Nor did the crisis add much impetus to the OPEC meeting at Abu Dhabi on 16 and 17 December, when it was decided to raise prices for 1979 by 10% in quarterly instalments. These would bring the marker crude selling price from $12.70 in December 1978 to $14.54 in October 1979—a rise of 14.5% over nine months but an average increase for the year 1979 of 10%. What was remarkable was the storm of protest with which the rise was greeted by Western governments, which seemed to ignore the fact that the rise was extremely modest and followed a long period of price stability.

In the month that followed the OPEC meeting, spot market prices began to climb at a rate which was to destroy the price programme agreed at Abu Dhabi and, by mid-May, to cause the Western world to talk of a 'second oil crisis'. With Iranian exports halted the international oil industry was short of some 5m. b/d, which was only partially made up by Saudi Arabia raising its production ceiling from 8.5m. b/d to 9.5m. b/d and by smaller increases in Kuwait, Iraq and other producer countries. By the middle of February, at which point OPEC announced an extraordinary meeting to be held in Geneva at the end of March, spot prices for light Gulf crudes had risen to $21 and higher, involving premiums of above $7.50.

In February Abu Dhabi, Qatar, Libya, Kuwait, Iraq, Oman and the USSR (for its Western customers) imposed surcharges on their crudes of between 68 cents and $1.41 per barrel.

On 5 March Iran resumed oil exports, building up over the next two months to a production level of some 4m. b/d (which meant exports of 1.5m. b/d–2.0m. b/d less than before the Revolution). This caused the spot premiums to fall from their end-February peak of $23, but the market pressure for a rise was still impossible for Saudi Arabia to resist when OPEC met at Geneva on 26 and 27 March. All producers agreed to bring

forward their scheduled 1979 last quarter increase to the second quarter (raising the marker to $14.55), and it was decided that producers could impose any additional surcharges they deemed 'justifiable in the light of their own circumstances'. Saudi Arabia added no premiums to its Light, Medium and Heavy crudes, but $1.14 to its high quality Berri crude. All of the other Gulf producers increased the surcharges they had imposed in February (on top of the new price levels), while the African producers raised their selling prices to the $17.50–$18.50 range.

In the middle of April it became known that Saudi Arabia was not maintaining its extra 1m. b/d of output in the second quarter, partly because it argued that the resumption of Iranian exports made this unnecessary, and partly, it was thought, to show its displeasure with the USA over the Egypt–Israel peace treaty. Shortly after this the effects of the Iranian stoppage began finally to feed through to the market, as oil companies cut back their deliveries. These developments set off in May another jump in the spot market price for light crudes, taking the price above the end-February level and then on to extraordinary levels in the region of $33 per barrel in mid-May. Nobody in the industry was surprised when the surge in the spot market was followed by two further rounds of leapfrogging increases—both led by Iran.

To try to lessen the pressure for higher prices, Saudi Arabia announced before the OPEC meeting in Geneva on 26 and 28 June 1979 that it was considering raising its output again. At the meeting the other members demanded further increases, which, if Saudi Arabia had co-operated, would have raised the marker crude to at least $20. Saudi Arabia, concerned at the recessionary influences that the oil price increases were having on the Western economies, sought to stabilize the price at a lower level of $17–$18. In the end OPEC reached an amicable compromise in which Saudi Arabia raised its marker price to $18 while the other members were allowed to impose surcharges up to $23.50. This figure was adopted for some of their crudes by Algeria, Libya, Nigeria and Venezuela. Soon after the meeting Saudi Arabia announced that it was raising production for the third quarter of 1979 by 1m. b/d to 9.5m. b/d.

It was not until September 1979 that Nigeria broke the $23.50 ceiling by imposing a further premium on the price of its crude—and so triggered yet another round of increases.

Saudi attempts to reunify prices—December 1979–September 1980

Saudi Arabia made a major attempt to restore order to the situation in December 1979, when it raised its crude prices by $6 per barrel, taking Arabian Light from $18 to $24. In doing this Saudi Arabia obviously hoped to set the stage for the unification of prices at the OPEC meeting in Caracas later in the month, but in the event, the Caracas meeting broke up in disarray. During January 1980 most OPEC members announced further increases backdated to the beginning of the year. Saudi Arabia felt that there would be no point in allowing their prices to fall further out of line with other members and so raised its own crudes by $2 per barrel. For the future they were encouraged by a softening of the spot market, caused by the downturn in economic activity in the industrialized world. Other producers, however, were not deterred from asking for even larger premiums and bonuses over and above their official prices on new crude sales contracts.

Saudi Arabia made another attempt to rationalize the price structure in May 1980, raising its prices by a further $2, taking Arabian Light to $28, effective from 1 April. This initiative, like its predecessor, failed. Within a week or so all other OPEC members—except Iran, which had already increased its second quarter prices—had matched the Saudi increase. When OPEC met at Algiers in early June the best that could be managed was an agreement to accept a two-tier price system. A theoretical marker price was set at $32 per barrel and on this basis producers of light crudes were allowed to charge differentials of up to $5. This established a new ceiling for OPEC prices of $37 but, in the following weeks, the price charged for Arabian Light stayed at $28. When the other producers realized that no changes would come from Saudi Arabia, they gradually raised their prices in line with the new accord. The African producers put their best crudes at the $37 limit.

During the summer the market moved steadily in Saudi Arabia's favour. The Kingdom's production had stayed at 9.5m. b/d since the middle of 1979. At the same time the oil companies had continued to pay high prices, with premiums, for other producers' crude in spite of the over-supply that had begun to be obvious in the winter of 1979/80. By mid-1980 stocks in the industrialized world had risen to unprecedented levels, to the extent that the oil companies' storage facilities were simply unable to accommodate further crude. By September spot market prices for African crudes had fallen to some $5 below official levels, and OPEC production had dropped 1.5m. b/d below the 28.5m. b/d recorded early in the year.

It was against this background that OPEC held two meetings in Vienna in September 1980—a regular oil ministers' meeting and a tri-ministerial meeting of oil, finance and foreign ministers. The latter group was convened to discuss the Organization's 'long-term strategy'. This involved a formula for future price increases, a wide-ranging programme of aid to the Third World, a revived North-South dialogue between the industrial powers and the developing countries, and a further bilateral dialogue between OPEC and the industrialized countries—all subjects which the Organization had begun to study at the meeting held in Ta'if in May 1978. Given the state of the market, the Saudi delegation in Vienna was able to make what seemed to be real progress towards a reunification of prices and agreement on a proper system of differentials. It was agreed that the actual Arabian Light price should be raised $2 to $30 per barrel and that this should be regarded as the official marker price. It was accepted that other OPEC crudes, aligned on the theoretical $32 marker, should not be reduced but would remain frozen until the next OPEC conference in December.

Saudi Arabia argued strongly at the Vienna meeting that any price for Arabian Light of over $30 would be too high to serve as a starting point for the Organization's long-term price formula, which members were hoping to implement at the beginning of 1981. Noting that conservation and diversification measures in the industrialized world were at last beginning to bite, Saudi Arabia was concerned that anything over $30 as the starting point for escalation might permanently damage the world economy and cause an undesirably large drop in demand for OPEC crude. Arguing against Saudi Arabia, the more militant OPEC members refused to accept the $30 starting point because it would have involved a reduction of their existing prices. The eventual compromise, lobbied most strongly by Kuwait, was based on the idea that if the majority of members agreed to freeze their prices, the escalation formula would quite quickly bring the Saudi price up to their desired $32 starting point—possibly as soon as the end of the first quarter of 1981.

There remained the question of the details of the price formula. The 'draft plan' presented by the working group presided over by Sheikh Yamani envisaged quarterly price adjustments based on three indices: the exchange rates of the main industrial currencies, inflation in the industrial countries' consumer prices and export prices, and a GNP index reflecting the real rate of growth of the 10 biggest industrial countries. The purpose of the last index was to bring the price of OPEC oil gradually up to the price of the 'alternatives'—oil from tar sands, shales and coal. The plan also provided for the co-ordinated adjustment of production upwards and downwards to preserve the price structure in the face of serious glut or shortage, and for moderate one-off price increases in time of acute shortage.

Most of the OPEC members backed the draft plan and were broadly in sympathy with the Saudi stand. The dissenters were Algeria, Iran and Libya, which rejected the use of inflation and growth indices from the industrial nations in constructing the price escalation formula. They argued instead for an index based on the much higher growth rates of the OPEC members and on the inflation of OPEC's imports of industrial goods. As the tri-ministerial meeting proceeded there were indications that Algeria would be prepared to compromise with the majority—in which case it was thought that any further resistance by Libya or Iran would have little practical significance. This left only the issue of differentials. Here disagreements revolved around the Gulf producers' opinion that the $7 difference between African crudes and the new marker price of $30 were $4–$4.50 too high. As with the differences over the structure of the long-term price formula there was some cautious optimism

that the issue of differentials could be solved if there was the political will to do so.

Iran–Iraq War: renewed price discord

All optimism was destroyed at the end of September by the outbreak of the Iran–Iraq War, which soon led to the abandonment of the OPEC summit meeting. The two countries' attacks on each others' loading terminals and refineries led to a complete halt in exports and the removal of 4m. b/d from the international market. Iraq asked other producers to increase their output to compensate for the loss. In October the oil ministers of the four Arabian OPEC members met in Ta'if, Saudi Arabia, and agreed on a programme of increases, though given the 2m. b/d–2.5m. b/d surplus that had existed in the market before the war the amounts involved were modest. In all, the Arabian producers' output was raised by only some 1m. b/d of which some 700,000 b/d–800,000 b/d came from Saudi Arabia. This involved a new Saudi production level of 10.2m. b/d–10.3m. b/d. The extra Saudi crude was sold to state-owned oil companies of industrialized and developing countries at a $2 premium over the official Arabian Light price of $30. The production increases were not big enough to prevent a gradual rise in spot market prices. In November the Rotterdam price for Arabian Light rose to $40, and by the end of the month there were a few examples of Arabian Light and African oils being traded for between $42 and $43.

It was against this background that OPEC met again in Bali, Indonesia, in December 1980. In view of the renewed discord and the more buoyant state of the market, the more moderate OPEC members were pleased to achieve even a minimal degree of pricing order. The conference took a series of decisions very similar to those taken at the Algiers conference in June 1980. Saudi Arabia agreed to raise the price of Arabian Light by $2 to $32, and the conference as a whole set a theoretical marker crude price of $36—this being intended as the basis for increases in the prices of other crudes. A differentials limit of $5 was set, making an OPEC ceiling price of $41. Somewhat to the oil industry's surprise, in early January 1981 Kuwait, Qatar and Iraq raised their prices by $4 aligning them either side of the theoretical marker price of $36. Abu Dhabi raised its price for Murban crude by just $3 to $36.56. The African producers moved the prices of their light crudes to the $40–$41 range.

1981—Price reunification

During December 1980 both Iran and Iraq began exporting crude again. From the time lifting began both producers offered substantial discounts, nominally to offset the extra insurance premiums that tanker owners were obliged to pay for sailing their ships into a war zone. In response to the renewal of exports by the two countries, Abu Dhabi had promptly stopped its output of 80,000 b/d of war-relief crude, but Saudi Arabia maintained its output at 10.3m. b/d. This meant that the Kingdom was accounting for 43% of total OPEC output—a figure which it had never attained in the 1970s and which gave it unprecedented power within OPEC. Certainly in 1980 Saudi Arabia seemed much better equipped to dictate price levels to the other members of OPEC than it had been during the previous confrontation of 1977. In the circumstances it was inevitable that Iran's and Iraq's return to the market would lead to a general erosion of prices. In April and May several companies, including Atlantic Richfield in Nigeria, 'walked away' from their contracts. Qatar dropped its $6.50 premium.

As it approached the next OPEC conference, scheduled for 25 May 1981 in Geneva, Saudi Arabia felt confident of being able to persuade its fellow members, without too much difficulty, to accept a price 'freeze' for the rest of the year. Sheikh Yamani made it known before the meeting that the Kingdom would like the 'freeze' to be extended through 1982, to give the Western economies 'time to breathe and recover'. Saudi Arabia also wanted to move towards a unified price structure and revive the long-term strategy plan. This had been the subject of informal discussions which it had held with Kuwait, Nigeria, Algeria, Venezuela and Indonesia at a secret meeting in Geneva in February.

At the OPEC conference no progress was made towards reunification. A mooted compromise, which would have involved Saudi Arabia increasing its price by $2 to $34 and the other members lowering their theoretical marker price to the same figure proved unacceptable to the militants. Instead all members agreed to 'freeze' the theoretical marker price at $36 and the maximum OPEC price at $41 until the end of the year.

Most of the members at the conference—the exceptions being Saudi Arabia, Iran and Iraq—also agreed to cut their output by 10% in an attempt to reduce the surplus on world markets. This was important as the first occasion since the 1960s that OPEC had taken a decision on production levels. However, it was announced that the basis for the 10% cut was to be the output levels obtaining at the beginning of the year and, as most producers' output was running at well below these levels in May 1981, the actual reductions that resulted from the decision were not very large.

There was another abortive attempt to reunify prices at $34 when OPEC held a consultative meeting in Geneva in August. Events in the period immediately after the meeting, however, influenced OPEC attitudes. Saudi Arabia in September reduced its production to 9m. b/d–9.5m. b/d as a gesture of goodwill, while Nigeria, Indonesia, Gabon and Iraq all found that to maintain acceptable production levels they had unilaterally to cut their prices.

At the end of October, when OPEC gathered for its third Geneva meeting of 1981, the members were at least able to agree on reunification. As had been suggested at earlier meetings, the point of reunification was $34—a figure which involved Saudi Arabia increasing its price by $2 and the other members of OPEC cutting their prices by $1–$2. Saudi Arabia agreed to underpin the new price structure by restoring its production level to the traditional ceiling of 8.5m. b/d. Various loose ends concerning differentials were tied up at a meeting in Abu Dhabi in December. On this occasion there was a general lowering of the prices of both light and heavy crudes, to be effective from the beginning of 1982, which cut the average cost of OPEC crudes to consumers by some 50 cents per barrel.

OPEC's first production programme

Only weeks after the reunified price structure and the new, more realistic differentials had come into effect OPEC found itself facing the worst crisis in its history. The continuing recession in the industrialized countries and a run-down of stocks at a rate believed to be 4m. b/d cut demand for OPEC oil in February to just 20.5m. b/d. This compared with a forecast of 23m. b/d made before the new year. In response to the pressure of the market Iran in February made three price cuts totalling $4; North Sea prices were reduced by similar amounts to around $31 per barrel. The spot market price for Arabian Light fell to $28.50—$5.50 below the government selling price.

Slightly to the surprise of many outside the Organization, OPEC met the challenge fairly effectively. On 6 March 1982 Saudi Arabia made a further cut in its production to 7.5m. b/d. On the same day informal discussion by some of the OPEC ministers, attending an Arab conference in Doha, resulted in a tentative agreement that the production of OPEC as a whole should be limited to 18.5m. b/d, and that a full, extraordinary meeting of the Organization should be called two weeks later in Vienna.

The extraordinary meeting, on 19 and 20 March 1982, started badly. Individual members produced a series of inflated figures for what they regarded as their minimum acceptable production quotas. The total of all quotas initially demanded came to 21.9m. b/d, and Sheikh Yamani warned that if the OPEC nations were not serious in their defence of the $34 marker price, and allowed the market to degenerate into a free for all, Saudi Arabia would have no alternative but to go it alone, which would entail a whole barrage of competitive measures—reduction of the Arabian Light price to $24 per barrel, an increase in output to 10m. or 11m. b/d, and extensive sales of Saudi crude on the spot market. This glimpse of the abyss concentrated the minds of the other members wonderfully and caused them to agree on a realistic set of quotas involving an 18m. b/d ceiling. This was slightly below the ceiling which had been mentioned at Doha and some 1m. b/d below average first quarter production levels. The decision was accompanied by a further lowering of light crude prices in Africa and the Gulf, the establishment of a ministerial 'watchdog' committee to monitor the market and the implementation of the quotas, and an agreement that the 18m.

b/d ceiling should be reviewed at the next ordinary conference in Quito in May.

The quotas agreed at the Vienna meeting, in millions of b/d, were as follows: Iraq 1.2, Iran 1.2, Saudi Arabia 7.5, Kuwait 0.65, Neutral Zone 0.3, UAE 1.0, Qatar 0.3, Nigeria 1.3, Libya 0.75, Algeria 0.65, Venezuela 1.5, Indonesia 1.3, Ecuador 0.2, Gabon 0.15. Immediately after the meeting Sheikh Yamani announced yet another cut in the Saudi production ceiling to 7m. b/d in April—0.5m. b/d below its quota level.

For three months following the Vienna meeting the OPEC production programme seemed to be working and prices on the spot market responded reassuringly by closing to official selling rates. At the next ordinary conference held in Quito on 20 and 21 May ministers expressed satisfaction with the success of the quota system. They decided to review the 17.5m. b/d ceiling later in the summer and there was some hope that it might be raised. By mid-June, however, it was clear that the limit on collective output had been exceeded. In that month production averaged nearly 18m. b/d despite the fact that Saudi Arabia's output was running well below its self-imposed ceiling at about 6m. b/d and Iraq, unable to export from the Gulf, was fulfilling little more than two-thirds of its quota. At the time the production programme was adopted Iran's attitude had seemed ambivalent and its participation doubtful. In the event it steadily increased its production from April onwards, stimulating exports through the offer of discounts of up to $3 and more below the officially agreed OPEC level. Its output had reached about 2.5m. b/d by July. Muhammad Gharazi, Iranian Minister of Oil, stated that the objective was 3m. b/d. Libya was estimated to be producing at a rate of 1.2m. b/d and in contracts had agreed to prices $2 below the official level. Because of their non-observance of the pact Venezuela declared that it would not be bound by the agreement. By the time the ministers gathered in Vienna for an extraordinary conference planned two months earlier the production programme was disintegrating. Chances of it being salvaged were not improved by Saudi Arabia's demand that the differential for the premium North African crudes should be increased from $1.50 to at least $3. This reflected the dissatisfaction of Saudi Arabia and the other Arab producers of the Gulf over the way in which their output was falling.

The fact that the extraordinary ministerial conference held on 9 and 10 July was suspended—rather than ended without any agreement—indicated the extent of its failure. Apart from a common commitment to the $34 reference price and recognition of the need to restrain production within a 17.5m. b/d ceiling, Iran, Libya and Algeria insisted that Saudi Arabia should further cut its production to accommodate other producers, in particular Iran. Saudi Arabia's response was that it still refused to discuss its level of output with other members and that it had already made substantial sacrifices. At a time when Libya and, to a lesser extent, Algeria were offering discounts in various forms off existing official prices, the Kingdom's insistence on widening differentials seemed a somewhat irrelevant, as well as disruptive, preoccupation. Above all, though, the belligerence of Iran, which had just previously taken the Gulf conflict into Iraq's territory, poisoned the atmosphere. Ministers dispersed comforted only by the strong expectation that demand for OPEC oil would revive in the second half of the year.

The willingness and ability of oil companies, banking on a price reduction, to run down stocks came as a surprise. OPEC production of about 18m. b/d in the third quarter and 19m. b/d in the fourth was too high to maintain the $34 reference price and Arabian producers grew restive. Meeting within the context of the Gulf Co-operation Council (GCC) made up of Saudi Arabia, Kuwait, the UAE, Qatar, Oman and Bahrain, they issued a thinly disguised threat of price cuts and increases in production by themselves if other exporters continued 'in their misguided actions'. The warning was evidently aimed at Britain, Norway and Mexico as well as OPEC recalcitrants.

OPEC's next biannual ministerial conference in Vienna from 18–20 December could do no more than agree that the $34 reference price should be defended and that collective output should be no more than 18.5m. b/d in 1983. Little progress was made on the allocation of production quotas, the elimination of discounting, and the correction of differentials. The lack of realism was clear from the fact that the initial quota nominations by individual members amounted to 23.4m. b/d. The possibility of the Gulf producers acting independently recurred but they decided against such a course.

A gathering in Bahrain on 23 January 1983 of oil ministers of the GCC, who were joined by their counterparts from Iraq, Indonesia, and Nigeria, paved the way for a full ministerial consultative meeting in Geneva on 23 and 24 January. Once again members failed to agree upon a concerted strategy in the face of a growing threat, although members moved a little closer to adoption of a new system of quotas. Once again the consultations were plagued by the issue of differentials and pressure from the Arab producers of the Gulf to obtain an accord on their increase. The central question, though, related to the $34 reference price. Saudi Arabia and its allies were clearly in favour of a cut to $30 per barrel.

The chief delegates of OPEC eventually reconvened in formal session in London on 6 March, though negotiations had been conducted continuously since mid-January. The common interest of producers looked imperilled in mid-February as, first, the British National Oil Corporation (BNOC) proposed to its customers a reduction in the top North Sea rate (in competition with the premium North African crudes) from $33.50 to $30.50 per barrel, and, then, a day later, Nigeria slashed its official selling rate from $35.50 to $30 in a bid to boost exports. Far from rising significantly there had been no recovery in demand for OPEC oil. On the contrary, destocking surged to a rate generally estimated at more than 4.5m. b/d during the first quarter of 1983, while members' output of oil and NGLs dropped to about 15.5m. b/d. The underlying desperation was, perhaps, best articulated by the Venezuelan Minister of Energy and Mines, who said on the third day of the conference: 'If we don't reach agreement this week we will meet in two months and be discussing $25 as a price'. The prospect of a general price collapse drew out reserves of endurance, as well as patience, from the delegates. The essential parts of the package finalized on 14 March were: a 15% cut in the reference price from $34 to $29 per barrel; a new production programme under a ceiling on collective output of 17.5m. b/d; and differentials on the bases set in March 1982.

Iran expressed strong reservations about the price cut, despite having previously given the biggest discounts to customers. It did so on principle and also, it seemed, as a ploy to secure a dispensation for acceptance by other members of a price for its own crudes below the OPEC structure. This was granted to take account of the higher insurance premiums and freight costs in respect of oil shipments from the Kharg Island terminal which had been the subject of periodic, if ineffective, Iraqi attacks in the continuing Gulf conflict. No limit was set but other members did not object to the announced $1.20 discount which more or less reflected the extra costs involved in shipping Iranian crude in March 1983.

The part of the agreement covering production caused the most trouble. Members appreciated from the outset the particular problems of Iran and Iraq—it was recognized that the latter could not fulfil its quota, but there was an understanding that Saudi Arabia and Kuwait would make up some of the difference. Three members caused particular difficulties as far as quotas were concerned. Saudi Arabia began by insisting on 6m. b/d for itself but, in the end, implicitly assented to produce no more than 5m. b/d without waiving its principle of refusing to participate in a production-sharing programme. The UAE held out to a late stage for 1.5m. b/d but ultimately agreed to an allocation of 1.1m. b/d. Venezuela, which demanded no less than 1.8m. b/d, settled in the end for 1.6725m. b/d. The quotas agreed, in millions of b/d, were as follows: Algeria 0.725, Ecuador 0.2, Gabon 0.15, Indonesia 1.3, Iran 2.4, Iraq 1.2, Kuwait 1.05, Libya 1.1, Nigeria 1.3, Qatar 0.3, UAE 1.1, Venezuela 1.6725, Saudi Arabia 5.0.

Where differentials were concerned, Nigeria posed one of the biggest problems confronting efforts to complete a satisfactory package, since it was politically impossible for the government of President Shagari, with an election looming, to revise upwards the price of Bonny Light in line with the $30.50 per barrel set by BNOC. The greatest danger to any new defence of a basic, albeit, lower price was a price-cutting war between Nigeria and the North Sea producers. The industry generally viewed the top Nigerian variety as being underpriced in compar-

ison with its North Sea competitors. Algeria and Libya agreed to set the rate for their premium crudes at $30.50. In doing so they put themselves at a slight disadvantage. It was calculated that, if production limits were observed, each of the three would enjoy a fair share. In the mean time, the question of what constituted the right differential for premium grades and the Arabian Light reference price, in a constantly shifting market, remained unresolved.

OPEC's struggle to maintain stability

After the conclusion of their prices and production pact, the OPEC producers, the world's marginal suppliers of energy, not only had to face lower per-barrel revenues but also a depressed level of output at least until the summer of 1983 in order to maintain the value of their petroleum, the source of their livelihood.

Two months after the conclusion of the agreement there was optimism that the line could be held. Crucial, in this respect, was the fact that an official selling rate for North Sea oil compatible with OPEC's price structure was proposed by the BNOC and, after initial misgivings, accepted by the industry as a whole. Anything less than the $30 per barrel set for the Brent blend would have prompted retaliation from Nigeria and almost certainly set off a price-cutting war. The UK Government, with its ideological adherence to the principle of 'free-market forces', strenuously sought to avoid any impression that it had colluded with OPEC, but stressed its intention of doing nothing to destabilize market forces. Norway, as usual, aligned itself with Britain. The collaboration of Mexico, which had also been on the lower price tier, had previously been obtained by OPEC. Having emerged as the main single threat to the new price structure, the USSR raised its official selling rates closer to those of OPEC and trimmed back supplies after prices on the spot market rose in April 1983, as if finally alerted to the common danger facing all producers.

At the outset the new price structure together with the system of production controls looked fragile. By early summer, however, confidence had grown that the market was stabilizing and that the goal of balancing supply with demand could be achieved at the cost of short-term sacrifice. Iran and Libya had evidently overcome early resistance from customers to their new official price levels. There was a consensus that demand for OPEC oil would rise at least to between 18m. b/d and 20m. b/d in the last quarter from a level of only about 14.5m. b/d in the first quarter, depending on the rate of restocking and economic recovery. Thus, it was imperative that OPEC as a whole and its members individually should keep their nerve and discipline.

At first sight it was ironic that Britain, with exports of only about 600,000 b/d, should have assumed such a pivotal position in this crucial period. In fact, the importance attached to it, while essentially arising from the crucial relationship between North Sea and Nigerian prices, highlighted OPEC's loss of control over the world's oil market as a result of declining demand and competition from non-member producers.

After an initial period of uncertainty over OPEC's revised production-sharing agreement and doubts about its ability to maintain sufficient discipline, the market had strengthened considerably by the time that the Organization met for its next ministerial conference in Helsinki on 18 July. During the April–June (1983) quarter OPEC production of crude oil fell to about 16.7m. b/d as members made something like a concerted effort to discipline output and observe official prices. For that quarter Indonesia, Nigeria and the UAE exceeded their quotas by between 70,000 b/d and 100,000 b/d. However, there were no significant breaches of quota allocations as Saudi Arabia bore the brunt of slack demand during this period. Moreover, after Iran and Libya had withstood pressure from customers to concede discounts, price levels were successfully maintained.

With demand for OPEC oil clearly starting to grow it was hoped that economic recovery and an increase in the demand for oil might make it possible to raise the limit on output. As it was, however, OPEC output surged well above the ceiling to pass 19m. b/d, an average rate which was maintained until the end of the year. Indonesia was obviously in breach of its quota of 1.3m. b/d with a rate of more than 1.4m. b/d during the second half of 1983. Iranian production probably ran at a rate 100,000 b/d or so above its 2.4m. b/d allocation. Kuwait also exceeded its quota of 1.05m. b/d with actual production of 1.2m. b/d or more. But, again, it was Saudi Arabia, the acknowledged 'swing producer' within OPEC (i.e. meeting any increase in demand for OPEC crude above the 17.5m. b/d ceiling or absorbing any drop below it), which was mainly responsible for the increase. At an estimated average of 5.87m. b/d its output during the July–December period was substantially higher than the 5m. b/d accorded it by other members of OPEC in the general understanding relating to the production-sharing programme of March 1983. This extra production would have accounted for about 60% of all OPEC output in excess of the 17.5m. b/d ceiling during the second half of 1983. Saudi Arabia had not, in fact, agreed to any limitation on its production, and at the end of the protracted London meeting in March 1983 it did no more than commit itself to being the Organization's 'swing producer'. The surge in its exports in the second half of 1983 coincided with the start of operations by NORBEC, a marketing company established to supplement the work of the state hydrocarbons corporation Petromin. When OPEC's market-monitoring committee called upon Saudi Arabia late in October 1983 to account for its high rate of output Riyadh's bland response was that the Kingdom could not perform its role as 'swing producer' if other members did not observe their quotas and price commitments. The Saudi statement also pointed to the oil being produced on behalf of Iraq (250,000 b/d from the Neutral Zone, shared with Kuwait, and 60,000 b/d from Saudi Arabia) to compensate it for the constraints on its exports imposed by the Iran–Iraq War, and to crude oil produced for storage rather than immediate sale so that, it was claimed, seasonal demand for natural gas could be met. There was some confusion, too, as to why Saudi Arabia was chartering a large number of supertankers and placing a considerable volume of crude in them. Initially, it was suggested that the oil was being stored because of the temporary shut-down of two offshore fields, Zuluf and Marjan, while they were being incorporated into the Kingdom's Master Gas System. Saudi Arabia sought to give the impression that the stockpile was not related to the possibility of a supply crisis resulting from the closure of the Strait of Hormuz or any other disruption of oil traffic. The cumulative total built up in floating storage by the end of 1983—just over 20m. barrels—was not sufficient to account for Saudi output over and above 5m. b/d.

The breakdown in OPEC discipline was seriously destabilizing the market again by the end of 1983 and when OPEC delegates met for a full ministerial conference in Geneva on 6 December the need to restore confidence in the market had become urgent.

The onus was on OPEC and the world was sceptical of its ability to defend the $29 per barrel reference price and the price structure relating to it. Even if there had been any scope for raising the ceiling the exercise would have been dangerous in the absence of an agreed mechanism for adjusting quotas and with the existence of conflicting quota claims. The UAE believed that it should have priority, with an increase in its allocation from 1.1m. b/d to 1.5m. b/d, if the ceiling was to be raised.

As early as July 1983 at the Helsinki meeting, Iran had given notice that it would demand a bigger quota at the Geneva conference and prior to it specified the increase being sought as 800,000 b/d in addition to the 2.4m. b/d accorded it under the London agreement of March 1983. Iraq, meanwhile, had voiced its claim for an increase from 1.2m. b/d to 1.8m. b/d. In any dispute over increased production the pleas of populous, debt-ridden Nigeria and Indonesia, two of the weakest links in the OPEC chain, could not be ignored. As it was, overproduction had pre-empted the possibility of lifting the ceiling and there was a strong argument for lowering it with percentage cuts in individual quotas. At the Geneva conference OPEC had little choice but to reaffirm the production ceiling and allocations agreed in London. Iran did press its claim for a bigger allocation at Saudi Arabia's expense, though not to the point of threatening a rupture. The Kingdom also came under fire from other members but Sheikh Ahmad Zaki Yamani, its Minister of Oil, did no more than promise privately that Saudi output would be restricted to a maximum of 5m. b/d without making it clear whether the pledge included oil produced on behalf of Iraq. Iran struck a discordant note by proposing that the $34 reference price should be restored because the $5 cut had not in any way stimulated demand but finally relented when other members

agreed that a committee should be established to discuss the question.

OPEC and the world price structure looked very vulnerable to a further decline in prices on the spot market, and a chain reaction of price cuts by non-members eventually forcing Nigeria and perhaps others to give way. The United Kingdom again found itself in the pivotal position as it had in the spring of 1983 because of the close relationship between North Sea and North African crudes. The subsequent recommendation of the BNOC for unchanged prices in the first quarter of 1984, citing OPEC's production agreement as 'a sound basis for stability in the market', was couched in terms indicative of a general change of attitude on the part of the UK Government. It had watched the crisis early in 1983 with impassivity and little appreciation of the dangers involved. By the end of the year the implications for state revenue and the country's balance of payments were fully appreciated and reckoned to be more serious than any lapse in respect for free-market forces. At the same time the companies responsible for the greater part of production in the UK sector of the North Sea had come to appreciate that their interests lay in market stability and maintenance of the price structure. In the event BNOC obtained overwhelming acceptance for its proposal, with only two of its customers phasing out their contract options.

OPEC succeeded in pulling through the critical spring months without any serious price cutting, despite a fall in demand for members' crude. Output in the first quarter was estimated by the IEA to have averaged 17.8m. b/d. Saudi production, at about 5m. b/d, came more or less within the limit recognized by other OPEC members. Nigeria's production surged ahead to about 1.46m. b/d over the three months. Subsequently, output was reined in and Nigeria pledged not to seek a quota increase until the ministerial conference in July. The other main offender was Indonesia whose production averaged something like 1.5m. b/d. It, like Qatar, evidently resorted to giving some disguised discounts.

OPEC's collective output exceeded the 17.5m. b/d limit by a clear margin over the 12-month period following conclusion of the pact on production and prices but no precise figures were available. Indeed, the failure of member countries to report accurately made more difficult the job of the Organization's market monitoring committee, which was to supervise adherence to quotas. The IEA calculated average OPEC production from the beginning of April 1983 to the end of March 1984 at 18.1m. b/d (not including NGLs). That compared with an estimate of 17.67m. b/d for the production year 1982/83, when the average was depressed to a low point of less than 15.5m. b/d in the fourth quarter of the year (January–March). Members were not helped by the continued rundown of inventories, but early in 1984 severe winter weather in North America boosted demand. An unexpected bonus was the miners' strike in the United Kingdom which began in the spring of 1984, initially creating an extra demand for fuel oil of 200,000 b/d–300,000 b/d, and of as much as 600,000 b/d before the industrial dispute came to an end a year later. In the early part of 1984 there was also an unexplained fall in Soviet supplies. Rising tension in the Gulf also helped to sustain the market and to support prices in the early part of the year. The potential danger to oil traffic passing through the Strait of Hormuz had become apparent in the summer of 1983 when it became known that France was to provide Iraq with *Super Etendard* aircraft, capable of delivering the *Exocet* missiles already in its possession. These could be used to hit tankers loading at Kharg Island, Iran's main oil terminal, though it seemed they were not sufficiently effective to cause much damage there. In September 1983 Ayatollah Khomeini himself had said 'I warn oil states of the region, and the other countries which use oil in one way or the other, that the Government of Iran, exerting its utmost power, will oppose this aggression and is determined to block the Strait of Hormuz, thus obstructing the passage of a single drop of petroleum'. The danger became far more real as Iraq began to step up its attacks, with a fair measure of success, from February 1984 onwards, although Iran soon proved that it could maintain exports at something approaching its quota entitlement by offering the inducement of discounts and later by ferrying an increasing proportion of its output to Sirri Island in small tankers for onward shipment.

OPEC's production-monitoring scheme

The increase in oil demand, which became evident in the last quarter of 1983 following a decline totalling 20.5% from 1980 to 1984 in the industrialized world, as defined by membership of the OECD, was maintained in 1984 when it rose by 2.3% compared with the previous year, according to the calculations of the IEA. However, the rate of growth declined progressively during the year from 6.1% in the first quarter, to 3.4% in the second and third quarters and to 2.6% in the fourth. Disappointingly for OPEC, despite the general recovery of demand for oil throughout the OECD, it did not keep pace with economic growth in the industrialized world and the ratio of oil consumption to the Gross Domestic Product (GDP) of the OECD as a whole continued to fall as a result of further energy conservation and switching to coal, gas and electricity. Moreover, OPEC's share of the market in 1984 fell for the sixth year in succession. Its output of crude at about 17.2m. b/d, plus 1.3m. b/d of NGLs or condensates, was marginally up on 1983 but accounted for only 40.2% of estimated supplies to the world outside the Communist world compared with 41.2% in 1983, according to IEA estimates. Total non-OPEC supplies in 1984 rose from 26.1m. b/d to 27m. b/d.

Over 1984 as a whole OPEC's output of crude oil was just under 17.5m. b/d, marginally less than in the previous year, according to the most authoritative estimates. The IEA calculated OPEC output at 17.2m. b/d, or exactly the same rate as in 1983, not including condensates and NGLs, production of which, the agency calculated, had risen from 1.2m. b/d to 1.3m. b/d. The well-informed Petroleum Intelligence Weekly (PIW) put the OPEC rate for 1984 at 17.49m. b/d, including condensates, which would have amounted to 450,000 b/d–500,000 b/d. The Royal Dutch/Shell group figures gave a total for 1984 of 18.57m. b/d compared with 18.5m. b/d in 1983, including all condensates and NGLs.

In 1984 there were some significant changes in the national shares of total OPEC output. That of Saudi Arabia, including its 50% entitlement of almost exactly 200,000 b/d from the Neutral Zone shared with Kuwait, fell by about 8% to 4.64m. b/d, and Iran's by nearly 10% to 2.18m. b/d, according to PIW calculations. By contrast, Iraq's production rose by about 20% to about 1.2m. b/d, its full OPEC quota, as throughput via the pipeline to Ceyhan, the terminal on Turkey's south-east coast, rose to a capacity of 1m. b/d, with the remainder accounted for by domestic consumption and some 50,000 b/d of petroleum products transported by road to Aqaba, Jordan, for onward shipment. When the volume in excess of 300,000 b/d of 'war relief' crude produced on its behalf by Saudi Arabia and Kuwait (technically taking the latter above its quota) was taken into account, though, Iraq could be considered to have been the biggest violator of the prices and production pact. Nigeria was 100,000 b/d above its 1.3m. b/d allocation. Proportionately, Qatar was the biggest offender, with average output for the year running at no less than 400,000 b/d compared with a quota of 300,000 b/d. At about 250,000 b/d, Ecuador was 25% above its 200,000 b/d quota.

Rising consumption, which was evident in the winter of 1983/84 led OPEC to hope that it might be possible to raise the ceiling on output to as much as 19m. b/d for the last quarter of the year. The expectation was that, by then, demand for OPEC crude might amount to as much as 20m. b/d depending on the extent to which stocks were drawn down. In the mean time OPEC struggled, for the third summer in succession, to maintain its price structure and the related, all-important credibility in terms of the observance of production and pricing discipline. In the spring of 1984 the market had revived to the extent that spot rates for Brent blend, the North Sea reference crude, marginally exceeded its official selling rate of $30 per barrel at the end of April. It was strengthened by fears of serious disruption of supplies from the Gulf resulting from a continuation of Iraq's attacks on tankers lifting oil at Iran's Kharg Island terminal and from the possibility of serious Iranian retaliation following attacks on Kuwaiti and Saudi vessels in May.

International anxiety reached its highest point in mid-May, when the Saudi super-tanker *Yanbu Pride* was set ablaze by rocket fire from an Iranian aircraft only 30 miles from the Saudi coast. That was enough to send the price of Brent, now established as the all-important market indicator, soaring to

$30.70 per barrel on the spot market. Orders for Saudi oil pumped through the Trans-Arabian pipeline (Tapline) rose from less than one-third of its 1.85m. b/d capacity, prior to the *Yanbu Pride* incident, to 1.5m. b/d in June. Iran had already threatened to prevent oil supplies leaving the Gulf via the Strait of Hormuz, through which a little over 20% (7m. b/d–8m. b/d) of supplies required by the non-Communist world were passing, if Iraqi military action prevented its own oil export industry from operating.

An increase in the use of the Tapline facility apart, it was reckoned that, in the event of the termination of supplies from the Gulf, other OPEC members would be able to provide 3.7m. b/d from idle capacity, while more than 500,000 b/d might be available from non-OPEC producers. In theory that would leave a shortfall in supply of up to 3m. b/d. The situation was potentially serious for Arab producers of the Gulf, as well as consumers, in view of the fact that a 2.5m. b/d shortfall over a period of a few months in 1970 sent spot rates soaring and led to the eventual doubling of official selling rates by the end of 1980 to the high point from which the subsequent deterioration in OPEC's fortunes began.

In the summer of 1984 there was no panic comparable to that experienced in 1979 and the concern over supplies proved to be short-lived. On the one hand, it was realized that Iran probably had not the capability to block the Strait of Hormuz by military means for more than a very brief period, if at all. Moreover, stocks were still at a high level, despite a steady rundown of company inventories since mid-1982. The stated readiness of the Reagan Administration to release oil from the US Strategic Petroleum Reserve of non-commercial stocks, then accounting for 80% or 400m. barrels, helped suppress any adverse speculation. In addition, there was the reassurance of the 55m.–60m. barrels which had been placed in floating storage by Saudi Arabia during the previous summer. Saudi Arabia had denied that the action was related to the possibility of the Strait of Hormuz being closed, but in the late summer of 1983 it did much to weaken the market, though little of the stored oil was released on to the market.

The oil market concluded that the situation was not as serious as first feared. The average spot rate for Brent fell below the official selling price in the last week of May. Having suffered a temporary reduction in oil liftings from Kharg Island, Iran moved rapidly to rectify the situation, offering discounts in the range of $2.50–$3.00 per barrel below the preferential rate relative to other Gulf crudes accorded it under the production and prices pact concluded by OPEC in March 1983. Exports quickly recovered to a level of 2.1m. b/d–2.2m. b/d, within its quota, with about another 700,000 b/d being used for domestic refining. It became evident that Qatar was far more flagrantly flouting the pact as its output rose above 400,000 b/d, stimulated by the offer of a discount of $1 or so below official selling prices.

A far more serious threat to the structure of the OPEC prices and production programme came from Nigeria, as it pressed for a rise in its quota to ease its grave financial and foreign exchange problems. There was the danger that Nigeria might go its own way, cutting its prices as it did in February 1983, which precipitated the OPEC crisis meeting in the following month and the traumatic $5 per barrel price reduction across the board. That was the main issue facing OPEC's 11–12 July ordinary mid-summer ministerial conference in Vienna, following a month which saw a steady decline in prices on the spot market. The unsatisfactory compromise reached at the conference was that Nigeria should be allowed an extra 100,000 b/d of output for August and 150,000 b/d for September with Saudi Arabia reducing its share to accommodate the increment. Yet, even at this stage there was optimism that there would be an appreciable rise in demand for OPEC oil in the latter half of the year.

OPEC's hopes were confounded. With available supplies greatly exceeding demand and, for the most part, selling at a discount on official prices, the market continued to sag. Saudi oil output surged to 5.5m. b/d in July and the OPEC total to over 18m. b/d. Largely as a result of these two factors the spot rate for Brent plummeted to $26.85–$26.95 at the end of the month. The crisis was such that Mr Alick Buchanan-Smith, British Minister of State for Energy, took the unprecedented step—given the UK's *laissez-faire* policy towards the oil industry—of writing to the eight largest operators in the North Sea urging them not to bring pressure on the BNOC to cut prices over the coming weeks. This, and subsequent clarification that Saudi output had been running at no more than 4.5m. b/d and that OPEC's output as a whole was more or less within its ceiling, did much to stabilize the market for a while.

It was becoming apparent that the growth in overall demand was slowing down, and OPEC crude output fell below 17m. b/d, with Saudi Arabia fulfilling its role as the 'swing producer', with its production falling below 4m. b/d, so that it seemed in September as if the market might be gaining some equilibrium. But with non-OPEC sources of supply progressively increasing, Nigeria raising its rate to 1.6m. b/d in October, and only a modest build-up of inventories, spot-market realizations began to sag again.

Even so, it was without any warning that OPEC found itself faced with a full-scale crisis in October, the market being thrown into panic with the news that Norway had offered its customers secret discounts on a month-by-month basis amounting to $1.35 per barrel off its Statjford crude for October and $1.05 for November. Already under some pressure from some customers (rather than the big suppliers) BNOC followed suit, cutting the rate for its Brent blend to $28.65 per barrel. Nigeria reacted predictably, leap-frogging the North Sea producers with a cut of $2 per barrel on its lighter varieties of crude and setting a price for Bonny Light (with which, in the spring of 1983, BNOC had managed to align Brent), to $28 per barrel, thereby threatening a vicious downward price spiral. Brent plummeted towards $26 per barrel on the spot market.

OPEC had no choice but to resist the downward trend set in motion by the North Sea producers and its recalcitrant member, Nigeria—any cut in per barrel revenues was not going to be offset by higher demand in the foreseeable future. Its response in consultations held in Geneva between six ministers on 22 October and the subsequent full extraordinary ministerial conference held from 29 to 31 October, was impressive. With remarkable speed, given the contortions which had been involved in apportioning output allocations in 1982 and 1983, it was decided to lower the ceiling on collective production to 16m. b/d (from the 17.5m. b/d set in spring 1982), and a new system of quotas was agreed upon. The limit was intended to be a temporary one, of unspecified duration, which would be lifted when the supply situation tightened up and spot-market prices came into line with official selling rates. Proportionately, Kuwait (14.3%), the UAE (13.6%), Saudi Arabia (an implied 12.9%, tacitly accepting the anticipated shortfall from Nigeria and a proportion of the cuts for Venezuela, Ecuador and Indonesia) and Libya (10.0%) agreed to the largest reductions in their output. In conformity with its traditional policy of refusing to allow its own output policy to be determined within the context of OPEC, Saudi Arabia made no formal commitment. The understanding was that it would not allow its rate to pass 4.353m. b/d, compared with 5m. b/d under the March 1983 pact. Nigeria's quota was left unchanged at 1.3m. b/d but it made it clear that it considered its entitlement to be no less than the 1.45m. b/d it was granted in September, and refused to rescind its $2 per barrel price cut bringing its prices back into line with those of other members. The Saudi and Kuwaiti chief delegates were confident that spot-market rates would come back into line with official selling rates before the end of the year and persuade Nigeria to conform. The new quotas (in millions of b/d, with the previous quotas in brackets) were as follows: Algeria 0.663 (0.725); Ecuador 0.183 (0.200); Gabon 0.137 (0.150); Indonesia 1.189 (1.300); Iran 2.300 (2.400); Iraq 1.200 (1.200); Kuwait 0.900 (1.050); Libya 0.990 (1.100); Nigeria 1.300 (1.300); Qatar 0.280 (0.300); Saudi Arabia 4.353 (5.000); UAE 0.950 (1.100); Venezuela 1.555 (1.675); total 16.0 (17.5).

No progress was made on the increasingly critical issue of OPEC's price differentials. By the late summer of 1984 it had become apparent that the defence of OPEC's crumbling price structure required a radical revision. Since they were last adjusted early in 1983, perhaps insufficiently for a system which had basically remained intact since 1979, rates had fallen glaringly out of line with market realities. In particular, the problem of a wide disparity between the prices of lighter crudes and those of the cheaper, heavier grades had become much too wide. This had been caused by the expansion of up-grading

capacity in refineries world-wide to convert high gravity, sulphurous oil into premium products. The difficulties of the light producers were compounded by Saudi Arabia's decision to change the proportions of its export contract 'mix' from a blend of 20% Arabian Light, 20% Arabian Heavy and 60% Arabian Light, to 35%, 25% and 40% respectively. In the long term the switch was made in order to gear Saudi output to the level of its reserves, but the immediate purpose seemed, to producers dependent on lighter varieties, to be to ensure demand for the Kingdom's crude because it effectively lowered the price of the Kingdom's average barrel in the composite package from $28.08 to $27.55.

OPEC's October conference did no more than appoint a three-man committee, comprising a chairman, Sheikh Yamani of Saudi Arabia, and the chief delegates of the UAE and Libya, to deal with the problem of differentials. The consensus in the oil industry was that the gap between heavy and light crudes should be closed by no less than $1.50 per barrel to bring a measure of greater stability to the market. The conference which was held in Geneva in two sessions in December only marginally closed the gap of $4.50 between the $26 per barrel official selling price for Arabian Heavy and the $30.50 charged, notionally, for the premium varieties of Algeria and Libya. Algeria and Nigeria pressed for a reduction in the differential of as much as $2, to be achieved mainly by an increase in the price of the heavy crudes. Saudi Arabia adamantly opposed anything but a small increase in their rates and there was general reluctance in principle and some fierce opposition in practice to paring back the $29 per barrel price set in March 1983 for the Arabian Light reference or 'marker' crude, because such a cut would constitute a reduction in the price conceded in the face of market pressures. The interim decision, from which Algeria and Nigeria dissociated themselves, was for a 50 cents increase in the price of Arabian Heavy, and a 25 cents increase for Arabian Medium, with a reduction of 25 cents for the ultra-light Gulf crudes. This, in effect, was a 75 cents reduction in the differential, setting Abu Dhabi's Murban crude, the Gulf's top variety, at $29.31 per barrel. It left the premium North African grades of Algeria and Libya theoretically where they were before, while Nigeria, in practice, showed no sign of realigning its rates with the rest of OPEC. The price of an average barrel in Saudi Arabia's export package rose by 22 cents.

In the event a much more coherent system was evolved at the extraordinary ministerial conference held in Geneva from 28–30 January 1985. Ten members in all overcame the psychological barrier relating to Arabian Light (which had been OPEC's reference crude since 1973) by bringing its price down by $1 to $28 per barrel. The differential *vis-à-vis* the ultra light Gulf crudes was reduced to a maximum of 15 cents for Murban and Arabian Medium was switched back to its old level of $27.40 per barrel. It was agreed that Nigeria, because of its special problems in relation to the North Sea and its dire financial state, could keep Bonny Light at $28.65, the price which BNOC was still paying to its suppliers while suffering mounting losses in its sales of participation crude to third parties. It was calculated that the reduction in the average weighted OPEC price was 29 cents per barrel but that of the Saudi Arabian 'mix' was cut by 47 cents to $27.33.

Algeria, Libya and Iran dissociated themselves from the agreement, though this did not make much difference to its potential ability to stabilize the market. The greater part of Algeria's exports were in the form of refined products sold at spot-market-related prices. A large proportion of sales by Libya were accounted for by barter deals involving discounts which it was offering more directly to customers, anyway, in its efforts to maintain shipments and fulfil its quota. The fact that the official selling price of Algeria's Sahara blend remained at $30.50 per barrel and Libya's Brega blend at $30.40 was, therefore, somewhat notional. Despite its opposition to the majority agreement, however, Iran quickly adjusted its prices in line with those of the other producers. It set them for liftings from Sirri Island, to which it was transporting an increasing volume of oil for onward transhipment, owing to buyers' inhibitions about lifting from the more vulnerable terminal at Kharg Island.

Another OPEC Monitoring Scheme

OPEC had, meanwhile, taken a major step towards enforcing more effectively the pact on production, pricing and sales. It was agreed at the 19–21 December 1984 conference session to establish a supervisory body, called the Ministerial Executive Council (MEC), under the chairmanship of Sheikh Yamani with the chief delegates of Venezuela, Nigeria, Indonesia and the UAE as the other participants. The far-reaching plan involved acquiescence by the 13 member states in an intrusion into their affairs and sovereignty unprecedented in the history of international organizations. The resolution empowered the council to employ independent auditors whom member states agreed to allow 'to check on member countries' petroleum sales, tanker nominations, shipments, pricing, quantities etc.' and 'to check the books, invoices, or any other documents that are deemed necessary by the firm in the fulfilment of its tasks'. Moreover, the brief of the council covered petroleum products and condensates as well as oil. Petroleum sales were also defined as covering barter deals, processing agreements, inter-governmental agreements, exchange and direct sales, equity oil, and all marketing arrangements—under most of which oil was disposed of at below official selling rates. The Dutch firm of auditors, KHG-Klynveld-Kraayenhof, was appointed before the end of January 1985. Although its role had been subsumed, OPEC's Market-Monitoring Committee continued.

In the second half of 1984 OPEC's output responded, despite varying degrees of indiscipline by nearly all members, to the slow-down in the short-lived growth in world demand and an actual decline in the preceding three months. The IEA calculated that collective production ran at 16.7m. b/d during the July–December period, well below the old ceiling. Not only was OPEC faced with increased supplies and greater price responsiveness to market pressures from its competitors but also by a large run-down of inventories in anticipation of cuts in official selling rates by the Organization. During the first quarter of 1985, with only a minimal build-up of 100,000 b/d by governments, the industrial stocks in the OECD area fell by no less than 2m. b/d.

In February 1985 the market strengthened, as a result of lower OPEC output and a measure of confidence arising from the revised differentials system and the new production-policing measures. Important short-term factors were a period of freezing weather in North America and Europe, together with a sudden shortfall in the availability of Soviet crude. The end of the UK miners' strike, however, removed 400,000 b/d–500,000 b/d in demand and, with a slump in demand forecast for the spring, OPEC needed support from other producers in its battle to hold the line. At the Geneva meeting in December 1984, Malaysia, Brunei and Egypt had encouragingly agreed to token cuts to show solidarity with OPEC, while Mexico repeated its commitment not to increase exports. On the critical North Sea front, however, hopes that the United Kingdom would try to hold Brent at $28.65 per barrel, with the aim of maintaining revenue and the value of sterling, were soon dashed.

In mid-March the British Government announced its decision to phase out the state-owned BNOC by July. The BNOC had, hitherto, purchased 51% of output from the UK sector and disposed of the critical volume (amounting to 700,000 b/d–800,000 b/d by 1985) which was not bought back by the larger companies with integrated operations and downstream (refining and marketing) interests. The implied threat of the abandonment of any form of structured-term pricing was soon realized as BNOC informed sellers that it would relate its prices to the spot market during its three-month period of phasing out. The announcement further depressed the market, which fell sharply at the end of April.

OPEC's prices and production discipline was still slack. Output in the first quarter of 1985 was reckoned by the IEA to have averaged 16.2m. b/d, just above the ceiling, having risen from 15.3m. b/d in January to 16.4m. b/d in February and fallen to 16.2m. b/d in March. There was evidence, though, that it was edging towards 16.5m. b/d by the end of April. Nigeria had not responded to the North Sea price cuts but its output, boosted by a series of new barter deals, was reckoned to be running at 1.7m. b/d. Four other members—Libya, Indonesia, the UAE and Ecuador—were exceeding their quotas, collectively by 400,000 b/d–450,000 b/d. Only the production below quota in Saudi

Arabia and Iran was keeping production in check. Co-operation with the MEC had been reasonable. Nigeria refused access to the auditors until April, while Algeria refused to let them examine its production of condensates. The Council had made much slower progress than had been hoped: it was close to full monitoring of OPEC output, yet far from exposing the scale of price discounting.

OPEC was faced with the harsh fact that the $5 per barrel price cut of March 1983 had not stimulated any increase in demand for its members' own oil. The growth in consumption world-wide, such as it had been, had only benefited non-members whose own investment in exploration and development had been given a big boost by the scale of the second 1979–81 price escalation. Conservation and the substitution of oil by other sources of energy had established themselves, for the foreseeable future, as enduring features of the economic life of the industrialized world. The extent of the damage was reflected in the fall in OPEC output from a high point of over 31m. b/d in 1979 to about 18.5m. b/d (including NGLs) in 1984, a drop of 40%. In the same period OPEC's share of the market fell from 60% to 40%. New sources of energy emerged over the five years, contributing to the market the equivalent of about 20m. b/d of oil half of which was in the form of non-OPEC petroleum supplies.

In terms of financial resources, Saudi Arabia was best equipped to deal with the crisis. Kuwait, with its large investment income, was also well placed. The UAE and Qatar, though not without some painful belt-tightening, also looked capable of balancing budgets and payments. Overall, the Gulf producers, including Iran and Iraq with their export potential restricted by the war between them, had borne the brunt of the cuts in output over the years, with only 50% of capacity being utilized in 1985 compared with 65% of other members'. As far as the poorer members were concerned, though, the four producers of the area hitherto regarded as perpetually in surplus—Saudi Arabia, Kuwait, the UAE and Qatar—still enjoyed too great a share of the much-diminished cake, especially Saudi Arabia, with an effective quota over three times that conceded to Nigeria which had a population perhaps 15 times as large. This remained a cause of underlying tension. So, too, did the ideological commitment of Algeria and Iran to maintaining, officially, the highest possible price whatever they or other members did in practice (i.e. discounting).

Yet it was understood that no one would benefit by boosting oil exports by lowering prices, since the loss of per barrel revenues would generally cancel out any gain in sales volume and could risk a free-fall or even a collapse of prices. For OPEC, the main compensation had been the strength of the US dollar, the currency in which all oil prices are set. Owing to the remorseless rise in the value of the dollar from the end of 1982 to the beginning of 1985, western European countries, on average, were paying 13% more for their oil in local currency terms, with a roughly similar increase for Japan. At the same time, however, the appreciation of the dollar, alone, could have been responsible for reducing demand by 2m. b/d.

During the summer of 1985 it became increasingly clear that, on the one hand, OPEC would not be able to raise the 16m. b/d production ceiling, and that, on the other, several members could not live comfortably with their quotas under the pact agreed in 1984. The breakdown of even the pretence to a firm commitment to production discipline was brought about by Iraq's determination not to observe any restrictions on its oil exports, and by growing Saudi impatience over production quota violations by other members and the fall in its output level as a result of its strict adherence to official selling rates. (By mid-1985 it was the only member of OPEC respecting them fully.)

The erosion of the official price structure worsened despite the efforts of the MEC to eliminate abuses. When the MEC met in Ta'if, Saudi Arabia, in early June 1985, it was apparent that the auditors, Klynveld-Kraayenhof, were encountering obstacles from nearly all member states. At this point, however, respect for the ceiling was not the main problem. In the first half of 1985 collective OPEC output had been slightly above the ceiling, at 16.2m. b/d but in the second had dropped to around 15m. b/d, when Saudi Arabia's production averaged just under 3m. b/d, compared with the maximum of 4.35m. b/d conceded under the revised 1984 production and prices pact. It had become clear that control of production was not, in itself, enough to strengthen the market, and drastic action on the issue of price was imperative. So-called 'net-back' deals, whereby prices for crude oil are related to current realizations for petroleum products on a spot-market basis, less agreed transportation and refining costs, assumed greater significance during 1985, having the effect of depressing prices further by locking them into a downward spiral of spot rates for products.

When OPEC met again in Vienna from 5–7 July, spot prices had fallen to a level $2–$3 per barrel below official selling rates, as output continued to stagnate. The need to restore a measure of credibility to official OPEC rates was more urgent than ever, and this meant resisting the drift towards market prices. Kuwait suggested that the ceiling should be adjusted on a seasonal basis, with a 7% reduction for the third quarter and a 7% increase for the fourth. For various reasons, five members opposed the Kuwaiti plan. In particular, Iraq gave notice that it not only wanted a bigger allocation but intended to pump to the full 500,000-b/d capacity of its new export outlet across Saudi Arabia via the new pipeline link which was scheduled for completion in August 1985. For the rest of OPEC and the oil market as a whole an important factor was the assertion by Saudi Arabia that it no longer considered itself to be the 'swing producer', and that it regarded the 4.35m. b/d conceded to it by the other members of OPEC, under the production-sharing pact of October 1984, as a 'fixed quota'.

At a subsequent consultative meeting in Vienna OPEC members agreed that they should cease direct discounting and phase out more involved price-cutting methods such as 'net-back' arrangements and counter-trade deals. The supervisory MEC was charged with contacting the governments of member states with a view to opening discussions on how this could be achieved.

At the next of OPEC's two annual ordinary conferences, in Geneva from 22–25 July, the majority of members agreed to a drop of 50 cents in the price of heavy Gulf crudes and to one of 20 cents in the prices of medium varieties, thus widening the differential between the former and ultra-light, North African crudes from $2.40 to $3 per barrel. The change reduced the weighted average official price for all OPEC crudes from $27.96 to $27.82 per barrel. Predictably, Algeria, Iran and Libya dissociated themselves from the majority decision, as they had done in the previous January, when a majority of 10 agreed to a lowering of the price for Arabian Light, then the essential reference for all other crudes, from $29 to $28 per barrel. It was doubtful whether the adjustment in price differentials would appreciably affect liftings of Saudi oil in the absence of a (totally unexpected) surge in demand. The triple alliance of Algeria, Iran and Libya, although they were dogged in their refusal to countenance any price cuts, were no respecters of the official rates. At this point, 70%–75% of OPEC exports were reckoned to be selling at rates conforming to the official structure but abuses were rapidly becoming more widespread.

Saudi Arabia's patience, meanwhile, was exhausted. The Kingdom's average output during the second quarter of 1985, including 50% of production from the Neutral Zone with Kuwait, ran at an average rate of something less than 3m. b/d, rather than the 3.8m. b/d that it could have expected on a pro rata basis under the quota system; and in May the rate of output fell to its lowest level for 20 years. The level of production officially regarded as necessary to cover the requirements of the 1984/85 budget was 3.85m. b/d, or the equivalent of $55,400m. at an average price of $27–$28 per barrel. By the time of the July 1985 meeting of OPEC, Saudi oil production was little more than 2m. b/d and, taking into account domestic consumption of about 800,000 b/d, sufficient to generate foreign exchange earnings from oil of only $11,000m.–$12,000m. As it was, the Saudi Government's revenue had fallen from a peak of $108,800m. in 1981/82 to $47,400m. in 1984/85, and it was becoming alarmed at the decline in economic activity, which was still very heavily dependent on state spending. The decision had almost certainly been made that the time had come for Saudi Arabia to cease making sacrifices on behalf of the other members of OPEC.

Saudi Arabia's decision to renounce the role of 'swing producer' and its determination to enjoy the maximum entitlement of 4.35m. b/d allowed it under the OPEC output sharing agreement became fully apparent in September. Saudi Arabia abandoned its previously strict adherence to official selling prices with

three deals on a net-back basis with Exxon, Texaco and Mobil, involving 800,000 b/d. Almost simultaneously the Kingdom persuaded the United Kingdom to accept payment for 132 military aircraft, from early 1986 onwards, in the form of crude oil, following the precedent set in the summer of 1984 with Boeing and Rolls-Royce in respect of 747 'Jumbo' jets wanted by the Saudi Ministry of Defence. The far more significant development in Saudi policy, the reversion to net-back deals, remained officially unacknowledged. King Fahd stressed the Kingdom's continued belief in the need for discipline among OPEC members and for the observance of common accords. Nevertheless, he continued, the principle of free trade was crucial, and 'nobody should blame anyone else for breaking the rules in pursuit of his own interests if he believes he is compelled to do so'.

Saudi Arabia's categorical insistence on its full portion of OPEC's diminishing share of the oil market was, in itself, enough to ensure the failure of the next OPEC meeting, in Vienna, on 3–4 October, which, it was hoped, would agree upon a revised system of quotas satisfying those members claiming larger allocations. It was clear that increases would have to be at Saudi Arabia's expense. As it was, the ministerial conference had no choice but to reaffirm the ceiling on collective output of 16m. b/d, with the economic experts' optimum estimate of demand for OPEC crude amounting to only 15.6m. b/d, despite the onset of winter. The meeting foreshadowed the abandonment of any real effort to control production, despite the fact that discipline over output had become imperative if prices were to be maintained. Quota increments were requested by Ecuador, Iraq, Qatar and Gabon. Iran responded to the Iraqi demand by pledging to produce two barrels for each one produced by its enemy. The UAE warned that it, also, wanted a bigger quota. The issue was deferred until the next ordinary conference, which was scheduled for the end of 1985. The inescapable, though unvoiced conclusion, was that it was impossible to agree on any distribution of quotas under such a low ceiling. At this point, Sheikh Yamani spoke of the need for serious discussions with non-member producers if a collapse of the market was to be avoided.

In the event, prices held up surprisingly well until the end of November, when Arabian Light, at $27.95 per barrel, was close to its official selling rate of $28 and premium North African crudes were being quoted at over $30 per barrel. One reason for this short-lived resilience was seasonal demand and a build-up of stocks, which rose at a rate of 500,000 b/d during the fourth quarter of 1985 in the industrialized countries belonging to the OECD. Secondly, non-OPEC supplies did not rise. A third factor was the intensified campaign by Iraq to blockade Iran's oil exports, which was signalled by the low-level air raid on the Kharg Island oil terminal on 15 August, the first such attack since June 1984.

Analysts had been puzzled by Iraq's apparent unwillingness to make telling raids on the prime economic target and its concentration instead on the tankers shuttling oil to Sirri Island. It was not clear whether this restraint arose from simple military or logistical factors, or from the persuasions of Iraq's major aid donors in the Gulf area, Saudi Arabia and Kuwait, which were anxious to prevent an escalation of the conflict which might involve them. The raid on Kharg Island temporarily reduced output from the terminal to only about one-half of the maximum export level of 1.6m. b/d, which was possible under Iran's 2.3m. b/d production quota. An increased number of Iraqi attacks from the air during the following months, aimed mainly at oil tanker traffic rather than the Kharg Island terminal, failed to have such a disruptive effect. The intensified campaign temporarily stabilized the spot market and forced Iran to consider various projects for reducing its dependence on Kharg Island. In practice, Iraq's failure to press home a potentially decisive advantage and Iran's resilience, enabled the latter to maintain the level of its exports, giving an output in the final quarter of the year of about 18.3m. b/d.

During the October–December quarter, OPEC output averaged rather more than 17.5m. b/d, far in excess of the optimum demand which had been estimated by the Organization's experts prior to the Vienna meeting in October. Saudi Arabia fulfilled its quota as progressively it offered all its customers oil priced on a net-back basis. With the commissioning of its new pipeline facility Iraq was able to achieve a production rate of about 1.7m. b/d. Nigeria, whose output rose from 1.3m. b/d to 1.7m. b/d, was responsible for most of the remainder of the rise in collective output. Demand was greater than OPEC's experts had forecast but actual supplies were in excess of requirements. According to a subsequent estimate by the IEA, the surplus during the final quarter of 1985 was about 1m. b/d. Moreover, by the end of the year the surge in Gulf production had led to a substantial increase in stocks afloat which had yet to reach the market.

OPEC'S 'fair' market share policy

OPEC met again in Geneva on 7 December in a mood of growing desperation. Early in November, Sheikh Yamani had warned of the possibility of a 'price war', yet the decision of the Organization at the three-day meeting, 'to secure and defend a fair share of the world oil market', came as a surprise, and had enormous implications for prices. The 16m. b/d ceiling remained notionally in force and so, too, did official selling rates. In practice, the majority had abandoned them both in preference for a strategy aimed at forcing other producers to collaborate with OPEC in maintaining prices and to concede to them a part of their market share.

By the end of January 1986 the price of the North Sea Brent blend had fallen to $18.80 per barrel on the spot market. In the period from November 1985 to March 1986, prices on the spot market for widely traded crudes plummeted by between 60% and 75%, to their lowest level, in real terms, since 1973. Iran, Algeria and Libya had publicly dissociated themselves from the new policy, urging, instead, a reduction in OPEC output, in order to restore prices to former levels. The strategy being pursued by the majority, albeit with misgivings in some quarters, was very much the invention of Saudi Arabia, Kuwait and the UAE—three states with financial reserves large enough to cushion them against the effects of a period of drastically reduced per-barrel revenues. Others had no such safety net.

Nine days of arduous debate at the ministerial conference held in Geneva from 16–24 March failed to produce an agreement on what the level of OPEC production should be and how it should be shared. Iran, Algeria and Libya demanded a cut in production to 14m. b/d for the second quarter of 1986, but Saudi Arabia insisted that any such reduction would be contrary to the policy of regaining market share, and that there would be no possibility of members observing such a ceiling if they were unable to respect one of 16m. b/d or to agree on how to distribute output under the higher limit. The only agreement to be reached was with a group of non-member producers (Mexico, Egypt, Oman, Malaysia and Angola), who signed a memorandum of understanding on co-operation and committed themselves, in principle, to curbing their own output, with the implicit proviso that OPEC first establish a workable system of quotas.

The conference was adjourned and reconvened in Geneva on 15 April. After several days of tense discussion, the deadlock remained unbroken, but a clear majority of 10 had emerged in favour of maintaining the strategy of recovering a 'fair' market share. They agreed that an OPEC production rate of 16.3m. b/d in the third quarter of 1986 and 17.3m. b/d in the fourth, giving an average of 16.7m. b/d for 1986 as a whole, would be compatible with the aim of restoring market stability. Adamant that the prime objective should be the restoration of prices to $28 per barrel by the end of the year, Iran, Algeria and Libya dissociated themselves from the majority view, declaring that OPEC output should be limited to 14m. b/d, 14.5m. b/d and 16.8m. b/d for the second, third and fourth quarters, respectively.

There were practical reasons why these three countries should propose a policy of production restraint. Despite its promise to produce two barrels of oil for every extra Iraqi barrel, the intensification of Iraqi attacks on Iranian oil installations and on tanker traffic during the spring prevented Iran from producing much more than its quota allowed. Algeria was committed to respecting its quota, and Libya, meanwhile, looked as if it would face some marketing difficulties after the withdrawal of the five US companies (Occidental, Continental, Amerada Hess, Marathon and W. R. Grace) involved in exploration and production operations there, following the USA's identification of Libya as a promoter of international terrorism and its punitive air raids on Tripoli and Benghazi in April.

The critical question of quotas remained unresolved, and was deferred to the next ordinary ministerial conference in July.

Following the marathon Geneva conference sessions, OPEC showed no sign of asserting any discipline. Collective OPEC output rose to about 17.5m. b/d in April, to about 18m. b/d in May and to more than 19m. b/d in the first two weeks of June, with Iran and Libya registering substantial increases in their production. So, too, did Saudi Arabia, which offered customers discounts ranging from 50 cents to $1.10 per barrel in order to maintain the level of liftings. Other producers, who had exceeded their quotas under the defunct 16m. b/d ceiling, continued to produce at these levels.

Saudi Arabia, Kuwait and the UAE seemed to want to inflict as much damage as possible on high-cost producers, in a bid to bring about the collaboration of the United Kingdom and Norway in OPEC's market-stabilization policy. By mid-1986, after six months of its application, they could derive some satisfaction from the fact that the strategy had had some tangible effect. Firstly, it was calculated that 800,000 b/d–900,000 b/d of capacity, mainly in the USA and Canada, had been closed down as a result of lower prices. Secondly, apart from the willingness, in principle, of five non-member exporters to co-operate with OPEC, the new Labour government in Norway, alarmed by the fall in state revenue and confronted by an economic crisis, suggested that it might be prepared to restrict the growth in the country's output provided that OPEC achieved a realistic system of production control. The British Government, however, remained dogged in its refusal to contemplate any intervention. Also, though at a considerable cost in pricing terms, OPEC had recovered some of its market share. According to the estimates of the IEA, OPEC's output of crude in the first half of 1986 was about 17.3m. b/d, a rise, which an increase in consumption of nearly 3% in the industrialized world, represented by members of the OECD, during the same period, helped to accommodate.

On 25 June OPEC oil ministers met on the Yugoslavian island of Brioni in another attempt to agree upon production levels and quotas. No progress was made towards agreement on a new quota system, although there was general agreement that the free-for-all should end. The demands of individual states totalled 20m.–21m. b/d, compared with IEA forecasts of demand for OPEC oil of 17.7m. b/d and 18.4m. b/d in the third and fourth quarters, respectively. Iran, Algeria and Libya continued to insist that the median price should be raised to $28 per barrel (OPEC's ultimate aim, officially) as soon as possible. It was recognised that the big surplus of supply overhanging the market, which had resulted from the June surge in OPEC production (19m. b/d—nearly 2m. b/d more than actual demand), would have an immediate, depressive effect on prices. Within a fortnight they had plummeted below $10 per barrel, the Brent blend falling to a nadir of $8.60. Early in July, Saudi Arabia's output soared to 5.7m. b/d, as it built up stocks in floating storage, in a move seemingly aimed at asserting more fully the Kingdom's influence over the market and OPEC, and collective production remained in excess of 18.5m. b/d well into July.

The reintroduction of quotas

The next OPEC meeting in Geneva on 28 July proved to be a turning point. It began with further talk about voluntary production cut-backs. By the fifth day of the conference the deadlock with Iraq, inevitably, proved to be an obstacle, with its refusal to join any production pact unless it was given parity with Iran. The impasse was surprisingly broken by Gholamreza Aqazadeh, Iran's Minister of Oil. He secretly proposed to Sheikh Ahmad Zaki Yamani, Saudi Arabia's Minister of Oil, that all members should return to the old quota system, under a ceiling of 16m. b/d (which had been determined in October 1984, and which had remained in force until the end of 1985), except for Iraq, which would be free to go its own way. In effect, the proposal set a limit for the 12 members, excluding Iraq, of 14.8m. b/d. Opposition from the UAE and Ecuador, which both demanded a larger share, had still to be overcome. Kuwait insisted that any evidence of quota violations by even one member would release the others from any obligation. As commitments had already been made to buyers, the proposal, if approved, could not take effect until September. Moreover, at the insistence of Saudi Arabia, Kuwait, the UAE and Ecuador, the resolution adopted on 5 August stressed that 'this agreement is temporary and does not constitute a basis for any fair distribution of national quotas in any future negotiations thereon nor does it bear any prejudice on OPEC's appropriate and rightful production'. This qualification was enough to ensure that the next conference, in October, to decide on a definitive and permanent allocation of shares, would be a lengthy affair. Under the two-month interim pact the quotas (in millions of b/d) were as follows: Algeria 0.663, Ecuador 0.183, Gabon 0.137, Indonesia 1.189, Iran 2.300, Kuwait 0.999, Libya 0.999, Nigeria 1.300, Qatar 0.280, Saudi Arabia 4.353, UAE 0.950 and Venezuela 1.555; giving an OPEC total of nearly 17.1m. b/d during September and October, after taking into account estimated Iraqi production and 'war-relief crude' produced on its behalf from the Neutral Zone by Saudi Arabia and Kuwait, and assuming that the other 12 countries observed their quotas.

When the interim pact came into force the price of the United Kingdom's Brent blend had climbed to $14.45 per barrel. A significant boost to OPEC's attempts to stabilize the market was given by Norway, when the government there announced cuts in exports amounting to about 10% for November and December. Oman had previously showed solidarity with OPEC with a cut in output of 50,000 b/d and there was support for the interim agreement from some non-OPEC countries, including Mexico and Malaysia. The main threat to market stability came from within OPEC's own ranks, most seriously from the UAE. Dubai refused to contemplate any reduction in its output of about 380,000 b/d; while Abu Dhabi only trimmed its rate during September to 900,000 b/d, so that UAE production during that month was nearly 350,000 b/d above its quota. Ecuador and Gabon also exceeded their entitlements. Venezuela and Libya sold oil from stocks over and above their quotas which, they were to argue, related to production rather than exports. By the end of September Brent was selling at around $14 per barrel, having risen at one point to $16.

OPEC met again on 6 October with little scope for raising the production ceiling to satisfy the demands of some members for larger quotas. The majority were in favour of extending the two-month interim agreement until the end of the year. This was ruled out by Sheikh Yamani, who said a redistribution of quotas was 'absolutely essential'. The other matter to be settled was the GCC's insistence on the establishment of prices in a $17–$19 per barrel range. Some members, while not rejecting the objective, believed it better to concentrate on production control. The meeting proved to be the longest and most exhausting OPEC had ever held. Kuwait complicated and prolonged it by claiming a larger share of whatever production total was arrived at. In the past, it maintained, and especially at the time of the 1983 production pact, it had made bigger 'sacrifices' than any other member in accepting a lower share of the total production (5.6% under the existing formula). Kuwait wanted greater recognition for its substantial oil reserves, output capacity and historic production rate, in the form of a larger quota. There ensued lengthy discussions and argument over the proper criteria for determining the allocation of quotas. The deadlock was finally broken by a Saudi statement on 18 October that the Kingdom was willing, on two conditions, to adhere to its quota of 4.353m. b/d until the end of the year, 'in order to ease the obstacles facing' all members. The first condition was that minor upward adjustments in production should not total more than 200,000 b/d. The second was that 'the per barrel price should be set at not less than $18 and that everyone should adhere to this price'.

On 22 October agreement was reached on a complex formula under which a higher production ceiling for OPEC members (excluding Iraq) of 14.961m. b/d was set for November and one of 15.039m. b/d for December. The starting point for the calculation of quotas was the 16m. b/d ceiling set in Geneva in October 1984 (less the 1.2m. b/d then accorded Iraq). A 161,000 b/d overall increment was shared by the participating members in November. Kuwait was conceded the entire 78,000 b/d increase for December when the total was distributed thus (in millions of b/d): Algeria 0.669, Ecuador 0.221, Gabon 0.160, Indonesia 1.193, Iran 2.137, Kuwait 0.999, Libya 0.999, Nigeria 1.304, Qatar 0.300, Saudi Arabia 4.353, the UAE 0.950 and Venezuela 1.574.

On 31 October, King Fahd of Saudi Arabia dismissed Sheikh Yamani, who had been his Minister of Oil since March 1962. It is possible that he was a scapegoat for the financial consequences of OPEC's policy of recovering market share, regardless of the

effect on prices. The ostensible reason for his dismissal, however, was his opposition to the King's demand for the immediate restoration of a fixed price of $18 or possibly $20 per barrel, and for a higher production quota for Saudi Arabia. Hisham Nazer, the Minister of Planning, and a known favourite of King Fahd, was appointed Acting Minister of Oil.

At Hisham Nazer's request, an emergency meeting of OPEC's pricing committee was convened in Quito on 14 November. It urged 'a prompt return to the system of fixing officially the prices for OPEC, as the appropriate means to restore to the Organization its capacity for controlling the price structure and maintaining the necessary stability in the world oil market. The committee also recommended that a reference price of $18 should not be fixed solely on the basis of 34° API Arabian Light (which Saudi Arabia, as it had previously made known, did not want to be the 'marker' crude) but on a 'basket' of seven crudes—Arabian Light, Dubai (UAE), Minas (Indonesia), Bonny Light (Nigeria), Saharan Blend (Algeria), Tia Juana Light (Venezuela) and Isthmus (Mexico).

During November the market strengthened with Britain's Brent crude, which commanded a premium of some 60 US cents over the chosen OPEC basket, averaging $14.40 per barrel, compared with $13.70 in October. OPEC output in November averaged about 16.5m. b/d. With the exception of the UAE, the output of the other 11 members party to the latest production pact was within their collective quota.

OPEC met in Geneva on 11 December, for its sixth conference of 1986, a year in which members suffered a drastic decline in oil revenue. All members were in favour of the $18 per barrel price target set by King Fahd but the majority were convinced that a reduction in the ceiling of 5%–10% would be necessary to achieve it. Iraq rejected a Saudi proposal that it should be given a quota of 1.466m. b/d. Final agreement was delayed by the Iranian demand that Iraq's expulsion from OPEC should be considered, and that a resolution should be adopted giving Iraq two months in which to reverse its decision not to participate in production agreements. Both measures were successfully opposed by the Arab members. The Arab producers opposed any censure of Iraq.

The result of the conference was an accord amongst the 12 on a 4.7% reduction in the limit on collective production from 15.039m. b/d in December, to 14.334m. b/d for the first half of 1987. A theoretical quota of 1.466m. b/d was allocated to Iraq, giving a notional ceiling for OPEC as a whole of 15.8m. b/d. It was agreed that fixed prices should be imposed from 1 February. Differential prices were fixed for the 17 most important crudes, apart from those in the basket, varying from $18.87 per barrel for Algeria's ultra-light Zarzaitine, to $16.67 for Kuwait's Export.

OPEC's new ceiling once again took into account certain factors which were becoming almost traditional: Iraq's refusal to participate in any production pact; the UAE's consistent violation of its quota; and the fact that, because of the Gulf conflict, Kuwait and Saudi Arabia refused to treat oil from the Neutral Zone produced on Iraq's behalf as contributing to their own output.

The cost of the 'price war'

Collective OPEC production in 1986, including NGLs, was 19.3m. b/d, compared with total consumption (outside the centrally planned economies of the Communist world) of 46.6m. b/d and supplies of 47.5m. b/d, according to IEA calculations. The discrepancy between consumption and supplies of 900,000 b/d was accounted for by the build-up of stocks largely caused by OPEC overproduction. Nevertheless, in terms of supply, OPEC increased its market share to 40.6%, compared with 37.7% in the previous year, thereby reversing the steady decline since 1979, when it was 61.7%. Non-OPEC supplies in 1986 were reckoned to be the same as in 1985, at 28.2m. b/d, with a 300,000 b/d decline in output by OECD member states, compensated for by a 300,000 b/d increase in net Communist (in practice Soviet) exports. Overall consumption rose by 1m. b/d, which could be partly attributed to lower oil prices, and a switch from other fuels as a result, rather than to economic growth. These somewhat bald statistics did not in any way highlight the one success of the 'price war' that could be identified. The damage to the high-cost US industry became apparent when US production figures were published. They showed that output had declined by 8.5% from 9.12m. b/d in 1985 to 8.34m. b/d in 1986. OPEC tended to claim sole responsibility for this decline. In May 1987 Peter Holmes, Chairman of Shell Transport and Trading Company, suggested that the price collapse of 1986 might have accounted for losses of 'perhaps as much as 500,000 b/d', but he added that exploration activity in the USA had declined 'catastrophically'.

The reason for the effective abandonment of OPEC's 'fair' market share strategy at the meeting on Brioni in June 1986, despite the fact that its two leading proponents (Saudi Arabia and Kuwait) were still cushioned by substantial, if diminishing, financial reserves, was that it was proving too costly. Prior to the Brioni meeting OPEC experts had estimated the overall annual loss of revenue by the 13 members at $50,000m.–$60,000m. Despite a strengthening of prices in the second half of 1986 actual losses were probably much greater. For instance, the Royal Dutch/Shell group later estimated that the value of collective OPEC oil exports fell from $133,000m. in 1985 to $75,000m. in 1986, despite the fact that output was up by about 12%, and exports, in volume terms, by about 16%.

OPEC's efforts to control prices and production during 1987

OPEC's performance under the new agreement of December 1986 was sufficiently impressive to boost the price of Brent to $17.55 per barrel at the end of March 1987, compared with an average of $16.20 during February. Before the OPEC conference in Vienna in June, however, collective output rose to 17.3m. b/d, significantly in excess of demand, and there were signs of growing indiscipline. The UAE and Qatar, in particular, flagrantly exceeded their quotas. The prospect of 500,000 b/d of extra Iraqi pipeline capacity becoming available in September (in fact, the new Kirkuk-Ceyhan (Turkey) pipeline became operational in July 1987) overshadowed the future.

At least, however, when OPEC met again in Vienna, from 25–27 June (its first meeting of the year), prices on the spot market were more or less in line with official selling rates. This was very much to the satisfaction of Saudi Arabia and Kuwait, whose policy had largely been oriented to making oil competitive with other fuels and, thereby, to ensuring a future demand for their abundant reserves. The so-called 'price hawks' (Iran, Algeria and Libya) were not so happy with the outcome because of their anxiety to see the $28 per barrel level (which had effectively been abandoned in December 1986) restored as soon as possible and production levels kept at 15.8m. b/d. The result of the Vienna conference was an agreement on raising the limit on OPEC output by 800,000 b/d to 16.6m. b/d for the rest of the year. (Iraq, once again, refused to participate in the agreement.) The higher ceiling, incorporating an overall rise of about 5%, gave new quotas (including a notional figure for Iraq) as follows (in millions of b/d, with the previous quotas in brackets): Algeria 0.667 (0.635); Ecuador 0.221 (0.210); Gabon 0.159 (0.152); Indonesia 1.190 (1.133); Iran 2.369 (2.255); Iraq 1.540 (1.466); Kuwait 0.996 (0.948); Libya 0.996 (0.948); Nigeria 1.301 (1.238); Qatar 0.299 (0.285); Saudi Arabia 4.343 (4.133); the UAE 0.948 (0.902); Venezuela 1.571 (1.495); total 16.600 (15.800). A committee, composed of the oil ministers of Indonesia, Nigeria and Venezuela, was asked to visit member countries 'in order to motivate them to comply with the terms of the agreement'—meaning, in effect, persuading or cajoling quota violators to stop exceeding their entitlements. In practice, of course, no one expected collective output to be contained within a 16.6m. b/d ceiling. The level was calculated to be significantly lower than actual demand to make allowance for Iraq's likely output and quota violations by other members.

In mid-1987 OPEC was able to derive some comfort from the marked reduction in stocks, which had been built up to an inordinately high level by members' overproduction in the autumn and summer of 1986. It appeared, too, as if prices on the spot market would continue to be buoyed up by tension in the Gulf arising from the prospect of a military confrontation between the USA and Iran. The US Administration insisted on proceeding, in the face of congressional opposition, with its plan to protect Kuwaiti oil tankers reregistered under the US flag, in defence of the principle of freedom of shipping in international waters. In July it was reported that Iran, in what appeared to

be a very ominous move, had finally begun to deploy Chinese-supplied *Silkworm* surface-to-sea missiles, with a range of 50 miles (80 km), in the vicinity of the Strait of Hormuz. It was also increasing its mine-laying operations around Kuwaiti coastal waters. Closure of the Strait of Hormuz would cut off supplies of more than one-third of OPEC output at its mid-1987 level, a shortfall which other members would be more than happy to make up.

Whilst a confrontation between the USA and Iran remained a matter of speculation, the Gulf conflict had made surprisingly little difference to the oil market, notwithstanding the sustained aggravation prompting Kuwait to seek assistance from the USSR, which chartered three supertankers to it, and then the USA.

In the face of repeated Iraqi air attacks (which were suspended for three weeks from 17 May when an Iraqi *Mirage* F-1 fighter plane mistakenly fired an *Exocet* missile at the *USS Stark*, killing 37 US sailors) Iran had managed to restore exports to the level of its OPEC quota by the spring of 1987. During 1986 Iraqi air raids had limited Iran's exports to little more than 1m. b/d. It was after Iraqi raids on the Iranian transhipment terminal at Sirri Island in August 1986 had reduced Iran's exports to 500,000 b/d (compared with 1.6m. b/d before) that Iran had begun its campaign of attacks against oil traffic to and from Kuwait. Kuwait was supporting Iraq financially in its war with Iran and selling oil on its behalf. What was probably a critical point in relation to the involvement of the superpowers in the Gulf and in prompting Kuwait's initial approach to the USA and the USSR came early in February 1987, when Lloyds of London announced that it was putting Kuwait on a par with Iraq and Iran with regard to insurance rates, charging a war premium of 3.75% of hull value on vessels using Kuwaiti ports, compared with 0.25% previously.

Iran criticized the Soviet decision to charter tankers to Kuwait (one of which struck a mine near the coast of Kuwait on 17 May—the same day as the *USS Stark* incident). On 29 April the Commander of the Iranian Navy warned that 'if there is any disruption in the movement of our ships and our imports and exports, this waterway would not be left open to any country. Subsequently, the Iranian Prime Minister proclaimed: 'everyone should know that we do not hesitate to make America's military presence in the region the target of our crushing blows'. The Iranian threat to close the Strait of Hormuz, first made in the autumn of 1983, when it became known that Iraq was to receive *Exocet* missiles, was once again being taken seriously. As the US Navy prepared to escort the reregistered Kuwaiti vessels in mid-July, any repercussions on the oil market and producers of the region from the heightened tension and looming confrontation in the Gulf were largely imponderable. There was general confidence that official selling rates of around $18 per barrel could be maintained, though it was realized that any serious development in the Gulf could send spot-market prices soaring, even if only briefly. The dangers of an Iranian-American confrontation were heightened on 24 July when the 400,000-dwt Ultra-Large Crude Carrier *Bridgeton,* one of the reflagged vessels, hit a mine near Farsi Island, when travelling in the first convoy to be escorted by the US Navy. Apparently undeterred by the prospect of conflict with the USA, Iran threatened to strike Kuwaiti onshore and offshore oil facilities with surface-to-surface missiles, if it continued to support Iraq in the Gulf conflict. Tension remained at a high level as the crude carrier *Texaco Caribbean* struck a mine in the Gulf of Oman off the coast of Fujairah on 10 August and another was discovered off Farsi Island, halting the progress of the second US-escorted convoy. Britain and France announced that they were reinforcing their naval forces in the region with minesweepers. Italy dispatched naval units, including minesweepers, which the Netherlands and Belgium also decided to send.

Nevertheless, with the escorting operation quickly established, the Iranian leadership made it clear that it wished to avoid a direct clash. As tension was defused, oil prices fell (prompting the OPEC committee meetings in September). Ironically, Iran enjoyed a period of just over six weeks, during which its oil exports were totally unimpeded by the Iraqi Air Force. On 20 July the UN Security Council adopted Resolution 598, urging an immediate cease-fire and the withdrawal of forces to recognized pre-war international boundaries, and a negotiated end to all hostilities. Iraq accepted the resolution, and halted attacks against Iran's oil traffic and economic targets. It evidently did so under diplomatic pressure from the USA to the effect that the chances of a settlement could only be jeopardized by attacks on shipping. Iran's response to the resolution was ambivalent. It avoided outright rejection, not least because such a reaction could only encourage US-led moves towards international sanctions. Teheran insisted that the first priority was for an international tribunal to identify the original aggressor in the conflict. The USSR and China were both reluctant to support Western diplomatic efforts to impose an arms embargo against Iran, because of their concern about long-term relations with the Islamic Republic, which, they argued, should be given more time to comply with Resolution 598. Faced with what seemed to be Iranian temporizing, Iraqi patience wore thin. On 29 August it resumed attacks on vessels bound to and from Iranian ports within its declared maritime exclusion zone. There followed an unprecedented series of attacks, in which 17 vessels were damaged in a period of six days from 29 August to 3 September—eight by Iraq and seven by Iran. Iraq also resumed attacks on Iranian economic targets. As a result, Lloyds raised the war-risk premiums on the hulls of all vessels plying the waters of the Gulf by 50%.

The first direct clash in the Gulf itself between the USA and Iran came on 21 September when two US Navy helicopters attacked the Iranian vessel *Iran Ajr*, as it was laying mines in international waters. During September there was an intensification and a shift in direction as well. Of the 15 assaults mounted in September, 11 were on Saudi-directed traffic. Iraq stepped up its raids on Iranian oil traffic and in the most devastating attack yet, on 7 October, struck five chartered shuttle and storage tankers at the Larak Island export transhipment terminal, including the 256,263-dwt Cypriot-registered storage tanker *Shining Star,* and the 564,739-dwt *Seawise Giant*, the largest vessel in the world, both of which had to be written off as total losses. Iran came under more pressure as the US Navy sank three Iranian speedboats on the following day, alleging that they had fired on a US observation helicopter. On 15 October Iran fired two Chinese-manufactured *Silkworm* missiles from the Faw Peninsula, which it had occupied early in 1986, at the Liberian-registered, but US-owned, 275,932-dwt *Sungari* as it was waiting to load oil at Kuwait's Mina Ahmadi terminal. On the next day the US-flagged 81,283-dwt product carrier *Sea Island City*, was struck by a similar projectile off Kuwait's Shuaiba terminal. The US Navy's 'measured and appropriate response' was to destroy the two offshore oil platforms on the Rostam and Rakhsh oilfield, which it claimed were being used as bases from which to track and launch attacks against shipping. According to Iran, Rostam had been producing 20,000 b/d–25,000 b/d, and Rakhsh was being repaired having been bombed by Iraqi aircraft a year earlier. Iran retaliated on 22 October by firing another *Silkworm* missile at Kuwait's deep-water terminal at Sea Island. In practice Kuwait's capacity to export was not seriously affected—the main terminal at al-Ahmadi was out of range of the *Silkworm.*

Neither the USA nor Iran showed any inclination further to escalate hostilities. Iran's speedboat attacks increased but care was taken not to interfere with shipping escorted by US, west European or Soviet vessels. At the same time, Iraq intensified its raids on Iranian oil traffic with attacks taking an unprecedented toll during December. Over the year as a whole, the number of attacks increased by more than 50%. In 1987 there were 163 compared with 107 in 1986, 47 in 1985 and 71 in 1984, according to a report to the US Senate's Committee on Foreign Relations. Of the total, 76 were carried out by Iraq and 87 by Iran—a reversal of previous proportions.

The summit meeting of the Arab League held in Amman, Jordan, in November 1987, condemned Iran for its occupation of Iraqi territory, its negative attitude towards peace efforts, and the Mecca disturbances but refrained from recommending the severance of economic and diplomatic relations with Iran.

Iraqi military pressure on Iran's oil exports was the main factor cutting the volume of its actual production from something like 2.8m. b/d in August to 2m. b/d, or less, in October (when domestic consumption totalled an estimated 600,000 b/d). Another factor was the overwhelming vote in the US Congress banning imports of Iranian oil, which had reached 260,000 b/d

in the January–August period. In August, France, in the midst of its diplomatic dispute with Iran, had taken a similar measure. The devastating raid on the Larak terminal was a particularly severe set-back. Early in November Lloyds List of London estimated that Iraqi air strikes had reduced the fleet of chartered tankers shuttling oil between Kharg and Larak island from 26 to 20, and the number actually owned by the Iranian National Tanker Company (INTC) from 12 to nine. The INTC was successful, however, in chartering six ultra large and very large crude carriers to ship oil from the Larak area for storage outside the war zone.

In the face of these difficulties Iran showed a resilience and flexibility in its selling arrangements which could only serve to undermine oil prices. Buyers were offered crude on a c.i.f., rather than an f.o.b., basis, delivered from floating storage near the major marketing areas. It offered Japanese customers discounts, which were the equivalent of $1 per barrel, based on spot-market rates for Oman and Dubai crude, in its attempts to sell an increasing volume of 'distress cargoes'. By mid-November it was estimated that there were as many as 20m. barrels of unsold Iranian crude in storage, mainly at Rotterdam, and another 14m. barrels at sea. The market was becoming awash with excess supplies from other producers, too. By December OPEC production was running at about 19m. b/d. The growing surplus had an inevitable impact on price levels. They slid ominously during November when the spot rate for the Brent blend fell to $17.37 in mid-month and was consistently below $18 throughout the month. As OPEC prepared for its end-of-year ministerial conference, it was clear that the price structure was coming under grave strain, largely as a result of the accumulated stresses of the Gulf conflict.

The meeting started amidst considerable despondency and scepticism as to what OPEC could and should do to stop the downward drift of prices from the $18 per barrel target, which had been set over a year before. Only six months before the issue had been whether OPEC could or should raise the reference price to a level higher than $18 per barrel. In general terms, the prospects for a successful meeting were blighted by deteriorating relations between Iran and Saudi Arabia, which would almost certainly make impossible the kind of compromises reached in August and December 1986, as well as June 1987. On the question of production OPEC was still divided between the 'hawks', seeking a lowering of the ceiling, and the Arab producers of the Gulf, who expressed confidence that demand could accommodate a higher limit. The OPEC Secretariat's assessment of future oil requirements was the most optimistic, with demand for members' crude in the second half of 1988 (assuming no change in the level of stocks) calculated at 18.4m. b/d. The minority on the Economic Commission Board (essentially the Arab states of the Gulf) estimated the requirement at 18.2m. b/d (assuming no change in stocks), while the majority put it at 17.6m. b/d (after a stock reduction of 300,000 b/d). The most pessimistic of the forecasts was almost identical to that of the IEA and closely in line with those of most major oil companies. True to form, Iran, at the outset, called for an increase in the reference price of at least $2.70 ($2.18 to compensate for the fall in the value of the dollar and 52 cents for inflation). The ritualistic demand received little sympathy from even the traditional 'price hawks' who fully appreciated that the burning priority was production restraint. On this front also Iran created initial turmoil and a fall in spot-market prices by threatening to opt out of any production pact that was agreed. That raised the possibility of only 11 of the 13 members subscribing to an agreement or, more intriguingly, of Iraq becoming party to an agreement while Iran excluded itself. In the run-up to the meeting Iraq had repeated its offer to participate in a production pact if it were given quota-parity with Iran, (i.e. a quota of 2.369m. b/d, compared with its notional quota of 1.54m. b/d). Such an arrangement would have set a more realistic upper limit on collective production of 15.89m. b/d; increasing the possibility that a market price of above $18 per barrel could be achieved if all members honoured their commitments. Moreover, as Iraq's sustained attacks on its enemy's oil exports effectively limited Iran's production to 2.37m. b/d, an arrangement under which Iraq produced as much as Iran would actually have significantly lowered Iraq's output which, Baghdad had boasted, had reached no less than 2.83m. b/d in November, with the advantage of new pipeline capacity. As it was, Iraq's sincerity was never put to the test—Iran, once again, rejected outright the concept of parity. There was also vehement opposition from Venezuela which was not prepared to see any diminution of its percentage share. The only possible outcome of the meeting was a 'roll-over' (continuation) of the output sharing accord concluded in the previous June. Despite Iranian reluctance, the accord was renewed and the existing quotas of the 12 remained in force. The only difference was that any pretence about Iraq having a notional allocation was abandoned. The five-member ministerial committee on price monitoring was again empowered to call an extraordinary conference to restore stability if 'there was any significant change in market prices'.

At the December meeting OPEC seriously addressed the problem of over-production, to the extent that it rehired KHG-Klynveld-Kraayenhof, the Dutch auditing firm, to monitor members' production and exports. It had originally been appointed to undertake this task at the end of 1984, when its efforts were obstructed by several countries. At its second attempt, it was assured of better collaboration and it was agreed that the auditors would send teams to all member states simultaneously, to preclude prevarication. The UAE inevitably found itself cast in the role of principal quota violator. In the late summer its output had risen to a peak estimated at 1.9m. b/d (compared with a quota of 948,000 b/d), 1.5m. b/d accounted for by Abu Dhabi and 400,000 b/d by Dubai (which was beyond the purview of OPEC, anyway, because of the peculiar nature of the federation). UAE output subsequently fell to 1.6m. b/d–1.7m. b/d in November and December. After the December meeting, Abu Dhabi felt sufficiently chastened to order its operating companies to cut back by about 350,000 b/d, which effectively reduced the UAE's output to 900,000 b/d for a while. Sheikh Ali al-Khalifa as-Sabah, Kuwait's Minister of Oil, acknowledged that his country had been producing at a rate of 100,000 b/d–150,000 b/d above its quota. He attributed the excess to Iranian attacks against its oil tankers and the need to build up inventories outside the Gulf, as well as to its frustration with quota breaches by other members. Only after the meeting did it emerge that Saudi Arabia and Kuwait had agreed to resume supplies of 'war-relief crude' to Iraq at the full rate of 310,000 b/d.

According to revised calculations by the IEA, OPEC production had run at 18.9m. b/d during the last quarter of 1987. In the first half of 1988, it was clear, the price levels would not only depend on greater production discipline but also on the rate at which stocks were drawn down. The assumption was that they could come under heavy pressure in the second quarter of the year. Overall, however, there was optimism that demand for OPEC crude would rise in 1988. For instance, the Kuwaiti Minister of Oil predicted that over the year as a whole demand would be between 18.5m. b/d and 19m. b/d.

OPEC reaffirmed official selling prices based on the $18 reference level, but it was, in reality, on the verge of abandoning any real pretence or effort at maintaining them. The emphasis had switched decisively towards concentration on output control which, if effectively applied, would keep prices around $18 per barrel. Some producers—Iran, Iraq and Qatar—were already negotiating rates with their customers which were wholly and unashamedly market-related. A proportion of UAE output was priced in the same way, apart from the preferential treatment given to its equity partners. At their annual summit in Riyadh, on 26–29 December, the Heads of State of the GCC (Saudi Arabia, Kuwait, the UAE, Oman, Bahrain and Qatar) called on all OPEC members to abide by official prices. The ring of hollow hypocrisy about the appeal was confirmed shortly afterwards when it emerged that Saudi Arabia had been offering preferential prices to its four old US partners in the Aramco operation (Exxon, Mobil, Texaco, and Chevron) since the late summer. It conceded similar terms, based on spot rates for Dubai and Oman crude, to smaller US customers, and Japanese companies were demanding similar terms. By the end of March, Saudi Arabia was offering the market-related price formula to all contract volumes of 100,000 b/d. Other Gulf producers had no choice but to sell to US customers on a 'delivered' basis, linked to prices of Alaskan crude. From the beginning of January they met dogged resistance from Japanese customers, who were well cushioned by stocks, and were forced to give ground. By the spring, even

Indonesia was selling to the Japanese at $1.56 below official prices. The respected Dr Fadhil ash-Shalabi, OPEC's Acting Secretary-General since 1982, publicly recognized in mid-March that the Organization was fighting a losing battle in trying to maintain official prices. He told the Arab Energy Conference in Baghdad that OPEC should revert to a system under which prices were allowed to fluctuate within a specified target range, using market-related formulae to sell quotas. The production ceiling would be lowered when rates fell within the agreed margin and raised when they exceeded it.

1988—no progress on prices or production

During January OPEC output dropped to about 17m. b/d. At the end of the month the spot rate for Brent blend had fallen to $16.25 per barrel, compared with $17.95 at the beginning. By the end of February Brent had dropped to only $14.77, despite the fact that collective production had averaged only 17.4m. b/d, with an estimated 500,000 b/d of Saudi Arabia's shipments and 300,000 b/d of Iran's in onshore storage overseas or in tankers. Throughout March the market remained weak, with the spot rate for North Sea crude dropping to a low point of $13.80 per barrel early in the month but recovering to $15.79 by its close. Over the first quarter, OPEC crude production averaged a modest 17.5m. b/d (well within the 15.06m. b/d ceiling after taking into account Iraq and oil production from the Neutral Zone sold on Iraq's behalf), as commercial stocks in the industrial world were drawn down at the rate of 1.9m. b/d, according to IEA calculations. After a hiatus at the turn of the year, when Syria attempted, unsuccessfully, to initiate a dialogue between Iran and the conservative Arab regimes of the Gulf, Iraq resumed attacks on Iranian oil and economic targets, while Iran retaliated against shipping on the Arab side of the Gulf. The new wave of attacks did not compare in intensity with the hostilities in the October–December period and, during the first quarter of 1988, the Gulf conflict was largely irrelevant to the oil market and, certainly, no salvation for prices. Indeed, it was indicative of the easing of tension that, early in February, Lloyds committee for rating war risk reduced premiums for oil and gas cargoes to and from Kuwait, Saudi Arabia, Bahrain and the UAE from 0.75% of hull value to 0.45%, and for other merchandise from 0.45% to 0.375%. The rate for all shipments to the Iranian port of Bandar Abbas was cut from 0.45% to 0.375%.

Despite a very 'significant change in market prices' in the early part of the year, it was not until 19 April that OPEC's price-monitoring committee met in Vienna. It did so mainly in response to an initiative by a group of non-member producers, Angola, the People's Republic of China, Egypt, Malaysia, Mexico and Oman. Mexico had indicated that the group would be prepared to cut its exports by 5% (equivalent to 183,000 b/d—including exports by Colombia, which took part in the group's preliminary discussions but which was not represented in the approach to OPEC) in return for a comparable reduction by OPEC. Mexico's Secretary of State for Energy, Mines and State Industries emphasized that collaboration would have to be 'a long-term endeavour', the 'beginning of a new stage of co-operation'. Prior to the meeting of the committee Saudi Arabia did little to disguise its lack of enthusiasm for any such collaboration. Nevertheless, King Fahd took the opportunity to reaffirm his country's commitment to a price of $18 per barrel and at the same time attributed the weakness of prices in the market to discounts offered by other members, while denying that Saudi Arabia was offering any itself. Of the countries represented on the committee, Nigeria and Indonesia were reluctant to call a full ministerial emergency meeting in advance of the biannual ordinary conference, which was scheduled for June. Venezuela and Algeria, however, were strongly in favour of one. They were supported by Iran, which, though not represented on the committee, sent Hossain Ardebili, its Deputy Minister of Oil. His intervention was probably crucial. Surprisingly, Hisham Nazer, Saudi Arabia's Minister of Oil, consented to a full consultative meeting (which would automatically become an extraordinary conference if any decision was taken) and a joint session with the non-OPEC ('NOPEC', as it was dubbed by the media) group immediately after it. Agreement was only reached after an intensive exchange between Arturo Hernández Grisanti, Venezuela's Minister of Energy and Mines, and Hisham Nazer. Mr Hernández accused Saudi Arabia of secretly aiming at a price of $15 per barrel, and was sharply critical of the price discounts that the Kingdom was known to be giving. Their confrontation was to set the scene for one of the most bitter OPEC conferences ever at the end of April. Before, it was convened, however, the chances for a reasonably amicable compromise were badly impaired by a further deterioration in relations between Saudi Arabia and Iran leading to the former severing diplomatic links on 26 April.

On the eve of the OPEC consultative conference, which began on 28 April, the proposal by six 'NOPEC' countries for a joint output reduction initiative with OPEC, received a polite but non-committal response from an OPEC ministerial committee. The 'NOPEC' delegation departed, leaving a senior Omani official to liaise with them on the outcome of the OPEC meeting. This, probably, was a tactical mistake, because it relieved OPEC members of any immediate pressure to reach a decision. The likelihood of an accord between the two groups was not great. Most OPEC members had been thinking in terms of matching barrel-for-barrel cuts, rather than of a reduction on the basis of a common percentage of total exports. (Saudi Arabia and Kuwait were known to have grave reservations about any lowering of the disrespected 15.06m. b/d ceiling.) On the second day of the conference, Algeria proposed that OPEC should respond to the 'NOPEC' proposal with an offer of a 300,000 b/d reduction (i.e. about 2.5% of current collective OPEC exports, compared with the 5% sought by the 'NOPEC' group), as a compromise. It was supported by seven other members leaving the Arab producers of the Gulf in a minority. Saudi Arabia produced a counter-proposal, to the effect that OPEC should match the non-members on a 183,000 b/d barrel-for-barrel basis but that the cut should be divided into 12 equal parts amongst the 12 members of the current production agreement. Hisham Nazer, the Saudi Oil Minister, defended the principle of equal distribution, according to which small producers like Gabon and Ecuador would have had to accept a disproportionately large reduction in their output, by saying that they should be made aware of what cutting back really meant. The proposal elicited more astonishment than support. The division of opinion over the 'NOPEC' offer remained, and the most that could be decided before the meeting ended on 2 May was to maintain contact with the group, with the aim of establishing the basis for long-term collaboration.

Prices dropped sharply in the aftermath of the meeting, with the Brent blend falling by 50 cents per barrel. At the same time OPEC was confronted with new, and potentially divisive issues relating to definitions of production. They were raised by Sheikh Ali al-Khalifa, the Kuwaiti chief delegate, largely as a result of the difficulties encountered by the Dutch auditing firm which had been re-engaged at the conference in December 1988. The most contentious issue concerned the definition of condensates, also known as NGLs, or gas which liquefies at the surface after being treated. KHG-Klynveld-Kraayenhof's study of the records of various member countries showed that, over the years, some of them had reclassified crude as condensates, production of which had been covered by none of OPEC's accords on output sharing. In retrospect, their exclusion was generally regarded as a mistake within OPEC but not one which could be rectified in the foreseeable future.

On the question of the reclassification of crude as condensates, Sheikh Ali al-Khalifa's attack was mostly directed at Venezuela. According to official figures published by the state oil corporation, Petróleos de Venezuela, Venezuela's output of condensates had increased from 17,000 b/d in 1982, to 142,000 b/d in 1987. Moreover, it was planned to increase to 190,000 b/d in 1988. Production of condensates by other members like Indonesia and Nigeria had also risen significantly. The auditors said in their report that Venezuela had defined condensates as NGLs with the American Petroleum Institute (API) gravity of 40.2° and above—an assertion which the Venezuelan delegation rejected. For their part, the auditors proposed defining condensates as all 'natural gas liquids and hydrocarbons with an API of 47° or higher, obtained from lease separators and field facilities when these are measured separately from crude oil'. Sheikh Ali al-Khalifa pointed out that a number of important crude streams produced by member states were lighter than 40.20° API gravity, and that such a definition could put as much as 2m. b/d of OPEC supply outside the ambit of the production sharing

system. Evidence was also produced that some members were excluding from their quotas so-called 'own use' oil, which was accounted for by industrial operations including refining. Sheikh Ali al-Khalifa calculated that, if such crude was excluded from quotas, it could add another 500,000 b/d–700,000 b/d to overall production. A special committee of experts was charged with drawing up a report on the problem of definition prior to the next OPEC ordinary ministerial conference in June.

OPEC's crude output was reckoned to have risen above 18.5m. b/d in May, compared with the modest 17.5m. b/d in the second quarter. From 11 to 16 May Iraq launched a punishing series of raids on Iran's Larak Island transhipment centre, hitting seven vessels, including the *Seawise Giant*, which was severely damaged again. But the raids did nothing to prevent the passage of the large volume of Iranian crude on the water in transit. Abu Dhabi apparently trimmed its allowable production by about 150,000 b/d in mid-May. In practice, however, making allowance for Iraq and production from the Neutral Zone, OPEC's rate of output was still some 500,000 b/d above the stipulated ceiling. In the circumstances a decision to roll-over the current agreement on quotas seemed to be a foregone conclusion. The pact seemed less tenable than ever, however, after Dr Mana bin Said al-Oteiba, the UAE Minister of Petroleum, walked out of the OPEC conference in Vienna on the second evening and flew to Rabat, Morocco, apparently to see his Head of State and the Ruler of Abu Dhabi, President Zaid. There he publicly repudiated the federation's quota of 948,000 b/d, saying that it could no longer accept so little. In a sense, his statement merely formalized the UAE's consistent violation of its allocation, which it had exceeded by 50% or more. Whilst disagreeing on forecasts for demand in the second half of 1988, Saudi Arabia and Kuwait threatened to flood the market with more than 1m. b/d of oil equivalent (in the form of condensates), unless the Organization agreed in December on precise technical definitions to distinguish between condensates and crude. Prior to the conference, at the experts' meeting, Venezuela had made a vigorous effort to convince other members that condensates could only be defined by certain reservoir characteristics and that neither specific gravity nor oil gas ratios should be the criteria. The majority seemed to believe that 'user oil' should be included in production. As long as members' behaviour was consistent, that question seemed relatively easy to solve. However, it looked as though the dispute over condensates would continue to be a far more contentious issue. After the conference, Sheikh Ali al-Khalifa said that any definition of what constituted condensates would have to be easily applicable and one which auditors could easily understand—suggesting that it would have to be fairly arbitrary in terms of its prescribed gravity. There was general recognition that the problem of Iraq's exclusion from the production-sharing system had to be dealt with but no progress was made towards solving it. Also, Saudi Arabia and Kuwait remained adamant that the 310,000 b/d, mostly from the Neutral Zone, which they were 'lending' to Iraq was (Iraq's) part of its quota, to be repaid at some future date, and that production from the territory as a whole was outside the pact.

In July, in the wake of the June conference, prices fell to around $14 per barrel, and, with stocks high, looked as though they would weaken further in the third quarter. Having failed to make positive progress towards (or even achieved a consensus in favour of) a collaborative production programme with the 'NOPEC' group, which might have stabilized prices, OPEC's $18 target seemed something of a chimera in mid-1988.

The acceptance, in July, by Iraq and Iran of UN cease-fire terms opened up new prospects for OPEC to take a firmer grip on oil supply. Iraq's freedom, for many years, to produce oil unconstrained by quota had been a major irritant to other oil exporters, in that it provided a precedent for overproduction. However, the prospects of peace also changed other policy attitudes among Iraq's neighbours, suggesting that there was now a possibility of a lasting OPEC accord and of meetings which would resolutely tackle the other issues which previous agreements had avoided. Iraq's self-exemption from quota curbs was not, however, the only obstacle to a production agreement to support prices.

Saudi Arabia, the world's largest oil exporter, whose support was crucial to the success of any agreement to regulate supply, had previously tended to temporize when other governments suggested that OPEC ministers should meet to suggest ways of reversing the price slide to an extraordinary conference of the whole group. Saudi Arabia disapproved of such meetings which tended, unfairly, in the view of its officials, to place the onus for restoring price stability on Saudi Arabia. The Saudi view was that it was the overproduction of other countries, mainly in the Arab Gulf, that was causing price weakness. Meetings of ministers simply focused international attention on Saudi Arabia's political weakness by highlighting its inability to persuade its smaller neighbours to observe OPEC discipline. Saudi Arabia's fear was that it would be asked, in effect, to sacrifice production to other exporters, both inside and outside the Middle East, in order to support prices. Its refusal to do so was based on its experience, in mid-1985, of being forced to cut its production to less than half of its official quota level while other producers continued to ignore quotas. However, as the cease-fire became a reality in July, Saudi Arabia reversed its opposition to an emergency meeting of OPEC's five-minister Pricing Committee, the group charged with convening the 13-nation conference if market prices were deviating too far from the official target. If Saudi Arabia, unlike other exporters, had been prepared to allow prices to slide rather than be put on a political spot, its ability to make up per barrel revenue losses with large scale overproduction was an option not open to many oil exporters. The threat of 'flooding' oil markets, with gains in volume compensating for price losses, was one that Saudi Arabia had used before, notably in 1986, and is a constant factor in oil politics.

With Saudi Arabia's agreement, five oil ministers met in Lausanne on 3 August. They were realistic enough to recognize there was little they could do until Iran and Iraq had begun to tackle directly the question of prisoners of war and the other outstanding issues which divided them. It was agreed that the Secretary-General of OPEC, the former Indonesian Minister of Oil, Dr Subroto, should try to act as an intermediary in an attempt to either persuade Iraq to relinquish its arbitrary demand for quota parity with Iran; or to press Iran to accept Iraq's claims in the interests of achieving a 13-nation agreement. The Lausanne session, despite the scepticism of market operators and some ministers, was ultimately to prove important in setting a politically realistic agenda for the 'reconstruction' of OPEC.

Saudi Arabian and Kuwaiti political and financial support for Iraq's war-effort also raised new difficulties for the oil-exporting countries. Iraq argued that the war with Iran had been fought not only for the sake of Iraq itself, but had also been important in maintaining the political, social and religious status quo in the face of Iran's destabilizing Islamic fundamentalism. If Iraq had failed to overcome or, at least, contain Iran, how long would it have been before Iran came to dominate the conservative Sheikhdoms of the Gulf? Along with direct financial support, Saudi Arabia and Kuwait agreed to 'lend' Iraq up to 330,000 b/d of oil exports from the shared Neutral Zone. In one respect, this was in response to justified Iraqi claims that it had lost long-standing and loyal crude oil customers when Iran destroyed its Gulf export facility at Fao in 1981. Saudi Arabia and Kuwait had prevailed upon other OPEC members to change the way quota production was defined and measured in such a way that crude oil exports 'loaned' to another country were attributed to the 'production' of the recipient. In this way, Saudi Arabia and Kuwait, which had already made the largest sacrifices, in both volume and percentage terms, to support falling oil prices, were able to produce their Neutral-Zone contribution to Iraq outside of their own allocations. Other OPEC members felt, with some justice, that their sales were being correspondingly reduced to balance finite demand, making them involuntary financial and political supporters of Iraq in its war with Iran. That situation was uncomfortable enough while Iraq was itself constrained by a quota. But in 1986, when OPEC reversed its market-share policy and reimposed quotas, Iraq refused to accept the quota allotted to it. This meant that the Neutral-Zone production of Saudi Arabia and Kuwait was now being attributed to no OPEC member at all. Iran, Algeria and Libya, the traditional supporters of high prices and lower OPEC production, were outraged and gained the support of traditional moderates in accusing Kuwait and Saudi Arabia of adding to the market glut

at a time when Iraq was not only producing more than its official quota, but even more than it was claiming as its rightful share.

This issue was also recognized in Lausanne as an important impediment to an overall production agreement. However, the five-minister Pricing Committee also demonstrated again that the Iran–Iraq conflict, together with the related Neutral Zone issue, was not the only regional problem impeding oil-exporter unity. The long-standing issue of overproduction by the UAE dominated the discussions at the Lausanne meeting. It had fallen to Dr Subroto to visit the President of the UAE, Sheikh Zayed, on behalf of OPEC, to seek assurances that the UAE would abide by the quota agreement which its Minister of Oil, Dr Mana Otaiba, had signed only weeks earlier. Market operators were as sceptical in public, as illustrated by a sharp drop in prices the day after the ministers had met, as other ministers were in private about the assurances that the UAE would always 'endeavour' to act in the best interests of OPEC as a whole. This lay oddly with the UAE's claim that its quota should be 1.5m. b/d, or more than 50% higher than that assigned by the rest of the group. While both Dr Subroto and the President of OPEC, the Nigerian Minister of Oil, Rilwanu Lukman, had to pretend to believe that the UAE would, in future, curtail output to the agreed level, the contradiction between its claim for a 1.5m. b/d quota and its assurances of co-operation, damaged market confidence.

The failure of the UAE to adhere to its quota was a mystery to many observers, since the UAE had one of the highest per capita oil incomes in the world. The origins of this failure lay in the fluctuating and uncertain relationship between Abu Dhabi and Dubai, the two leading Sheikhdoms in the federation, and in Dubai's refusal to accept federal (i.e. Abu Dhabi's) control over its oil policies and revenues. Dubai's adoption of an independent pricing policy had enabled it to maintain production at close to its 400,000 b/d capacity; Abu Dhabi had been put in the position of 'UAE swing producer'. This meant, in effect, that Abu Dhabi would have had to cut its production to the low level of 500,000 b/d, or less, in order to maintain the federation's output at its officially agreed level. This would have posed severe technical problems for its oilfield operators, which could have been overcome, had it not been for the financial contribution that Abu Dhabi was committed to making to the federal budget. With the relationship between individual rulers always uneasy, Abu Dhabi had in effect refused to cut its production to a level less than double that of Dubai, and, often, it had produced significantly more than that. The fault, as far as OPEC and its attempts to regulate production were concerned, lay with the decision to convert Abu Dhabi's 1967 membership to cover the whole of the UAE. The simple fact was that the Abu Dhabi and federal ministries had virtually no influence on Dubai's oil policy, making any quota for the UAE applicable only in theory. Whatever the historical background, the intra-emirate rivalry also provided a convenient excuse for Abu Dhabi to increase its revenue through bigger sales.

As prices continued to slide towards $10 a barrel (and below for some heavier Middlé Eastern crude oils) ministers and Heads of State were in regular contact. However, with Iran and Iraq still unable to agree on quotas, as well as on territorial and other war-related issues, OPEC's Middle Eastern members increasingly took matters into their own hands and started to push up their production to compensate for lower prices, which were therefore subjected to further pressure. The UAE, Kuwait and lastly Saudi Arabia increased their exports, especially to the USA where Iraq had significantly increased its sales.

On 25 September the same five oil ministers who had met in Lausanne met in Madrid. Their decision to reconstitute OPEC's Long-Term Strategy Committee led to the addition to OPEC's steering group of three crucial Middle Eastern oil exporters: Iran, Iraq and Kuwait. Their statement, that a review of objectives and strategies in the context of current circumstances, '*especially concerning the price of oil and the production mechanism to support it*' was necessary, was a clear warning to all oil exporters that OPEC would either have to tackle outstanding issues, or give up all attempts to control prices and production. The meeting of the wider group was seen as a necessary precursor to a full OPEC conference which would end the isolation of Iraq. Meanwhile, throughout October, Saudi Arabia, the UAE and Kuwait continued to boost output, as did other exporters, until the group was producing at levels as high as or even higher than they were at the peak of the 1986 price war. Saudi Arabia was demonstrating its unwillingness to carry the burden of price support at a time when other exporters were ignoring their obligations and showing that it could, unlike most other exporters, compensate in full, by higher sales, for any loss in revenue caused by lower prices.

With OPEC's eight-minister Pricing and Long-Term Strategy Committees due to meet again in Madrid on 20 October, the Arab Gulf countries grouped in the GCC (which included non-OPEC states) made their position clear when their oil ministers broke with their normal practice of steering clear of OPEC disputes. They issued a communiqué, in which they stated that their participation in a new production agreement for 1989 would be conditional on the 12 countries returning to and adhering to the agreed quotas which had been ignored since June, with the exception of Iraq, which would be given parity with Iran at 2.369m. b/d. The second, enlarged Madrid session on 20–22 October failed to overcome Iranian resistance to quota parity with Iraq, while Iraq remained adamant that it would accept nothing less than that. By the end of October, OPEC production had soared to over 22m. b/d, far in excess of what most analysts believed the market could absorb. The Gulf Arab states increased their production markedly and made it clear that they would not adhere to their official quotas unless there was total discipline. However, although prices were weak, they did not fall to the $5 per barrel level that some feared. The Madrid session was adjourned, rather than abandoned, until mid-November, when the full OPEC conference was due to assemble in Vienna. This reinforced the hope in the commercial oil industry that OPEC would, under pressure, find a solution. The result was that crude oil looked 'cheap' and was bought on that basis. More significantly, consumer demand for oil was increasing.

When the Long-Term Strategy Committee reassembled in Vienna on 17 November, there were signs that Iran had adopted a more flexible approach. A crucial consideration, both for Iran and for the other Middle Eastern countries which were anxious to reach an agreement, was the knowledge that Iraq had already commenced major pipeline expansion schemes across Saudi Arabia into the Red Sea and was repairing its Gulf export facilities which had been destroyed in the War. Unless Iraq agreed to adhere to its quota, it would be in the position to supply all of the likely increase in world demand for OPEC crude oil over the coming year and was likely to supply it anyway, if growth in demand declined, at the expense of other exporters' market share. The choice appeared to be simple: Iraq's demand for a quota of about 2.5m. b/d would have to be met, or Iraq would undermine the market for all other exporters with production of around 4m. b/d within the coming year. It required 10 days of tortuous negotiations to overcome the political problems that such a deal gave rise to within the faction-riven Iranian Government, and even so political sensitivities prevailed over economic sense in the agreement that was finally concluded. In resisting Iraq's demand for quota parity, Iran justified its stance by arguing that it would not relinquish its market share and insisted on retaining the same percentage of total allocations which it had been granted prior to 1986, when Iraq had last officially accepted an OPEC quota. Iranian delegates invited other OPEC members, notably Iraq's supporters in the Middle East, to sacrifice market share to Iraq if they so wished. The ploy was a subtle one. In the distribution that resulted, Iran's quota was 125,000 b/d higher than it would have been under the distribution proposed by the GCC. Iraq was granted the same amount while the other 11 members of OPEC sacrificed pro-rata 250,000 b/d out of the 18.5m. b/d ceiling agreed for the first half of 1989. Iran's Minister of Oil, Gholamreza Aqazadeh, who had sworn he would never sign an accord giving Iraq quota parity, flew home to consult his government colleagues, leaving a deputy to sign the OPEC resolution. Even then, the agreement almost collapsed at the eleventh hour when the Saudi Arabian Minister of Oil, Hisham Nazer, insisted that a 'floor price' of $15 should be incorporated into it. Suspicions, unfounded in 1988, but deriving from the price collapse of 1986, that Saudi Arabia actually wanted a lower price, led to opposition to this move, which Saudi Arabia believed would boost the market, even though it was unclear

which producers would join Saudi Arabia in curtailing supplies if prices threatened to fall through the agreed 'floor-level'.

Very high production in November and December, after the OPEC agreement had been signed, but before the new 18.5m. b/d ceiling took effect, underlined that most exporters intended to abide by the letter of the agreement. Saudi Arabia increased production to 6m. b/d, the UAE produced more than double its allocation of 948,000 b/d and Kuwait, too, showed that it could easily produce and export up to 2m. b/d. In the final weeks of 1988, production reached 23m. b/d, 4.5m. above the ceiling agreed for the first six months of 1989, and 6m. b/d–7m. b/d in excess of the ceiling then officially still in force. It was feared that the rush to export ahead of the 1 January deadline would place huge stock in the hands of consumers, which they would draw upon in early 1989 in order to subject prices and sales to further pressure.

An 'audit' of each member's production, internal consumption and exports was agreed to buttress the agreement for the first six months of 1989, to be conducted once a month by officials from each of the 13 OPEC member states. However, it quickly became evident, as members claimed each month to have hit production and export targets almost to the barrel, that information was regarded as a tool to justify national policy stances, and not as the means of regulating the market which some had hoped for. The UAE, whose long-standing overproduction was well-known, declined to supply monthly data and sent no representatives to the agreed monthly meetings of experts. Its production did, however, decline sharply from the 23m. b/d peak of December. This fact, rather than continued 'cheating', became the focus of market attention. As it became clear that the demand for oil had surged ahead in late 1988 and was continuing to do so, oil prices strengthened to a level close to and, in some cases, above the official $18 per barrel target price.

In the first three months of 1989, OPEC and world oil markets received a morale booster from the activities of a loose collection of other exporters, in which Oman, a member of the GCC of Arab exporters, played a prominent role. Since 1986, Saudi Arabia and Kuwait had led an OPEC campaign for non-member oil-exporting countries to share the burden of market stabilization, and to curtail their growing, capacity-level production. Since 1983, the growing production and exports of non-OPEC members had been perceived as a major threat to price stability, with the pricing and production policy of the United Kingdom viewed as a major problem. With its high profile in world markets due to its transparent pricing, North Sea oil had posed a particular problem for Nigeria, one of OPEC's poorest members, with whose crude exports British and Norwegian supplies competed directly both in terms of quality and location. Attempts at political persuasion failed and the price war of 1986 was regarded as a means of forcing the British Government to abandon its inflexible stance with regard to oil production levels. However, the British Government refused to do so, despite the huge loss of government revenues and the damaging impact on the United Kingdom's balance of payments. However, Mexico agreed to reduce its exports by 5% and Norway reduced its planned increases by limiting output to 92.5% of its rising capacity. A meeting between non-OPEC ministers and the OPEC conference had failed in 1986, at the height of the crisis, to produce anything more than positive words. By 1988, when OPEC had managed to boost prices somewhat through its own efforts, an offer by non-OPEC ministers to reduce their exports by 5%, if OPEC members did likewise, was rebuffed by Saudi Arabia and Kuwait, since they felt that they had already reduced their production sufficiently.

On 27 January representatives of 13 non-OPEC oil exporters met with counterparts from six OPEC nations to indicate their willingness to support OPEC's efforts to stabilize prices. Saudi Arabia insisted that OPEC, by setting a ceiling of 18.5m. b/d for the first-half of 1989, had taken an important first step which should be matched by the non-members. Like many analysts, Saudi Arabian officials were sceptical about reports that demand for oil was rising rapidly, and they were deeply concerned about the possibility that prices would decline drastically in the traditionally weak April–June quarter. After a second meeting in London in late February, the non-OPEC governments announced that they would reduce exports by 5% (or freeze them at 5% below planned levels) for the April–June period at least. Although Mexico had initially played a major role in organizing the non-OPEC group, it was two countries from the Middle East and North Africa region, albeit with very different structures, that now played a major political role. Oman convened and chaired the first session, while the second was hosted by Egypt.

Market confidence that OPEC had solved the problems of its troublesome Middle Eastern and North African members was shaken when its eight-minister Price-Monitoring Committee met in late March, ostensibly to review how closely the membership had adhered to the agreement signed in November. Kuwait dramatically announced its intention of seeking a higher market-share for itself, the UAE and for the three smallest exporters, Gabon, Ecuador and Qatar. However, prices remained steady during April as supplies were reduced and demand continued to rise. In May, however, markets began to react to the disputes that were dividing traditional allies, and weaker prices led to a long, tense OPEC conference in early June.

When oil ministers reassembled on 1 June 1989, many were unable to believe that Kuwait would insist on a quota increase larger than the 5%–8% increase in the OPEC total which was under discussion for the second half of the year. However, they failed to take account of Kuwait's situation in early 1989, which was unique within OPEC. In percentage terms, it had made greater production sacrifices during the 1980s than any other OPEC member, despite having less financial interest than others in maintaining prices at a high level. Days of negotiations between Kuwait and the other OPEC members failed to reach an accommodation. Other governments' fear of the domestic political consequences of acceding to Kuwait's demands proved stronger, ultimately, than their desire to reach a compromise between Kuwait's claim for a quota of 1.35m. b/d and the 1.12m. b/d which it would have been allocated under a straight pro-rata distribution of the 20m. b/d ceiling which a majority thought reasonable to stabilize prices. Leaving no room for doubt about his intentions, Kuwait's Minister of Oil, Sheikh Ali Khalifa as-Sabah, proposed an amendment to the final OPEC resolution, exempting Kuwait from the agreed production quotas. To take account of the additional volume of Kuwaiti production, which was now regarded as inevitable (it had already been overproducing in May and June by some 800,000 b/d–900,000 b/d), the production ceiling was raised by only 1m. b/d to 19.5m. b/d, correspondingly reducing the extra volumes to which other members were entitled.

The 1990s—lost opportunities

The 1990s has been a crucial decade for all oil exporters, especially for those with large reserves, located mainly in the Middle East and North Africa. Kuwait and Saudi Arabia have attempted to reduce their dependence on buyers of crude oil, beginning with the acquisition, in the 1970s, of control over their natural oil resources by buying into the downstream oil industry in Europe and the USA. While the reintegration of the oil industry is seen by many observers as inevitable and a force for stability, the restoration of direct ownership links between Middle Eastern producers and the refiners and distributors of oil products in the consuming countries may act as a counterweight to OPEC and the attempts to co-ordinate oil interests in the Middle East and North Africa. In September 1989, a meeting of OPEC's Long-Term Strategy Committee was due to attempt to solve the perennial problems of quota distribution, oil prices and the likely impact on oil producers of the growing 'environmentalist' movement in western consumer countries. In the event, the Long-Term Strategy Committee convened in Geneva from 23–27 September and, the eight permanent members being joined by ministers from all other OPEC adherents, a full-scale quota and pricing meeting took place. An interim report on long-term strategy talked airily about co-operation within OPEC, with non-OPEC producers and with consumers, but the meeting subsequently lapsed into the familiar pattern of proposal, counter-proposal, objection and final agreement on quotas. None of the participants appeared to be convinced that they would be adhered to. Iran called for a redistribution of quotas, to favour Kuwait, the UAE, Ecuador and Gabon, within a ceiling of 21.5m. b/d. However, the call was rejected because of Libya's demand for parity with Kuwait, and the UAE's insistence on an even larger quota than Iran had proposed. The

old pro rata formula was revived, within a new ceiling of 20.5m. b/d, just 1m. b/d lower than the level set previously. Kuwait duly rejected its quota of 1.149m. b/d for the final quarter of 1989.

At the next full OPEC meeting, held on 25–28 November 1989, quotas were redistributed, with Kuwait being allocated 6.82% of total output compared with 5.61% previously. The production ceiling was raised to 22m. b/d, although most members regarded this as insignificant since the *de facto* level of production was already 24m. b/d. Iran, Algeria and Indonesia all relinquished quota shares in Kuwait's favour even though, given the parlous state of their economies, they were themselves probably more suitable candidates for increases. However, with Saudi Arabia refusing to make any concessions, someone had to give way to bring some semblance of peace. The immediate result was that the UAE, seeing how a rich member like Kuwait could achieve its aims by totally ignoring the needs of poorer members, felt obliged to follow suit. So the November 1989 agreement left the overall situation much as before, with Kuwait adhering to its quota, but the UAE producing 100% more than it had been allocated. Overall output continued to run at nearly 24m. b/d, apart from a dip in January 1990, when overproduction was limited to 830,000 b/d.

The hyperbole surrounding the new agreement had an unforeseen side-effect: the price of crude petroleum started to rise and by January 1990 it had reached its highest level for two years. To some extent this was prompted by optimistic demand estimates issued by OPEC, and by a closer adherence by members to their quotas. However, during January–May 1990, prices fell steadily, with discounting and 'new formula' pricing rife. The one thing that could have stabilized matters—adherence to quotas—was forgotten.

To a large extent, the first quarter of 1990 may go down in history as a period of lost opportunity for OPEC. World demand for oil rose slowly at a time when several non-OPEC producers were experiencing difficulties. The continued fall in US production, the problems facing the United Kingdom and Mexico and the inability of Soviet infrastructure to maintain oil-production levels all combined to open a sizeable gap in the market which OPEC producers could have filled. The rapid change of regime in virtually all Eastern European countries reinforced this trend. However, disputes between Middle Eastern producers once more resulted in overproduction and prices slumped.

With the market behaving unpredictably, the meeting of the Ministerial Monitoring Committee, held on 16–17 March, took no action, hoping that the situation would become clearer before the next full OPEC meeting on 25 May. In the event, prices continued to decline, and overproduction continued to such an extent that, immediately before a further meeting of the Monitoring Committee, on 2 May, increasing numbers of tankers were being chartered to serve as floating storage in a glutted market. The next full OPEC meeting was thus postponed, first until June and then until late July.

At the meeting of the Monitoring Committee held on 2 May it was agreed to reduce production by 1.445m. b/d from an average level of 23.5m. b/d. This measure brought production to just within the previously agreed ceiling and had little more than a cosmetic effect on the market. Prices strengthened for a day or two, then resumed their steady downward slide. And while producers all willingly agreed to cut back their production, some weeks later the overall cut was only around half that which had been agreed.

The full OPEC meeting which began on 25 July 1990 took place in an atmosphere of increasing tension caused by Iraq's threats of military action against countries which failed to observe production quotas. Iraq had accused both the UAE and Kuwait of flouting their quotas and claimed, with reference to a long-standing territorial dispute, that Kuwait had violated the Iraqi border in order to steal Iraqi oil. At the meeting Iraq sought to raise OPEC's minimum reference price to $25 per barrel, but in the event the ministerial council adopted a new price of $21 per barrel—which it hoped to achieve by the end of 1990—and fixed a new production ceiling of 22.5m. b/d for the remainder of 1990. Quotas for individual countries remained unchanged, except that of the UAE which was raised to 1.5m. b/d. The immediate effect of Iraq's invasion—and subsequent annexation—of Kuwait at the beginning of August, and of the economic sanctions imposed on Iraq by the UN in response to it, was the loss of about 8% of world oil production. By late August prices had risen to about $30 per barrel and OPEC members were divided over whether to increase production to compensate for the loss of supplies from Iraq and Kuwait.

Within a matter of weeks, however, many OPEC members had decided that it was in everybody's best interest to make good the 4.5m. b/d loss to the market. Saudi Arabia in particular pledged massive support for the reversal of Iraq's action, inviting foreign military assistance to defend its borders. It also raised its petroleum production considerably, partly to pay for such assistance and partly as a *quid pro quo*. Other OPEC members, mindful that non-OPEC sources might be used to make good the loss of Iraqi and Kuwaiti supplies, followed suit. Such non-OPEC action was not, in fact, immediately forthcoming, the option of marketing oil from the US Strategic Petroleum Reserve being withheld until the situation clarified. Similarly, the IEA declared that it would hold back its reserves until shortages were confirmed. Some non-OPEC producers raised their production, while planned closures for maintenance in areas such as the North Sea were postponed until the market stabilized.

The *de facto* raising of production by a number of OPEC member states duly became *de jure* on 29 August 1990, when 10 OPEC ministers of oil met in Vienna and agreed to compensate for 3.0m. b/d–3.5m. b/d of lost production. By this time the price of crude oil had risen to $32 per barrel. A further meeting took place on 12 December 1990 and it was agreed to continue with the suspension of quotas until the Iraqi–Kuwaiti conflict was resolved. Once it was resolved, it was decided that quotas would be brought back into force, with the target price of $21 per barrel being retained.

The next meeting of OPEC, on 12 March 1991, confirmed that whatever decisions OPEC took, the market remained the dominant force. Oil producers had by this time increased output to such an extent that, even as the loss of Iraqi and Kuwaiti production continued, prices had plummeted and storage capacity had become scarce. Pledges that the strategic reserves of consuming countries might be brought into use had acted as a spur. Saudi Arabian production peaked at more than 9m. b/d, while the UAE had raised its output to more than 2.5m. b/d.

With supplies abundant and demand moving from winter to summer levels, prices fell by about 50% from their peak of $32 per barrel. Saudi Arabia reduced production and by April 1991 the market had become more balanced, with prices having recovered to around $4 below the OPEC target price of $21 per barrel. The situation was more or less as it had been before Iraq's invasion of Kuwait. It was decided at the OPEC meeting on 12 March 1991 to reduce production by about 5%, from 23.4m. b/d to 22.298m. b/d. However, individual OPEC members had already taken account of falling demand and the true level of OPEC production was little above the newly targeted level. The cut was thus more apparent than real and had no effect on prices.

However, by formalizing new quotas the OPEC meeting of 12 March 1991 did allow most producers to maintain output at a level close to their production capacity. A further meeting was held on 4 June 1991 at which it was agreed to maintain the *status quo*. The quotas which had been set in March were to remain in force until September 1991, when a further meeting would decide whether any adjustments needed to be made. Ironically, Iraq's invasion of Kuwait, which had aimed to prevent the latter's persistent flouting of its OPEC quota, had had the effect of stabilizing the market, balancing supply with demand; but neither Iraq nor Kuwait were any longer in a position to take advantage of the new equilibrium.

The meeting of OPEC held on 24–26 September 1991 set a new production ceiling of 23.6m. b/d. In fact, OPEC production had averaged 23.636m. b/d during the first half of 1991, far above the production ceiling that had been agreed in March 1991; while in the second half of that year it had averaged 24.741m. b/d. Clearly, OPEC members were seeking to maximize their production regardless of their quota allocations, and prices remained far below the OPEC target price of $21 per barrel.

Kuwait recommenced production of oil in June 1991, increasing it gradually from 70,000 b/d to 550,000 b/d by the end of the year. It was clear that if Kuwait continued to restore capacity

at this rate, then other OPEC producers would have to reduce theirs in order to accommodate it. At an interim meeting of OPEC held on 27 November 1991, it was agreed to reappraise the level of production within the Organization in February 1992. Meanwhile, however, the market began to dictate production levels. The situation was further complicated by a steep decline in production by the former Soviet republics, although this was offset by the continued economic recession in many consuming countries. As a result total demand for oil declined by 1.1% and it became clear that, without a voluntary reduction in production, the market would enforce a collapse in prices.

Before the OPEC meeting of February 1992 took place, nine of the 13 OPEC member states announced reductions in production totalling 400,000 b/d. Consequently there was little dissent when, at the meeting on 15 February, a new production quota of 22.982m. b/d was set. The new ceiling was opposed only by Saudi Arabia, whose official policy was now to seek quotas in accordance with production capacity.

In February 1992 Iraq was granted a production quota which, at 505,000 b/d, was sufficient to satisfy domestic demand. Kuwait was granted a quota of 812,000 b/d, although at the time it was unclear whether it would be able to achieve this level of production. Individual OPEC member states continued to abide by, or ignore, their production quotas as it suited them, but overall OPEC production remained more or less in line with the production ceiling as a result of market forces.

At the OPEC meeting held on 22 May 1992 ministers agreed, with some reservations, to maintain the production ceiling at 22.982m. b/d, although Kuwait was allowed to produce more than its previous quota of 812,000 b/d in order to compensate for production lost during the Iraqi occupation. Finally, the market met the wishes of almost all the OPEC member states. Increasing demand for oil for storage, for example, allowed Saudi Arabia, which had requested a higher quota, to continue to produce above the level of its formal quota. Iran had sought a reduction in the production ceiling in order to raise prices, and in fact increased demand raised spot market prices to close to the OPEC target price of $21 per barrel. However, the market remained exposed to factors that were beyond OPEC's control. Production by Russia and the United Kingdom, for instance, had begun to increase, while oil from recently-discovered fields in, for example, Colombia, increased the pressure on the cartel.

Spot prices continued to firm in the immediate aftermath of the OPEC meeting of 22 May 1992, and in late June reached their highest level for seven months. Factors influencing the market included the failure, on 22 June, of the UN and Iraq to reach any agreement on the resumption of Iraqi petroleum exports, and forecast higher demand for OPEC petroleum in the USA in the summer months. On the whole prices remained firm during July, August and the early weeks of September. By mid-September, however, when the Ministerial Monitoring Committee met in Geneva, concern was being expressed at the margin by which spot prices were failing to reach the target price of $21 per barrel, especially since market conditions were considered to be fundamentally favourable. By this time OPEC production was substantially in excess of the previously agreed level. Saudi Arabia, for instance, was reported to be producing, on average, 8.3m. b/d, compared with its allocation of 7.887m. b/d. Iranian production was also significantly above allocated level.

It was widely agreed that the statement issued at the conclusion of the Ministerial Monitoring Committee meeting contained no measures that were likely to raise prices to the target level. The statement indicated that OPEC's market share in the fourth quarter of 1992 should be 24.2m. b/d in order to achieve the target price, and reaffirmed OPEC's earlier decision to allow for additional, unspecified Kuwaiti production. However, some analysts and OPEC ministers argued that the agreement would boost prices to the target level. Taking into account Kuwaiti production of 200,000 b/d, OPEC production was likely to be more than 24.4m. b/d during the final quarter of 1992. However, winter demand for OPEC oil was estimated at 25m. b/d–25.5m. b/d. Also at the September meeting Ecuador confirmed its withdrawal from OPEC with effect from November 1992, after which time it would enjoy 'associate status' of the Organization only.

As demand for OPEC crude oil rose, total production averaged some 24.75m. b/d in September. By early October demand had risen to such an extent that the Secretary-General of OPEC, Dr Subroto, dismissed the idea of reimposing quotas at the next OPEC meeting in November. Prices were reportedly sustained by forward winter demand and by continued political tension in the Middle East. However, as seasonal demand for oil began to reach its peak in early October, prices remained below the level that had been expected.

At the OPEC meeting held in November 1992 in Vienna measures were taken that were designed to remove some 400,000 b/d of OPEC crude from the market in December. These included the establishment of a total OPEC production level of slightly less than 24.6m. b/d for the first quarter of 1993; and the establishment of new production allocations for OPEC member states to take effect from 1 December 1992. It was also agreed to allow Kuwait to continue to produce more than its allocated level of crude.

By mid-December a feared collapse in the price of oil appeared to have been averted. By early January 1993, however, prices had fallen to almost the lowest levels recorded in 1992 as a result of weak demand and production that remained in excess of the levels agreed in Vienna the previous November. Indeed, it was reported that production by the 12 OPEC member states and Ecuador in December 1992 had averaged 25.27m. b/d, its highest level since 1980. During the remainder of January, with stock levels remaining high, prices continued to weaken and towards the end of the month the Saudi Arabian Minister of Oil suggested that member states should reduce their collective production by 1m. b/d in order to check the decline in prices, which had fallen from $21 per barrel to $17 per barrel over the previous four months.

At the next full OPEC meeting, held in Vienna in February, it was agreed to make pro rata reductions in production that would effectively remove almost 1.5m. b/d from the market. The reductions, which pertained to the second quarter of 1993, were to take effect from 1 March. However, OPEC's declared commitment to maintaining a production ceiling of 23.58m. b/d met with the strongest scepticism from most observers, who believed that the new agreement would only begin to support prices in mid-March when it would be clear whether or not it was being observed. It appeared that attention would be closely focused on Kuwaiti production in the second quarter. Kuwait had agreed, reluctantly, to reduce its output to 1.6m. b/d, but warned that the slightest non-observance by other OPEC member states would immediately cause it to produce at a claimed capacity level of 2.1m. b/d. Kuwait had reportedly only agreed to reduce its second-quarter production in exchange for a third-quarter allocation equal to that of other countries with similar production capacity, historical market share and quota. Above all, the agreement indicated that the pressures relieved by the loss of Kuwaiti production in the 1990–91 crisis in the Gulf now applied to the market once again.

By late February the price of crude petroleum had reached a three-month peak since it appeared that OPEC's biggest producers would observe the agreement of 16 February. Prices did, in fact, remain firm during March, even though it appeared that production had averaged between 24m. b/d–24.3m. b/d. This compared with estimated production of 25.35m. b/d in February and the reduction was greater than most observers had expected it to be. However, there was concern that Iran was continuing to produce above its allocated level and that such overproduction might cause Kuwait to flout its own allocated level of 1.6m. b/d. Observers also expressed fears that OPEC's efforts to support prices would be cancelled out if the industry failed to build up its stocks during the second quarter of 1993. At an unofficial meeting in Muscat, Oman, in mid-April the oil ministers of the OPEC member states determined to adhere more closely to the production levels allocated in February. OPEC's own estimate of total production in March was 23.8m. b/d, some 290,000 b/d in excess of the agreed ceiling.

At the beginning of May 1993 the market was reported to be broadly in balance and prices were steady though below the levels OPEC producers had hoped to achieve. According to one analyst, OPEC production had averaged 24.32m. b/d in April, with Saudi Arabia and Iran allegedly the main over-producers. Later in the month the CGES forecast that demand for OPEC

oil would reach 25.3m. b/d in the third quarter of 1993. Fears were expressed that individual OPEC member states might be tempted to increase their production in pursuit of increased sales and greater revenue. The CGES suggested that additional demand for OPEC petroleum could be allocated on a pro rata basis, using the production agreement of February as a guide; or that extra demand could be shared according to each member state's sustainable capacity.

The spot price of a representative selection of OPEC crudes was reported to have averaged $18.20 per barrel in May, almost 1.5% lower than in April and March. Production in May was reportedly 230,000 b/d lower than in April, but, at an estimated 24.1m. b/d, still higher than OPEC's second-quarter output ceiling of 23.58m. b/d. Prices weakened during the approach to OPEC's next full ministerial meeting in June, in Geneva, not least because there was little confidence that the meeting would conclude a credible production agreement.

During June 1993 oil prices remained below the targeted level of $21 per barrel that OPEC had sought to achieve through the reintroduction—in all but name—of the quota system it had abandoned during the 1990–91 crisis in the Gulf, in the form of production allocations agreed by the member states. The problem, as far as the market was concerned, was that nobody involved in the industry believed that the member states would be able to summon sufficient discipline to observe the production ceiling of 23.58m. b/d introduced in February 1993 and extended, in June, to the third quarter of 1993. In its forecast of price trends for the year to June 1994 the CGES considered three possible developments, each based on the assumption that the supply of OPEC oil would continue to exceed demand for it: that OPEC would respond to demand by raising its production to 24.9m. b/d, in which case prices would remain below $19 per barrel; that OPEC would be able to hold production at or below 24.5m. b/d, in which case the CGES forecast that the average price for OPEC crude petroleum would reach $20.10 in the period April–June 1994; or, if OPEC were unable to exercise sufficient discipline and production rose to 25.2m. b/d in the third quarter of 1993, that the average price of OPEC crude would remain at or below $18.10 per barrel in October–December 1993, falling to $17.90 in April–June 1994.

The market had every reason to suspect that the OPEC member states would fail to observe their declared production target. Kuwait had begun to claim, with increasing insistence, an allocation that fully reflected its restored production capacity. At the OPEC ministerial meeting held in Geneva on 8–10 June 1993 Kuwait requested an official allocation of 2.16m. b/d for the third quarter of 1993, claiming that it had effectively been promised an increase in its allocation to 2m. b/d at the OPEC meeting in Vienna in February 1993. Saudi Arabia gave no indication of any willingness to renounce what it considered to be its right to one-third of total OPEC production, and Iran remained keen to maximize revenues by maximizing its production. The prospect of the removal of the UN's economic sanctions on Iraq remained distant, although Iraq had claimed, one year earlier, to have fully repaired all war damage to its oil production facilities and to have boosted its capacity. The vexed and potentially disruptive issue of quota parity between Iran and Iraq could thus be dismissed for the time being, and producing countries could concentrate on optimistic predictions of the increasing dependence of the large industrial countries on oil over the coming 20 years. Indeed, it had been argued that lower prices for oil since 1985 had acted in the interest of OPEC—and other—producers by discouraging research, investment in and development of alternative energy sources; and by making North American and North Sea fields less competitive, enabling OPEC to regain most of the markets it had lost after 1979.

In early July 1994 oil prices were strengthening in response to OPEC's decision, taken at a meeting of member states' oil ministers in mid-June, to freeze production at 24.52m. b/d for the remainder of 1994 and to cancel its regular September meeting. Another cause of firmer prices was growth in US demand, which was reported to have risen by some 1m. b/d since the beginning of 1994. Also, it appeared likely, owing to constraints on production in certain countries, that OPEC would be able to observe the production ceiling more easily than it had others in the past.

OPEC's decision consolidated a recovery in the price of world crude oil, which had risen by some 25% between the end of March and mid-May 1994. Factors involved in the recovery had included an upward revision in the forecast demand for crude oil in 1994 by the IEA; and a slight reduction, in April, in OPEC's total production of crude.

This recovery was in contrast to the trend that had prevailed for most of the previous 12 months. Indeed, OPEC's decision, in March 1994, to maintain production at 24.52m. b/d for the remainder of the year had led to fears of a collapse in the world price of oil and to speculation that OPEC might take emergency measures if prices fell any closer to $10 per barrel in the spring and summer. OPEC's inability to reduce surplus supplies to the market had been determined, in part, by Kuwait's unwillingness to accept a pro-rata cut in production, although all other OPEC states had indicated their readiness to act to reduce combined crude oil production by up to 10% for the second and third quarters of 1994. In 1993 OPEC production reportedly rose by 2.9% to an average of just under 25m. b/d, while world oil prices declined by some 30%. In December prices fell to their lowest level for five years as a consequence of OPEC's failure, in late November, to modify the production ceiling of 24.52m. b/d first fixed in September. This had initially provoked a positive reaction from the market, but prices subsequently fell owing to weak demand and doubts whether the OPEC member states would adhere to their individual quotas.

In late July 1994, prices were firm owing to OPEC member states' observance of the Organization's combined production quota, and to the loss of some Nigerian supplies after industrial action. By mid-August Nigerian production had declined by some 25% since the beginning of an oil workers' strike in June, and this factor had combined with a drop in Iranian production to support prices. During August OPEC producers did not attempt to compensate for the lost Nigerian production by raising their output, with the result that the distance between supply and demand continued to increase, contributing to an increase in the average price of crude oil during the second quarter of the year. During the third week of August the price of the OPEC 'basket' of crude oil was reported to have averaged $16.70 per barrel, about $0.40 higher than one year earlier. In the last week of August prices weakened as Nigerian production began to recover after the Government had ended the oil workers' strike.

Demand was expected to weaken during September as a result of the planned closure of refineries in the USA, Europe and Japan. This factor combined with Nigeria's wholehearted return to the market to put prices under pressure, and by the third week of the month they had fallen by about 15% from the levels achieved in August.

Prior to the OPEC ministerial conference in November 1994 there were optimistic forecasts of demand for OPEC oil for the rest of the year, and for 1995. According to the CGES, demand for OPEC crude for the whole of 1994 would increase, on average, by about 400,000 b/d, and would rise by a further 800,000 b/d in 1995.

At the OPEC ministerial conference in November the unanimous decision was taken to adhere to the existing level of production of 24.52m. b/d in the hope that this would cause prices to rise towards the desired level of $21 per barrel. The average price of OPEC crudes in October had been only $15.36 per barrel. At the ministerial meeting, when the decision on production levels was taken, OPEC's output was above the quota level. Average production in November was estimated at 24.92m. b/d-25.1m. b/d. Most of the above-quota surplus was attributed to increases in Iranian and Venezuelan production. According to the Washington-based Petroleum Finance Corporation, OPEC's revenues were $121,000m. in 1994, compared with $137,000m. in 1993. This indicated that average prices had been substantially lower in 1994 than in 1993.

At the beginning of 1995 prices remained firm despite further evidence of excessive production within OPEC and increased competition from non-OPEC suppliers. In January average OPEC production was estimated at 25m. b/d. The average price for OPEC crudes was $17 per barrel, compared with $16 per barrel in December 1994. This trend, which continued through the first quarter of the year, was attributed by the CGES to strong demand resulting from improving world economic

conditions. OPEC producers nevertheless remained concerned about excessive production.

Prices remained stable in mid-March, but it was reported that increases achieved since production had been frozen at the beginning of 1995 had been cancelled out by the decline in the value of the US dollar in which world oil prices are denominated. OPEC production was reported to have risen further, to 25.1m. b/d, in February. In the final week of March prices rose to their highest level for the year owing to a combination of strong demand and uncertainty over whether the USA would succeed in imposing an embargo on sales of Libyan oil. These factors, combined with reduced production in Iran and Saudi Arabia in March, had, by mid-April, raised prices to more than $18 per barrel, their highest level since August 1994. At the beginning of May prices rose further during the approach to the imposition, by the USA, of a trade embargo against Iran. However, this rise was not sustained owing to lack of international support for the embargo.

The quota level agreed in November 1994 appeared to be under severe strain in May 1995 when, according to *Petroleum Intelligence Weekly*, output rose to 27.725m. b/d, the highest monthly production figure for three years. The increase was attributed to raised production in Saudi Arabia, Iran and Venezuela. At the ministerial meeting held in Vienna in June 1995 OPEC member states chose to retain the production quota of 24.52m. b/d for the remainder of the year.

By July, markets for oil were weak, prices falling to their lowest levels for the year early in the month. OPEC producers were reported to be increasingly concerned at the continued decline in their share of the market. Demand for crude petroleum had risen by some 10% over the preceding two years, but most of this had been met by non-OPEC suppliers. According to some estimates, OPEC production of crude oil was higher in July 1995 than in any of the previous six months, averaging 25.15m. b/d.

Speculation about the future marketing of Iraqi oil was responsible for a further weakening of prices in mid-August, amid predictions that weaker economic growth in the coming months would reduce demand for OPEC oil and that non-OPEC producers would capture most of the future growth in demand for oil that did occur. In mid-August, however, prices—especially those of US crudes—firmed as a result of potentially hostile Iraqi troop movements and of joint US-Jordanian military manoeuvres. Low US stocks were another factor. *Reuters* reported that OPEC production in August was at its highest level for 15 years, averaging 25.72m. b/d. Average OPEC production for the month was thus 1.2m. b/d higher than the quota level of 24.52m. b/d. *Reuters* reported that Saudi Arabia, Venezuela, Nigeria, Iran and the UAE all produced at more than their official quotas during August and speculated that such overproduction, if sustained, could place prices under pressure during the final quarter of 1995. During January–August 1995 the price of the OPEC 'basket' of crudes averaged $17 per barrel.

In late September OPEC estimated that demand for its members' oil would total 23.8m. b/d in the third quarter of 1995, some 200,000 b/d less than had previously been estimated. OPEC forecast that demand would total 25.6m. b/d in the final quarter of the year, a reduction of 300,000 b/d compared with OPEC's previous estimates. OPEC now estimated that demand for the year would average 25m. b/d.

In a report published in October the CGES recommended that OPEC should reduce production by at least 600,000 b/d if it was to limit the decline of prices in 1996. Such a reduction could only be achieved if current quotas were strictly observed. However, it was widely recognized that there was little possibility of this being realized: Venezuela, for example, was already overproducing by some 300,000 b/d. Prices nevertheless remained firm in advance of the OPEC ministerial meeting in Vienna on 21 November, at which it was agreed to maintain production at its current level for a further six months from 1 January 1996. According to estimates by *Reuters*, OPEC production averaged 25.5m. b/d in October and 25.27m. b/d in November.

In a report published in December 1995, the IEA emphasized the warnings contained in the report published by the CGES in October (see above), forecasting a decline in demand for OPEC crude oil, from an average of 25.1m. b/d in 1995 to 24.6m. b/d in 1996. Stimulated by fundamental factors, however, demand in the northern hemisphere remained strong during December and into 1996. Prices declined slightly in the third week of January as a result of increased speculation regarding the return of Iraqi supplies to the market. Earlier predictions of a sharp decline in prices in 1996 seemed unlikely to be realized during the early part of the year as stocks—especially those in the USA—remained low, this factor combining with strong seasonal demand to support prices. According to the Washington-based Petroleum Finance Corporation, these factors were sufficient to maintain the market even if OPEC production were to rise as high as 26m. b/d.

Iraq's decision, announced on 24 January 1996, to reopen negotiations with the UN on the sale of a limited quantity of its oil had a depressing effect on prices, especially as OPEC was thought to have no strategy for dealing with the ultimate return of Iraqi supplies to the market. When the talks actually commenced on 6 February 1996 OPEC took the precaution of repeating that it would convene an extraordinary ministerial conference when an agreement was eventually reached between the UN and Iraq.

High seasonal demand continued to combine with low stocks to support prices during February, a process reinforced at the end of the month by the conclusion of the first round of negotiations between Iraq and the UN without agreement. The Iraqi issue continued to influence markets, however. In early March there were signs that Iraq was moving closer to accepting the UN's terms for a resumption of oil sales and there was widespread scepticism among observers that OPEC producers would be able, or, indeed, willing to reduce production to accommodate Iraqi supplies except in the event of a drastic decline in prices. The continued flouting of quotas was reported to have led to an increase in OPEC production to 26m. b/d in February.

Low stocks—again, principally in the USA—remained the major influence on the market and were regarded as responsible for prices rising to their highest level for five years on 20 March 1996. The continued failure of Iraq and the UN to make any progress in their negotiations was a further factor behind the rise. Prices appeared finally to peak in late April after US President Bill Clinton announced the decision to release 12m. barrels of oil from the US Strategic Petroleum Reserve over a six-month period in order to counter rises in the price of gasoline.

On 20 May 1996 the UN and Iraq concluded an agreement under the terms of which Iraq was permitted to sell $2,000m.-worth of petroleum over a 180-day period in order to finance the purchase of humanitarian supplies and UN operations in Iraq and in the three Kurdish governorates in the north of the country. Contrary to its own earlier expressed intentions, OPEC did not convene an emergency ministerial meeting in order to devise a strategy to accommodate Iraq's return to the market. Not surprisingly, however, it was Iraq that dominated the ordinary ministerial meeting of OPEC member states which commenced in Vienna on 5 June. There was speculation, prior to the meeting, that OPEC would instigate measures to curb overproduction by member states, but, in the event, no such action was taken. The OPEC production quota of 24.52m. b/d that had been in force during the first half of the year was merely renewed, with a supplementary allowance of 800,000 b/d which Iraq would need to sell, at prevailing price levels, in order to achieve the maximum revenue permitted under the agreement with the UN. The quota of 287,000 b/d for Gabon, which had left OPEC at the end of 1996, was withdrawn, leaving a final quota of 25.033m. b/d for the second half of 1996. Few observers considered the new quota to be realistic: in May OPEC production was estimated to have averaged 26m. b/d, rising above this level at the beginning of June. In view of this, already considerable overproduction, it was arguable that was the OPEC ministerial conference had done nothing that was likely to be effective to manage the return of Iraqi supplies to the market.

Prices nevertheless remained stable, as they had since the conclusion of the agreement between Iraq and the UN in May. It was announced in June that the OPEC monitoring committee was to be reconstituted and that it would monitor production in June, July and August before meeting for the first time in September 1996. Chaired by the Iranian Minister of Oil, Gholamreza Aqazadeh, with representatives from Libya and Nigeria, the committee pledged to take firm action against

member states found to be in breach of their quotas, although no details were released of exactly how they might be penalized.

By the beginning of July 1996 it was clear that there was going to be some delay before Iraqi exports recommenced, the USA having rejected Iraq's proposed procedures on 27 June. From now almost until the end of 1996 prices were to rise consistently, mainly but not exclusively, in response to the delay in the implementation of the agreement between Iraq and the UN. The USA's rejection of Iraqi proposals, for example, bolstered prices which might otherwise have fallen as a result of predictions that supplies would be excessive in the second half of 1996. The delay of Iraq's return to the market continued to support prices in the second week of July when all other indications pointed to a market in balance. The price of Brent blend crude for immediate delivery—the reference price for the majority of crude petroleums—rose to $19.99 per barrel, its highest level since April. OPEC production was estimated to have amounted to 25.64m. b/d in June, some 600,000 b/d in excess of the expanded quota announced that month. OPEC reported that the 'basket' price of member states' crudes had averaged $18.83 per barrel in the first six months of 1996, compared with $16.86 per barrel in the whole of 1995.

At the beginning of August the continued failure of Iraq and the UN to establish the procedures for renewed sales of Iraqi petroleum remained the most important market-strengthening factor. Demand remained strong and it was estimated that OPEC production in July had totalled 25.86m. b/d. Saudi Arabia reportedly informed OPEC that, in spite of production in excess of its quota level, it had not marketed in excess of quota in that month. Prices continued to rise in the third week of August: in the middle of the month the Brent reference blend was fetching $21 per barrel, compared with an average price of $16 per barrel in August 1995; and analysts sought to explain why prices were doing precisely the opposite of what they had predicted they would do in the second half of the year. According to the CGES, low industrial stocks of petroleum were the most convincing explanation for the strength of petroleum markets at the end of August.

US missile attacks on Iraqi targets on 3 and 4 September 1996 raised oil prices to their highest levels since the 1991 conflict in the Persian (Arabian) Gulf. The USA's opposition to the resumption of Iraqi petroleum exports hardened and it appeared now that these exports would not commence before the end of 1996. Perceived shortages of heating oil in the USA and Europe began to assume more significance in forecasts of oil price development for the final quarter of the year. The possibility of shortages in the absence of Iraqi supplies lifted prices to their highest levels for the year in the second week of September as the renewed conflict between Iraq and the USA remained unresolved. In Europe the price of the Brent reference blend rose above $23 per barrel. The IEA, meanwhile, predicted that there would be a reduction in OPEC supplies in the third and fourth quarters and at the same time raised its estimate of demand for OPEC crudes in those periods by 700,000 b/d. According to the IEA, OPEC production amounted to 25.81m. b/d in August, a slight reduction compared with July.

With prices having risen by almost 30% since June and with many observers indicating the possibility of shortages before the end of 1996, it was no surprise that the OPEC monitoring committee, meeting in Vienna on 25 September, decided, in spite of the warning it had issued earlier in the year, to take no action against member states that continued to produce and to market oil well in excess of their quota levels. Prices were supported in early October by continued predictions of a shortage of heating oil in the northern hemisphere in the coming winter months, and by continued forecasts of strong demand in the final quarter of 1996. The IEA estimated OPEC production had amounted to 25.88m. b/d in September.

The market situation outlined above continued through the final quarter of the year. From December 1996 Iraq began to influence petroleum markets more directly. There was no dramatic weakening of prices when Iraqi exports finally recommenced on 10 December, but it soon became clear that the sanguine predictions voiced in the preceding months, that a new, higher trading range for petroleum had been established in response to favourable fundamental factors, were misplaced.

The strength of crude oil prices in the second half of 1996 led some oil industry forecasters to claim that a new trading range, one of US $24–$25, had established itself, compared with that of $15–$20 which had hitherto been regarded as the long-term, sustainable trend. Late in the year speculative articles began to examine the possible consequences for global economic growth if prices were to rise even higher and stay at that level. None predicted a global recession either directly caused or aggravated by high oil prices, but such recessions of both the present and the preceding two decades were nevertheless invoked as a warning of the possible consequences. Some 15 months later, by the end of March 1998, world markets for crude oil appeared to be on the verge of collapse. Saudi Arabia's marker crude, Arabian Light, for instance, was trading at its lowest level since 1986. Venezuela, generally considered to be OPEC's most extravagant quota-buster, had been instrumental, together with Saudi Arabia and Mexico, in obtaining the agreement of producers, both OPEC and non-OPEC alike, to begin to reduce supplies by 1.245m. barrels per day (b/d) from 1 April. To many observers this agreement, coming so soon after the formal revision of OPEC quotas in Jakarta, Indonesia, in November 1997, represented a significant step towards a free market in oil. But, for all its novelty, it was, initially at least, received with indifference by markets, and prices remained doggedly low. What were the factors behind the unexpected decline in the prices of crude oil?

The resumption of Iraqi supplies

One factor was the resumption, from 10 December 1996, of exports of Iraqi crude oil—the so-called 'oil-for-food' sales made under the terms of UN Security Council Resolution 986 of April 1995—for the first time (officially, at least) since the Gulf War of 1990–91. By April 1997 the 'basket price' for OPEC crude oils had fallen to about $16 per barrel, compared to some $24 per barrel at the end of 1996. It is important to note, however, that the imminence of Iraq's return to the market had probably supported prices in the second half, particularly the final quarter, of 1996, since some producers were thought to have prepared for it by restraining output. This, together with lower-than-anticipated output by some non-OPEC producers and low stocks world-wide, meant that prices were already at an artificially high level when Iraq's return to the market coincided with mild winter weather conditions in the northern hemisphere to bring about an unusually sharp adjustment. The conditions of UN Resolution 986 were another factor behind the weakening of prices in the first quarter of 1997: Iraqi oil exports were defined in terms of value rather than quantity. Consequently, every time oil prices weakened Iraq was able to increase the amount of oil it marketed.

As 1997 progressed it became clear that the resumption of Iraqi exports had introduced an element of volatility into an otherwise stable market. Iraq's periodic quarrels with the UN weapons inspectorate, for example, which had settled into a largely predictable pattern of confrontation, crisis and resentful compromise, now took on greater meaning as they began to combine with other market influences to strengthen or weaken the price of crude oil. The memorandum of agreement pertaining to UN Resolution 986 had to be renewed every six months (Iraq was allowed to sell $2,000m.-worth of oil over 180 days, divided into two 90-day periods), and in June 1997 Iraq suspended its exports owing to a dispute with the UN regarding the distribution of revenues from the sales. The removal of the approximately 700,000 b/d, which Iraq had been exporting, immediately lifted prices from their lowest levels of the year. The longer Iraqi exports remained suspended, the greater the potential for disruption when they eventually resumed, since, in order to achieve revenue targets in a shorter period of time, Iraq would have to increase the quantity it exported. Oil markets thus became subjected to speculation that Iraqi exports might resume, in July, at about twice the level recorded in December 1996–June 1997. According to the London-based CGES, such a boost to OPEC output would lead to weaker prices in the third quarter of 1997. If, on the other hand, exports were delayed until the final quarter of the year, the CGES forecast increases to more than $20 per barrel for some crudes. Iraqi exports thus began to exert a destabilizing influence on oil markets, although the contribution this made to the decline in prices in the first

quarter of 1998 may have been exaggerated by some analysts. The main factor at work then was excess of supply, but on such a scale that, while the availability of Iraqi exports and the timing of their return to the market could make a bad situation worse, their suspension would do little to bring about any recovery.

Overproduction within OPEC

Supplies of crude oil were already regarded as more than adequate before the financial difficulties of some East Asian countries in late 1997 began to be perceived as an economic crisis, altering predictions of regional economic growth and reducing world demand for oil. The CGES, for example, had predicted an increase of some 2m. b/d, to 73.8m. b/d, in world demand in 1997, and suggested that this would be adequately covered by new supplies, especially non-OPEC supplies. In early and mid-1997 attention focused on the extent of overproduction within OPEC. According to the Paris-based International Energy Agency (IEA), OPEC production had reached 27.13m. b/d in April 1997, compared with the Organization's official quota of 25.03m. b/d. Other analysts estimated overproduction to be even higher. However, according to the BP *Statistical Review of World Energy*, global demand for oil had increased by 2.4% in 1996. Key producers, in particular Saudi Arabia, remained confident that demand in 1997 would exceed less assured expectations for the year. In its mid-year report the IEA referred to the continued strength of demand, led by economic growth in the USA, Asia and Latin America, but nevertheless forecast weaker prices and substantial growth in inventories in the second half of the year, unless there was a significant reduction in OPEC output. At the ministerial conference in Vienna in June 1997 OPEC's response to predictions of steady, if not strong, demand, adequate supplies and a weakening of prices was to renew its official production quota of 25.03m. b/d for a further six months. Attempts reportedly were made to obtain an agreement on the stricter observance of quotas, but these were unsuccessful. In spite of the scale of overproduction—generally estimated at about 2m. b/d in excess of the quota level—the failure to obtain such an agreement was dismissed as being of no great significance for prices during the second half of the year.

For the time being OPEC producers appeared to have assessed market conditions accurately. In the period June—October 1997 markets were influenced by the interplay between US summer demand for gasoline and the size of inventories, especially those of gasoline in the USA and of industrial oil in the countries of the OECD. Generally this had a positive effect on prices. In August the CGES forecast that the average price of the United Kingdom's Brent marker crude would be above $19 per barrel in 1997 and that of OPEC crudes more than $18.50 per barrel. The strength of European inventories, however, was regarded as likely to exert downward pressure on prices as the winter approached. The most important fundamental factor contributing to the stability of markets during the first three quarters of 1997 remained growing demand from the USA and Asia. In October the IEA estimated that demand in the final quarter of the year and in the first quarter of 1998 would be some 2m. b/d higher than in the corresponding periods of 1996 and 1997. Since non-OPEC production, especially in the North Sea, had failed to match expectations, predictions of demand for OPEC crudes rose accordingly. In response, OPEC production was estimated to have risen to its highest level for 17 years, 27.62m. b/d, in September.

OPEC raises its quota

In view of what happened in early 1998, OPEC's decision, taken at the ministerial conference held in Jakarta, Indonesia, in November 1997, to raise, for the first time in four years, its production quota, to 27.5m. b/d from 1 January 1998, was subsequently described as a misjudgement. Without the benefit of hindsight, however, there appeared to be strong arguments in its favour. The producer states of the Persian (Arabian) Gulf that were the principal advocates of raising the quota—Saudi Arabia, in particular, but also Kuwait and the United Arab Emirates (UAE)—considered that, by abiding by their quotas (relatively speaking), they were not benefiting fully from growing world demand for oil. All three had costly production capacity to spare, yet they continued to forfeit market share to other OPEC members, especially Venezuela, with apparently fewer scruples about quota observance. At the time the decision was taken actual OPEC production was already estimated at about 28m. b/d, and was forecast to average some 27.5m. b/d in 1997. The crucial factor left out of the reckoning was the seriousness of the developing economic crisis in East Asia, the region which, in 1990–97, was estimated to have accounted for some 70% of growth in world demand for oil. Moreover, owing to changes in trading patterns and market share, this was precisely the area on which exports from the core Gulf producers had become concentrated. Almost as soon as OPEC took the decision to raise its quota, oil markets were caught in the pincers of increased production—or fear of it—and reduced Asian demand.

There was immediate concern that OPEC had misread conditions, the IEA noting that the raised quota appeared to have brought about a fundamental shift of mood on oil markets. According to the IEA, OPEC supplies were expected to rise by 500,000 b/d–1.1m. b/d as a result of the increase, and the mood that now prevailed was fear of an excess of supplies. The IEA itself forecast world oil demand at 76.1m. b/d in the first quarter of 1998 and demand for OPEC supplies at 27.1m. b/d. In early December the price of some crudes fell to their lowest level since June 1997, and from the beginning of January 1998 began to decline rapidly. That of Brent, the United Kingdom's marker crude, for instance, fell below $15 per barrel in the first week of 1998, compared with more than $17 per barrel in late December 1997. The increased OPEC quota was not the only factor behind these declines. Iraqi exports had again been suspended, but were now expected to resume. Winter weather in the northern hemisphere had been exceptionally mild, while data from the USA indicated that, contrary to expectations, stocks of some petroleum products had increased. By mid-January 1998 prices had fallen to their lowest levels for more than three years. Estimated growth in demand for oil in East Asia had by this time been revised downwards by some 300,000 b/d and, it was feared, would have to be revised downwards again if the regional economic crisis spread to India and China. At the end of January prices recovered temporarily as the likelihood of conflict in the Gulf increased owing to failure to achieve a resolution of Iraq's latest dispute with the UN over weapons inspections. However, the level of OPEC production remained a major concern. OPEC's decision, taken at a ministerial meeting in Vienna, Austria, on 26 January, to urge its members to comply with quotas was widely regarded as an inadequate response to the feared effect of the Far East economic crisis on demand for oil.

At the beginning of February 1998 Iraq began to exert a more negative influence on oil markets, following the announcement, by the UN Secretary-General, of a possible future increase in the value of Iraqi oil exports, from $2,000m. over six-month periods to $5,200m. Estimates of OPEC production published in the same month suggested that it had increased to more than 28m. b/d in December 1997 and January 1998. Meanwhile, the IEA once again reduced its forecast of world demand for oil in 1998 to take account of the decline in economic activity in East Asia. It was not until mid-February that the first signs of any action by producers to support prices emerged. By that time the price of UK Brent had fallen to below $14 per barrel. In late February falling Asian demand was reported to be causing increasing difficulties for Gulf producers, with European markets being sought for both crude and petroleum products that could not be sold in the Far East. By late March oil prices had fallen to their lowest levels for 10 years. Arabian Light, for instance, Saudi Arabia's marker crude, was trading below $10 per barrel. On 22 March a plan, initiated by Saudi Arabia, Venezuela and non-OPEC Mexico, was announced to reduce world oil supplies by some 2m. b/d from 1 April 1998. To summarize, the market conditions to which producers were attempting to co-ordinate a response were characterized by the following factors: forecasts that world production of oil would exceed demand by 1.5m. b/d–2m. b/d in 1998; a possible fall in East Asian demand of more than 300,000 b/d, whereas previous forecasts had predicted it to rise by some 1m. b/d in 1998; mild winter weather conditions in the northern hemisphere, which, together with surplus supplies, had increased fuel inventories at a time when they were usually drawn upon—according to

the IEA, fuel inventories in the OECD countries were at their highest levels for 20 years—undermining future prices at the same time as spot prices; uncertainty as to whether the continuing reintegration of Iraq into world markets would support or weaken prices; the possibility of Iraqi exports approaching 2m. b/d by mid-1998; uncertainty about the level of non-OPEC output; OPEC production estimated at about 2m. b/d in excess of demand for it in January 1998 and, given the scale of overproduction, doubts about the Organization's ability to take effective action to reduce this.

In detail, the agreement announced on 22 March 1998 committed Saudi Arabia to reduce production by 300,000 b/d, Venezuela by 200,000 b/d and Mexico by 100,000 b/d. Kuwait and the UAE each undertook to implement reductions of 125,000 b/d. At a meeting of OPEC oil ministers in Vienna on 30 March, the reductions announced on 22 March were supplemented by a commitment by Norway to cut production by 100,000 b/d. In total, the agreement, if fully implemented, would reduce world production of oil by 1.5m. b/d, to which OPEC would contribute cuts totalling 1.245m. b/d and non-OPEC producers (Mexico, Oman, Norway and Egypt) 260,000 b/d. Oil markets responded positively to the initial announcement of the planned reductions, with crude prices rising by up to $2 per barrel. However, widespread scepticism remained about how effective the agreement would be, not least because of the failure of agreements concluded in similar circumstances in the past. Also, the agreement did not address the question of Iraqi production, and Iraq, having produced 1.8m. b/d in February, retained the potential to negate the confirmed reductions entirely. Even if the cuts could be effectively implemented, it was still estimated that supply would remain substantially in excess of demand. The agreement was regarded by many observers as a further step towards a free market in oil, especially as, if it were to collapse, OPEC producers which had hitherto observed their quotas would have no interest in restraining production while forfeiting market share.

In the first week of April 1998 oil prices fell back to the levels prevailing before 22 March. Doubts remained that the cuts announced in late March would be fully implemented. In mid-April UK Brent was trading at about $12.50 per barrel as markets remained oversupplied. In mid-May, however, prices rose in response to indications that OPEC producers were reducing output in line with their agreement. According to the IEA, world production had been reduced by about 1m. b/d in April, of which 800,000 b/d was contributed by reductions in OPEC output. Iraq was estimated to have increased its exports in April by some 160,000 b/d. Prices received further support from indications that Kuwait would back any agreement to reduce production further at the OPEC ministerial meeting on 24 June, and from reports of a recovery in Asian demand. However, at the end of the month reports that US stocks had risen to their highest levels for nearly five years stemmed the recovery and attention remained focused on the possibility of an agreement to implement further reductions at the OPEC ministerial meeting in late June.

Oil Statistics

Note: Reserve figures are subject to wide margins of error, and there are considerable differences between sources—including oil companies and governments. Proven reserves do not denote 'total oil in place', but only that proportion of the oil in a field that drilling has shown for certain to be there and to be recoverable with current technology and at present prices. Normally recoverable reserves amount to about a third of the oil in place. Because the potential of fields is continually being reassessed in the light of production experience and because the production characteristics of a field can (and often do) change as it gets older, proven reserves figures may sometimes be revised upwards or downwards by quite dramatic amounts without any new discoveries being made. Price rises tend inevitably to increase reserves figures by making small fields or more complex recovery techniques economic.

The only exception to the proven commercially recoverable reserves formula used in this table applies to the USSR figures, which, as reported by *Oil and Gas Journal*, refer to 'explored reserves', which include proved, probable and some possible reserves.

NATURAL GAS IN THE MIDDLE EAST AND NORTH AFRICA

CHRIS CRAGG

Revised for this edition by SIMON CHAPMAN

The Middle East now accounts for more than 30% of the world's proven reserves of natural gas. With the addition of Algeria, Libya, Tunisia and Egypt, the figure is closer to 40%. This amounts to 54,670,000m. cu m (excluding Tunisia), according to a 1998 survey, but even this figure should be regarded as conservative. The eastern part of the region lies in a trend that most geologists now believe contains the bulk of Eurasia's hydrocarbons. This runs from the Yamal peninsular in Russian Siberia to the Caspian Sea, across the 'fertile crescent' into Saudi Arabia, and across the Red Sea towards Sudan. Proven reserves in the region, second only to those of Russia, have more than quadrupled since 1970. Indeed, since the mid-1980s they have risen by more than two-thirds, the additional amount alone sufficient for almost eight years' of global gross consumption. At current levels of production, proven reserves in the Middle East could last well into the second century of the next millenium, and proven reserves underestimate potential reserves, sometimes by as much as a factor of two.

However, many countries, especially those on the shores of the Persian (Arabian) Gulf, have sufficient proven reserves to meet any short-term requirements and have simply not tried to discover more gas. Where this is not so, notably in Syria, Egypt, Yemen and Algeria, the search has continued successfully. In general, however, more attention has been paid to the expansion of domestic, western and eastern European and Japanese markets.

In spite of huge reserves, natural gas has until very recently been an under-utilized resource in much of the Middle East and North Africa. In contrast to oil, it was difficult to export, requiring either large pipeline systems or very expensive conversion into liquefied natural gas (LNG). Since in terms of volume, oil has a far greater thermal content than gas, gas produced far less reward than oil for a given capital expenditure. Local markets were generally dominated by oil burning, or did not exist. As a result, oil companies looking for oil and finding gas, shut in the gas and went elsewhere. Where gas was found with oil—'associated' gas—the oil was used and the gas flared. In 1973, Saudi Arabia was flaring as much as 86% of its gross production and its flare stacks were visible to the early astronauts. Some countries, notably Algeria, Libya and Abu Dhabi did export by liquefying the gas for European, American or Japanese consumption. Yet this was a formidable technical undertaking, requiring liquefaction plants to cool the gas to −165°C, each costing as much as US $2,000m., and special ships costing over $100m. Constructed in the late 1970s, these plants came into operation at an inopportune moment, since between 1979 and 1982 world gas consumption actually fell. In the USA, there was a huge surplus of domestically-produced gas, while in Europe, large volumes of Soviet gas from Siberia reached the market. Only the Japanese, with no resources of their own, remained faithful to their supplier in Abu Dhabi. Much of the extremely expensive Algerian LNG capacity became idle after a series of disputes with US distributors.

Many countries, however, perhaps motivated by this experience, began to realize the value of what was being flared. As a substitute for oil, gas could be burnt in power stations, desalination plants, and wherever heat was required. This, in an era of high oil prices, would free crude for export. As a result, the flaring of 'associated' gas was gradually cut, a process which, in the case of Saudi Arabia, required a major offshore and onshore gathering grid. By 1991 flaring in that country had been reduced to only 6% of total—greatly increased—production. Compared with 1983, when Saudi Arabia used some 4,000m. cu m of natural gas and flared 26,900m. cu m, in 1991 it used 32,000m. cu m and flared only 4,400m. cu m. Iran, too, had realized the waste involved in flaring gas and had begun to use gas-reinjection techniques in order to assist the recovery of oil. In 1991, having increased its production of natural gas by 97% since 1983, Iran reinjected into the ground more gas than it had actually been using a decade earlier. In the Middle East and North Africa generally, however, flaring remained high, involving 52,420m. cu m in 1991—an amount almost double Norway's marketed production—compared with 43,840m. cu m in 1980. A sudden increase in 1991 was largely due to the tragedy of Kuwait, where the Iraqi invasion and subsequent war flared 96% of total production in that year. Over the same period, gross production in the region had increased by 110%. A greater achievement was to have found a commercial use for the gas. In 1991 the Middle East and North Africa used or exported some 179,760m. cu m of natural gas, more than double the level of consumption seven years earlier. Iran, Abu Dhabi, Saudi Arabia, Bahrain, Oman, Egypt, Libya and Qatar have all doubled domestic consumption of natural gas since the mid-1980s, water desalination plants, power-stations and even town distribution grids having been constructed near where the gas used to be flared. Equally, the development of the petrochemical and metal industries has increasingly utilized gas rather than oil. By 1991 the Middle East and North Africa had more gas-fired power-stations than both Western Europe and North America combined.

Natural gas is also a major petrochemical feedstock. With environmental awareness growing, the region has quickly realized the value of gas for production of methanol and, from it, methyl-tertiary-butyl ether (MTBE). With the search now on for cleaner fuels, methanol itself may one day become an important vehicle fuel and it requires a gas feedstock. In 1991, however, MTBE was in short supply as a gasoline octane enhancer, since lead was being phased out.

The increase in demand for natural gas has not only occurred in the countries that produce it. By 1991 the countries of the Middle East and North Africa were exporting 44,430m. cu m of natural gas, compared with only 2,300m. cu m a decade earlier. In 1990 Algeria, which had found it difficult to export natural gas in the early 1980s, received orders from Italy, Germany, Yugoslavia, Spain and France and had fully to utilize its previously idle LNG capacity. By 1997 the annual capacity of the Transmediterranean pipeline to Italy via Libya had risen to 24,000m. cu m. To the west, Spain and Morocco had agreed to begin constructing another pipeline to Spain, passing beneath the Strait of Gibraltar (see below). Algerian exports of natural gas had risen to 33,900m. cu m by 1991, compared with about 17,000m. cu m annually in the mid-1980s. Indeed, by 1992 European dependency on Algerian supplies had begun to cause alarm owing to political unrest in that country. Yet, with its rapidly increasing, youthful population, the Algerian Government could not afford to reduce its exports. By late 1996 Algeria was supplying some 25% of gas imported into Europe and aimed to retain its market share in the face of future competition from Libya, which has supply contracts with Italy, and Egypt, whose potential first export market is Turkey (see below). It has been estimated that natural gas will meet about 25% of Europe's energy requirements in 2010, compared with 20% in 1996, of which some 50% will be imported. In late 1996 Algeria began to supply gas to Córdoba in southern Spain via the Maghreb-Europe pipeline which runs through Morocco and beneath the Strait of Gibraltar. By 2000 the Maghreb-Europe line is expected to transport about 10,000m. cu m annually. Algerian exports of natural gas totalled about 30,000m. cu m in 1998 and it is

planned eventually to increase this to 60,000m. cu m. Algeria has begun actively to seek increased foreign investment in order to share the cost of developing its oil and gas industries, which was forecast at more than US $17,000m. in 1996–2000. In 1997 the European Investment Bank (EIB) granted a $300m. loan to Algeria's state energy operator, SONATRACH, towards the construction of a new pipeline (GR2) to transport natural gas from the Hassi R'Mel field.

Algeria is not alone in having come to regard exports of natural gas as a major source of revenue. In the Persian (Arabian) Gulf Abu Dhabi has long been a major supplier of LNG to Japan and plans to expand its production capacity. Qatar, which has huge reserves—estimated at 10,600,000m. cu m, 5% of total world reserves, at the beginning of 1998—has spent US $3,500m. on constructing a LNG plant and export facilities which include an industrial port (at Ras Laffan), offshore platforms and ships to transport the LNG. This project, which was first conceived in the 1970s, was completed in 1997 and may eventually supply more than 6,000m. cu m of natural gas to Japanese electricity producers. A second LNG project was under way in early 1997, as was the expansion of associated petrochemicals programmes. In 1992 Oman announced similar plans to develop its LNG production capacity, in a deal with Shell, with the aim of exporting some 6,000m. cu m to Japan after the inauguration of a new LNG plant in 2000.

The development of Iran's South Pars field began in 1993, but has not proceeded smoothly owing to the huge cost of the project, and to obstructive US legislation that penalizes companies investing in Iran. Iran's reserves of natural gas are second only to those of the USSR, and this after very little detailed exploration. Iran is keen to develop its exports of natural gas, although the emphasis of production, whether for export or for domestic consumption, has varied in accordance with the world price of oil. Domestic demand, while it is growing rapidly, still uses only a tiny fraction of potential production. In July 1998 Iran began to seek new foreign investment in its hydrocarbons sectors, including its gas fields, generally on a 'buy-back' basis. Production of natural gas reportedly rose by 8% in 1996/97 to 64,200,000m. cu m.

It is possible that plans to transport Iranian natural gas to India and to Pakistan will be realized in the early 2000s. The question of constructing pipelines in the opposite direction is more complex politically, but Iran's ambitions have been boosted by the collapse of the USSR. The USSR achieved its export links with western Europe with a system that took very little account of the real investment costs of the very long Siberian pipelines. These pipelines and the reserves that filled them were in poor condition, but the construction of new capacity was likely to be extremely expensive. The collapse of the communist system freed Eastern European countries and the republics of the former USSR to seek alternative suppliers of fuel. Iran now has two options for expanding its sales of natural gas in Europe. It can either conclude agreements with Turkey, or it can enter Eastern Europe through the Ukraine. In May 1997 Iran, Turkey and Turkmenistan agreed on plans to export as much as 30,000m. cu m of Turkmen gas to Turkey via Iran. This was in addition to plans to connect Turkey and Turkmenistan to the Iranian gas pipeline system.

If Iran appears likely to become a major exporter of natural gas in the 21st century, then the underlying reason is the increasing importance of gas to the global economy. Growth in world consumption has remained fairly steady (although a slight decrease was recorded in 1997) and 2,016.4m. tons of oil equivalent were consumed world-wide in 1998, compared with 1,662.1m. tons in 1998. The market for natural gas, in terms of energy equivalence, is about half the size of that for crude oil. Gas has a number of advantages over oil in an era of environmental concern. In contrast to coal or oil, gas produces less carbon dioxide on combustion and generally contains less sulphur. Any carbon tax thus discriminates against gas rather less than it does against rival fuels. In addition, the use of gas for generating electricity has greatly increased and will continue to increase because the fuel can be used in combined-cycle turbines. Such turbines generate power with a 50% rate of efficiency, compared with the 34% generally achieved by standard, single-cycle oil- or coal-fired power stations. The International Energy Agency (IEA) has forecast that the consumption of gas for power generation alone will increase from 32,000m. cu m in 1989 to at least 81,000m. cu m by 2000. Apart from nuclear energy, gas is the fuel best suited to this process. The only threat to this relatively new source of revenue to the region is likely to be internal consumption, which has been rising at a rate of 6% a year, if the impact of the invasion of Kuwait is ignored. The impact that this event and the Gulf War had on Iraqi supplies was considerable, since Iraqi gas is primarily associated with oil. Consequently, as Iraqi export sales of petroleum have been reduced, Iraq has lost its source of domestic gas supply. This has led to the necessity to produce crude oil and then return it back into the ground, simply to sustain the gas supply.

It is thus virtually certain that the role of Middle Eastern gas in world trade will grow, increasing exporters' revenues. However, the role of natural gas in many of the less fortunate Middle Eastern states should not be forgotten. Compared with Iran's resources, Jordan's reserves of 15,000m. cu m are minute, but gas from the al-Lisheh region now supplies 15% of Jordan's electricity, saving a considerable amount of foreign exchange, and may eventually meet 25% of power requirements. In Syria, where Shell has been remarkably successful at finding local supplies where none were previously believed to be, new reserves have rapidly been put to use for the production of electricity. In Egypt, in the western desert, offshore of Alexandria and in the Red Sea, small fields have all yielded quantities that would probably not have been developed in the Gulf region. These are now used to supply industry and an incipient Cairo gas distribution system. Since the mid-1980s pipeline development has doubled Egyptian consumption, but diligent exploration has discovered sufficient natural gas to produce a healthy reserves-to-production ratio. By late 1996 most Egyptian power stations were gas-fired, and in 1997/98 an exportable surplus became available when new fields north of the Nile Delta commenced production. Meanwhile, Shell, Repsol and Norsk Hydro have invested some US $750m. in the development of gas fields in the western desert. At the end of 1997 Egypt's proven reserves of natural gas totalled 780,000m. cu m.

The importance of natural gas to the future of the Middle East and North Africa has thus increased enormously since the early 1970s. A new appreciation of the fuel as clean-burning has created potential demand that will be a major element in the region's development over the next 20 years. In recognition of this, a new spirit of co-operation has developed. Unlike crude oil, the production of which is controlled by OPEC and thus dominated by the politics of oil pricing and the Organization's internal disputes, gas diplomacy is largely free of past east-west recriminations. The development of reserves, pipelines, liquefaction units and power plants in the region is being aided by Western multinational companies—Shell, Total, Agip, Elf and others—in a way that no longer applies in the oil business. Even Algeria, where the gas industry was formerly dominated by its state company, SONATRACH, requested inward investment in early 1992. Japanese trading groups, such as Mitsui and Mitsubishi, have also established a foothold in the industry. Gas remains a capital-intensive business and external assistance is required in both the financial and technical spheres. Yet, in contrast to oil, the development of gas resources and their exploitation seems to have an internationally binding effect. Gas supply is a central element in the Gulf Co-operation Council's plans for economic development. Iran trades with its northern neighbours. Trade in natural gas with Europe has made a major contribution to Algeria's economic development, and one which has been mutually beneficial. Despite their apparent vulnerability to civil commotion, the long gas pipelines that are beginning to spread across the region and on into Europe have become links that the beneficiaries are reluctant to break.

GAS: RESERVES AND PRODUCTION
(t.c.m. = trillion cu metres)

Country	Reserves 1 Jan. 1999 (t.c.m.)	Production 1998 (m. tons oil equivalent)

Notes: Figures in the Reserves column are for gas recoverable with present technology and at present prices. Figures for reserves of gas—like reserves of oil—may be subject to wide margins of error.

Definitions: Natural gas may be found on its own ('unassociated' gas) or with oil ('associated' gas). 'Associated' gas exists partly as a gas cap above the oil and partly dissolved in oil—it is the presence of gas under pressure in new oil fields which drives the oil to the surface. 'Associated' gas is unavoidably produced with oil and may be flared, reinjected or used as fuel.

Natural gas is a mixture of numerous hydrocarbons and varying amounts of inert gases, including nitrogen, carbon dioxide and sulphur compounds. (Gas containing large quantities of sulphur is know as *sour* gas; gas without sulphur is *sweet* gas.) By far the biggest component of all natural gas by volume (at least 75%) is methane, CH_4. Other components are ethane—C_2H_6, propane—C_3H_8, and butane—C_4H_{10}. All of these hydrocarbons are gases at normal temperatures and pressures. Suspended in the gas are various heavier hydrocarbons, pentane (C_5H_{12}), octane etc., which are liquids at normal temperatures and pressures. Gas with a relatively high proportion of propane, butane and the heavier hydrocarbons is known as *wet* gas. 'Associated' natural gas tends to be wetter than 'unassociated' gas.

Methane is the normal pipeline natural gas used for domestic and industrial purposes. It liquefies at very low temperatures (−160°C) and very high pressures, and in this condition is known as *liquefied natural gas*, LNG.

Ethane is either kept with methane and used as a fuel, or is separated and used as a feedstock for petrochemicals production. Ethane is not traded on its own internationally.

Propane and butane are used as cylinder gases for a large number of industrial and domestic purposes—camping gas and cigarette lighter gas is either propane or butane. The two gases liquefy at higher temperatures and lower pressures than methane. In their liquid state they are known as *liquefied petroleum gases*—LPGs.

Pentane and other heavier liquids are used for a variety of purposes, including the spiking of heavy crude oils and as petrochemical feedstocks. These hydrocarbons, liquid at normal temperatures and pressures, are known as *natural gasolines* or *condensate*.

Together, liquefied petroleum gases and natural gasolines are referred to as *natural gas liquids*—NGLs.

WATER, 'VIRTUAL WATER' AND THE ECONOMIES OF THE MIDDLE EAST AND NORTH AFRICA

TONY ALLAN

It has often been argued that for many countries in arid regions like the Middle East and North Africa, where 'indigenous' water resources are insufficient to sustain national economies, water has become a highly-prized commodity and a potential source of armed conflict. Many prominent political commentators and politicians (including, recently, King Hussein of Jordan and former Secretary-General of the United Nations Boutros Boutros-Ghali) and fewer economists have warned of the threat to regional stability posed by the problems of water-deficit economies. Yet economies have been sustained and serious conflict has been avoided. In the case of the Middle East and North Africa, at least, water has been accessed from a global system, via trade; economic systems, not the clearly inadequate hydrological systems, have provided a solution to the region's water-supply problems. Water in the global trading system is known as 'virtual water'; this is the water embedded in key water-intensive commodities such as wheat. While there is good reason to suppose that, at least in terms of freshwater availability, there will be sufficient water to meet the needs of a future world population more than twice its current size, there remains a lack of reliable scientific projection as to the future capacity of the global freshwater system. In terms of demand, given that freshwater needs are driven by increased population, precise calculations are complicated by the vast range of future world population forecasts. This domain of uncertain information has given rise to both optimists, including the author and most economists, and pessimists, whose divergent interpretations owe much to the differing assumptions upon which their respective analyses are based. The issue is of particular importance to the peoples and political leaders of the Middle East and North Africa, given that the region's economies are already as dependent on global water as they are on their own renewable supplies. In the 1960s and 1970s there were attempts in the former Soviet Union to review the world's water balance; water availability and use have also been addressed. Since 1994 there has been a welcome and responsible attempt by the Food and Agriculture Organization (FAO) of the United Nations to examine the subjects of water availability for Africa and the Middle East and water utilization through irrigation, the major using sector. The publications provide first approximations that should be given prominence in order to allow the enhancement of the reliability of the data by progressive iteration. A balanced perspective on the population, water and food nexus from the International Food Policy Research Institute (IFPRI) identifies low, medium and high growth-rate scenarios for world population forecasts.

'In its 1996 study, the United Nations found that population growth between 1990 and 1995 was 1.48 per cent per year, rather than the 1.57 per cent projected in 1994. In light of this lower rate, the United Nations revised its projections for population growth in the next century, based on three different assumptions about the fertility of the world's women. The medium fertility model—the one usually considered the most likely—would put the world's population at 9.4 billion by 2050 (half a billion lower than the United Nations 1994 estimates). World population would continue to grow until 2200, according to this model, when it would stabilize at 10.73 billion.

The medium fertility model falls in the middle of a wide range of possible outcomes. Low fertility would result in a world population of 7.7 billion by 2200, whereas high fertility would mean 11.1 billion mouths to feed in 2200. These extremes are by no means unrealistic, and the population debate is far from over.... Public policy and individual behaviour, they say, will ultimately determine the world's population.'

The link between global water resources and the Middle East and North Africa

About the water of the Middle East and North Africa there is less scientific controversy; the region 'ran out' of water in the 1970s. The news of this important economic development was little reported. In the political world facts, including those on water, which are judged to have costly political consequences are easily ignored or dismissed as irrelevant. With selection and distortion of information often the norm in political processes it is predictable that discourses on the water resources of the Middle East and North Africa have often been misleading and confusing. For political leaders in the region political imperatives are more compelling than scientific facts. On the issue of water, these imperatives drive them to assert that their economies have not run out. Government ministers in Egypt in the mid-1990s maintained a vigorous public defence of their assertions that Egypt has sufficient water. The main reason for the discrepancy of interpretations of water sufficiency by scientists and politicians is the politicians' reluctance to specify their understanding of what 'sufficient' means. By 'sufficient', scientists mean sufficient 'indigenous' water to meet the total household requirements and agricultural (including water for food production), industrial and municipal needs of an economy. In most cases the politicians imply adherence to the same criteria as the scientists but in practice they are taking only a part of the 'total' needs into consideration. Without making their assumptions clear they are asserting that 'sufficient freshwater' is that volume necessary to sustain existing jobs in agriculture and industry and to meet municipal and industrial needs. For an economy such as Israel's this would account for only 25% of the water which would be needed for food self-sufficiency. For Egypt such a notion of sufficiency represents about 60% of the water needed for food self-sufficiency. For politicians in most of the countries in the region the food production gap resulting from the insufficiency of water has to be ignored, since to draw attention to the water and food shortfall could be politically destabilizing.

The particular importance of the Middle East *vis-à-vis* the water issue stems from its dubious distinction as the first major region in the world to 'run out' of water. The water demands of the populations of the Arabian Peninsula and much of Libya had exceeded the capacity of their water resources for food self-sufficiency by the 1950s. Israel and Palestine also 'ran out' of water in the 1950s, Jordan in the 1960s, and Egypt in the 1970s. The Maghreb countries have recently entered water deficit. The Tigris-Euphrates riparians have yet to fully utilize their water resources but will undoubtedly do so in the next couple of decades.

The major indicator of the scale of the water deficit of an economy is the level of its food imports, since the water required to raise food is what an economist would refer to as its 'dominant consumptive use'. This use dominates both in terms of the individual citizen and of the national economy. Water used by the agriculture sector exceeds tenfold the water employed by the industrial and municipal sectors combined. Each year an individual needs only 1 cu m of drinking water and between 50 and 100 cu m for other domestic uses, although a much lower actual level of use is not unusual in many rural communities in countries in other regions such as sub-Saharan Africa. In contrast, each year at least 1,000 cu m of water, either naturally occurring in soil profiles, or transported to the profiles by irrigation systems, is needed to meet the food requirements of that individual. At a national level, more than 90% of all official water budgets are devoted to the agricultural sector.

In the arid and semi-arid Middle East and North Africa the dominance of agricultural water demand is remarkable. There is little or no naturally occurring soil water, even in the winter

when parts of the region do receive rainfall. By contrast, for economies located in temperate latitudes—in Europe and the humid tracts of North America for example—the issue of the relative demands of the agriculture and the industry (including services) sectors is of little consequence. In temperate latitudes crop production is almost entirely based on soil water which occurs naturally and is largely taken for granted. In these regions the huge volumes of water utilized by agriculture are not considered within the context of a national water budget. Such water is a free commodity. In the Middle East and North Africa, however, agricultural water is expensively won because of the costs of storage (in order to ensure timely availability) and distribution. In addition, mobilizing such volumes of water can be politically stressful both nationally, (owing to environmental impacts) and internationally, provoking riparian conflict.

Soil water and the economic efficiency of water use are crucial issues for the region. It is global soil water which balances the water budgets of all the economies of the Middle East and North Africa (with the arguable exception of Turkey) while the effective allocation of water among sectors in order to gain high returns and encourage high levels of employment is fundamental to economic and political stability.

The regional water shortfall and the global water surplus

The rate at which food imports have grown in the Middle East and North Africa since the 1970s appears to support the scientists' contentions that the region has 'run out' of water, given that the production of every ton of a food commodity such as wheat requires a water input of approximately one thousand times that volume. The trend in cereal imports reflects a reasonable approximation of the capacity or incapacity of an economy to meet its strategic food needs.

Meanwhile, the peoples of the region and their leaders do not need to recognize these resources and economic realities. Their interpretations of Middle East hydrological and economic contexts are based on now irrelevant past expectations; their perception of global hydrological and economic contexts is unsound. The Middle East's hydrological system is clearly less and less able to meet the rising demands being placed upon it, while the global hydrological system is in surplus, and evidently capable of meeting the most demanding element of global water demand—world food consumption. Assuming a medium water consumption rate of 1,500 cu m per person per year, global freshwater needs amount to some 8,250 m. cu m annually, a volume well within the estimated capacity of available global freshwater. At the regional level there can only be levels of pessimism regarding the future availability of water, at least for irrigated food production. There is some optimism with regard to future volumes of the region's freshwater, but this is based on non-scientific assumptions. On the other hand, optimism about the capacity to utilize the region's water more productively is justifiable, and it is on this aspect of water management that politicians and regional optimists focus, as do those with financial and consulting services to contribute from outside the region. At the global level there is uncertainty both about volumes of available freshwater and about the capacity to use the water effectively. In such circumstances there is evidence to support the arguments of both optimists and pessimists. Owing to the significant error margins of the statistics produced by the as yet inadequate models of potential global change, vastly differing views emerge concerning the capacity of the world's agricultural systems to raise food, which only serve to further complicate the debate. The pessimistic global freshwater scenario is persuasive if one accepts the following assumptions: the continuance of current or more extravagant (in terms of water use) patterns of food consumption by individuals; demographic transition based on estimates of maximum growth rates; static technology; totally inflexible international organizations and political institutions; and ineffective trading systems. If, however, it is assumed that communities can change their food consumption behaviour, global population growth will level off in the second half of the 21st century at some 10,000m., sound economic policies can improve the productivity of water by ensuring that it is allocated to activities and crop production which yield high returns, advances in technology can significantly improve the productivity of water in food production, and that the mechanisms of international trade in staple foods continue to operate with proven effectiveness to ameliorate the uneven water endowments of the world's regions then one can conclude that the world's water and food futures are indeed uncertain but far from insecure. The contribution by the scientific community of best estimates of the status of existing soil water surpluses is crucial to a serious examination of the debate. Unfortunately these numbers are difficult to obtain because the concept of soil water availability is difficult to define and agree, and even if the concept were generally agreed, a method of comprehensive monitoring has yet to be defined. The particular insecurity of the Middle East and North Africa arises not just from its water resource endowment, but also from the inability of its governments and agriculture sectors, as well as international institutions, to adapt to the resource scarcity and take measures to find and mobilize substitutes.

It is important to stress that the types of adjustment anticipated by the water optimists cannot be achieved quickly. Even thirty years is a rather short transitional period for the necessary major adjustments in water policies to be developed in response to limited water availability. Effecting changes in the public perception of the value of water will take time. The associated political discourses enabling fundamental changes in water policies may take decades at least, so deeply-rooted are the belief systems, and so challenging any proposals that they should change, that politicians are loathe to contradict them, even though the implementation of such measures is essential for the stabilization of the political economy.

How is it that the theories of the pessimists and the optimists have evolved simultaneously yet are informed by such confusing and contradictory interpretations? There appear to be four main reasons, three concerning water supply and one related to water demand. In terms of supply, one must first acknowledge the diverse assumptions on surface and groundwater availability adopted by the two groups. Secondly, the most important variable of all, global soil water, is ignored by pessimists and little understood by the optimists. Thirdly, there is considerable imprecision in the estimates of the other important components of the global hydrological system, most particularly with regard to climatic change. Finally, with respect to demand there are so many factors affecting the requirements of a community for water that it is possible to extrapolate demands for water which differ hugely between the lowest and highest estimates; the optimists tend to invoke the former whereas the pessimists quote the latter.

Soil water and 'virtual water'

Soil water, located in the soil profiles of countries throughout the world, is perhaps the most crucial component of the water debate equation, and yet also the most frequently neglected by both optimists and pessimists. The neglect is especially true of the pessimists. Soil water and soil moisture rarely feature in their arguments, or if they do they generally refer to examples in some local irrigated circumstances and not to the pivotal role of naturally occurring soil water in feeding the world's future populations. If at least one-half of the water needed to feed the Middle East and North Africa's people in the 1990s lies in the soil profiles of temperate humid environments in North America, South America and Europe, it is surely derelict to ignore that water. This is not to discredit the inestimably important contributions of Lester Brown and Sandra Postel to international and local discourse on the state of the world's water resources. Their success in highlighting the urgency of achieving major shifts in perception and policy is extremely important. However, by discussing only surface water and groundwater, a very partial perspective on the waters of importance to human populations is presented. An analysis of the energy future of a hydrocarbon-deficient national economy would be as misleading if it neglected options to import oil and gas. Even more neglectful is the failure to emphasize properly the impressive international trading systems which transfer commodities requiring high water inputs from water surplus areas to water poor ones. In practice more water flows into the Middle East each year in this 'virtual' form, embedded in cereal imports, than is used for annual crop production in Egypt—Egypt being by far the most water-rich country in the arid part of the Middle East and North Africa.

Without wishing to contradict the concerns of the eco-pessimists and those afflicted with hydro-paranoia *vis-à-vis* the Middle East, it should be possible to enlighten those concerned by refocusing the analysis at a higher and more appropriate level, namely at the level of the international political economy. Here lie the answers to why economies operate as they do and why water policies are as they are in the Middle East and North Africa. Comprehensive explanations cannot be provided by narrow analysis of catchments and water budgets at national levels or even at regional levels. Catchment hydrologies do not represent the full range of options available to those managing a national economy. If national hydrological systems restrict economic options then politicians are obliged to find remedies in systems which do provide solutions. US water resource specialists have coined the term, the 'problemshed', to describe the 'catchment' or 'system' in which solutions can be found. National economies operate in international political economic systems—in problemsheds—and not just in hydrological systems—or watersheds. The shared and delimited catchment hydrologies, with their attendant troublesome international relations, are dangerously misleading frameworks of analysis. The existence of solutions in 'problemsheds' enable politicians to avoid the stresses of inter-riparian relations in the watershed.

Although many of the problems associated with water shortage in the Middle East and North Africa have been addressed successfully in the last quarter of the 20th century, certain recurrent frictions persist, most notably among the countries of the Jordan catchment. The initiatives of Turkey in the upper Tigris-Euphrates have also been the focus of considerable international attention. Meanwhile, many observers are predicting a new era of intense and possibly tense co-operation among the riparians of the Nile, following decades of inactivity.

The Jordan: Syria, Lebanon, Israel, Jordan and Palestine

The waters of the Jordan and the groundwater of the West Bank have long been issues of crucial importance for Israel, Jordan and Palestine. Peace talks conducted during 1993–94 between Jordan and Israel culminated in October 1994 with an agreement which included the provision of a phased 200m. cu m of water per year for Jordan, to be allocated partly from current Israeli resources and partly from jointly-developed resources, and to be implemented in 50m. cu m increments. The agreement was less favourable than Jordan had hoped but was acceptable in the context of a complex accord which established peace and also addressed territorial issues. Indeed, one of the unavoidable challenges for those involved in international negotiations over shared water resources is that discussions on water are always linked with other issues.

During the preliminary stages of the negotiations between the Israeli and Palestinian authorities which subsequently became known as the Oslo (1993) and Oslo II (1995) Accords, five crucial issues were identified: territory, Jerusalem, settlements, refugees and water. In the difficult years since Oslo II the handover of West Bank territory and the related issues of settlements have been prioritized. The status of Jerusalem is closely connected with the issues of settlement and territory, and will take its place at the top of the negotiating agenda in due course. Although water remains both a symbol of Palestinian national interest and an important current and future national resource, it is likely to be a foundation element in the co-operative relations between Israel and Palestine during and beyond the 'final status' negotiations. The emergence of water as a source of co-operation rather than long-term conflict owes much to the fact that the solution to the water problems of both Palestine and Israel lie beyond the water resources of the Jordan river and the West Bank. The principal water resource in terms of volume for all of these economies, both presently and in the future, lies outside the region, since their gross water needs can only be met by importing 'virtual water'. The ability to afford such imports is a problem of socio-economic development in which water plays a part, but is not determining; other production factors such as financial and human capital are the crucial determinants.

It is not yet clear to all Israelis that strong economies in the West Bank and Gaza are essential to a peaceful and secure future for Israel. However, a rapidly-growing minority is aware of the development pre-requisites for a comprehensive peace, and the discourse is being shaped slowly but favourably despite the high profile political manoeuvring over territory.

Although hopes for an Israeli agreement with both Syria and Lebanon were initially encouraged by speculation surrounding a possible Israeli withdrawal from southern Lebanon, by mid-1998 no resolution of the conflict was forthcoming and all sides remained firmly entrenched. The Golan Heights are considered by both Syrians and Israelis as crucial to the negotiation of a successful peace. Significant resources have been devoted to gaining and retaining the territory and considerable nationalist emotional energy has been expended in anticipating a new status for the tract and its water. The terrain is militarily strategic but the waters which flow from Golan into the upper Jordan river are of minor importance. They comprise only some 5% of current Israeli water use and about 1% of that of Syria. Owing to their location, the waters could not easily be used economically in Syria. The Baniyas tributary provides about 130 000 cu m of water per year; other Golan streams provide minor flows into Lake Tiberias. Certainly, in this instance, water poses no impediment to the negotiation of a settlement. Lebanon exports a similar quantity of water, via the Hasbani tributary, to the upper Jordan river. Despite its water surplus the Lebanese Government is by no means disposed to co-operate with Israel on this issue; it has often been alleged that Israel's original expansion into southern Lebanon was partly motivated by designs to divert the waters of the Litani river. The diplomatic distance between Lebanon and Israel is reinforced by the close relations between Syria and Lebanon. Any enhancement of Israel's water resources as a result of a *rapprochement* between Lebanon and Israel will require the approval of Syria. There is a good economic case for both parties to recognize the economic value of Lebanon's surplus water to its southern neighbour, but the political moment for such a recognition is not at hand. Although the Jordan riparians are among the region's most poorly-served with respect to water, the way that Israel, and, to a lesser extent, Jordan have surmounted the problem point the way to secure strategies of appropriate allocation and sound water re-use for all the Jordan riparians.

The Tigris-Euphrates system

The Tigris-Euphrates system is shared by Turkey, Syria, Iraq and Iran. The system is still in surplus in that use has yet to exhaust the water available. Turkey supplies more than 90% of the Euphrates' water and about one-half of the Tigris' flow. The remainder of the Tigris current originates in the Iranian tributaries.

Dam-building by Turkey during and since the 1970s has changed the regime of the Euphrates. The Keban (1975) and the Karakaya (1987) dams, each designed to store about 30 cu km of water, were part-financed by loans from the World Bank. Non-controversial power-generation and the control of flow were the stated purposes of these structures. The larger Atatürk Dam, with storage capacity of 46 cu km, was designed for consumptive water use in irrigation projects as well as for non-consumptive hydropower. The Atatürk reservoir filled in the early 1990s, and the project was financed by the Turkish Government, owing to a World Bank operating directive (OD 7.50) which states that structures that imply possible 'harmful' consequences for other riparians can only benefit from the Bank's concessionary financing if all potentially affected riparians approve the project. No such approval was forthcoming from Syria and Iraq. The hydrological impact of the reservoir on the Euphrates was easily predicted. The, albeit variable, flow of the river at the Turkish-Syrian border has decreased from some 30 cu km per year to just below 16 cu km per year. Since the mid-1970s an accumulated reduction in flow of about 150 cu km has resulted from filling reservoir storage, and evaporation from reservoirs at the three major, and other minor, structures. This accumulated reduction in flow is approximately equivalent to five years' total Euphrates' flow, or nine years of the 47% of flow which is the 500 cu sec (cubic metres per second) average rate of flow promised to Syria by Turkey. Turkey argues that the flow is now reliable and assures its southern neighbours that the lower average flow will be guaranteed even after serious consumptive use of 10 or more cu km per year becomes the

norm when associated irrigation projects are constructed and operational. Since the annual flow of the Euphrates was always unreliable, the average use of the flow by Syria and Iraq never exceeded an annual total of 15 cu km. Had Syria's irrigation projects undertaken in the 1970s proved more successful, then the consumptive use downstream of Turkey would have been greater. However, Syria is continuing to develop the irrigation potential of the Euphrates, diverting water to projects near Aleppo, where the soils are more productive than those in the Euphrates lowlands which proved so unrewarding in the 1970s.

Turkey has also initiated development projects for its Tigris waters which will almost certainly result in reductions in river flow and improvements in its reliability. The Tigris is of principal concern to Turkey and Iraq; Syria is only a minor riparian of the river, and the terrain makes the diversion of water into Syria costly. Iraq is the main beneficiary of the Tigris and any shortfall which might arise from the Euphrates as a result of Turkish upstream engineering could be made good by the development of the Tigris waters. Iraq, however, is in an extraordinary (if temporary) economic predicament. In July 1990, before the invasion of Kuwait, Iraq was importing 90% of its food requirements, implying that it was relying on imports for more than 90% of its water needs. In the context of the subsequent prolonged UN embargo imposed against Iraq there have been a number of significant shifts in Iraqi economic policy. Priority is now being given to food production, especially irrigated crops. However, the necessary emphasis being given to the use of land and water resources is undermined by a shortage of skilled farm labour; in the 1970s, accustomed to the spoils of the lucrative petroleum industry, Iraq came to rely heavily on Egyptian expatriates to operate its farms. The major water issue for Iraq is not the volume at its disposal—Iraq is almost as rich as Egypt in that respect, with a much smaller population—nor the quality of that water, but rather the intractable nature of its low-lying and saline soils and the absence, as yet, of appropriate rural institutions to mobilize the exceptional levels of expertise and technology needed to develop productive irrigation in such an unfriendly soil environment.

The Nile

The Nile has been of immense hydrological and economic importance to Egypt for thousands of years. The Nile waters are fundamental to Egypt's relations with the other riparian nations of the river. In the past Egyptian historical perspectives of the river and its tributaries have dominated riparian relations. The upstream riparians have become increasingly frustrated with the emphasis on precedent and what they regard as a biased perspective. In the early 1970s Egypt began to exhaust the water needed to meet all its food-raising, industrial and domestic needs. Since then it has met its burgeoning water requirements by importing 'virtual water'. The long established hydropolitical regime of the Nile Basin was based on two contrary objectives. The first was that of Egypt, supported by Sudan, and successfully sustained until the end of the 20th century, and was driven by the belief that there should be no impairment to the flow of Nile water to Egypt, since Egypt fully utilized all the water that arrived each year at Lake Nasser. The second objective, never successfully articulated by the upper riparians of the 'Blue' and the 'White' Nile regions was to assert their entitlement to some part of the flow of the upper tributaries.

Meanwhile, for the past three decades, discussions conducted under the auspices of the International Law Commission (ILC) of the United Nations on shared international freshwater have been taking place. In May 1997 the Commission's proposed convention on trans-national watercourses was agreed by the General Assembly of the United Nations. The deliberations of the Commission have been as principled as possible, but inevitably the pragmatism of the 1997 convention means that downstream interests such as those of Egypt and Sudan, as well as Syria and Israel (although their positions are complicated by being simultaneously upstream in some other watercourses), are being compromised to accommodate the upstream interests of riparians such as Ethiopia and the East African Lakes basin states in the Nile Basin, as well as Turkey in the Tigris-Euphrates system.

Just as the new international order evident since the demise of the former Soviet Union in 1990 has had a considerable impact on international relations in the Jordan basin, in the Nile basin also there is a perceptible shift in the level of discussion, the quality of the hydropolitical discourse and in the water-development initiatives being considered. There had been some basin-wide co-operation in the 1960s when the Hydromet Project, charged with the collection and sharing of hydrological data, was established by Nile Basin governments with international support. By the 1980s the project had foundered for a range of resource and organizational reasons. The potential for a new co-operative regime became evident in 1992 at three different levels of interaction: firstly, an annual meeting of regional water ministers was arranged; secondly, a twice-yearly TeccoNile (TAC since 1998) meeting of senior water resource engineers and planners from the respective riparian water ministries was instituted; thirdly, a series of annual meetings entitled Nile 2002 was inaugurated which involved representatives from the riparians as well as international specialists. In 1995 TeccoNile produced a Nile River Basin Action Plan (NRBAP) proposing that US $100m. be spent on projects to enhance basin-wide hydrological databases and other relevant capacity. For Egypt, this suited their goal of slow upstream development of Nile waters. The World Bank, along with a number of other international agencies, was asked to consider providing funding for the Plan. In December 1997 the proposal was reviewed by a panel of international water specialists and scientists and the response was significant for a number of reasons; although it was agreed that the concept of the basin could be useful in gaining some important water resource prizes—for example the storage of water upstream in places where it would not evaporate at the rate of three metres depth per year experienced at Lake Nasser—it was also noted that there were significant advantages in adopting planning scenarios at the sub-basin level, for example Egypt, the Sudan, Ethiopia and Eritrea for the Eastern ('Blue') Nile and other sub-basins in the Southern ('White') Nile. The panel also emphasized the need for sound economic principles as well as sound environmental principles to inspire all co-operative activity over Nile waters.

Some of these ideas and initiatives distinguish the 1990s from any previous decade. Whether the observed shifts in the level of hydropolitical activity and co-operation, as well as the new international water discourse, would have taken place without the change in the international order is impossible to establish. The evidence is very strong in the hydropolitics of both the Jordan basin and the Nile basin that the emergence of the single 'superpower' in 1990 inspired a mixture of confidence and readiness to consider new positions, particularly on the part of stressed economies in Africa.

The economies of the Middle East and North Africa, and the governments responsible for them, have been fortunate that the emergence of the demographically-driven water shortages have occurred at a time when the global trading system is well able to handle such a growing deficit. The global trading system in grain can deliver 40,000m. cu m of water embedded in grain imports without any visible stress. No engineering system could mobilize one-tenth of that, and even then not with the flexibility of the trading system. It falls to those responsible for planning the appropriation of and/or access to the use of water for a nation's needs to take into account the status of the global soil water resources which have enabled the stress-free provision of water to the Middle East and North Africa since the 1970s. Information is not yet reliable on global soil moisture. For those with an inescapable need for flows of soil water via 'virtual water', the imperative to obtain best estimates of the volume of this water is clear. It is a paradox that the water pessimists may be wrong but their pessimism is a very useful political tool which can help the innovator to shift the eternally interdependent belief systems of the public and their politicians. The water optimists may be right but their optimism is dangerous because the notion enables politicians to treat water as a low policy priority, delay innovation and thereby appease those who perceive themselves to be prospering under the old order.

ISLAMIC BANKING AND FINANCE

RODNEY WILSON

The development of modern commercial banking has been relatively slow in the Middle East and, even today, most people do not use banks. To some extent this reflects the historical underdevelopment of the region as, for ordinary people, the monetarization of transactions has been a relatively recent phenomenon. In other Third World societies there were no moral objections to the replacement of barter with cash and credit transactions. Due to the Islamic code of ethics, however, there has been popular resistance to modern financial developments in many parts of the Muslim world, including the Middle East. Saudi Arabia, for example, did not issue its own banknotes until the 1960s, as before then gold and silver coins were the major instruments for transactions. Although most people no longer regard paper money as being un-Islamic, the use of cheques, commercial bank credit and other banking instruments are viewed with suspicion by many devout Muslims.

Arab-owned commercial banks were only founded in the Middle East in the 1920s, the first being Banque Misr of Egypt and the Arab Bank, a Palestinian institution. Most financial activity up until then was handled by foreign banks, and even banks such as the Ottoman Bank or the National Bank of Egypt were foreign-owned. As these banks were largely involved in trade finance or arranging government loans, they were not dealing directly with ordinary local Muslims. In any case, trade was often in the hands of non-Muslims; the Egyptian cotton trade, for example, being largely handled by foreigners resident in Alexandria. Hence, banks were regarded as institutions serving infidels, and not organizations with which the devout Muslim should become involved. This attitude has persisted, and despite the development of indigenous commercial banking, it tends to be only the more Westernized elements in Muslim societies which use modern banking services.

Principles of Islamic Finance

Perhaps the most widely known tenet of Islamic finance in the West is the prohibition of *riba*. What constitutes *riba* has long been the subject of debate amongst Islamic scholars. Some believe that *riba* refers to usury, whereas others believe that all interest is *riba*. Certainly, one Muslim objection to interest payments is on the grounds of equity. It is the poor and needy who are often forced to borrow, whereas the rich have surplus funds to save. Interest thus penalizes the poor and benefits the rich. To the devout Muslim this is anathema, as it results in hardship, and increasing social polarization. Such practices could not be tolerated in a community of believers.

A further objection to interest is that it corrupts the recipient. It is viewed as an unearned income, a reward without productive effort. Interest can be a deterrent to honest toil, as it may be tempting to rely on unearned income rather than working for a wage or salary. Western neo-classical economics sees interest as a reward for waiting or deferring consumption until a future time. The Protestant ethic which underlies Western capitalism regarded saving as virtuous. Time is treated as a type of commodity by Western economists, which has a price. There is believed to be a trade-off between earnings and leisure, and wages are a reward for foregoing leisure. Muslim scholars reject such notions. The just wage reflects the workers' contribution to society, not the time spent working. Time itself is valueless. Hence there can be no justification in a reward for time.

To the devout Muslim abstinence needs no material reward. The earth's bounty is to be used, but Allah demands certain sacrifices, such as fasting during the month of Ramadan. The rewards for such abstinence are spiritual, and the introduction of monetary incentives would only undermine the spiritual value of such practices. Furthermore, an incentive for saving may result in underconsumption, and a lack of effective demand in the economy. Hoarding is viewed as socially undesirable in Muslim societies, as it can result in unemployment and idle capacity. In this sense Muslim ideals are consistent with Keynesian views on economic management. Currency must circulate, and the accumulation of the means of exchange for its own sake is seen as undesirable. In the view of Muslim economists, capitalism does not achieve the right balance. Too much power is vested in the suppliers of capital; and the loanable fund market is distorted. A market system is viewed as natural, it is capitalism that is unnatural.

Application of Islamic Ideals

Although there is little disagreement over the principles of Islamic finance, the interpretation of the prohibition of *riba* in practice has been subject to much greater controversy. Should the prohibition apply to all interest, or does it merely mean that interest rates should be constrained at moderate levels? Are interest charges for business loans permissible, as the borrowers are seeking to use their credit to generate profits? Are fixed interest loans preferable to those subject to interest rate variations, as at least the borrower knows the exact charges in advance, and there is no element of uncertainty? Finally under inflationary conditions, should interest rewards be allowed to compensate savers for the depreciation of the value of their savings? A prohibition of nominal interest to compensate for inflation would penalize lenders, and subsidize borrowers. It could be argued that the prohibition of *riba* applies to real interest, not nominal interest, as with inflation, a ban on the latter may result in negative real interest.

Most Islamic states in practice have tried to restrain nominal interest rates. As inflation results in social strains in any Muslim community, and also poses moral dilemmas, the control of price increases has been an important economic priority for Muslim governments. In the Middle East inflation has been a major worry in Turkey and Lebanon, and a cause of concern in Iran, Egypt and Syria. The consequences of inflation for nominal interest rates appalled the majority of devout Muslims. Double-figure nominal interest rates have become all too prevalent in these countries, and even when action against price rises has succeeded problems can remain. As there are some lags in adjustment, it is possible to have high real rates, especially as inflation starts to fall.

Some states, such as Saudi Arabia, have a prohibition on all interest payments and receipts under their Islamic laws. Arrangement fees and service charges are permitted, however, on bank loans, and in practice, as they are calculated on a percentage basis, they resemble interest in many respects. The service charges are fixed, however, and hence borrowers are not subject to the uncertainty over the future costs of debt-servicing which arises when interest rates vary. In Saudi Arabia most bank deposits are in current accounts which earn no income, but even deposits in savings accounts only earn a modest fixed return, not an interest receipt.

Modern Islamic Banking

In Islamic states where commercial banks are free to charge and receive interest, many Muslim businessmen felt obliged to participate in *riba* transactions, even though they felt a moral guilt in doing so. To overcome this dilemma of conscience, specifically Islamic banks were founded which could compete with conventional commercial banks but which adhered to Islamic principles. The movement was started in Pakistan in the 1950s, but soon spread to the Arab World, with the opening of the Mitr Ghams Savings Bank in Egypt in 1963, which later was superseded by the Nasser Social Bank. The impact of these institutions was modest, as the major state-owned banks continued to account for most of the banking business in Egypt. Nevertheless, the Nasser Social Bank attracted deposits from an influential group of pious farmer landlords, and backed some significant agro-industrial ventures.

It was, however, the devout Muslim merchants of the Gulf who were largely responsible for the subsequent rapid expansion of Islamic banking. These conservative merchants were reluctant to use the services of conventional commercial banks yet, with the rapid business expansion in the Gulf following the oil price rises of 1973–74, some type of financial intermediation was clearly needed. Institutions such as the Dubai Islamic Bank (founded 1975), the Kuwait Finance House (1977), and the Bahrain Islamic Bank (1979) were established to serve such clients, while at the same time avoiding *riba* transactions. There was some government encouragement, with the states taking a minority shareholding in each of the institutions, but most of the finance came from the merchants themselves, especially in the case of the Dubai Islamic Bank which was 80% privately owned.

The Islamic banks in the Gulf account for around 10% of total bank deposits. Although their role in Gulf finance is modest, the banks' market penetration is considered a success, given that they represent a new type of institution adopting innovative financial techniques. Although there have been set-backs, notably as a result of dealings in precious metals, the track record of the Islamic banks has been favourable so far, and the returns to investors have been competitive with those offered by more conventional banks. As most deposits are of modest amounts, the total number of depositors is higher than their share of total deposits indicates. Many customers maintain accounts with both the new Islamic banks and conventional commercial banks. In this sense the Islamic banks complement rather than replace conventional banks. Nevertheless, the ultimate objective for the Islamic banks is to provide a comprehensive range of banking services as a complete alternative to *riba* finance.

In terms of domestic market penetration, the Kuwait Finance House has been the most successful Islamic bank, accounting for almost one-fifth of total bank deposits in Kuwait. Its activities are more diverse than those of the commercial banks in Kuwait, as it is heavily involved in housing loans and car-purchase financing, in addition to trade and commerce. The extent of its involvement in real estate means that, in many respects, it resembles a building society. Islamic services are provided in a modern fashion, with computerized accounts, fully automatic telling facilities and even Islamic credit cards. During Iraq's occupation of Kuwait in August 1990–February 1991, the Kuwait Finance House refused to remain open for business, unlike other Kuwaiti banks. Following the country's liberation, the Kuwait Finance House reopened, having gained much respect by its refusal to collaborate with the Iraqis in any way.

In Saudi Arabia there has been considerable support for Islamic banking, even though the Kingdom had no specifically Islamic banks until recently. As all banks in Saudi Arabia are supposed to operate according to Islamic principles, the Saudi Arabian Monetary Agency saw no need to license a specially designated Islamic bank. Indeed it was thought that granting such a licence would place the commercial banks in an invidious position. Hence the only Islamic financial institution in the Kingdom was the Jeddah-based Islamic Development Bank, but it is a development assistance agency, and not a bank which deals with the general public. Its principal aim is to provide *riba*-free finance for Islamic countries, especially those with low per caput income levels.

Money-lenders as Islamic Banks

Many Saudi citizens do not maintain accounts with the commercial banks in the Kingdom. Instead they resort to money-lenders and money-changers for their financial requirements. Some of these informal bankers offer a wide range of financial services, including the exchange of currency, the handling of overseas remittances, deposit facilities and loans. Interest is not earned on loans, which are often in kind rather than cash. For example, if a client needs some item of equipment, the money-lender will usually purchase it on behalf of the client, and then either collect instalments from the client, or else enter a leasing arrangement. In either case the payments over a period will exceed the initial cost of the item, the difference representing the money-lender's profit.

One Saudi Arabian money-lending and money-changing family, the ar-Rajhis, have grown to become one of the largest commercial financial institutions in the Kingdom. Their assets exceed US $9,300m. In 1997 Ar-Rajhi Banking and Investment Corporation was Saudi Arabia's most profitable bank, with an 8% increase in profits, to $347m. The bank's profitability owes much to its substantial non-interest bearing deposits. All of the business has been built up on the basis of *riba*-free transactions. In 1983 there were pressures on the ar-Rajhis to register as a commercial bank, as, unlike the other banks, they did not hold reserves with the Saudi Arabian Monetary Agency and were completely unregulated. Rather than register as a conventional commercial bank, the ar-Rajhis decided to seek Islamic banking status, as they claimed their business methods conformed to Koranic principles in any case.

There was some hesitation on the part of the Saudi Arabian Monetary Agency, given the implications for the other banks and the problems in acting as a lender of the last resort for this type of financial institution. In the end, however, the Saudi Arabian Monetary Agency decided to license the ar-Rajhis officially in 1985 as deposit-takers and exchange dealers, largely in order to help safeguard the stability of the domestic financial system. In 1988 the ar-Rajhis decided to increase their capital base by becoming a public company and sold one-half of their shares outside the family. Although the Monetary Agency is not obliged to act as lender of the last resort with respect to institutions such as the ar-Rajhis, it is widely believed that it would if the need arose. It is only the unregistered money-changers, who refuse to submit properly audited annual accounts, that lie outside the Monetary Agency's protective net. With the registration of the money-lenders as Islamic banks, the Monetary Agency has conceded that Islamic financial principles can be interpreted in different ways. Plurality exists as both the conventional commercial banks and the money-lenders claim to conform with Islamic principles, even though their methods of operation differ considerably.

Islamic Banks in International Markets

Prince al-Faisal as-Sa'ud of Saudi Arabia is one of the leading activists in the Islamic banking movement. Although he has not established a domestic banking operation within Saudi Arabia, he was the prime instigator of the Faisal Islamic Banks of Egypt and Sudan, both of which were founded in 1977. Both banks received some local deposits, but much of their funds for lending came from Saudi Arabia. Hence, in this sense, the institutions represented a vehicle for the intra-regional recycling of petroleum revenue to less affluent Muslim states. Prince al-Faisal as-Sa'ud, however, decided that it would be desirable to have an Islamic banking presence in Western financial markets. It was felt necessary to provide some mechanism whereby investors from Saudi Arabia and elsewhere in the Gulf could participate in Western markets on the basis of *riba*-free transactions. Consequently Dar al-Maal al-Islami, the House of Islamic Funds, was founded in Geneva, Switzerland, in 1981, with a paid-up capital of US $316m.

Despite some initial problems, and losses during the 1983/84 financial year, Dar al-Maal al-Islami seems to have established a sound deposit base, and is widening its lending and investment activities. The major difficulty has been to identify *riba*-free projects to back profitably in Western markets. There is no objection to dealing with institutions which participate in *riba* transactions, however, as long as the Islamic institution is not directly involved, though in the longer term it is hoped to avoid such dealings. In practice, Dar al-Maal al-Islami functions as a kind of investment company, deploying most of its funds in equity markets and in property, though it also holds short-term assets in the form of cash and commodities. It is the appropriate choice of liquid financial instruments which has caused greatest difficulty, as Islamic institutions cannot hold government bills or bonds which yield interest.

Constraints in Secular Societies

Problems inevitably arise when Islamic financial institutions operate in a non-Islamic environment. As the Islamic banks do not hold Western government securities as part of their liquid assets, they cannot be registered in Western Europe or the USA as fully-fledged commercial banks. Commodity holdings are not recognized as liquid assets, and the maintenance of a large proportion of non-earning cash reserves would substantially reduce the banks' returns on their assets. One possible solution

in the West is to act as a kind of building society, lending to Muslims for house purchases. This approach has been adopted by First Path Financial Services of Michigan and Ontario, the leading Islamic retail financial institution in North America.

The Bank of England has been reluctant even to register the Islamic banks as licensed deposit-takers, largely owing to their inability to provide a guaranteed rate of return on deposits and a perceived opacity of transactions and procedures, and those operating in the United Kingdom are regarded as investment companies rather than banks. The lack of banking status has drawbacks. Islamic institutions cannot solicit for deposits from Muslim investors who reside in the United Kingdom, nor can they carry out normal banking operations. The Islamic financial institutions in London are mainly engaged in the finance of Euro-Arab trade. Clients of British banks exporting to the Islamic world are often referred to Islamic institutions in London. One new development has been for Western commercial banks to offer Islamic financial services to their Muslim clients. The Union Bank of Switzerland, for example, offers an Islamic investment fund. The Saudi International Bank in London offers Islamic trade finance and is also offering Islamic portfolio management services for clients of substantial means. The United Bank of Kuwait has opened a specialized Islamic Investment Banking Unit in London. It is now the leading provider of such services in Europe. Citibank has offered Islamic banking services since 1994, its Bahrain branch being the centre for these activities.

Indebtedness and the Shari'a Law

Sudden fluctuations in the world price for oil can result in vulnerable loan agreements and the creation of bad debts. Many borrowers argue that they should not be liable for interest payments when they fall into debt. The *Shari'a* courts have usually sided with the debtors rather than with the banks, and in Saudi Arabia there is some doubt if even service charges can be legally enforced.

In the United Arab Emirates the courts have ruled that simple interest is permissible, but that borrowers are not liable for compound interest payments. As the *Shari'a* law does not follow case precedent, there is much confusion about the situation. Commercial banks operating in the Gulf are increasingly reluctant to take debtors to court, and many are trying to reach out-of-court settlements by granting payment moratoriums. Rolling over credits is regarded as preferable to writing down the value of bank assets.

In order to avoid problems of this kind in the future the commercial banks in Saudi Arabia are now offering Islamic finance. Some, including the Kingdom's largest bank, the National Commercial, have opened separate branches for women, a move favoured by some Islamic theologians, who advocate the sexual segregation of finance in accordance with Islamic inheritance laws. The National Commercial Bank has also opened new Islamic branches, and converted some existing branches to Islamic branches. By 1998 46 of its 245 branches had been 'Islamized'. This is partly in response to clients' wishes, but also because, in the event of repayments failure, restitution can be more easily sought through the courts. Trade credit is granted through resale and leasing arrangements, and the profit-sharing principle covers medium- and long-term finance. It seems likely that an increasing proportion of commercial banking business in the Gulf will be 'Islamized', even though it requires much more work by the banks. The emphasis switches from mere risks appraisal, to the fuller evaluation of returns which is necessary with Islamic finance.

'Islamization' of Banking

In post-revolutionary Iran a major policy objective has been the 'Islamization' of the nation's institutions. In an Islamic society it is felt that all institutions should operate in accordance with Islamic principles, including banks and financial institutions. Merely permitting Islamic banks to operate alongside Westernized commercial banks is unsatisfactory. In a society of believers there is no place for *riba* financial institutions, indeed the workings of commercial banks are an affront to the faithful. Instead, to ensure conformity with Koranic ideas and the spirit of Shi'ism, the Teheran authorities have 'Islamized' the entire banking system which precludes the operation of commercial banks using principles of Western finance.

Iranian commentators have repeatedly attacked the Arab Islamic banking movement as a camouflage for capitalism. Merely using the word 'Islamic' does not change the nature of the banks themselves. The expression 'Islamic banking' is itself a contradiction in terms according to these critics. The word 'bank' comes from the Italian 'banco', meaning 'table', as, in the past, money-changers from Lombardy used to place money on a table. Such practices are inappropriate in Islamic financial transactions, which are based on trust. The word of a devout Muslim is believed, and he has no need to produce proof of his worth. This explains why even some Arab Islamic institutions are called houses rather than banks, the Kuwait Finance House and Dar al-Maal al-Islami (literally, Islamic House of Funds) being notable examples.

Merely providing interest-free transactions, though a welcome development, is insufficient, according to Iranian critics. Islamic financial institutions cannot be limited-liability companies as obligations between Muslims who enter transactions must be absolute. There can be no escape from personal liability, and institutions can have no personality of their own in any case.

Implementation of Islamic Financial Law

Iran's Islamic financial laws were passed by the Majlis (Islamic Consultative Assembly) in February 1984. They provided for the 'Islamization' of all Iran's financial institutions by 22 March 1985, although the implementation of the new regulations took four years to complete. Interest has been phased out of the system, and the banks now offer either interest-free current and savings deposits, or long-term investment deposits. With current account deposits customers can use chequing facilities, but only those with savings deposits are given preferential treatment with respect to loan applications. Incentives are also offered on savings deposits, including the possibility of a funded pilgrimage to Mecca. Those with long-term investment deposits cannot withdraw their funds without several months notice, but they are entitled to share in the bank's profits, in accordance with the Islamic *mudaraba* (speculation) system. Borrowers are encouraged to enter into partnership arrangements with the banks, under which they share any profits which arise as a result of the investments which the bank has financed. The partnership arrangement may be only in respect of one project which the bank backs, or it may be with the business as a whole. In the case of a limited partnership the profits shared are only those which arise from the specific project for which funds have been obtained. Under a full partnership arrangement all profits are shared. Machinery purchases are often financed by the bank purchasing the item required on behalf of the client, who repays by instalments. In this case the ownership is transferred on payment of the first instalment. An alternative arrangement is leasing conditioned to purchase, whereby the ownership is only transferred when the final instalment is paid.

Under the Islamic banking laws banks may also finance trade through forward purchases on a client's behalf. There is a distinction drawn between such purchases and futures trading, which is regarded as speculative, and therefore prohibited. Under a forward purchase the bank pays for the commodity being traded on behalf of the import agent or wholesaler, who will repay the bank when he resells the merchandise to the retailer or final customer. The Arab Islamic banks have similar resale contracts, the time period for this type of credit typically being 90 or 180 days.

Employee Attitudes

In practice, in Iran, there has been some opposition to the new laws from existing bankers, and many bank employees are less than enthusiastic about the new systems. To facilitate implementation the banks have been reorganized into three groups, Melat, Melli and Tejarat. A Council of Money and Credit Regulation has been established to supervise the banking system, the Council consisting of representatives from the banks themselves, independent financial experts, and religious advisors (two of whom are mullahs). The Central Bank retains its executive role, but the Council is responsible for bank policy, and the implementation of the new code. In 1994 it was announced that foreign banks could operate in Iran again, and

MAJOR ISLAMIC BANKS (1998)

Institution	Country	Date of foundation	Paid-up capital (million US $)
Bahrain Islamic Bank	Bahrain	1979	35.0
Bahrain Islamic Investment Company	Bahrain	1981	14.0
Bank Islam Malaysia	Malaysia	1983	80.0
Al-Baraka Group	Saudi Arabia/ Bahrain	1982	54.0
Beit Ettamouil Saudi Tounsi	Tunisia	1984	50.0
Dar al-Maal al-Islami	Switzerland	1981	316.0
Dubai Islamic Bank	UAE	1975	136.0
Faisal Islamic Bank of Bahrain	Bahrain	1982	100.0
Faisal Islamic Bank of Egypt	Egypt	1977	132.0
Faisal Islamic Bank of Sudan	Sudan	1977	30.0
Faisal Islamic Bank of Turkey	Turkey	1985	10.0
International Islamic Bank	Bangladesh	1983	19.0
International Investor	Kuwait	1992	20.0
Islamic Development Bank	Saudi Arabia	1975	4,400.0
Jordan Islamic Bank for Finance & Investment	Jordan	1978	56.0
Kuwait Finance House	Kuwait	1977	229.0
Kuwait Finance House (Turkey)	Turkey	1983	20.0
Nasser Social Bank	Egypt	1972	29.0
Qatar Islamic Bank	Qatar	1983	54.0
Ar-Rajhi Bank	Saudi Arabia	1985	400.0
Tadamon Islamic Bank	Sudan	1983	9.0

not be confined solely to maintaining representative offices. It remains to be seen how they will be regulated under the Islamic banking laws.

The Arab Islamic financial institutions have had fewer personnel problems. All of the staff recruited by the Islamic banks are practising Muslims, apart from some employees in Europe. Many are experienced bankers, who took salary cuts to join the new institutions, because they wished to work in an Islamic environment, and refrain from participation in *riba* transactions. Their attitude is extremely positive, and they are genuinely seeking to make Islamic principles work. The bank employees view their jobs as part of their religious devotion and there is little doubt that in many respects a voluntary system of Islamic banking is preferable to compulsion.

Monetary Policy Issues

Islamic financial principles are not only applicable to banking activity, but also to government finance and management of the economy at the national level. The prohibition of *riba* precludes the use of interest-rate changes as an instrument of monetary policy. Islamic economists believe it is unfair to penalize borrowers by raising interest rates merely for the sake of demand management, when the problems which resulted in such an action were not the fault of individual borrowers. Hence, even in Muslim economies where interest is permitted, it is felt desirable to keep rates stable, and preferably at low levels. Other instruments of monetary policy can be used, including control of the money supply, and the regulation of bank lending through reserve requirements and special deposits. Indeed a strict monetary policy is thought to be essential in order to keep inflation under control. High and unpredictable rates of price increase result in social strains and uncertainty which can undermine the cohesion of Islamic societies.

Many Islamic economists urge balanced budgets, as, if government expenditure exceeds tax receipts, borrowing becomes necessary. If resort is made to bill or bond issues this implies the government is dependent on *riba* finance, an undesirable state of affairs for any government in the Islamic world. In Saudi Arabia the authorities have attempted to avoid interest by issuing government securities at a discount below their redeemable value. The difference represents the return to purchasers of the securities. A large number of Islamic economists object to this practice, however, as the yield on the securities resembles interest. Indeed the price at which this type of Saudi Government security has been traded has been influenced by interest-rate developments in Western markets. This is a result of the openness of the Kingdom's economy, and the ease with which foreign assets can be substituted for domestic assets.

Fiscal Policy Constraints

The public sector borrowing requirement can of course be controlled through fiscal policy, by restraining government expenditure or increasing taxation. The governments of many of the poorer Islamic states find great difficulty in restraining expenditure, especially on items such as food subsidies, given the pressing social needs. Many face a dilemma, as the reduction of the food subsidies results in inflationary pressures, which cause Islamic critics to assert that they are penalizing the poor, and are acting contrarily to the spirit of Islamic brotherhood. On the other hand if the subsidies are maintained, the governments are forced to borrow, not only from their own citizens, but also from Western infidels, or non-believers.

In the poorer Islamic states the tax base is extremely restricted, as most of the population do not earn enough to pay income tax, and purchase taxes on basic commodities would penalize the needy. Import duties usually constitute the major source of government revenue, except in the oil-exporting states. Islamic law provides for *zakat*, a type of wealth tax, which is on the statutes of all Muslim countries. This is levied annually on both businesses and individuals at a rate of 2.5% of their total net value. *Zakat* is a unique tax, as contributions are entirely voluntary, but most believers pay, as it is regarded as one of the five central obligations of the Islamic faith.

In countries such as Saudi Arabia, *zakat* collection is encouraged, and the funds are collected by a special ministry, which uses the revenue for social purposes. *Zakat* has to be administered separately from other tax revenue, and cannot be used for general government spending, even on development projects. For this reason some governments have done little to encourage *zakat*. In Iran, under the Shah, many of the bazaar merchants paid *zakat*, but not to the secular Teheran authorities. Instead they paid *zakat* to local relief agencies organized by the mullahs through the local mosques. Most of the revenue was used to help poor rural immigrants to the cities who had difficulty in finding employment and who often lived in appalling conditions. Since the revolution the Islamic Government has taken over the administration of the tax, and there has been much debate about whether it should be made compulsory given the great social problems inherited from the Shah's regime.

Islamic Investment

Perhaps the most interesting recent development has been the widening of the scope of Islamic finance to encompass equity investment. Such participatory finance is acceptable under the *Shari'a* law but until recently the major constraints have been the unacceptability of many western companies because of their involvement in *haram* activities such as alcohol or pork production and distribution. Drawing from the experience of the ethical investment movement in the West, criteria have now been

established for Islamically-acceptable equity investment. Flemings, the British investment bank, launched its Oasis Fund in 1995, investing in companies world-wide, which are involved in *halal* activities. In Saudi Arabia the National Commercial Bank launched a Global Trading Fund in 1995 and the ar-Rajhi group established a Global Equity Fund in 1997, both of which are managed in accordance with the *Shari'a* law. The Faisal Islamic Bank of Bahrain initiated its Golden Equity Fund in 1997.

In 1999 Dow Jones & Co Inc, the US international business news publisher, launched an Islamic Market Index covering some 600 companies around the world. Companies are listed only if their debt-to-asset level is less than one-third, if receivable accounts are less than one-half of total assets, and if interest income is less than 10% of operating income. These screening criteria are acceptable to many *Shari'a* scholars, providing an amount equivalent to the interest-generated income is donated to charitable causes as a means of income 'purification'.

Prospects for the Future

The prospects for Islamic finance were dealt several blows in the late 1980s, most notably the collapse in 1988 of the Egyptian Islamic investment house, Ar-Rayan, which was widely publicized. The Central Bank refused to intervene, thousands of small investors lost their savings and although Egypt's Islamic banks were not directly involved, confidence in the whole sector was shaken. This had implications well beyond Egypt, as did the difficulties of the Jordan Islamic Bank, which were caused by the effect on the Jordanian economy of the crisis in the Gulf in 1990/91.

Despite these reversals, the outlook for Islamic banking for the millennium and beyond is encouraging. Islamic financial assets world-wide (including those held by insurance companies) amounted to an estimated US $150,000m. by 1999. Existing Islamic financial institutions are now well established and Islamic financial instruments are widely recognized as a viable alternative to *riba* finance. Investors in the Ar-Rayan company were eventually compensated by an anonymous Gulf source and confidence among depositors with Islamic banks in Egypt was restored. The four principal state-owned commercial banks in Egypt now offer Islamic banking facilities to their clients. These facilities have proved to be very successful, attracting 10% of total deposits in the Egyptian banking system within one year of their introduction. (New banking legislation enacted in Egypt in mid-1998 was expected to provide for the privatization of the country's four principal banks, and to prompt a period of acquisition, merger and increased competition.)

Recent political developments in the Gulf may favour Islamic finance. The unrest in Bahrain, a key financial centre in the Gulf, has brought a political response, but it also makes the authorities there and in Saudi Arabia more concerned than ever to emphasize their own Islamic credentials. This can be done with little controversy in the economic and banking sphere, by accepting and even encouraging Islamic finance. Financial 'Islamization' may be seen as preferable to political 'Islamization', and as a way of meeting at least some of the aspirations of citizens of the Gulf.

By mid-1999 future prospects for Islamic banking were continuing to improve. A number of new Islamic banks were launched in the region during 1998, including two in Bahrain and one in Abu Dhabi. In addition, two large conventional banks in the region (Arab Bank and Arab Banking Corporation) and one foreign bank (ABN-Amro) established Islamic subsidiaries. The prospects for Islamic banking outlets abroad were also encouraged by speculation, in mid-1998, that banking legislation would soon be enacted in the USA which would supersede the 1933 'Glass-Steagall' Banking Act, and thereby facilitate the establishment of truly Islamic banks there. Expansion in both the scale and the scope of the sector was predicted for the new millennium following the significant developments of the 1990s.

The financial contribution of the Kuwait Finance House to the ambitious Equate chemical plant project in Kuwait has also demonstrated the possibilities for Islamic financing of large development projects. Other interesting proposals for the sector include the possible future use of equity for long-term financing. ABN-Amro is expanding its Global Islamic Financial Services in Bahrain to play a major role in project finance, while Citi Islamic Bank and the ABC Islamic Bank are providing leasing facilities for utility expansion where Islamic financing may be especially appropriate.

CALENDARS, TIME RECKONING, AND WEIGHTS AND MEASURES

The Islamic Calendar

The Islamic era dates from 16 July 622, which was the beginning of the Arab year in which the *Hijra* ('flight' or migration) of the Prophet Muhammad (the founder of Islam), from Mecca to Medina (in modern Saudi Arabia), took place. The Islamic or *Hijri* Calendar is lunar, each year having 354 or 355 days, the extra day being intercalated 11 times every 30 years. Accordingly, the beginning of the *Hijri* year occurs earlier in the Gregorian Calendar by a few days each year. Dates are reckoned in terms of the *anno Hegirae* (AH) or year of the Hegira (*Hijra*). The Islamic year AH 1420 began on 17 April 1999.

The year is divided into the following months:

1. Muharram	30 days	7. Rajab	30 days
2. Safar	29 „	8. Shaaban	29 „
3. Rabia I	30 „	9. Ramadan	30 „
4. Rabia II	29 „	10. Shawwal	29 „
5. Jumada I	30 „	11. Dhu'l-Qa'da	30 „
6. Jumada II	29 „	12. Dhu'l-Hijja	29 or 30 days

The *Hijri* Calendar is used for religious purposes throughout the Islamic world and is the official calendar in Saudi Arabia. In most Arab countries it is used in conjunction with the Gregorian Calendar for official purposes, but in Turkey and Egypt the Gregorian Calendar has replaced it.

PRINCIPAL ISLAMIC FESTIVALS

New Year: 1st Muharram. The first 10 days of the year are regarded as holy, especially the 10th.

Ashoura: 10th Muharram. Celebrates the first meeting of Adam and Eve after leaving Paradise, also the ending of the Flood and the death of Husain, grandson of the Prophet Muhammad. The feast is celebrated with fairs and processions.

Mouloud or **Yum an-Nabi** (Birth of Muhammad): 12th Rabia I.

Leilat al-Meiraj (Ascension of Muhammad): 27th Rajab.

Ramadan (Month of Fasting).

Id al-Fitr or **Id as-Saghir** or **Küçük Bayram** (The Small Feast): Three days beginning 1st Shawwal. This celebration follows the constraint of the Ramadan fast.

Id al-Adha or **Id al-Kabir** or **Büyük Bayram** (The Great Feast, Feast of the Sacrifice): Four days beginning on 10th Dhu'l-Hijja. The principal Islamic festival, commemorating Abraham's sacrifice and coinciding with the pilgrimage to Mecca. Celebrated by the sacrifice of a sheep, by feasting and by donations to the poor.

Islamic Year	1419		1420		1421	
New Year	28 April	1998	17 April	1999	6 April	2000
Ashoura	7 May	1998	26 April	1999	15 April	2000

Leilat al-Meiraj	17 Nov.	1998	6 Nov.	1999	26 Oct.	2000
Ramadan begins	20 Dec.	1998	9 Dec.	1999	28 Nov.	2000
Id al-Fitr	19 Jan.	1999	8 Jan.	2000	28 Dec.	2000
Id al-Adha	28 March	1999	16 March	2000	6 March	2001

Note: Local determinations may vary by one day from those given here.

The Iranian Calendar

The Iranian Calendar, introduced in 1925, was based on the Islamic Calendar, adapted to the solar year. Iranian New Year (*Now Ruz*) occurs at the vernal equinox, which usually falls on 21 March in the Gregorian Calendar. In Iran it was decided to base the calendar on the coronation of Cyrus the Great, in place of the *Hijra*, from 1976, and the year beginning 21 March 1976 became 2535. During 1978, however, it was decided to revert to the former system of dating. The year 1378 began on 21 March 1999.

The Iranian year is divided into the following months:

1. Favardine	31 days	7. Mehr	30 days
2. Ordibehecht	31 „	8. Aban	30 „
3. Khordad	31 „	9. Azar	30 „
4. Tir	31 „	10. Dey	30 „
5. Mordad	31 „	11. Bahman	30 „
6. Chariver	31 „	12. Esfand	29 or 30 days

The Iranian Calendar is used for all purposes in Iran, except the determining of Islamic religious festivals, for which the lunar Islamic Calendar is used.

The Hebrew Calendar

The Hebrew Calendar is solar with respect to the year but lunar with respect to the months. The normal year has 353–355 days in 12 lunar months, but seven times in each 19 years an extra month of 30 days (*Adar II*) is intercalated after the normal month of Adar to adjust the calendar to the solar year. New Year (*Rosh Hashanah*) usually falls in September of the Gregorian calendar, but the day varies considerably. The year 5759 began on 21 September 1998, and 5760 begins on 11 September 1999.

The months are as follows:

1. Tishri	30 days	7. Nisan	30 days
2. Marcheshvan	29 or 30 days	8. Iyyar	29 „
3. Kislev	29 or 30 „	9. Sivan	30 „
4. Tebeth	29 days	10. Tammuz	29 „
5. Shebat	30 „	11. Ab	30 „
6. Adar	29 „	12. Ellul	29 „
(Adar II)	30 „		

The Hebrew Calendar is used to determine the dates of Jewish religious festivals only. The civil year begins with the month Tishri, while the ecclesiastical year commences on the first day of Nisan.

Standard Time

The table shows zones of standard time, relative to Greenwich Mean Time (GMT). Many of the individual countries adopt daylight saving time at certain times of year.

Traditional Arabic time is still widely used by the local population in Saudi Arabia except in most of the Eastern Province. This system is based on the local time of sunset, when timepieces are all set to 12.

GMT	One hour ahead	Two hours ahead	Three hours ahead	Three and one-half hours ahead	Four hours ahead
Morocco	Algeria Libya Spanish North Africa Tunisia	Cyprus Egypt Israel Jordan Lebanon Syria Turkey	Bahrain Iraq Kuwait Qatar Saudi Arabia Yemen	Iran	Oman United Arab Emirates

Weights and Measures

Principal weights and units of measurement in common use as alternatives to the metric and imperial systems.

WEIGHT

Unit	Country	Metric equivalent	Imperial equivalent
Hogga	Iraq	1.27 kg	2.8 lb
Maund	Yemen Saudi Arabia	37.29 kg	82.28 lb
Qintar (Kantar) or Buhar	Cyprus	228.614 kg	504 lb
	Egypt	44.928 kg	99.05 lb
Ratl or Rotl	Saudi Arabia Egypt	0.449 kg	0.99 lb
Uqqa or Oke	Cyprus	1.27 kg	2.8 lb
	Egypt	1.245 kg	2.751 lb
Yeni Okka	Turkey	1 kg	2.205 lb

LENGTH

Unit	Country	Metric equivalent	Imperial equivalent
Busa	Saudi Arabia	2.54 cm	1 in
Dirraa, Dra or Pic	Cyprus	60.96 cm	2 ft

CAPACITY

Unit	Country	Metric equivalent	Imperial equivalent
Ardabb or Ardeb	Saudi Arabia Egypt	198.024 litres	45.36 gallons
Kadah	Egypt	2.063 litres	3.63 pints
	Cyprus	36.368 litres	1 pint
Keila	Egypt	16.502 litres	3.63 gallons

AREA

Unit	Country	Metric equivalent	Imperial equivalent
Donum or Dunum	Cyprus	1,335.8 sq m	0.33 acre
	Iraq	2,500 sq m	0.62 acre
	Israel Jordan	1,000 sq m	0.2471 acre
	Syria Turkey	919.04 sq m	0.2272 acre
Feddan	Saudi Arabia Egypt	4,201 sq m	1.038 acres
Yeni Donum	Turkey	10,000 sq m (1 ha)	2.471 acres

PART TWO
Regional Organizations

THE UNITED NATIONS IN THE MIDDLE EAST AND NORTH AFRICA

Address: United Nations Plaza, New York, NY 10017, USA.

Telephone: (212) 963-1234; **fax:** (212) 963-4879; **internet:** http://www.un.org.

The United Nations (UN) was founded on 24 October 1945. The organization aims to maintain international peace and security and to develop international co-operation in economic, social, cultural and humanitarian problems. The principal organs of the UN are the General Assembly, the Security Council, the Economic and Social Council (ECOSOC), the International Court of Justice and the Secretariat. The General Assembly, which meets for three months each year, comprises representatives of all UN member states. The Security Council investigates disputes between member countries, and may recommend ways and means of peaceful settlement: it comprises five permanent members (the People's Republic of China, France, Russia, the United Kingdom and the USA) and 10 other members elected by the General Assembly for a two-year period. The Economic and Social Council comprises representatives of 54 member states, elected by the General Assembly for a three-year period: it promotes co-operation on economic, social, cultural and humanitarian matters, acting as a central policy-making body and co-ordinating the activities of the UN's specialized agencies. The International Court of Justice comprises 15 judges of different nationalities, elected for nine-year terms by the General Assembly and the Security Council: it adjudicates in legal disputes between UN member states.

Secretary-General of the United Nations: KOFI ANNAN (Ghana) (1997–2001)

MEMBER STATES IN THE MIDDLE EAST AND NORTH AFRICA

(with assessments for percentage contributions to UN budget for 1998, and year of admission)

Algeria	0.116	1962

Côte d'Ivoire	Mali	Tunisia
Djibouti	Mauritania	Uganda
Egypt	Mauritius	Zambia
Equatorial Guinea	Morocco	Zimbabwe
	Mozambique	
	Namibia	

Organization

(August 1999)

COMMISSION

The Commission may only act with the agreement of the government of the country concerned. It is also empowered to make recommendations on any matter within its competence directly to the government of the member or associate member concerned, to governments admitted in a consultative capacity, and to the UN Specialized Agencies. The Commission is required to submit for prior consideration by ECOSOC any of its proposals for actions that would be likely to have important effects on the international economy.

CONFERENCE OF MINISTERS

The Conference, which meets every two years, is attended by ministers responsible for economic or financial affairs, planning and development of governments of member states, and is the main deliberative body of the Commission.

The Commission's responsibility to promote concerted action for the economic and social development of Africa is vested primarily in the Conference, which considers matters of general policy and the priorities to be assigned to the Commission's programmes, considers inter-African and international economic policy, and makes recommendations to member states in connection with such matters.

OTHER POLICY-MAKING BODIES

A Conference of Ministers of Finance and a Conference of Ministers responsible for economic and social development and planning meet in alternate years to formulate policy recommendations. Each is served by a committee of experts. Five intergovernmental committees of experts attached to the Sub-regional Development Centres (see below) meet annually and report to the Commission through a Technical Preparatory Committee of the Whole, which was established in 1979 to deal with matters submitted for the consideration of the Conference.

Seven other committees meet regularly to consider issues relating to the following policy areas: women and development; development information; sustainable development; human development and civil society; industry and private sector development; natural resources and science and technology; and regional co-operation and integration.

SECRETARIAT

The Secretariat provides the services necessary for the meeting of the Conference of Ministers and the meetings of the Commission's subsidiary bodies, carries out the resolutions and implements the programmes adopted there. It comprises an Office of the Executive Secretary, the African Centre for Women and the following eight divisions: Food Security and Sustainable Development; Development Management; Development Information Services; Regional Co-operation and Integration; Programme Planning, Finance and Evaluation; Economic and Social Policy; Human Resources and System Management; Conference and General Services.

Executive Secretary: Kingsley Y. Amoako (Ghana).

SUB-REGIONAL DEVELOPMENT CENTRES

Multinational Programming and Operational Centres (MULPOCs) were established, in 1977, to implement regional development programmes. In May 1997 the Commission decided to transform the MULPOCs into Sub-regional Development Centres (SRDCs) in order to enable member states to play a more effective role in the process of African integration and to facilitate the integration efforts of the other UN agencies active in the sub-regions. In addition, the SRDCs were to act as the operational arms of ECA at national and sub-regional levels: to ensure harmony between the objectives of sub-regional and regional programmes and those defined by the Commission; to provide advisory services; to facilitate sub-regional economic co-operation, integration and development; to collect and disseminate information; to stimulate policy dialogue; and to promote gender issues. In July 1997 it was reported that ECA intended to deploy 25% of its professional personnel in the SRDCs (up from 9%) and to allocate approximately 40% of its budget to the Centres.

Central Africa: POB 836, Yaoundé, Cameroon; tel. 23-14-61; fax 23-31-85; e-mail casrdc@camnet.cm; Dir Abdoulaye Niang.

Eastern Africa: c/o UNDP, ave de l'Armée 12, BP 445, Kigali, Rwanda; tel. 77822; fax 76263; Dir Halidou Ouedraogo.

North Africa: POB 316, Tangier, Morocco; tel. (9) 322346; fax (9) 340357; e-mail srdc@cybermania.net.ma; Dir S. Jugessur.

Southern Africa: POB 30647, Lusaka, Zambia; tel. (1) 228503; fax (1) 236949; e-mail uneca@zamnet.za; Dir Dr Robert M. Okello.

West Africa: POB 744, Niamey, Niger; tel. 72-29-61; fax 72-28-94; Dir Henri Soumah.

Activities

The Commission's activities are designed to encourage sustainable socio-economic development in Africa and to increase economic co-operation among African countries and between Africa and other parts of the world. The Secretariat is guided in its efforts by major regional strategies including the Abuja Treaty establishing the African Economic Community signed under the aegis of the Organization of African Unity and the UN New Agenda for the Development of Africa covering the period 1991–2000. ECA's main programme areas for the period 1996–2001 were based on an Agenda for Action, which was announced by the OAU Council of Ministers in March 1995 and adopted by African heads of state in June, with the stated aim of 'relaunching Africa's economic and social development'. The five overall objectives were to facilitate economic and social policy analysis and implementation; to ensure food security and sustainable development; to strengthen development management; to harness information for development; and to promote regional co-operation and integration. In all its activities ECA aimed to promote the themes of capacity-building and of fostering leadership and the empowerment of women in Africa. In May 1998 ECA's African Centre for Women inaugurated a new Fund for African Women's Development to support capacity-building activities.

DEVELOPMENT INFORMATION SYSTEMS

The Pan-African Documentation and Information Service (PADIS) was established in 1980. The main objectives of PADIS are: to provide access to numerical and other information on African social, economic, scientific and technological development issues; to assist African countries in their efforts to develop national information handling capabilities through advisory services and training; to establish a data communication network to facilitate the timely use of information on development; and to design sound technical specifications, norms and standards to minimize technical barriers in the exchange of information. ECA is promoting the use of electronic systems to disseminate information throughout the region, under its commitment for the period 1996–2001 to harness information for development purposes. ECA aims to co-ordinate the implementation of the African Information Society Initiative (AISI), a framework for creating an information and communications infrastructure. In addition, ECA encourages member governments to liberalize the telecommunications sector and stimulate imports of computers in order to enable the expansion of information technology throughout Africa.

ECA also promotes the development and co-ordination of national statistical services in the region and undertakes the collection, evaluation and dissemination of statistical information. ECA's work in the field of statistics has been concentrated in five main areas: the African Household Survey Capability Programme, which aims to assist in the collection and analysis of demographic, social and economic data on households; the Statistical Training Programme for Africa, which aims to make the region self-sufficient in statistical personnel at all levels; the Technical Support Services, which provide technical advisory services for population censuses, demographic surveys and civil registration; the National Accounts Capability Programme, which aims at improving economic statistics generally by building up a capability in each country for the collection, processing and analysis of economic data; and the ECA-Regional Statistical Data Base, part of PADIS, which provides on-line statistical information to users. In 1997 ECA planned to upgrade its statistical database in order to provide a data services centre for the region.

ECA assists its member states in (i) population data collection and data processing; (ii) analysis of demographic data obtained from censuses or surveys; (iii) training demographers at the Regional Institute for Population Studies (RIPS) in Accra, Ghana, and at the Institut de formation et de recherche démographiques (IFORD) in Yaoundé, Cameroon; (iv) formulation of population policies and integrating population variables in development planning, through advisory missions and through the organization of national seminars on population and development; and (v) dissemination of information through its *Newsletter, Demographic Handbook for Africa*, the *African Population Studies* series and other publications. The strengthening of national population policies was an important element of ECA's objective of ensuring food security in African countries. The Ninth Joint Conference of African Planners, Statisticians and Demographers was held in March 1996, in Addis Ababa, Ethiopia.

DEVELOPMENT MANAGEMENT

ECA aims to assist governments, public corporations, universities and the private sector in improving their financial management; strengthening policy-making and analytical capacities; adopting measures to redress skill shortages; enhancing human resources development and utilization; and promoting social development through programmes focusing on youth, people with disabilities and the elderly. The Secretariat organizes training workshops, seminars and conferences at national, subregional and regional levels for ministers, public administrators and senior policy-makers, as well as for private and non-governmental organizations. ECA aims to increase the participation of women in economic development and incorporates this objective into its administrative activities and work programmes.

Following the failure to implement many of the proposals under the UN Industrial Development Decade for Africa (IDDA, 1980–90) and the UN Programme of Action for African Economic Recovery and Development (1986–90), a second IDDA was adopted by the Conference of African Ministers of Industry in July 1991. The main objectives of the second IDDA include the consolidation and rehabilitation of existing industries, the expansion of new investments, and the promotion of small-scale industries and technological capabilities. In June 1996 a conference, organized by ECA, was held in Accra, Ghana, with the aim of reviving private investment in Africa in order to stimulate the private sector and promote future economic development. During 1999 ECA was undertaking preparatory activities for the first African Development Forum (ADF), which was scheduled to be convened in Addis Ababa, Ethiopia, in October. The ADF process was initiated by ECA to formulate an agenda for effective, sustainable development in African countries through dialogue and partnership between governments, academics, the private sector, donor agencies etc. It was intended that the process would focus towards an annual meeting concerned with a specific development issue. The first Forum was to be convened on the theme 'The Challenge to Africa of Globalization and the Information Age'. It aimed to review the AISI (see above) and formulate country action plans and work programmes for 2000.

In 1997 ECA hosted the first of a series of meetings on good governance, in the context of the UN system-wide Special Initiative on Africa. The second African Governance Forum (AGF II) was held in Accra, Ghana, in June 1998. The Forum focused on accountability and transparency, which participants agreed were essential elements in promoting development in Africa and should involve commitment from both governments and civil organizations. A third AGF was to be held in Mali, in 1999, to consider issues relating to conflict prevention, management and governance.

ECONOMIC AND SOCIAL POLICY

The Economic and Social Policy division concentrates on the following areas: economic policy analysis, social policy and poverty analysis, and the co-ordination and monitoring of special issues and programmes. Monitoring economic and social trends in the African region and studying the development problems concerning it are among the fundamental tasks of the Commission, while the special issues programme updates legislative bodies regarding the progress made in the implementation of initiatives affecting the continent. Every year the Commission publishes the *Survey of Economic and Social Conditions in Africa* and the *Economic Report on Africa*.

The Commission gives assistance to governments in general economic analysis, fiscal, financial and monetary management, trade liberalization, regional integration and planning. The ECA's work on economic planning has been broadened in recent years, in order to give more emphasis to macro-economic management in a mixed economy approach: a project is being undertaken to develop short-term forecasting and policy models to support economic management. The Commission has also undertaken a major study of the informal sector in African countries. Special assistance is given to least-developed, land-locked and island countries which have a much lower income level than other countries and which are faced with heavier constraints. Studies are also undertaken to assist longer-term planning.

In May 1994 ECA ministers of economic and social development and of planning, meeting in Addis Ababa, adopted a *Framework Agenda for Building and Utilizing Critical Capacities in Africa*. The agenda aimed to identify new priority areas to stimulate development by, for example, strengthening management structures, a more efficient use of a country's physical infrastructure and by expanding processing or manufacturing facilities.

ECA aims to strengthen African participation in international negotiations. To this end, assistance has been provided to member states in the ongoing multilateral trade negotiations under the World Trade Organization; in the annual conferences of the IMF and the World Bank; in negotiations with the EU; and in meetings related to economic co-operation among developing countries. Studies have been prepared on problems and prospects likely to arise for the African region from the implementation of the Common Fund for Commodities and the Generalized System of Trade Preferences (both supervised by UNCTAD); the impacts of exchange-rate fluctuations on the economies of African countries; and on the long-term implications of different debt arrangements for African economies. ECA assists individual member states by undertaking studies on domestic trade, expansion of inter-African trade, transnational corporations, integration of women in trade and development, and strengthening the capacities of state-trading organizations. ECA encourages the diversification of production, the liberalization of cross-border trade and the expansion of domestic trade structures, within regional economic groupings, in order to promote intra-African trade. ECA also helps to organize regional and 'All-Africa' trade fairs.

In March/April 1997 the Conference of African Ministers of Finance, meeting in Addis Ababa, reviewed a new initiative of the World Bank and IMF to assist the world's 41 most heavily indebted poor countries, of which 33 were identified as being in sub-Saharan Africa. While the Conference recognized the importance of the involvement of multilateral institutions in assisting African economies to achieve a sustainable level of development, it criticized aspects of the structural adjustment programmes imposed by the institutions and advocated more flexible criteria to determine eligibility for the new initiative.

In 1997, with regard to social policy, ECA was focusing upon improving the socio-economic prospects of women through the promotion of social and legal equality, increasing opportunities for entering higher education and monitoring the prevalence of poverty.

FOOD SECURITY AND SUSTAINABLE DEVELOPMENT

In the early 1990s reports were compiled on the development, implementation and sound management of environmental programmes at national, sub-regional and regional levels. ECA members adopted a common African position for the UN Conference on Environment and Development, held in June 1992. In 1995 ECA published its first comprehensive report and statistical survey of human development issues in African countries. The *Human Development in Africa Report*, which was to be published every two years, aimed to demonstrate levels of development attained, particularly in the education and child health sectors, to identify areas of concern and to encourage further action by policy-makers and development experts. In 1997 ECA was actively involved in the promotion of food security in African countries and the study of the relationship between population, food security, the environment and sustainable development.

PROGRAMME PLANNING, FINANCE AND EVALUATION

ECA provides guidance in the formulation of policies towards the achievement of Africa's development objectives to the policy-making organs of the UN and OAU. It contributes to the work of the General

Assembly and other specialized agencies by providing an African perspective in the preparation of development strategies. In March 1996 the UN announced a system-wide Special Initiative on Africa to mobilize resources and to implement a series of political and economic development objectives over a 10-year period. ECA's Executive Secretary is the Co-Chair, with the Administrator of the UNDP, of the Steering Committee for the Initiative.

REGIONAL CO-OPERATION AND INTEGRATION

The Regional Co-operation and Integration Division administers the transport and communications and mineral and energy sectors, in addition to its activities concerning the Sub-regional Development Centres (SRDCs—see above), the integrated development of transboundary water resources, and facilitating and enhancing the process of regional economic integration.

ECA was appointed lead agency for the second United Nations Transport and Communications Decade in Africa (UNTACDA II), covering the period 1991–2000. The principal aim of UNTACDA II is the establishment of an efficient, integrated transport and communications system in Africa. The specific objectives of the programme include: (i) the removal of physical and non-physical barriers to intra-African trade and travel, and improvement in the road transport sector; (ii) improvement in the efficiency and financial viability of railways; (iii) development of Africa's shipping capacity and improvement in the performance of Africa's ports; (iv) development of integrated transport systems for each lake and river basin; (v) improvement of integration of all modes of transport in order to carry cargo in one chain of transport smoothly; (vi) integration of African airlines, and restructuring of civil aviation and airport management authorities; (vii) improvement in the quality and availability of transport in urban areas; (viii) development of integrated regional telecommunications networks; (ix) development of broadcasting services, with the aim of supporting socio-economic development; and (x) expansion of Africa's postal network. ECA is the co-ordinator, with the World Bank, of a regional Road Maintenance Initiative, which was launched in 1988. By early 1996 13 African countries were receiving assistance under the initiative, which sought to encourage a partnership between the public and private sectors to manage and maintain road infrastructure more efficiently and thus to improve country-wide communications and transportation activities. The third African road safety congress was held in April 1997, in Pretoria, South Africa. The congress, which was jointly organized by ECA and the OECD, aimed to increase awareness of the need to adopt an integrated approach to road safety problems. During 1998/99 transport activities included consideration of a new African air transport policy, workshops on port restructuring, and regional and country analyses of transport trends and reforms.

The Fourth Regional Conference on the Development and Utilization of Mineral Resources in Africa, held in March 1991, adopted an action plan that included the formulation of national mineral exploitation policies; and the promotion of the gemstone industry, small-scale mining and the iron and steel industry. ECA supports the Southern African Mineral Resources Development Centre in Dar-es-Salaam, Tanzania, and the Central African Mineral Development Centre in Brazzaville, Republic of the Congo, which provide advisory and laboratory services to their respective member states.

ECA's Energy Programme provides assistance to member states in the development of indigenous energy resources and the formulation of energy policies to extricate member states from continued energy crises. In 1997 ECA strengthened co-operation with the World Energy Council and agreed to help implement the Council's African Energy Programme.

ECA assists member states in the assessment and use of water resources and the development of river and lake basins common to more than one country. ECA encourages co-operation between countries with regard to water issues and collaborates with other UN agencies and regional organizations to promote technical and economic co-operation in this area. A meeting of chief executives of river and lake basin organizations in Africa was scheduled to be held, under ECA auspices, in July 1999. ECA has been particularly active in efforts to promote the integrated development of the water resources of the Zambezi river basin and of Lake Victoria.

In all of its activities ECA aims to strengthen institutional capacities in order to support the process of regional integration, and aims to assist countries to implement existing co-operative agreements, for example by promoting the harmonization of macroeconomic and taxation policies and the removal of non-tariff barriers to trade.

Finance

For the two-year period 1998–99 ECA's regular budget, an appropriation from the UN budget, was an estimated US $89.6m.

Economic and Social Commission for Western Asia—ESCWA

Address: Riad es-Solh Sq., POB 11-8575, Beirut, Lebanon.

Telephone: (1) 981301; **telex:** 216917; **fax:** (1) 981510; **internet:** http://www.escwa.org.lb.

The UN Economic Commission for Western Asia was established in 1974 by a resolution of the UN Economic and Social Council (ECOSOC), to provide facilities of a wider scope for those countries previously served by the UN Economic and Social Office in Beirut (UNESOB). The name 'Economic and Social Commission for Western Asia' (ESCWA) was adopted in 1985.

Organization

(August 1999)

COMMISSION

The sessions of the Commission (held every two years) are attended by representatives of member states, of UN bodies and specialized agencies, of regional and intergovernmental organizations, and of other UN member states attending as observers.

TECHNICAL COMMITTEE

The Committee, formally the Standing Committee of the Programme, is the principal subsidiary body of the Commission and functions as its policy-making structure. Six specialized inter-governmental committees have been established to consider specific areas of activity, to report on these to the Technical Committee and

to assist the Committee in formulating ESCWA's medium-term work programmes.

Statistical Committee: first session convened in 1995; meets every two years.

Committee on Social Development: established in 1994; meets every two years.

Committee on Energy: established in 1995; meets every two years.

Committee on Water Resources: established in 1995; meets annually.

Committee on Transport: established in 1997; meets every two years.

Committee on Liberalization of Foreign Trade and Economic Globalization: established in 1997; meets annually.

SECRETARIAT

The Secretariat comprises an Executive Secretary, a Deputy Executive Secretary, a Senior Advisor and Secretary of the Commission, an Information Services Unit and a Programme Planning and Co-ordination Unit. ESCWA's technical and substantive activities are undertaken by the following divisions: energy, natural resources and environment; social development issues and policies; economic development issues and policies; sectoral issues and policies; statistics; and technical co-operation.

Executive Secretary: Dr HAZEM ABD EL-AZIZ EL-BEBLAWI (Egypt).

Activities

ESCWA is responsible for proposing policies and actions to support development and to further economic co-operation and integration in western Asia. ESCWA undertakes or sponsors studies of economic social and development issues of the region, collects and disseminates information, and provides advisory services to member states in various fields of economic and social development. It also organizes conferences and intergovernmental and export group meetings and sponsors training workshops and seminars.

Much of ESCWA's work is carried out in co-operation with other UN bodies, as well as with other international and regional organizations, for example the League of Arab States (q.v.) the Co-operation Council for the Arab States of the Gulf (q.v.) and the Organization of the Islamic Conference (OIC, q.v.).

ESCWA works within the framework of medium-term plans, which are divided into two-year programmes of action and priorities. The biennium 1994–95 was considered to be a transitional period during which the Commission restructured its work programme. This restructuring focused ESCWA activities from 15 to five sub-programmes. A further reorganization of the sub-programmes was implemented in 1997 to provide the framework for activities in the medium-term period 1998–2001.

MANAGEMENT OF NATURAL RESOURCES AND ENVIRONMENT

The main objective of the sub-programme was to promote regional co-ordination and co-operation in the management of natural resources, in particular water resources and energy, and the protection of the environment. The sub-programme aimed to counter the problem of an increasing shortage of freshwater resources and deterioration in water quality resulting from population growth, agricultural land-use and socio-economic development, by supporting measures for more rational use and conservation of water resources, and by promoting public awareness and community participation in water and environmental protection projects. In addition, ESCWA aimed to assist governments in the formulation and implementation of capacity-building programmes and the development of surface and groundwater resources.

ESCWA supports co-operation in the establishment of electricity distribution and supply networks throughout the region and promotes the use of alternative sources of energy and the development of new and renewable energy technologies. Similarly, ESCWA promotes the application of environmentally sound technologies in order to achieve sustainable development, as well as measures to recycle resources, minimize waste and reduce the environmental impact of transport operations and energy use. Under the sub-programme ESCWA was to collaborate with national, regional and international organizations in monitoring and reporting on emerging environmental issues and to pursue implementation of Agenda 21, which was adopted at the June 1992 UN conference on Environment and Development, with particular regard to land and water resource management and conservation.

IMPROVEMENT OF THE QUALITY OF LIFE

ESCWA's key areas of activity in this sub-programme were population, human development, the advancement of women and human settlements, and, in particular, to pursue the implementation of recommendations relevant to the region of the four UN world conferences held on these themes during the mid-1990s.

ESCWA's objectives with regard to population were to increase awareness and understanding of links between population factors and poverty, human rights and the environment, and to strengthen the capacities of member states to analyse and assess demographic trends and migration. The main aim in the area of human development was to further the alleviation of poverty and to generate a sustainable approach to development through, for example, greater involvement of community groups in decision-making and projects to strengthen production and income-generating capabilities. The sub-programme incorporated activities to ensure all gender-related recommendations of the four world conferences could be pursued in the region, including support for the role of the family and assistance to organizations for monitoring and promoting the advancement of women. With regard to human settlements, the objectives of the sub-programme were to monitor and identify problems resulting from rapid urbanization and social change, to promote understanding and awareness of the problems and needs of human settlements, and to strengthen the capacity of governments in the region in formulating appropriate policies and strategies for sustainable human settlement development.

ECONOMIC DEVELOPMENT AND GLOBAL CHANGES

During the period 1998–2001 ESCWA aimed to support member states in their understanding of the process of globalization of the world economy and their participation in international trading negotiations and arrangements. ESCWA also aimed to strengthen the capacity of members in implementing economic reform policies, financial management and other structural adjustment measures, and to facilitate intra-regional trade, investment and capital movements.

CO-ORDINATION OF POLICIES AND HARMONIZATION OF NORMS AND REGULATIONS FOR SECTORAL DEVELOPMENT

This sub-programme was concerned with the harmonization of standards throughout the region in the areas of transport, industry, agriculture and technology. ESCWA aimed to promote co-operation among member states in transport and infrastructure policies and greater uniformity of safety and legal standards, the latter with a view to facilitating border crossings between countries in the region. ESCWA, similarly, aimed to assist local industries to meet regional and international standards and regulations, as well as to improve the competitiveness of industries through the development of skills and policies and greater co-operation with other national and regional support institutions. ESCWA strategies to develop the agricultural potential of member states included resource conservation activities, agricultural management, institution-building and harmonization of regulations and norms. In the field of technology the sub-programme was designed to strengthen the capabilities of member states, to promote the transfer of technologies, research and development activities, and to enhance collaboration in the production sector.

DEVELOPMENT, CO-ORDINATION AND HARMONIZATION OF STATISTICS AND INFORMATION

In the medium-term ESCWA aimed to develop the statistical systems of member states in order to improve the relevance and accuracy of economic and social data, and to implement measures to make the information more accessible to planners and researchers. ESCWA also intended to promote the comparability of statistics, through implementation of various standard international systems and programmes, particularly focusing on a series of national population and housing censuses scheduled to be conducted in the region in 2000.

Finance

ESCWA's share of the UN budget for the two years 1998–99 was US $49.5m., compared with $33.2m. for the previous biennium.

United Nations Development Programme—UNDP

Address: One United Nations Plaza, New York, NY 10017, USA.

Telephone: (212) 906-5315; **fax:** (212) 906-5364; **e-mail:** hq@undp.org; **internet:** http://www.undp.org.

The Programme was established in 1965 by the UN General Assembly. Its central mission is to help countries eradicate poverty and achieve a sustainable level of human development.

Organization

(August 1999)

UNDP is responsible to the UN General Assembly, to which it reports through the UN Economic and Social Council.

EXECUTIVE BOARD

The 36-member Executive Board is responsible for providing inter-governmental support to and supervision of the activities of UNDP and the UN Population Fund (UNFPA, of which UNDP is the governing body).

SECRETARIAT

Offices and divisions at the Secretariat include: Planning and Resource Management; Development Policy Resources and External Affairs;, Evaluation, Audit and Performance Review; and the Office of the Human Development Report. Five regional bureaux, all headed by an assistant administrator, cover: Africa; Asia and the Pacific; the Arab states; Latin America and the Caribbean; and Europe and the Commonwealth of Independent States. There is also a Division for Global and Interregional Programmes.

Administrator: MARK MALLOCH BROWN (United Kingdom).

Assistant Administrator and Director of the Regional Bureau for Arab States: SAAD ALFARARGI (Egypt).

COUNTRY OFFICES

In almost every country receiving UNDP assistance there is a country office, headed by the UNDP Resident Representative, who co-ordinates all UN technical assistance, advises the government on formulating the country programme, ensures that field activities are carried out, and acts as the leader of the UN team of experts working in the country. Resident Representatives are normally designated as co-ordinators for all UN operational development activities; the offices function as the primary presence of the UN in most developing countries.

There is also a UNDP office in the 'Occupied Palestinian Territories' (POB 51359, 4A Ya'kubi St, Jerusalem 91513; tel. 2-6277337; telex 25282; fax 2-6280089).

Activities

As the world's largest source of grant technical assistance in developing countries, UNDP works with more than 150 governments and 40 international agencies to achieve faster economic growth and better standards of living throughout the world. Most of the work is undertaken in the field by the various United Nations agencies, or by the government of the country concerned. UNDP is committed to allocating some 87% of its core resources to low-income countries with an annual income per caput of less than US $750, while 60% of resources are allocated to the world's least-developed countries.

Assistance is mostly non-monetary, comprising the provision of experts' services, consultancies, equipment, and fellowships for advanced study abroad. In 1996 35% of spending on projects was for the services of experts, 25% was for subcontracts, 18% for equipment and 16% for training; the remainder was for other costs, such as technical support. Most UNDP projects incorporate training for local workers. Developing countries themselves provide 50% or more of the total project costs in terms of personnel, facilities, equipment and supplies. In 1996 UNDP expenditure, on projects in the Arab states (i.e. excluding Cyprus, Iran and Turkey) amounted to US $61m., or 5% of the total field programme expenditure.

In June 1994 the Executive Board adopted a programme for change which focused on UNDP's role in achieving sustainable human development, an approach to economic growth that encompasses individual well-being and choice, equitable distribution of the benefits of development and conservation of the environment. Within this framework there were to be the following priority objectives: poverty elimination; sustainable livelihoods; good governance; environmental regeneration; and the advancement and empowerment of women. The allocation of UNDP programming resources has subsequently reflected this agenda, with 26% of funding directed towards poverty eradication and livelihoods for the poor, 25% to capacity-building and governance, 24% to projects concerned with the environment and food security, and 23% to public resources management for sustainable human development (with 2% to other activities).

In 1994 the Executive Board also determined that UNDP should assume a more active and integrative role within the UN development system. This approach has been implemented by UNDP Resident Representatives, who aim to co-ordinate UN policies to achieve sustainable human development, in consultation with other agencies, in particular UNEP, FAO and UNHCR. UNDP has subsequently allocated more resources to training and skill-sharing programmes in order to promote this co-ordinating role. In late 1997 the UNDP Administrator was appointed to chair a UN Development Group, which was established as part of a series of structural reform measures initiated by the UN Secretary-General and which aimed to strengthen collaboration between some 20 UN funds, programmes and other development bodies. UNDP's leading role within the process of UN reform was also to be reflected in its own internal reform process, 'UNDP 2001', which was ongoing in 1999.

Approximately one-third of all UNDP programme resources support national efforts to ensure efficient governance and to build effective relations between the state, the private sector and civil society, which are essential to achieving sustainable development. UNDP undertakes assessment missions to help ensure free and fair elections and works to promote human rights, an accountable and competent public sector, a competent judicial system and decentralized government and decision-making. In July 1997 UNDP organ-

ized an International Conference on Governance for Sustainable Growth and Equity, which was held in New York, USA, and attended by more than 1,000 representatives of national and local authorities and the business and non-governmental sectors. At the Conference UNDP initiated a four-year programme to promote activities and to encourage new approaches in support of good governance.

Within UNDP's framework of urban development activities, the Local Initiative Facility for Urban Environment (LIFE) undertakes small-scale environmental projects in low-income communities, in collaboration with local authorities and community-based groups. Other initiatives include the Urban Management Programme and the Public-Private Partnerships Programme for the Urban Environment, which aim to generate funds, promote research and support new technologies to enhance sustainable environments in urban areas. Activities undertaken under the Urban Management Programme in 1998 included pollution and traffic control in the historic centre of Damascus, Syria. In November 1996 UNDP initiated a process of collaboration between city authorities world-wide to promote implementations of the commitments made at the 1995 Copenhagen summit for social development (see below) and to help to combat aspects of proverty and other urban problems, such as poor housing, transport, the management of waste disposal, water supply and sanitation. The first Forum of the so-called World Alliance of Cities Against Poverty was convened in October 1998, in Lyon, France. UNDP supports the development of national programmes that emphasize the sustainable management of natural resources, for example through its Sustainable Energy Initiative, which promotes more efficient use of energy resources and the introduction of renewable alternatives to conventional fuels. UNDP is also concerned with forest management, the aquatic environment and sustainable agriculture and food security.

UNDP aims to help governments to reassess their development priorities and to design initiatives for sustainable development at a country-specific level. UNDP country offices support the formulation of national human development reports (NHDRs), which aim to facilitate activities such as policy-making, the allocation of resources and monitoring progress towards proverty eradication and sustainable development. By 1996 four countries in the Middle East and North African region (Cyprus, Egypt, Iraq and Turkey) had produced NHDRs. In addition, the preparation of Advisory Notes and Country Co-operation Frameworks help to highlight country-specific aspects of poverty eradication and national strategic priorities. In January 1998 the Executive Board adopted eight guiding principles relating to sustainable human development that were to be implemented by all country offices, in order to ensure a focus to UNDP activities. A network of Sub-regional Resource Facilities (SURFs) has been established to strengthen and co-ordinate UNPD's technical assistance services. UNDP is a co-sponsor, jointly with WHO, the World Bank, UNDCP, UNICEF, UNESCO and UNFPA, of a Joint UN Programme on HIV and AIDS, which became operational on 1 January 1996. UNDP also has responsibility for co-ordinating activities following global UN conferences. In March 1995 government representatives attending the World Summit for Social Development, which was held in Copenhagen, Denmark, adopted the Copenhagen Declaration and a Programme of Action, which included initiatives to promote the eradication of poverty, to increase and reallocate official development assistance to basic social programmes and to promote equal access to education. With particular reference to UNDP, the Programme of Action advocated that UNDP support the implementation of social development programmes, co-ordinate these efforts through its field offices and organize efforts on the part of the UN system to stimulate capacity-building at local, national and regional levels. By 1996 a new Poverty Strategy Initiative was being implemented in more than 60 countries, while other activities were directed towards strengthening the private sectors in developing countries, in particular through the provision of financing for micro-enterprises, and creating the capacity for sound economic management and good governance. A review conference to consider implementation of the Summit's objectives was scheduled to be convened in 2000. Following the UN Fourth World Conference on Women, held in Beijing, People's Republic of China, in September 1995, UNDP has led inter-agency efforts to ensure the full participation of women in all economic, political and professional activities, and has assisted with further situation analysis and training activities. (UNDP also created a Gender in Development Office to ensure that women participate more fully in UNDP-sponsored activities.) UNDP played an important role, at both national and international levels, in preparing for the second UN Conference on Human Settlements (Habitat II), which was held in İstanbul, Turkey, in June 1996. At the conference UNDP announced the establishment of a new facility, which was designed to promote private-sector investment in urban infrastructure. The facility was to be allocated inititial resources of US $10m., with the aim of generating a total of $1,000m. from private sources for this sector.

In the mid-1990s UNDP expanded its role in countries in crisis and with special circumstances, working in collaboration with other UN agencies to promote relief and development efforts. In particular, UNDP was concerned to achieve reconciliation, reintegration and reconstruction in affected countries, as well as to support emergency interventions and manage the delivery of programme aid. In 1996 20 new special development initiatives were undertaken, including socio-economic rehabilitation in Lebanon and environmental improvements in areas of resettlement in Gaza and the West Bank. In addition, UNDP extended its Disaster Management Training Programme, in order, partly, to help countries meet the objectives of the International Decade for Natural Disaster Reduction (announced in 1990).

Since 1990 UNDP has published an annual *Human Development Report*, incorporating a Human Development Index, which ranks countries in terms of human development, using three key indicators: life expectancy, adult literacy and basic income required for a decent standard of living. In 1997 a Human Poverty Index and a Gender-related Development Index, which assesses gender equality on the basis of life expectancy, education and income, were introduced into the Report for the first time.

During 1996 UNDP implemented its first corporate communications and advocacy strategy, which aimed to generate public awareness of the activities of the UN system, to promote debate on development issues and to mobilize resources by increasing public and donor appreciation of UNDP. A series of national and regional workshops was held, while media activities focused on the publication of the annual *Human Development Report* and the International Day for the Eradication of Poverty, held on 17 October. UNDP aims to use the developments in information technology to advance its communications strategy and to disseminate guide-lines and technical support throughout its country office network.

Finance

UNDP and its various funds and programmes (see below) are financed by the voluntary contributions of members of the United Nations and the Programme's participating agencies, as well as through cost-sharing by recipient governments and third-party donors. In 1996 total voluntary contributions amounted to US $2,186m., including $844m. to the Programme's core resources. In that year core expenditure on field programme activities amounted to $1,211m.

Publications

Annual Report.
Human Development Report (annually).
Choices (quarterly).
Co-operation South (quarterly).

Associated Funds and Programmes

UNDP is the central funding, planning and co-ordinating body for technical co-operation within the UN. Associated funds and programmes, financed separately by means of voluntary contributions, provide specific services through the UNDP network. In 1996 expenditure on projects carried out under the aegis of these funds and programmes amounted to US $263.3m.

CAPACITY 21

UNDP initiated Capacity 21 at the UN Conference on Environment and Development, which was held in June 1992, to support developing countries in preparing and implementing policies for sustainable development (i.e. the objectives of Agenda 21, which was adopted by the Conference). Capacity 21 promotes new approaches to development, through national development strategies, community-based management and training programmes. During 1998 programmes funded by Capacity 21 were being undertaken in 52 countries.

GLOBAL ENVIRONMENT FACILITY—GEF

The GEF, which is managed jointly by UNDP, the World Bank and UNEP, began operations in 1991, with funding of US $1,500m. over a three-year period. Its aim is to support projects for the prevention of climate change, conserving biological diversity, protecting international waters, and reducing the depletion of the ozone layer in the atmosphere. UNDP is responsible for capacity-building, targeted research, pre-investment activities and technical assistance. UNDP also administers the Small Grants Programme of the GEF, which supports community-based activities by local non-governmental

organizations. During the pilot phase of the GEF, in the period 1991–94, $242.5m. in funding was approved for 55 UNDP projects. In March 1994 representatives of 87 countries agreed to provide $2,000m. to replenish GEF funds for a further three-year period from July of that year. In November 1997 33 donor countries committed themselves to a target figure $2,750m. for the next replenishment of GEF funds.

PROGRAMME OF ASSISTANCE TO THE PALESTINIAN PEOPLE—PAPP

PAPP is committed to strengthening newly-created institutions, to creating employment opportunities and to stimulating private and public investment in the area to enhance trade and export potential in the Israeli-occupied Territories and Palestinian autonomous areas. Examples of PAPP activities include the following: construction of sewage collection networks and systems in the northern Gaza Strip; provision of water to 500,000 people in rural and urban areas of the West Bank and Gaza; construction of schools, youth and health centres; support to vegetable and fish traders through the construction of cold-storage and packing facilities; and provision of loans to strengthen industry and commerce. Field programme expenditure in 1996 totalled US $47.1m.

UNITED NATIONS CAPITAL DEVELOPMENT FUND—UNCDF

The Fund was established in 1966 and became fully operational in 1974. It invests in poor communities in least-developed countries by providing economic and social infrastructure, credit for both agricultural and small-scale entrepreneurial activities, and local development funds which encourage people's participation as well as that of local government in the planning and implementation of projects. UNCDF aims to promote the interests of women in community projects and to enhance their earning capacities. A Special Unit for Microfinance was established in 1997 as a joint UNDP/UNCDF operation, to facilitate co-ordination between micro-credit initiatives of the UN, and to support UNDP's MicroStart initiative. In May 1996 stable funding for the Fund was pledged by eight donors for a three-year period. UNCDF's annual programming budget amounts to some US $40m.

Executive-Secretary: POUL GROSEN.

UNITED NATIONS DEVELOPMENT FUND FOR WOMEN—UNIFEM

UNIFEM, which became an associated fund of UNDP in 1985, is the UN's lead agency in addressing the issues relating to women in development and promoting the rights of women world-wide. The Fund provides direct financial and technical support to enable low-income women in developing countries to increase earnings, gain access to labour-saving technologies and otherwise improve the quality of their lives. It also funds activities that include women in decision-making related to mainstream development projects. UNIFEM has supported the preparation of national reports in 30 countries and used the priorities identified in these reports and in other regional initiatives to formulate a Women's Development Agenda for the 21st century. Through these efforts, UNIFEM played an active role in the preparation for the UN Fourth World Conference on Women, which was held in Beijing, People's Republic of China, in September 1995. Programme expenditure in 1998 totalled US $13.8m.

Director: NOELEEN HEYZER (Singapore).

OFFICE TO COMBAT DESERTIFICATION AND DROUGHT—UNSO

The Office was established following the conclusion, in October 1994, of the UN Convention to Combat Desertification in Those Countries Experiencing Serious Drought and/or Desertification, Particularly in Africa. It replaced the former UN Sudano-Sahelian Office (UNSO), while retaining the same acronym. UNSO is responsible for UNDP's role in desertification control and dryland management. Special emphasis is given to strengthening the environmental planning and management capacities of national institutions. During 1998 UNSO, in collaboration with other international partners, supported the implementation of the UN Convention in 55 designated countries.

Director: PHILIP DOBIE.

Headquarters: One United Nations Plaza, New York, NY10017, USA; tel. (212) 906-6497; fax (212) 906-6345; e-mail unso@undp.org; internet http://www.undp.org/seed/unsa.

UNITED NATIONS VOLUNTEERS—UNV

The United Nations Volunteers is an important source of middle-level skills for the UN development system, supplied at modest cost, particularly in the least-developed countries. Volunteers expand the scope of UNDP project activities by supplementing the work of international and host country experts and by extending the influence of projects to local community levels. UNV also supports technical co-operation within and among the developing countries by encouraging volunteers from the countries themselves and by forming regional exchange teams made up of such volunteers. The UN Short-term Advisory Programme, which is the private-sector development arm of UNV, has increasingly focused its attention on countries in the process of economic transition. In addition to development activities UNV has become increasingly involved in areas such as peace-building, elections, human rights and community-based environmental programmes.

Since 1944 UNV has administered UNDP's Transfer of Knowledge Through Expatriate Nationals (TOKTEN) programme, which was initiated in 1977 to enable specialists and professionals from developing countries to contribute to development efforts in their countries of origin through short-term technical assignments.

At 31 October 1998 2,262 UNV's were serving in 129 countries, while the total number of people who had served under the initiative amounted to 17,740.

Executive Co-ordinator: SHARON CAPELING-ALAKIJA.

United Nations Environment Programme—UNEP

Address: POB 30552, Nairobi, Kenya.

Telephone: (2) 621234; **telex:** 22068; **fax:** (2) 226890; **internet:** http://www.unep.org.

The United Nations Environment Programme was established in 1972 by the UN General Assembly, following recommendations of the 1972 UN Conference on the Human Environment, in Stockholm, Sweden, to encourage international co-operation in matters relating to the human environment.

Organization

(August 1999)

GOVERNING COUNCIL

The main function of the Governing Council, which meets every two years, is to provide general policy guide-lines for the direction and co-ordination of environmental programmes within the UN system. It comprises representatives of 58 states, elected by the UN General Assembly on a rotating basis.

SECRETARIAT

The Secretariat serves as a focal point for environmental action within the UN system.

Executive Director: Dr KLAUS TOPFER (Germany).

REGIONAL OFFICES

Africa: POB 30552, Nairobi, Kenya; tel. (2) 624283; fax (2) 623928.

Europe: CP 356, 15 chemin des Anémones, 1219 Châtelaine, Geneva, Switzerland; tel. (22) 9799111; telex 415465; fax (22) 7973420.

Activities

UNEP aims to maintain a constant watch on the changing state of the environment; to analyse the trends; to assess the problems using a wide range of data and techniques; and to promote projects leading to environmentally sound development. It plays a catalytic and co-ordinating role within and beyond the UN system. Many UNEP projects are implemented in co-operation with other UN agencies, particularly UNDP, the World Bank group, FAO, UNESCO and WHO. About 45 intergovernmental organizations outside the UN system and 60 international non-governmental organizations have official observer status on UNEP's Governing Council, and, through the Environment Liaison Centre in Nairobi, UNEP is linked to more than 6,000 non-governmental bodies concerned with the environment.

UNEP played a significant role in preparing for and conducting the UN Conference on Environment and Development (UNCED, or the 'Earth Summit'), which was held in Rio de Janeiro, Brazil, in June 1992. Agenda 21, a programme of activities to promote sustainable development, which was adopted at UNCED, reaffirmed UNEP's mandate and gave its Governing Council an enhanced role in the areas of policy guidance and development. The two-year 1994–95 programme was considered to be a transitional period for UNEP, during which its role and effectiveness as the UN's agency for environmental issues was re-evaluated. In May 1995 the Governing Council adopted a new programme of activities for the two-year period 1996–97, which aimed to incorporate the demands of Agenda 21 and achieve a more integrated approach to addressing environmental issues. UNEP's 12 previous sectoral sub-programmes were redesigned into the five main interdisciplinary areas of work listed below. Approaches to assessment and monitoring, formulation and evaluation of environment policy and management of environmental intitiatives (defined as priority actions by Agenda 21) were to be applied in all programme activities, in order to increase the efficacy of UNEP's work. The Governing Council resolved that UNEP should strengthen its co-operation partnerships with other UN agencies and regional, national and local institutions in order to benefit from their expertise and to address varying regional environmental concerns.

In February 1997 the Governing Council, at its 19th session, adopted a ministerial declaration on UNEP's future role and mandate, which recognized the organization as the principal UN body working in the field of the environment and as the leading global environmental authority, setting and overseeing the international environmental agenda. In June a Special Session of the UN General Assembly, referred to as the 'Earth Summit + 5', was convened to review the state of the environment and progress achieved in implementing UNCED's objectives. The meeting adopted a Programme for Further Implementation of Agenda 21 to intensify efforts in areas such as energy, freshwater resources and technology transfer. The meeting confirmed UNEP's essential role in advancing the Programme and as a global authority promoting a coherent legal and political approach to the environmental challenges of sustainable development.

SUSTAINABLE MANAGEMENT AND USE OF NATURAL RESOURCES

UNEP aims to promote the sustainable use of natural resources, in order to prevent degradation of the environment and natural ecosystems that results from intensified demands on land, water, marine and coastal resources.

UNEP estimates that one-third of the world's population will suffer chronic water shortages by 2025, owing to rising demand for drinking water as a result of growing populations, decreasing quality of water because of pollution and increasing requirements of industries and agriculture. Efforts to address these problems include conducting a range of studies and assessments of river basins and regional seas, including the Nile river, the Caspian Sea and the Erhai Lake. In addition, UNEP provides scientific, technical and administrative support to facilitate the implementation and co-ordination of regional seas conventions and plans of action. UNEP promotes greater international co-operation in the management of river basins and coastal areas, and for the development of tools and guide-lines to achieve the sustainable management of freshwater and coastal resources. In particular, UNEP aims to control land-based activities, principally pollution, which affect freshwater resources, marine biodiversity and the coastal ecosystems of small-island developing states. In November 1995 110 governments adopted a Global Programme of Action for the Protection of the Marine Environment from Land-based Activities. UNEP was to manage the Programme's Secretariat.

UNEP supports the sound management and conservation of biological resources, in order to maintain biological diversity and to achieve sustainable development. UNEP was instrumental in the drafting of a Convention on Biological Diversity (CBD), which was adopted by UNCED in order to preserve the immense variety of plant and animal species, in particular those threatened with extinction. The Convention entered into force at the end of 1993. UNEP supports co-operation for biodiversity assessment and management in selected developing regions and for the development of strategies for the conservation and sustainable exploitation of individual threatened species (e.g. the Global Tiger Action Plan). UNEP also provides assistance for the preparation of individual country studies and strategies to strengthen national biodiversity management and research. In November 1995 UNEP published a Global Diversity Assessment, which was presented as the first comprehensive study on biodiversity throughout the world. In 1996 an ad hoc working group on biosafety was established to negotiate the conclusion of a protocol to the CBD to regulate international trade in living modified organisms (including genetically modified seeds and crops and pharmaceutical derivatives), in order to reduce any potential adverse effects on biodiversity and human health. An extraordinary session of the conference of parties to the CBD was convened in Cartagena, Colombia, in February 1999, to consider the provisional text formulated by the group and adopt its legally-binding provisions. The meeting, however, was suspended, owing to outstanding differences between the main producer countries and developing nations regarding the protocol's implications on principles of free trade. UNEP provides administrative and technical support to other regional and international conventions, including the Convention on the Conservation of Migratory Species and the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES).

In October 1994 87 countries, meeting under UN auspices, signed a Convention to Combat Desertification (see UNSO, p. 224), which aimed to provide a legal framework to counter the degradation of drylands. An estimated 75% of all drylands have suffered some land degradation, affecting approximately 1,000m. people in 110 countries. UNEP continues to support the implementation of the Convention, as part of its efforts to protect land resources. UNEP also aims to improve the assessment of dryland degradation and desertification in co-operation with governments and other international bodies, as well as identifying the causes of degradation and measures to overcome these.

SUSTAINABLE PRODUCTION AND CONSUMPTION

The use of inappropriate industrial technologies and the widespread adoption of unsustainable production and consumption patterns have been identified as being inefficient in the use of renewable resources and wasteful, in particular, in the use of energy. UNEP

aims to develop new policy and management tools for governments and industry and to encourage the use of environmentally sound technologies, in order to reduce pollution and the unsustainable use of natural resources. UNEP organizes conferences and training workshops to promote sustainable production practices and disseminates relevant information through the International Cleaner Production Information Clearing House.

UNEP provides institutional servicing to the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, which was adopted in 1989 with the aim of preventing the disposal of wastes from industrialized countries in countries that have no processing facilities. In March 1994 the second meeting of parties to the Convention agreed to ban exportation of hazardous wastes between OECD and non-OECD countries by the end of 1997. The amendment of the Convention required ratification by three-quarters of signatory states before it could enter into effect, and was not achieved by December 1997. The fourth full meeting of parties to the Convention, held in February 1998, attempted to clarify the classification and listing of hazardous wastes, which was expected to stimulate further ratifications. At that time the number of parties to the Convention had increased from 30 in 1992 to 117. UNEP also extends administrative support to the Vienna Convention for the Protection of the Ozone Layer (1985) and its 1987 Montreal Protocol, which provided for a 50% reduction in the production of chlorofluorocarbons (CFCs) by 2000. (An amendment to the Protocol was adopted in 1990, which required complete cessation of the production of CFCs by 2000 in industrialized countries and by 2010 in developing countries; these deadlines were advanced to 1996 and 2006 respectively, in November 1992.) In 1997 the ninth Conference of the Parties (COP) to the Vienna Convention adopted a further amendment which aimed to introduce a licensing system for all controlled substances. A Multilateral Fund for the Implementation of the Montreal Protocol was established in June 1990 to promote the use of suitable technologies and the transfer of technologies to developing countries. In November 1996 the Fund was replenished, with commitments totalling US $540m. for the three-year period 1997–99. The OzonAction Programme of UNEP's division of technology, industry and environment works under the Fund to promote information exchange, training and technological awareness. Its objective is to strengthen the capacity of governments and industry in developing countries to undertake measures towards the cost-effective phasing-out of ozone-depleting substances.

UNEP encourages the development of alternative and renewable sources of energy. To achieve this, UNEP is supporting the establishment of a network of centres to research and exchange information of environmentally-sound energy technology resources. UNEP undertakes technical activities to support the implementation of the Framework Convention on Climate Change (FCCC), which was adopted at UNCED and entered into force in March 1994. The FCCC commits countries to submitting reports on measures being taken to reduce the emission of 'greenhouse gases' (i.e. carbon dioxide and other gases that have a warming effect on the atmosphere). The Convention recommended stabilizing these emissions at 1990 levels by 2000; however, this was not legally binding. At the COP held in Kyoto, Japan, in December 1997, 38 industrial nations endorsed mandatory reductions of emissions of the six most harmful gases by an average of 5.2% from 1990 levels, between 2008 and 2012. The agreement was to enter into force on being ratified by countries representing 55% of the world's carbon dioxide emissions in 1990. The fourth COP, convened in Buenos Aires, Argentina, in November 1998, adopted a Plan of Action to promote implementation of the Kyoto Protocol, through further detailed consideration of measures designed to reduce gas emissions. These included the Clean Development Mechanism, by which industrialized countries may obtain credits towards achieving their reduction targets by assisting developing countries to implement emission-reducing measures, and a system of trading emission quotas. The meeting also agreed on the need to formulate an effective compliance mechanism; however, discussion on the voluntary participation by developing countries in the Kyoto Protocol was postponed.

The realignment of UNEP activities, undertaken for the work programme 1996–97, addressed the concerns that unsustainable patterns of consumption and production, in particular in industrialized countries, were major contributing factors to the deterioration of the global environment. UNEP aims to adjust this situation by stimulating understanding and awareness of the relationship between production and consumption, and promoting dialogue among developed countries to attain an agreement on more sustainable forms of production.

A BETTER ENVIRONMENT FOR HUMAN HEALTH AND WELL-BEING

A guiding principle of Agenda 21 was that the principal objective of sustainable development policies should be to ensure that all human beings enjoy a healthy and productive life. The new UNEP sub-programme integrated its previous activities relating to health, human settlement and welfare with those concerned with toxic wastes and chemicals. A single office, UNEP Chemicals, was established to promote the sound management of hazardous substances, central to which was the International Register of Potentially Toxic Chemicals (IRPTC). UNEP aims to facilitate access to data on chemicals and hazardous wastes, in order to assess and control health and environmental risks, by using the IRPTC as a clearing house facility of relevant information and by publishing information and technical reports on the impact of the use of chemicals. In 1996 UNEP, in collaboration with FAO, began to work towards promoting and formulating a legally-binding international convention on prior informed consent (PIC) for hazardous chemicals in international trade, extending a voluntary PIC procedure of information exchange undertaken by more than 100 governments since 1991. The Convention was adopted at an international conference held in Rotterdam, Netherlands, in September 1998, and was to enter into force on being ratified by 50 signatory states. It aimed to reduce risks to human health and the environment by restricting the production, export and use of hazardous substances and enhancing infomation exchange procedures. UNEP is also working towards a multilateral agreement to reduce and ultimately eliminate the manufacture and use of Persistent Organic Pollutants (POPs), which are considered to be a major global environmental hazard. UNEP sponsored the first meeting of an Intergovernmental Negotiating Committee on POPs, which was held in Montreal, Canada, in June 1998. An agreement on POPs was expected to be ready for signature in 2000.

In conjunction with UNCHS (Habitat), UNDP, the World Bank and other regional organizations and institutions, UNEP promotes environmental concerns in urban planning and management through the Sustainable Cities Programme, as well as regional workshops on urban pollution and the impact of transportation systems. In January 1994 UNEP inaugurated an International Environmental Technology Centre (IETC), with offices in Osaka and Shiga, Japan, in order to strengthen the capabilities of developing countries and countries with economies in transition to promote environmentally sound management of cities and fresh water reservoirs through technology co-operation and partnerships.

UNEP aims to reduce the risk to human populations of environmental change and emergencies. UNEP also aims to enhance accident prevention and emergency preparedness capabilities in all developing countries, for example through its APELL programme (Awareness and Preparedness for Emergencies at the Local Level). As part of its efforts to develop mechanisms to avoid and settle environmental disputes, UNEP participates in working groups in the Israeli-occupied Territories, under the Middle East peace process, and promotes greater regional co-operation in the management of shared natural resources, for example in the Nile river basin, Central Asia and Antarctica.

GLOBALIZATION AND THE ENVIRONMENT

With the globalization of the world's economy UNEP has identified a need to enhance the assessment of the environmental impact of trade patterns and policies, at country and regional level, and to undertake legal analyses of the relationship between environmental laws and international trade regimes. UNCED recommended the need to integrate environmental issues into economic priorities as a prerequisite of sustainable development. UNEP operates a system of environmental valuation and environmental impact assessment, which it aims to promote through national guide-lines and technical workshops. Other so-called environmental economic tools may be developed through environmental and natural resource accounting and the eco-labelling of country export products (i.e. identifying products with a high environmental quality profile). UNEP aims to promote the exchange of information relevant to this sector and to assist countries to develop additional sources of finance for environmentally sustainable development. UNEP, together with UNDP and the World Bank, is an implementing agency of the Global Environment Facility (GEF, see p. 223), which was established in 1991 as a mechanism for international co-operation in projects concerned with biological diversity, climate change, international waters and depletion of the ozone layer. UNEP provides the secretariat for the Scientific and Technical Advisory Panel, which was established to provide expert advice on GEF programmes and operational strategies.

In order to complement the globalization process and the expanded environment agenda, UNEP supports the formulation and implementation of international and national legislation as environmental management tools. While it supports and helps co-ordinate the activities of the secretariats of international and regional conventions, UNEP is undertaking preliminary efforts to formulate a definitive international legal framework for sustainable development. At a national level UNEP assists governments to prepare environmental legislation and guide-lines and to implement existing international conventions. Training workshops in various aspects of environmental law and its application are conducted.

UNEP aims to promote coherent decision-making, in the environment field, through its support for research and information exchange. It promotes the scientific research and review of key environmental issues and conducts workshops to develop policy recommendations.

GLOBAL AND REGIONAL SERVICING AND SUPPORT

UNEP has a major responsibility to identify and assess environmental issues of common concern, to alert the world community to these issues, to precipitate their resolution through international co-operation and to provide policy guidance for the direction and co-ordination of environmental programmes within the UN system. Under this sub-programme UNEP aims to fulfil its role and to deliver its programme of work through the basic institutional functions of environmental assessment, advisory services, public awareness and provision of information. The first Global Environment Outlook (GEO-1), which UNEP presented as an assessment of the state of the world's environment, was published in January 1997.

Through regional consultations and specialized centres world-wide, UNEP aims to develop and enhance frameworks, methodologies and indicators to achieve integrated environmental assessment and reporting. In particular, UNEP aims to strengthen early-warning mechanisms and region-specific assessment. UNEP is participating in the design of a Global Terrestrial Observing System, which was to be implemented by the GEF.

UNEP promotes and supports regional co-operation initiatives for environmental action by co-operation with regional banks, economic commissions and other organizations. In addition, UNEP provides policy and technical advice to governments in developing countries and countries with economies in transition for the integration of environmental considerations into national development plans.

Education and public awareness are critical for promoting sustainable development and improving the capacity of groups and individuals to address environmental issues. UNEP's public education campaigns and outreach programmes promote community involvement in environmental issues. Further communication of environmental concerns is undertaken through the media, an information centre service and special promotional events, including World Environment Day, photograph competitions and the awarding of the Sasakawa Prize to recognize distinguished service to the environment by individuals and groups.

UNEP's data and information services include a global resource information database (GRID), which converts data collected into information usable by decision-makers, and the INFOTERRA programme, which facilitates the exchange of environmental information through an extensive network of national 'focal points', and the Environment and Natural Resource Information Networks (ENRIN), which UNEP aims to establish in every developing region. UNEP aims to integrate all its information resources in order to improve access to information and international environment information exchange. This was to be achieved through the design and implementation of UNEPNET, which was to operate throughout the UN system and be fully accessible through the world-wide information networks.

Finance

UNEP derives its finances from the regular budget of the United Nations and from voluntary contributions to the Environment Fund. A budget of US $75m. was approved for the 1998–99 work programme. In February 1999 the Governing Council authorized a budget of $120m. for the two-year period 2000–01.

United Nations High Commissioner for Refugees—UNHCR

Address: CP 2500, 1211 Geneva 2 dépôt, Switzerland.

Telephone: (22) 7398111; **telex:** 415740; **fax:** (22) 7319546; **internet:** http://www.unhcr.ch/.

The Office of the High Commissioner was established in 1951 to provide international protection for refugees and to seek durable solutions to their problems.

Organization

(August 1999)

HIGH COMMISSIONER

The High Commissioner is elected by the United Nations General Assembly on the nomination of the Secretary-General, and is responsible to the General Assembly and to the UN Economic and Social Council (ECOSOC).

High Commissioner: SADAKO OGATA (Japan).

Deputy High Commissioner: FREDERICK BARTON (USA).

EXECUTIVE COMMITTEE

The Executive Committee of the High Commissioner's Programme, established by ECOSOC, gives the High Commissioner policy directives in respect of material assistance programmes and advice in the field of international protection. It meets once a year, usually in Geneva. It includes representatives of 53 states, both members and non-members of the UN.

ADMINISTRATION

Headquarters include the Executive Office, comprising the offices of the High Commissioner, the Deputy High Commissioner and the Assistant High Commissioner. The offices of Internal Oversight and of International Protection report directly to the Executive Office, as do the Secretariat, the Centre for Documentation and Research and the Department of Public Information. Refugee support services are undertaken by the divisions of Operations Support, Financial and Information Services and Human Resource Management. Operations are administered by the following regional offices: Operations for Central, East and West Africa; Southern Africa Operations; Great Lake Operations; Bureau for Asia and the Pacific; Bureau for Europe; Bureau for the Americas; and Bureau for Central Asia, South-West Asia, North Africa and the Middle East. At July 1998 there were 244 UNHCR field offices in 118 countries. At that time UNHCR employed 5,528 people, including short-term staff, of whom 4,670 (or 84%) were working in the field.

Activities

The competence of the High Commissioner extends to any person who, owing to well-founded fear of being persecuted for reasons of race, religion, nationality or political opinion, is outside the country of his or her nationality and is unable or, owing to such fear or for reasons other than personal convenience, remains unwilling to accept the protection of that country; or who, not having a nationality and being outside the country of former habitual residence, is unable or, owing to such fear or for reasons other than personal convenience, is unwilling to return to it. Refugees who are assisted by other United Nations agencies, or who have the same rights or obligations as nationals of their country of residence, are outside the mandate of UNHCR.

In the early 1990s there was a significant shift in UNHCR's focus of activities. Increasingly UNHCR is called upon to support people who have been displaced within their own country, i.e. with similar needs to those of refugees but who have not crossed an international border. Operations involving internally displaced population may be undertaken only at the request of the UN Secretary-General or the General Assembly and with the consent of the country concerned. In addition, it is providing greater support to refugees who have returned to their country of origin, to assist their reintegration, and is working to enable the local community to support the returnees. At 31 December 1997 the refugee population world-wide totalled 11.98m., while UNHCR was concerned with a further 3.47m. returnees, 954,000 asylum-seekers and 5.97m. others, of whom the majority were internally displaced persons.

INTERNATIONAL PROTECTION

As laid down in the Statute of the Office, one of the two primary functions of UNHCR is to extend international protection to refugees. In the exercise of this function UNHCR seeks to ensure that refugees and asylum-seekers are protected against *refoulement* (forcible return), that they receive asylum, and that they are treated according to internationally recognized standards of treatment. UNHCR pursues these objectives by a variety of means which include promoting the conclusion and ratification by states of international conventions for the protection of refugees, particularly the 1951 UN Convention relating to the Status of Refugees, extended by a Protocol adopted in 1967. The Convention defines the rights and duties of refugees and contains provisions dealing with a variety of matters which affect their day-to-day lives. By January 1999 137 states had acceded to either the Convention or the Protocol, or both.

Palestine refugees in the region are under the care of UNRWA (q.v.).

ASSISTANCE ACTIVITIES

UNHCR assistance activities are divided into General Programmes, which include a Programme Reserve, a General Allocation for Voluntary Repatriation and an Emergency Fund, and Special Programmes. The latter are undertaken at the request of the UN General Assembly, the Secretary-General of the UN or member states, in response to a particular crisis.

The first phase of an assistance operation uses UNHCR's capacity of emergency preparedness and response. This enables UNHCR to address the immediate needs of refugees at short notice, for example, by employing specially trained emergency teams and maintaining stockpiles of basic equipment, medical aid and materials. A significant proportion of UNHCR expenditure is allocated to the next phase of an operation, providing 'care and maintenance' in stable refugee circumstances. This assistance can take various forms, including the provision of food, shelter, medical care and essential supplies. Also covered in many instances are basic services, including education and counselling. Whenever possible, measures of this kind are accompanied by efforts to encourage maximum levels of self-reliance among the refugee population.

As far as possible, assistance is geared towards the identification and implementation of durable solutions to refugee problems—this being the second statutory responsibility of UNHCR. Such solutions generally take one of three forms: voluntary repatriation, local integration and resettlement. Where voluntary repatriation is feasible, the Office assists refugees to overcome obstacles preventing their return to their country of origin. This may be done through negotiations with governments involved, or by providing funds either for the physical movement of refugees or for the rehabilitation of returnees once back in their own country.

When voluntary repatriation is not feasible, efforts are made to assist refugees to integrate locally and to become self-supporting in their countries of asylum. In cases where resettlement through emigration is the only viable solution to a refugee problem, UNHCR negotiates with governments in an endeavour to obtain resettlement opportunities, to encourage liberalization of admission criteria and to draw up special immigration schemes. During 1997 25,179 refugees were resettled under UNHCR auspices.

In the early 1990s UNHCR aimed to consolidate efforts to integrate certain priorities into its programme planning and implementation, as a standard discipline in all phases of assistance. The considerations include awareness of specific problems confronting refugee women, the needs of refugee children, the environmental impact of refugee programmes and long-term development objectives. In an effort to improve the effectiveness of its programmes UNHCR has initiated a process of delegating authority, as well as responsibility for operational budgets, to its regional and field representatives, increasing flexibility and accountability. In 1995 a new Inspection and Evaluation Service was established in order to strengthen UNHCR's capacity to review operational effectiveness and efficiency.

REGIONAL ASSISTANCE

From 1974 onwards UNHCR has acted as co-ordinator of the UN Humanitarian Programme of Assistance for Cyprus, assisting some 265,000 displaced persons on the island.

UNHCR co-ordinates humanitarian assistance for the estimated 165,000 Sahrawis registered as refugees in the Tindouf area of Algeria. Approximately 80,000 most vulnerable members of the Sahrawi refugee population receive direct assistance from UNHCR. In September 1997 an agreement was reached on implementing the 1991 Settlement Plan for the Western Sahara. Accordingly, UNHCR was to help organize the registration and safe return of up to 135,000 Sahrawi refugees who had been identified as eligible to vote in the referendum on the future of the territory, scheduled to be conducted in early December 1998. In addition, UNHCR was to facilitate the reintegration of the returnees and monitor their rehabilitation. The referendum was subsequently rescheduled, according to proposals presented by the UN Secretary-General in November, and was envisaged to be conducted in December 1999 (later revised to 31 July 2000).

From 1979, as a result of civil strife in Afghanistan, there was a massive movement of refugees from that country into Pakistan and Iran, creating the world's largest refugee population, which reached a peak of almost 6.3m. in 1992. In April 1992, following the establishment of a new Government in Afghanistan, refugees began to return in substantial numbers (hitherto only a small number had returned under the UNHCR-administered repatriation programme) although large numbers of people continued to flee into Pakistan as a result of the fighting that persisted. From October 1996 renewed hostilities resulted in further large-scale population displacement, and in November UNHCR suspended its relief activities in the Afghan capital, Kabul, owing to mounting security concerns. Relief operations continued in other parts of the country. During 1997 UNHCR operated a pilot scheme to organize group repatriations to specific areas in Afghanistan, under the protection of international observers. At 31 December 1997 the Afghan refugee population totalled 2.65m., of whom 1.4m. were in Iran and 1.2m. in Pakistan. By 30 June 1998 59,070 refugees had returned, with UNHCR assistance, from Pakistan and 753 from Iran since the start of the year, bringing that total number of returnees to more than 4m. since 1988 (2.7m. from Pakistan and 1.3m. from Iran). However, the ongoing civil conflict and new population displacement precluded a settlement of the Afghan refugee situation and continued to cause immense difficulties in undertaking a comprehensive humanitarian operation in that country.

In March–May 1991, following the war against Iraq by a multinational force, and the subsequent Iraqi suppression of resistance in Kurdish areas in the north of the country, there was massive movement of some 1.5m., mainly Kurdish, refugees into Iran and Turkey. UNHCR was designated the principal UN agency to attempt to alleviate the crisis. In May the refugees began to return to Iraq in huge numbers and UNHCR assisted in their repatriation, establishing relief stations along their routes from Iran and Turkey. Following the war to liberate Kuwait UNHCR gave protection and assistance to Iraqis, Bidoons (stateless people) and Palestinians who were forced to leave that country. At April 1997 there were 3,800 registered refugees in Kuwait, while an additional 25,000 people were of concern to UNHCR, including 15,000 Iraqis and 8,000 Palestinians.

In April 1994 UNHCR initiated a programme to provide food and relief assistance to Turkish Kurds who had fled into northern Iraq. In September 1996 fighting escalated among the Kurdish factions in northern Iraq. By the time a cease-fire agreement was concluded in November some 65,000 Iraqi Kurds had fled across the border into Iran. UNHCR, together with the Iranian Government, provided these new refugees with basic humanitarian supplies. By the end of the year, however, the majority of refugees had returned to Iraq, owing to poor conditions in the temporary settlements, security concerns at being located in the border region and pressure from the Iranian authorities. In December, UNHCR announced its intention to withdraw from the Atroush camp, which housed an estimated 15,000 Turkish Kurds, following several breaches of security in the camp, and expressed its concern at the political vacuum in the region resulting from the factional conflict. UNHCR proceeded to

transfer 4,000 people to other local settlements and to provide humanitarian assistance to those refugees who had settled closer to Iraqi-controlled territory but who had been refused asylum. At 31 December 1997 the refugee population in Iraq totalled 104,000, of whom some 62,600 were Palestinians, 29,400 Iranian Kurds, and 10,900 Kurds from Turkey. In addition, there were 125,800 returnees and 32,000 displaced persons in Iraq of concern to UNHCR. During 1997 UNHCR assisted 4,341 Iraqi Kurds to repatriate from Iran, and recorded a further 4,000 spontaneous returnees. At December, however, there was still a substantial Iraqi refugee population in the region, totalling an estimated 630,700, of whom 570,800 were in Iran. At the end of 1997 Iran remained the principal country of asylum in the world, hosting some 2m. refugees, mainly from Afghanistan and Iraq.

In June 1992 people fleeing the civil war and famine in Somalia began arriving in Yemen in large numbers. UNHCR set up camps to accommodate some 50,000 refugees, providing them with shelter, food, water and sanitation. As a result of civil conflict in Yemen in mid-1994, a large camp in the south of the country was demolished and other refugees had to be relocated, while the Yemen authorities initiated a campaign of forcible repatriation. At December 1997 Yemen was hosting 38,500 refugees, and a further 60,000 people in a refugee-like situation of concern to UNHCR (i.e. mainly Yemeni nationals of Somali origin, and certain Eritrean and Palestinian residents). During early 1998 the refugee population in Yemen expanded owing to the influx of Somalis fleeing the ongoing civil conflict and the effects of heavy flooding which had devastated areas in the south of that country.

Persons of concern to UNHCR in the Middle East and North Africa (at 31 December 1997, '000)*

Country	Refugees	Asylum seekers	Returnees	Others of concern
Algeria	170.7	—	—	—
Cyprus	0.0	—	—	265.0†
Iran	1,982.6	—	—	—
Iraq	104.0	1.6	125.8	32.0†
Kuwait	3.8	0.7	—	138.0
Libya	8.5	1.5	—	—
Syria	22.7	0.6	—	—
Yemen	38.5	0.6	—	60.0

* The table shows only those countries where the total number of persons of concern to UNHCR amounted to more than 10,000. The figures are provided mostly by governments, based on their own methods of estimation. The data do not include Palestinian refugees, who come under the care of UNRWA (q.v.).

† Internally displaced persons.

CO-OPERATION WITH OTHER ORGANIZATIONS

UNHCR works closely with other UN agencies, intergovernmental organizations and non-governmental organizations (NGOs) to increase the scope and effectiveness of its emergency operations. Within the UN system UNHCR co-operates, principally, with the World Food Programme in the distribution of food aid, UNICEF and the World Health Organization in the provision of family welfare and child immunization programmes and with the UN Development Programme in development-related activities and the preparation of guide-lines for the continuum of emergency assistance to development programmes. UNHCR also has close working relationships with the International Committee of the Red Cross and the International Organization for Migration. In June 1994 a world conference was held in Oslo, Norway, attended by UNHCR and some 450 NGOs, at which a Declaration to consolidate their collaboration in humanitarian operations was adopted. In 1997 UNHCR implemented 931 projects in 131 countries in collaboration with 443 NGOs, enabling UNHCR to broaden the use of its resources while maintaining a co-ordinating role in the provision of assistance.

Finance

UNHCR administrative expenditure is financed under the United Nations regular budget. General Programmes of material assistance are financed from voluntary contributions made by governments, and also from non-governmental sources. The 1999 budget totalled US $914.8m., of which the regular budget amounted to $19.8m., while $413.0m. was allocated to General Programmes and $482.0m. to Special Programmes. Of the total amount, $28.0m. (or some 3%) was proposed for expenditure in North Africa and the Middle East.

United Nations Peace-keeping Operations

Address: Department of Peace-keeping Operations, Room S-3727-B, United Nations, New York, NY 10017, USA.

Telephone: (212) 963-8079; **telex:** 420544; **fax:** (212) 963-9222; **internet:** http://www.un.org/Depts/dpko/.

United Nations peace-keeping operations have been conceived as instruments of conflict control. The UN has used these operations in various conflicts, with the consent of the parties involved, to maintain international peace and security, without prejudice to the positions or claims of parties, in order to facilitate the search for political settlements through peaceful means such as mediation and the good offices of the Secretary-General. Each operation has been established with a specific mandate, which requires periodic review by the Security Council. United Nations peace-keeping operations fall into two categories: peace-keeping forces and observer missions.

Peace-keeping forces are composed of contingents of military and civilian personnel made available by member states. These forces assist in preventing the recurrence of fighting, restoring and maintaining peace, and promoting a return to normal conditions. To this end, peace-keeping forces are authorized as necessary to undertake negotiations, persuasion, observation and fact-finding. They run patrols and interpose physically between the opposing parties. Peace-keeping forces are permitted to use their weapons only in self-defence.

Military observer missions are composed of officers (usually unarmed), who are made available, on the Secretary-General's request, by member states. A mission's function is to observe and report to the Secretary-General (who in turn informs the UN Security Council) on the maintenance of a cease-fire, to investigate violations and to do what it can to improve the situation.

Peace-keeping forces and observer missions must at all times maintain complete impartiality and avoid any action that might affect the claims or positions of the parties.

The UN's peace-keeping forces and observer missions are financed in most cases by assessed contributions from member states of the organization. During the 1990s, a significant expansion in the UN's peace-keeping activities has been accompanied by a perpetual financial crisis within the organization, as a result of the increased financial burden and some member states' delaying payment. At 31 October 1998 outstanding assessed contributions to the peace-keeping budget amounted some US $1,651m.

UNITED NATIONS DISENGAGEMENT OBSERVER FORCE—UNDOF

Headquarters: Damascus, Syria.

Commander: Maj.-Gen. Cameron Ross (Canada).

UNDOF was established for an initial period of six months by a UN Security Council resolution in May 1974, following the signature in Geneva of a disengagement agreement between Syrian and Israeli forces. The mandate has since been extended by successive resolutions. The initial task of the Force was to take over territory evacuated in stages by the Israeli troops, in accordance with the disengagement agreement, to hand over territory to Syrian troops, and to establish an area of separation on the Golan Heights.

UNDOF continues to monitor the area of separation; it conducts fortnightly inspections of the areas of limited armaments and forces; uses its best efforts to maintain the cease-fire; and from time to time has undertaken activities of a humanitarian nature, such as arranging the transfer of prisoners and war-dead between Syria and Israel. The Force operates exclusively on Syrian territory.

At 31 May 1999 the Force comprised 1,029 troops from Austria, Canada, Japan, Poland and Slovakia. It is assisted by 80 UNTSO military observers (the Observer Group, Golan). The cost to the

United Nations of the operation for the period 1 July 1998–30 June 1999 was estimated at US $35.4m.

UNITED NATIONS INTERIM FORCE IN LEBANON—UNIFIL

Headquarters: an-Naqoura, Lebanon.

Commander: Maj.-Gen. JIOJE KONOUSE KONROTE (Fiji).

UNIFIL was established by a UN Security Council resolution in March 1978. The original mandate of the force was to verify the withdrawal of Israeli forces from southern Lebanon, to restore international peace and security, and to assist the Government of Lebanon in ensuring the return of its effective authority in the area. UNIFIL has also extended humanitarian assistance to the population of the area, particularly since the second Israeli invasion of Lebanon in 1982. By mid-1998 Security Council Resolution 425, requiring the unconditional withdrawal of Israeli troops from southern Lebanon, had yet to be implemented. In late March 1998 the Israeli Government announced that it recognized Resolution 425, although any withdrawal of its troops would be conditional on receiving security guarantees from the Lebanese authorities. A formal decision to this effect, adopted on 1 April, was rejected by the Lebanese and Syrian Governments. In April 1992, in accordance with its mandate, UNIFIL completed the transfer of part of its zone of operations to the control of the Lebanese army. UNIFIL maintains checkpoints and observation posts, which are designed to monitor movement on the principal roads and to deter hostilities. UNIFIL provides civilians with food, water, medical supplies, fuel and escorts to farmers. UNIFIL medical centres and mobile teams provide care to an average 3,000 civilian patients each month, and a field dental programme has been established.

In April 1996 Israel initiated a large-scale offensive against suspected targets pertaining to the Hezbollah militia in southern Lebanon. During the offensive Israeli artillery shells struck a UNIFIL base at Qana, which was temporarily being used to shelter civilians displaced by the hostilities, resulting in the deaths of more than 100 people. The UN Security Council condemned the attack and demanded the respect by all sides of UNIFIL's mandate and for the safety and freedom of movement of its troops. In May a UN inquiry concluded that the UN site had been deliberately targeted during the offensive, owing to the presence of Hezbollah activists in the camp. In June 1997 the UN General Assembly resolved that Israel should contribute US $1.8m. towards UNIFIL's operational costs, as compensation for the Qana incident.

At 31 May 1999 the Force comprised some 4,500 troops (from nine countries), assisted by some 60 UNTSO military observers (the Observer Group, Lebanon), and other international and local civilian staff. The cost to the United Nations of the operation for the period 1 July 1998–30 June 1999 was approximately US $143m.

UNITED NATIONS IRAQ-KUWAIT OBSERVATION MISSION—UNIKOM

Headquarters: Umm Qasr, Kuwait.

Commander: Maj.-Gen. ESA KALERVO TARVAINEN (Finland).

UNIKOM was established by a UN Security Council resolution (initially for a six-month period) in April 1991, to monitor a 200-km demilitarized zone along the border between Iraq and Kuwait. The task of the mission was to deter violations of the border, to monitor the Khawr 'Abd Allah waterway between Iraq and Kuwait, and to prevent military activity within the zone. In February 1993 the Security Council adopted a resolution to strengthen UNIKOM and expand its mandate, following incursions into Kuwaiti territory by Iraqi personnel, in order to enable the use of physical action to prevent or redress violations of the demilitarized zone or the border between Iraq and Kuwait. In April the UN Secretary-General agreed to reinforce the mission's observer team and logistic support elements. UNIKOM provides technical support to other UN operations in the area, particularly the Iraq-Kuwait Boundary Demarcation Commission, and assisted with the relocation of Iraqi citizens from Kuwait, which was completed in February 1994.

At 31 May 1999 UNIKOM comprised 908 troops and support personnel and 194 military observers, assisted by 200 international and local civilian support staff. In June 1998 the UN General Assembly appropriated US $52.1m. for the maintenance of the mission for a period of one year. Two-thirds of the total cost of the mission are funded by voluntary contributions from Kuwait.

UNITED NATIONS MISSION FOR THE REFERENDUM IN WESTERN SAHARA—MINURSO

Headquarters: El-Aaiún, Western Sahara.

Special Representative of the UN Secretary-General: WILLIAM EAGLETON (USA).

Personal Envoy of the UN Secretary-General: JAMES BAKER, III (USA).

Chairman of the Identification Commission: EDUARDO VETERE.

Chief Military Observer: Brig.-Gen. BERND LUBENIK (Austria).

In April 1991 the UN Security Council endorsed the establishment of MINURSO to verify a cease-fire in the disputed territory of Western Sahara (claimed by Morocco), which came into effect in September 1991, to secure the release of all Western Saharan political prisoners, to implement a programme of repatriation of Sahrawi refugees (in co-ordination with UNHCR), and to organize a referendum on the future of the territory. The referendum, originally envisaged for January 1992 was, however, postponed indefinitely. In 1992–93 the Secretary-General's Special Representative organized negotiations between the Frente Popular para la Liberación de Saguia el-Hamra y Río de Oro (Frente Polisario) and the Moroccan Government, who were in serious disagreement regarding criteria for eligibility to vote in the referendum (in particular, the Moroccan Government insisted that more than 100,000 members of ethnic groups who had been forced to leave the territory under Spanish rule prior to the last official census in 1974, the results of which were to be used as a basis for voter registration, should be allowed to participate in a referendum.) Nevertheless, in March 1993 the Security Council advocated that further efforts should be made to compile a satisfactory electoral list and to resolve the outstanding differences on procedural issues. An Identification Commission was consequently established to begin the process of voter registration, although this was obstructed by the failure of the Moroccan Government and the Frente Polisario to pursue political dialogue. In March 1994 the Security Council resolved that the Identification Commission should proceed with its work and the UN continued its efforts to obtain the co-operation of the two parties. The identification and registration operation was formally initiated in August; however, the process was complicated by the dispersed nature of the Western Saharan population and by a deterioration in diplomatic relations between Morocco and neighbouring Algeria, which hosts the majority of Sahrawi refugees. In December the Secretary-General expressed his intention to commence the transitional period of the settlement plan, during which time MINURSO was to oversee a reduction of Moroccan government troops in the region, a confinement of Frente Polisario forces, the release of political prisoners and the exchange of other prisoners and refugees, with effect from 1 June 1995. While this date was later reviewed, in June 1995 a Security Council mission visited the region to assess the referendum process. The mission recognized legitimate difficulties in conducting the indentification process; however, it urged all parties to co-operate with MINURSO and suggested that the future of the Mission would be reconsidered in the event of further delays. In December the UN Secretary-General reported that the identification of voters had stalled, owing to persistent obstruction of the process on the part of the Moroccan and Frente Polisario authorities. By May 1996 all efforts to resume the identification process had failed, owing to the ongoing dispute regarding the number of potentially eligible voters, as well as the Frente Polisario's insistence on reviewing those already identified (a demand rejected by Morocco). Three registration offices in Western Sahara and one in Mauritania were closed. At the end of that month the Security Council endorsed a recommendation of the Secretary-General to suspend the identification process, until all sides demonstrate their willingness to co-operate with the mission. In addition, the Security Council decided that MINURSO's operational capacity was to be reduced by 20%, with sufficient troops retained to monitor and verify the cease-fire. The Secretary-General's acting Special Representative pursued efforts to maintain political dialogue in the region; however, no significant progress was achieved in furthering the identification process. In early 1997 the new Secretary-General of the UN, Kofi Annan, attempted to revive the possibility of an imminent resolution of the dispute, amid increasing concerns that the opposing authorities were preparing for a resumption of hostilities in the event of a collapse of the existing cease-fire, and appointed James Baker, a former US Secretary of State, as his Personal Envoy to the region. In early June Baker obtained the support of Morocco and the Frente Polisario, as well as Algeria and Mauritania (which border the disputed territory), to conduct further negotiations in order to advance the referendum process. Direct talks between senior representatives of the Moroccan Government and the Frente Polisario authorities were initiated later in that month, in Lisbon, Portugal, under the auspices of the UN Special Representative, and attended

by Algeria and Mauritania in an observer capacity. In September the two sides concluded an agreement which aimed to resolve the outstanding issues of contention and enable the referendum to be conducted in late 1998. The agreement included a commitment by both parties to identify eligible Sahrawi voters on an individual basis, in accordance with the results of the 1947 census, and a code of conduct to ensure the impartiality of the poll. In October 1997 the Security Council extended MINURSO's mandate to 20 April 1998. The Council also endorsed a recommendation of the Secretary-General to increase the strength of the mission, initially by 32 identification staff and 36 civilian police officers to work at up to nine identification centres. The process of voter identification resumed in December 1997. The timetable for the settlement plan envisaged the identification process as being completed by 31 May 1998, a final list of voters to be published, after a process of appeal, in late July, followed by a transitional period, under UN authority, during which all Sahrawi refugees were to be repatriated. The referendum was scheduled to be conducted on 7 December, and MINURSO was expected to withdraw from the region in January 1999. In January 1998 the Security Council approved the deployment of an engineering unit to support MINURSO in its demining activities. In April the Council extended MINURSO's mandate for a three-month period. At that time there were already significant delays apparent in the identification process, owing to ongoing disputes regarding the eligibility of members of three Saharan tribal groups. In July the Security Council extended MINURSO's mandate until 21 September, but warned that it would be terminated if either side significantly obstructed implementation of the settlement plan. By early September the initial identification process had been completed, with a total of 147,350 voters identified, including 87,238 since December 1997. However, the issue of the eligibility of 65,000 members of the three disputed tribal groups remained unresolved. Later in that month the UN Security Council extended MINURSO's mandate by 30 days, to enable the Personal Envoy of the Secretary-General to attempt to negotiate a solution to the problem. At the end of October the Council, extending MINURSO's mandate until 17 December, endorsed a series of measures proposed by the Secretary-General to advance the referendum process and urged both sides to agree to the plans by mid-November. The measures provided for a strengthened Identification Commission to consider requests from any applicant from the disputed tribal groups on an individual basis, with effect from 1 December. On that date a provisional list of voters was to be published and the appeals process initiated. The proposals also incorporated the need for an agreement by both sides with UNHCR with regard to arrangements for the repatriation of refugees. In early November the Secretary-General visited the region to promote his proposals for a peaceful settlement. At that time it was anticipated that the new timetable could allow for the identification process to be completed by mid-April 1999, a transitional period to commence in June or July, with the referendum to be conducted in December. By early December 1998 the Frente Polisario, Algeria and Mauritania were reported to have accepted the proposals, while the position of the Moroccan Government remained uncertain, placing the future of MINURSO in doubt. Negotiations followed between representatives of the UN and the Moroccan Government, and in late January 1999 an agreement was reached on the proposals, which included the establishment of a new UNHCR office in Western Sahara. In mid-March Morocco signed an agreement with the UN to secure the basis of the MINURSO operation, which was subsequently extended by the Security Council. In May the Council extended the mandate until mid-September in order to resume the identification process and implement the settlement plan. A new timetable envisaged the referendum being held on 31 July 2000. In July 1999 the UN published a provisional list of 85,000 qualified voters. In September the Mission's mandate was extended until mid-December.

The Mission has headquarters in the north and south of the territory, and there is a liaison office in Tindouf, Algeria, in order to maintain contact with Polisario (which is based in Algeria) and the Algerian Government.

At 26 January 1999 MINURSO comprised 197 military observers, six staff officers, 87 troops and 26 civilian police observers. In November 1998 the UN General Assembly appropriated US $37.3m. to meet the costs of the mission for the period 1 November–30 June 1999.

UNITED NATIONS PEACE-KEEPING FORCE IN CYPRUS—UNFICYP

Headquarters: Nicosia, Cyprus.

Special Adviser to the UN Secretary-General: James Holger.

Commander: Maj.-Gen. Evergisto Arturo de Vergara (Argentina).

UNFICYP was established in March 1964 by a UN Security Council resolution (for a three-month period, subsequently extended) to prevent a recurrence of fighting between the Greek and Turkish Cypriot communities, and to contribute to the maintenance of law and order and a return to normal conditions. The Force controls a 180-km buffer zone, established (following the Turkish intervention in 1974) between the cease-fire lines of the Turkish forces and the Cyprus National Guard. The Force also performs humanitarian functions, such as facilitating the supply of electricity and water across the cease-fire lines, and providing emergency medical services. In August 1996 serious hostilities between elements of the two communities in the UN-controlled buffer zone resulted in the deaths of two people and injuries to many others, including 12 UN personnel. Following further intercommunal violence, UNFICYP advocated the prohibition of all weapons and military posts along the length of the buffer zone. The Force also proposed additional humanitarian measures to improve the conditions of minority groups living in the two parts of the island. A new series of direct negotiations between the leaders of the two communities was initiated, under the auspices of the Special Adviser, in July 1997. By mid-1999 no significant progress had been made towards achieving a settlement.

At 30 November 1998 UNFICYP had an operational strength of 1,273 troops and 33 civilian police monitors, supported by 330 international and local civilian staff. The annual cost of maintaining the Force is estimated at US $43.0m., of which about one-half is met by assessed contributions from UN member states; the Government of Cyprus pays one-third of the total cost of the operation, while Greece contributes an estimated $6.5m.

UNITED NATIONS TRUCE SUPERVISION ORGANIZATION—UNTSO

Headquarters: Government House, Jerusalem.

Chief-of-Staff: Maj.-Gen. Timothy R. Ford (Australia).

UNTSO was established initially to supervise the truce called by the UN Security Council in Palestine in May 1948 and has assisted in the application of the 1949 Armistice Agreements. Its activities have evolved over the years, in response to developments in the Middle East and in accordance with the relevant resolutions of the Security Council.

UNTSO observers assist the UN peace-keeping forces in the Middle East (see below), UNIFIL and UNDOF. UNTSO maintains a presence in Egypt, organized as Observer Group Egypt which has its headquarters at Ismailia, in the area of the Suez canal, and conducts patrols and operates outposts in the Sinai region. There is also a small detachment of observers in Beirut, Lebanon and liaison offices in Amman, Jordan and Gaza. UNTSO observers have been available at short notice to form the nucleus of other peace-keeping operations.

At 31 May 1999 UNTSO comprised 143 military observers, who were supported by other international and local civilian staff. UNTSO expenditures are covered by the regular budget of the United Nations. The mission was allocated US $47.7m. from the two-year budget for 1998–99.

United Nations Relief and Works Agency for Palestine Refugees in the Near East—UNRWA

Addresses: Gamal Abd an-Nasser St, Gaza City; Bayader Wadi Seer, POB 140157, Amman 11814, Jordan.

Telephone (Gaza City): (7) 6777333; **fax:** (7) 6777555.
Telephone (Amman): (6) 5826171; **telex:** 21170; **fax:** (6) 5826177.

Internet: http://www.un.org/unrwa/.

UNRWA was established by the UN General Assembly to provide relief, health, education and welfare services for Palestine refugees in the Near East, initially on a short-term basis. UNRWA began operations in May 1950 and, in the absence of a solution to the refugee problem, its mandate has subsequently been extended by the General Assembly, most recently until 30 June 2002.

Organization

(August 1999)

UNRWA employs an international staff of about 130 and more than 21,000 local staff, mainly Palestine refugees. In mid-1996 the agency's headquarters were relocated, from Vienna, Austria, to Gaza and Jordan. The Commissioner-General is the head of all UNRWA operations and reports directly to the UN General Assembly. UNRWA has no governing body, but its activities are reviewed annually by a 10-member Advisory Commission comprising representatives of the governments of:

Belgium	Jordan	Turkey
Egypt	Lebanon	United Kingdom
France	Syria	USA
Japan		

Commissioner-General: PETER HANSEN (Denmark).

FIELD OFFICES

Each field office is headed by a director and has departments responsible for education, health and relief and social services programmes, finance, administration, supply and transport, legal affairs and public information.

Gaza: POB 61; Al Azhar Rd, Rimal Quarter, Gaza City; tel. (7) 824508; fax (7) 6777444.

Jordan: POB 484; Al Zubeidi Bldg, Mustafa Bin Abdullah St, Tla'a Al-Air, Amman; tel. (6) 5607194; telex 23402; fax (6) 5685476.

Lebanon: POB 947; Bir Hassan, Ghobeiri, Beirut; tel. (1) 603437; fax (1) 603443.

Syria: POB 4313; UN Compound, Mezzah Highway/Beirut Rd, Damascus; tel. (11) 6133035; fax (11) 6133047.

West Bank: POB 19149; Sheik Jarrah Qtr, Jerusalem; tel. (2) 5890400; telex 26194; fax (2) 5322714.

LIAISON OFFICES

Egypt: 2 Dar-el-Shifa St, Garden City, POB 277, Cairo; tel. (2) 354-8502; fax (2) 354-8504.

USA: 2 United Nations Plaza, Room DC 2-1755, New York, NY 10017; tel. (212) 963-2255; telex 422311; fax (212) 935-7899.

Activities

ASSISTANCE ACTIVITIES

Since 1950 UNRWA has been the main provider of relief, health, education and social services for Palestine refugees in Lebanon, Syria, Jordan, the West Bank and the Gaza Strip. For UNRWA's purposes, a Palestine refugee is one whose normal residence was in Palestine for a minimum of two years before the 1948 conflict and who, as a result of the Arab–Israeli hostilities, lost his or her home and means of livelihood. To be eligible for assistance, a refugee must reside in one of the five areas in which UNRWA operates and be in need. A refugee's descendants who fulfil certain criteria are also eligible for UNRWA assistance. At 31 December 1998 UNRWA was providing essential services to 3,573,382 registered refugees (see table). Of these, an estimated 1,159,669 (33%) were living in 59 camps serviced by the Agency, while the remaining refugees had settled in the towns and villages already existing.

UNRWA's three principal areas of activity are education; health services; and relief and social services. Some 77% of the Agency's 1999 regular budget was devoted to these three operational programmes.

Education accounted for 47% of UNRWA's 1999 budget. In the 1998/99 school year there were 458,716 pupils enrolled in 650 UNRWA schools, and 13,915 educational staff. UNRWA also operated eight vocational and teacher-training centres, which provided a total of 4,632 training places. UNRWA awarded 891 scholarships for study at Arab universities in 1998/99. Technical co-operation for the Agency's education programme is provided by UNESCO.

Health services accounted for 18% of UNRWA's 1999 general fund budget. At the end of 1998 there were 122 primary health care units providing outpatient medical care, disease prevention and control, maternal and child health care and family planning services, of which 82 also offered dental care. At that time annual patient visits to UNRWA medical units numbered 7.0m., while the number of health staff totalled 3,484. UNRWA also operates a small hospital in the West Bank and offers assistance towards emergency and other secondary treatment, mainly through contractual agreements with non-governmental and private hospitals Technical assistance for the health programme is provided by WHO.

Relief and social services accounted for 12% of UNRWA's general fund budget for 1999. These services comprise the distribution of food rations, the provision of emergency shelter and the organization of welfare programmes for the poorest refugees (at 31 December 1998 195,359 refugees, or 5.5% of the total registered refugee population, were eligible to receive special hardship assistance). In 1998 UNRWA provided technical and financial support to 70 women's programmes, 26 youth activity centres and 32 community-based rehabilitation centres.

In order to encourage Palestinian self-reliance the Agency issues grants to ailing businesses and loans to families who qualify as special hardship cases. Between 1983 and early 1993 608 such grants and loans were made. In 1991 UNRWA launched an income generation programme, which provides capital loans to small businesses and micro-enterprises with the objective of creating sustainable employment and eliminating poverty, particularly in the Occupied Territories. By 31 December 1998 18,053 loans, with a total estimated value of US $30.1m., had been issued to new and existing Palestinian-owned enterprises.

Following the signing of the Declaration of Principles by the Palestine Liberation Organization and the Israeli Government in September 1993, UNRWA initiated a Peace Implementation Programme (PIP) to improve services and infrastructure for Palestinian refugees. In September 1994 the first phase of the programme (PIP I) was concluded after the receipt of US $93.2m. in pledged donations. PIP I projects included the construction of 33 schools and 24 classrooms and specialized education rooms, the rehabilitation of 4,700 shelters, the upgrading of solid waste disposal facilities throughout the Gaza Strip and feasibility studies for two sewerage systems. It was estimated that these projects created more than 5,500 jobs in the Gaza Strip for an average period of four months each. By mid-1998 the total number of PIP projects, including those under the second phase of the programme (PIP II), amounted to 369, while funds received or pledged to the Programme totalled $221.7m.

Since 1993 UNRWA has been engaged in the construction, equipping and commissioning of a 232-bed hospital in Gaza, with funds from the European Union and its member states. Construction was finished in 1996. The hospital and an affiliated nursing college were to be integrated into the health care system of the Palestinian National Authority, once the process of commissioning had been completed.

AID TO DISPLACED PERSONS

After the renewal of Arab–Israeli hostilities in the Middle East in June 1967, hundreds of thousands of people fled from the fighting and from Israeli-occupied areas to east Jordan, Syria and Egypt. UNRWA provided emergency relief for displaced refugees and was additionally empowered by a UN General Assembly resolution to provide 'humanitarian assistance, as far as practicable, on an emergency basis and as a temporary measure' for those persons other than Palestine refugees who were newly displaced and in urgent need. In practice, UNRWA lacked the funds to aid the other displaced persons and the main burden of supporting them devolved on the

Arab governments concerned. The Agency, as requested by the Government of Jordan in 1967 and on that Government's behalf, distributes rations to displaced persons in Jordan who are not registered refugees of 1948.

RECENT EMERGENCIES

Since 1982 UNRWA has managed a specially-funded operation in Lebanon, aimed at assisting refugees displaced by the continued civil conflict. In late 1986 and early 1987 fighting caused much destruction to Palestinian housing and UNRWA facilities in Lebanon, and an emergency relief operation was undertaken. In April 1996 UNRWA dispatched emergency supplies to assist some of the estimated 500,000 people displaced by renewed military activities in southern Lebanon.

In January 1991 (following the outbreak of war between Iraq and a multinational force whose aim was to enforce the withdrawal of Iraqi forces from Kuwait) the Israeli authorities imposed a curfew on Palestinians in the Israeli-occupied territories, and in February UNRWA began an emergency programme of food distribution to Palestinians who had thereby been prevented from earning a living. Following the conflict, Jordan absorbed more than 300,000 people fleeing Kuwait and other Gulf countries. Many of these people are eligible for UNRWA services.

In September 1992 an UNRWA mission was sent to Kuwait, following allegations of abuses of human rights perpetrated by the Kuwaiti authorities against Palestinian refugees living there. The mission was, however, limited to assessing the number of Palestinians from the Gaza Strip in Kuwait, who had been unable to obtain asylum in Jordan, since Jordan did not recognize Gazan identity documents.

STATISTICS

Refugees Registered with UNRWA (31 December 1998)

Country	Number	% of total
Jordan	1,487,449	41.6
Gaza Strip	785,551	22.0
West Bank	562,737	15.7
Syria	370,035	10.4
Lebanon	367,610	10.3
Total	3,573,382	100.0

Finance

UNRWA is financed almost entirely by voluntary contributions from governments and the European Union, the remainder being provided by UN bodies, non-governmental organizations, business corporations and private sources, which also contribute to extra-budgetary activities. UNRWA's general fund budget for 1999 amounted to US $352.8m.

Publication

Annual Report of the Commissioner-General of UNRWA.

Food and Agriculture Organization—FAO

Address: Viale delle Terme di Caracalla, 00100 Rome, Italy.

Telephone: (06) 57051; **telex:** 625852; **fax:** (06) 5705-3152; **e-mail:** telex-room@fao.org; **internet:** http://www.fao.org.

FAO, the first specialized agency of the UN to be founded after the Second World War, was established in Québec, Canada, in October 1945. The Organization combats malnutrition and hunger and serves as a co-ordinating agency for development programmes in the whole range of food and agriculture, including forestry and fisheries. It helps developing countries to promote educational and training facilities and the creation of appropriate institutions.

Organization

(August 1999)

CONFERENCE

The governing body is the FAO Conference of member nations. It meets every two years, formulates policy, determines the Organization's programme and budget on a biennial basis, and elects new members. It also elects the Director-General of the Secretariat and the Independent Chairman of the Council. Every second year, FAO also holds conferences in each of its five regions (designated the Near East, Asia and the Pacific, Africa, Latin America and the Caribbean, and Europe).

COUNCIL

The FAO Council is composed of representatives of 49 member nations, elected by the Conference for staggered three-year terms. It is the interim governing body of FAO between sessions of the Conference. The most important standing Committees of the Council are: the Finance and Programme Committees, the Committee on Commodity Problems, the Committee on Fisheries, the Committee on Agriculture and the Committee on Forestry.

SECRETARIAT

The total number of staff at FAO headquarters in September 1997 was 2,465, of whom 67 were associate experts, while staff in field, regional and country offices numbered 1,967, including 133 associate experts. Work is supervised by the following Departments: Administration and Finance; General Affairs and Information; Economic and Social Policy; Agriculture; Forestry; Fisheries; Sustainable Development; and Technical Co-operation.

Director-General: JACQUES DIOUF (Senegal).

REGIONAL OFFICES

Regional Office for the Near East: 11 el-Eslah el-Zerai St, POB 2223, Dokki, Cairo, Egypt; tel. (2) 3316000; telex 21055; fax (2) 3495981; e-mail fao-rne@field.fao.org; Regional Rep. ATIF Y. BUKHARI.

Sub-regional Office for North Africa: BP 300, Tunis, Tunisia; tel. (1) 847553; telex 14994; fax (1) 791859; e-mail fao-snea@field.fao.org; Sub-regional Rep. BRAHIM AMOURI.

Activities

FAO aims to raise levels of nutrition and standards of living, by improving the production and distribution of food and other commodities derived from farms, fisheries and forests. FAO provides technical information, advice and assistance by disseminating information; acting as a neutral forum for discussion of food and agricultural issues; advising governments on policy and planning; and developing capacity directly in the field.

The 1997 FAO Conference, held in Rome in November, identified the following areas of activity as FAO priorities for 1998–99; the Special Programme for Food Security; transboundary animal and plant pests and diseases; forestry; the Codex Alimentarius code on food standards; and strengthening the Technical Co-operation Programme (which funds 15% of FAO's field programme expenditure). The Conference also endorsed FAO's 'TeleFood' initiative, a televised fund-raising event, broadcast to an estimated 500m. viewers in some 70 countries in October 1997. The initiative generated approximately US $2m. towards projects aimed at helping small-scale farmers to increase crop production, and was expected to take place on an annual basis in order to raise public awareness of the problems of hunger and malnutrition. During 1998 public donations to TeleFood financed 225 'grass-roots' projects in 81 countries, at a cost of almost $1.8m. The projects provided tools, seeds and other essential supplies directly to small-scale farmers, and were especially aimed at helping women.

In November 1996 FAO hosted the World Food Summit, which was held in Rome and was attended by heads of state and senior government representatives of 186 countries. Participants approved the Rome Declaration on World Food Security and the World Food Summit Plan of Action, with the aim of halving the number of people afflicted by undernutrition, at that time estimated to total 828m. world-wide, no later than 2015.

FAO's total field programme expenditure for 1997 was US $260m., compared with $244m. spent in 1996. An estimated 33% of field projects were in Africa, 22% in Asia and the Pacific, 12% in the Near East, 10% in Latin America and the Caribbean, 4% in Europe, and 19% were inter-regional or global.

AGRICULTURE

FAO's Field Programme provides training and technical assistance to enable small farmers to increase crop production, by a number of methods, including improved seeds and fertilizer use, soil conservation and reafforestation, better water resource management, upgrading storage facilities, and improvements in processing and marketing. Governments are advised on the conservation of genetic resources, on improving the supply of seeds, and on crop protection: animal and plant gene banks are maintained. In June 1996 representatives of more than 150 governments attending a conference in Leipzig, Germany, organized by FAO, adopted a Global Plan of Action to conserve and improve the use of plant genetic resources, in order to enhance food security throughout the world. The Plan included measures to strengthen the development of plant varieties and to promote the use and availability of local varieties and locally-adapted crops to farmers, in particular following a natural disaster, war or civil conflict. FAO's Special Programme for Food Security, which was initiated in 1994, was designed to assist target countries, i.e. low-income countries with a food deficit, to increase food production and productivity as rapidly as possible. This was to be achieved primarily through the widespread adoption by farmers of available improved production technologies, with emphasis on areas of high potential. At 31 March 1998 83 countries were categorized as 'low-income food-deficit', of which 42 were in Africa. By March 1999 the Programme was operational in 39 countries, of which 23 were in Africa and 10 in Asia and the Near East. A budget of US $10m. was allocated to the Programme for the two-year period 1998–99.

Plant protection, weed control and animal health programmes form an important part of FAO's work as farming methods become more intensive, and pests more resistant to control methods. In 1985 the FAO Conference approved an International Code of Conduct on the Distribution and Use of Pesticides, and in 1989 adopted an additional clause concerning 'Prior Informed Consent', whereby international shipments of newly banned or restricted pesticides should not proceed without the agreement of importing countries. Under the clause FAO aims to inform governments about the hazards of toxic chemicals and to encourage them to take proper measures to curb trade in highly toxic agrochemicals, while keeping the pesticides industry informed of control actions. In mid-1996 FAO publicized a new initiative which aimed to increase awareness of, and to promote international action on, obsolete and hazardous stocks of pesticides remaining throughout the world. In September 1998 a new legally-binding treaty on trade in hazardous chemical and pesticides was adopted at an international conference held in Rotterdam, the Netherlands. The so-called Rotterdam Convention required that hazardous chemicals and pesticides banned or severely restricted in at least two countries should not be exported unless explicitly agreed by the importing country. It also identified certain pesticide formulations as too dangerous to be used by farmers in developing countries, and incorporated an obligation that countries halt national production of those hazardous compounds. The treaty was to enter into force on being ratified by 50 signatory states. A central concept of FAO's plant protection programme is the Integrated Pest Management (IPM) strategy, which was initiated in 1988 in order to reduce over-reliance on pesticides. IPM principles include biological control methods, such as the introduction of natural predators to reduce pest infestation, crop rotation and the use of pest-resistant crop varieties. In mid-1995 FAO initiated a project, at the request of 16 Middle Eastern and North African Governments, to improve the development and use of IPM strategies at a local and national level throughout the region, and to improve their dissemination between the countries. FAO's Joint Division with the International Atomic Energy Agency (IAEA) tests controlled-release formulas of pesticides and herbicides that can limit the amount of agrochemicals needed to protect crops. The Joint FAO-IAEA Division is engaged in exploring biotechnologies and in developing non-toxic fertilizers (especially those that are locally available) and improved strains of food crops (especially from indigenous varieties). In animal production and health, the Joint Division has developed progesterone-measuring and disease-diagnostic kits, thousands of which are delivered to developing countries every year.

An Emergency Prevention System for Transboundary Animal and Plant Pests and Diseases (EMPRES) was established in 1994 to strengthen FAO's activities in the prevention, control and, where possible, eradication of highly contagious diseases and pests. EMPRES's initial priorities were locusts and rinderpest. During 1994 EMPRES published guide-lines on all aspects of desert locust monitoring, commissioned an evaluation of recent control efforts and prepared a concept paper on desert locust management. FAO assumed responsibility for technical leadership and co-ordination of the Global Rinderpest Eradication Campaign, which aims to eradicate the disease, endemic in the area of the Horn of Africa, by 2010.

In November 1997 FAO initiated a Programme Against African Trypanosomiasis, which aimed to counter the parasitic disease, spread by the tsetse fly, which manifests itself as ngana in cattle and other animals and as sleeping sickness in humans, and is prevalent in almost one-third of Africa.

FISHERIES

FAO's Fisheries Department consists of a multi-disciplinary body of experts who are involved in every aspect of fisheries development from coastal surveys, improved production, processing and storage, to the compilation of statistics, development of computer databases, improvement of fishing gear, institution building and training. In March 1995 a ministerial meeting of fisheries adopted a Rome Consensus on World Fisheries, which identified a need for immediate action to eliminate overfishing and to rebuild and enhance depleting fish stocks. In November the FAO Conference adopted a Code of Conduct for Responsible Fishing, which incorporated many global fisheries and aquaculture issues (including fisheries resource conservation and development, fish catches, seafood and fish processing, commercialization, trade and research) to promote the sustainable development of the sector. FAO promotes aquaculture as a valuable source of animal protein, and as an income-generating activity for rural communities. In 1996/97 FAO participated in 21 technical consultations on the management of marine resources, strengthened work on aquatic genetic resources, and conducted studies to monitor the impact of 'El Niño', a periodic warming of the tropical Pacific Ocean, on aquaculture in Latin America and Africa.

FORESTRY

FAO focuses on the contribution of forestry to food security, on effective and responsible forest management and on maintaining a balance between the economic, ecological and social benefits of forest resources. FAO has helped to develop national forestry programmes and to promote the sustainable development of all types of forest. FAO's Forests, Trees and People Programme promotes the sustainable management of tree and forest resources, based on local knowledge and management practices, in order to improve the livelihoods of rural people in developing countries. A draft strategic plan for the sustainable management of trees and forests was formulated in 1997 and was revised early in 1999, incorporating proposals of meetings of the Regional Forestry Commissions which were held during 1998. The main objectives of the draft plan were to maintain the environmental diversity of forests, to realise the economic potential of forests and trees within a sustainable framework, and to establish broad social networks of interested parties to manage and develop forest environments. During 1997 FAO helped to organize the Eleventh World Forestry Congress, which was held in Antalya, Turkey, in October.

PROCESSING AND MARKETING

An estimated 20% of all food harvested is lost before it can be consumed. FAO helps to reduce immediate post-harvest losses through the introduction of improved processing methods and storage systems. It also advises on the distribution and marketing of agricultural produce and on the selection and preparation of foods for optimum nutrition. Many of these activities form part of wider rural development projects. FAO continues to favour the elimination of export subsidies and related discriminatory practices, such as protectionist measures that hamper international trade in agricultural commodities. By late 1997 FAO had organized 18 regional workshops and 44 national projects in order to help member states to implement new World Trade Organization regulations, in particular with regard to agricultural policy, intellectual property rights, sanitary and phytosanitary measures, technical barriers to trade and the international standards of the Codex Alimentarius, and to consider the impact on member states of the ministerial decision concerning the possible negative effects of the reform programme on least-developed and net-food-importing developing countries. FAO evaluates new market trends and helps to develop improved plant and animal quarantine procedures. In November 1997 the FAO Conference adopted new guide-lines on surveillance and export certification systems in order to harmonize plant quarantine standards.

ENVIRONMENT

In April 1991 a Conference on Agriculture and the Environment was held in the Netherlands, organized jointly by FAO and the Netherlands Government. The alleviation of poverty was identified as being a major prerequisite for sustainable agricultural production. At the UN Conference on Environment and Development, held

in Rio de Janeiro in June 1992, FAO participated in several working parties and supported the adoption of Agenda 21, a programme of activities to promote sustainable development. FAO was subsequently designated as the UN agency responsible for the chapters of Agenda 21 concerned with water resources, forests, fragile mountain ecosystems and sustainable agriculture and rural development.

NUTRITION

In December 1992 an International Conference on Nutrition was held in Rome, administered jointly by FAO and WHO. The Conference approved a World Declaration on Nutrition and a Plan of Action, aimed at promoting efforts to combat malnutrition as a development priority. Since the conference, more than 100 countries have formulated national plans of action for nutrition, many of which were based on existing development plans such as comprehensive food security initiatives, national poverty alleviation programmes and action plans to attain the targets set by the World Summit for Children in September 1990. By October 1995 several projects based on the national plans of action had been implemented in areas such as nutrition education, food quality and safety, micronutrient deficiency alleviation and nutrition surveillance.

FOOD SECURITY

FAO's food security policy aims to encourage the production of adequate food supplies, to maximize stability in the flow of supplies, and to ensure access on the part of those who need them. FAO was actively involved in the formulation of a Plan of Action on food security, adopted at the World Food Summit in November 1996, and was to be responsible for monitoring and promoting its implementation.

FAO's Global Information and Early Warning System (GIEWS), which became operational in 1975, monitors the crop and food outlook at global and national levels in order to detect emerging food supply difficulties and disasters and to ensure rapid intervention in countries experiencing food supply shortages. In 1997 the GIEWS conducted 24 missions to assess crops and food supply, and participated in a number of inter-agency surveillance programmes, mainly with the World Food Programme (WFP). At the end of 1997 FAO identified 37 countries, that were confronting acute food shortages and required exceptional and/or emergency food assistance, compared with 31 at the end of 1996. In July 1999 the GIEWS issued a special report on the severe drought affecting countries in the Near East sub-region. Cereal and livestock production were reported to have declined substantially, while cereal exports in 1999/2000 were expected to fall by some 50%.

FAO INVESTMENT CENTRE

The Investment Centre was established in 1964 to help countries prepare viable investment projects that would attract external financing. The Centre focuses its evaluation of projects on two fundamental concerns: the promotion of sustainable activities for land management, forestry development and environmental protection; and the alleviation of rural poverty. In 1997 43 projects were approved, representing a total investment of some US $2,827m.

EMERGENCY RELIEF

FAO works to rehabilitate agricultural production following natural and man-made disasters by providing emergency seed, tools, and technical and other assistance. In 1997 FAO's Special Relief Operations Service undertook emergency interventions in 34 countries, at a cost of more than US $60m. New projects approved in the first quarter of 1998 included assistance to farmers affected by earthquakes in Iran, crop protection in northern Iraq and assistance with implementation of the UN Security Council resolution to provide for the limited export of petroleum by Iraq in return for food and essential humanitarian supplies. Jointly with the United Nations, FAO is responsible for WFP (see below), which provides emergency food supplies and food aid in support of development projects.

INFORMATION

FAO functions as an information centre, collecting, analysing, interpreting and disseminating information through various media. It issues regular statistical reports, commodity studies, and technical manuals in local languages (see list of publications below). Other materials produced by the FAO include information booklets, reference papers, reports of meetings, training manuals and audiovisuals.

FAO compiles and co-ordinates an extensive range of international databases on agriculture, fisheries, forestry, food and statistics, the most important of these being AGRIS (the International Information System for the Agricultural Sciences and Technology) and CARIS (the Current Agricultural Research Information System). Statistical databases include the GLOBEFISH databank and electronic library, FISHDAB (the Fisheries Statistical Database), FORIS (Forest Resources Information System), and GIS (the Geographic Information System). In addition, AGROSTAT PC has been designed to provide access to updated figures in six agriculture-related topics via personal computer. In 1996 FAO established a World Agricultural Information Centre (WAICENT), which offers wide access to agricultural data through the internet.

FAO REGIONAL COMMISSIONS

Commission for Controlling the Desert Locust in the Near East: f. 1965 to carry out all possible measures to control plagues of the desert locust within the region and to reduce crop damage. Mems: 13 states.

Commission for Controlling the Desert Locust in North-West Africa: f. 1971 to promote research on control of the desert locust. Mems: 4 states.

General Fisheries Council for the Mediterranean—GFCM: f. 1952 to develop aquatic resources, to encourage and co-ordinate research in the fishing and allied industries, to assemble and publish information, and to recommend the standardization of scientific equipment, techniques and nomenclature. Mems: 19 states.

Near East Forestry Commission: f. 1953 to advise on formulation of forest policy and review and co-ordinate its implementation throughout the region; to exchange information and advise on technical problems. Mems: 20 states.

Near East Regional Commission on Agriculture: f. 1983 to conduct periodic reviews of agricultural problems in the region; to promote the formulation and implementation of regional and national policies and programmes for improving production of crops and livestock; to strengthen the production and management of crops, livestock, supporting services and research; to promote the transfer of technology and regional technical co-operation; and to provide guidance on training and manpower development. Mems: 15 states.

Near East Regional Economic and Social Policy Commission: f. 1983 to review developments relating to food, agriculture and food security; to recommend policies on agrarian reform and rural development; and to review and exchange information on food and nutrition policies and on agricultural planning. Mems: 15 states.

Regional Commission on Land and Water Use in the Near East: f. 1967 to review the current situation with regard to land and water use in the region; to identify the main problems concerning the development of land and water resources which require research and study and to consider other related matters. Mems: 21 states.

Finance

FAO's Regular Programme, which is financed by contributions from the member governments, covers the cost of FAO's Secretariat, its Technical Co-operation Programme (TCP) and part of the cost of several special action programmes. The budget for the two years 1998–99 amounted to US $650m. Much of FAO's technical assistance programme is funded from extra-budgetary sources. The single largest contributor is the United Nations Development Programme (UNDP), which in 1997 accounted for $46.4m., or 18% of field project expenditures. More important are the trust funds that come mainly from donor countries and international financing institutions. In 1996 they totalled $165.9m., or 64% of field project expenditures. FAO's contribution under the TCP (FAO's regular budgetary funds for the Field Programme) was $42.4m., or 16% of field project expenditures, while the Organization's contribution under the Special Programme for Food Security was $5.5m., or some 2% of the total $260.2m.

World Food Programme—WFP

Address: Via Cesare Giulio Viola 68, Parco dei Medici, 00148 Rome, Italy.

Telephone: (06) 6513-1; **telex:** 626675; **fax:** (06) 6590-632; **e-mail:** wfpinfo@wfp.org; **internet:** http://www.wfp.org.

WFP, which became operational in 1963, is the principal food aid agency of the UN. It aims to eradicate chronic undernourishment by assisting social development and human growth, and to alleviate acute hunger by providing emergency relief following natural or man-made humanitarian disasters. Priority is given to vulnerable groups, such as children and pregnant women. During 1998 WFP benefited some 74.8m. people world-wide, of whom 18.4m. received aid through development projects, 16.3m. were refugees, returnees or internally displaced, while 40.1m. were victims of natural disasters. Total food deliveries in that year amounted to 2.8m. metric tons in 80 countries.

Through its development activities, WFP aims to alleviate poverty in developing countries by promoting self-reliant families and communities. Food is supplied, for example, as an incentive in develop-

ment self-help schemes, as part wages in labour-intensive projects of many kinds, particularly in the rural economy, but also in the industrial field, and in support of institutional feeding schemes where the emphasis is mainly on enabling the beneficiaries to have an adequate and balanced diet. Some WFP projects are intended to alleviate the effects of structural adjustment programmes (particularly programmes which involve reductions in public expenditure and in subsidies for basic foods). During 1998 WFP supported 125 development projects, for which operational expenditure totalled US $254.3m.

In the early 1990s there was a substantial shift in the balance between emergency and development assistance provided by WFP, owing to the growing needs of victims of drought and other natural disasters, refugees and displaced persons. In addition, there was a noticeable increase in aid given to those in need as a result of civil war, compared with commitments for victims of natural disasters. WFP maintains strategic stores of food and logistics equipment (at Nairobi, Kenya and Pisa, Italy) to enable it to respond effectively to emergency situations and supports eight field units, which undertake vulnerability analysis and mapping activities.

In 1998 WFP operational expenditure in the Middle East and North Africa amounted to an estimated US $59.0m., or 5% of total operational expenditure in that year, including $15.2m. for relief operations and $22.0m. for development projects. Examples of WFP activities in 1998 included income-generation diversification in Egypt, a school feeding programme in Morocco, and the provision of aid to enhance food security in areas of minimal rainfall in Yemen.

In accordance with a Security Council resolution providing for the limited sale of petroleum by the Iraqi Government in exchange for the purchase of essential humanitarian supplies, which came into effect in December 1996, WFP was mandated to establish an observation system to ensure the fair and efficient distribution of food throughout the country. WFP was also required to transport and distribute the food supplies to local populations in the north of Iraq. In 1998 WFP operational expenditure on the special operation in Iraq amounted to US $13.3m. WFP employed 27 international and more than 200 local observers to supervise the distribution of 4.76m. metric tons of food.

WFP Executive Director: CATHERINE A. BERTINI (USA).

International Bank for Reconstruction and Development—IBRD, and International Development Association—IDA (World Bank)

Address: 1818 H St, NW, Washington, DC 20433, USA.

Telephone: (202) 477-1234; **telex:** 248423; **fax:** (202) 477-6391; **e-mail:** pic@worldbank.org; **internet:** http://www.worldbank.org.

The IBRD was established on 27 December 1945. Initially it was concerned with post-war reconstruction in Europe; since then its aim has been to assist the economic development of member nations by making loans where private capital is not available on reasonable terms to finance productive investments. Loans are made either direct to governments, or to private enterprises with the guarantee of their governments. The 'World Bank', as it is commonly known, comprises the IBRD and the International Development Association (IDA), which was founded in 1960. The affiliated group of institutions, comprising the IBRD, the IDA, the International Finance Corporation (IFC, q.v.), the Multilateral Investment Guarantee Agency (MIGA, q.v.) and the International Centre for Settlement of Investment Disputes (ICSID) is referred to as the World Bank Group. Only members of the International Monetary Fund (IMF, q.v.) may be considered for membership in the Bank. Subscriptions to the capital stock of the Bank are based on each member's quota in the IMF, which is designed to reflect the country's relative economic strength. Voting rights are related to shareholdings.

Organization

(August 1999)

Officers and staff of the IBRD serve concurrently as officers and staff in the IDA. The World Bank has offices in New York, Paris, Brussels, London and Tokyo; regional missions in Nairobi (for eastern Africa), Abidjan (for western Africa) and Riga (in Latvia); and resident missions in more than 70 countries.

BOARD OF GOVERNORS

The Board of Governors consists of one Governor appointed by each member nation. Typically, a Governor is the country's finance minister, central bank governor, or a minister or an official of comparable rank. The Board normally meets once a year.

EXECUTIVE DIRECTORS

The general operations of the World Bank are conducted by a Board of 24 Executive Directors. Five Directors are appointed by the five members having the largest number of shares of capital stock, and the rest are elected by the Governors representing the other members. The President of the Bank is Chairman of the Board.

OFFICERS

President and Chairman of Executive Directors: JAMES D. WOLFENSOHN (USA).

Vice-President, Middle East and North Africa Region: KEMAL DERVIS.

Activities

FINANCIAL OPERATIONS

The World Bank's primary objectives are the achievement of sustainable economic growth and the reduction of poverty in developing countries. In mid-1994 the World Bank Group published a review of its role and activities, and identified the following five major development issues on which it intended to focus in the future: the pursuit of economic reforms; investment in people, in particular through education, health, nutrition and family-planning programmes; the protection of the environment; stimulation of the private sector; and reorientation of government, in order to enhance the private sector by reforming and strengthening the public sector. The Bank compiles country-specific assessments and formulates

country assistance strategies (CASs) to ensure that the Bank's own projects support and complement the programmes of the country concerned. In March 1997 the Board of Executive Directors endorsed a 'Strategic Compact', providing for a programme of reforms, to be implemented over a period of 30 months, to increase the effectivness of the Bank in achieving its central objective of poverty reduction. The reforms, which aimed to increase the proportion of projects rated as satisfactory in development terms from 66% to 75%, included greater decentralization of decision-making, and investment in front-line operations, enhancing the administration of loans, and improving access to information and co-ordination of Bank activities through a knowledge management system comprising four thematic networks: the Human Development Network; the Environmentally and Socially Sustainable Development Network; the Finance, Private Sector and Infrastructure Development Network; and the Poverty Reduction and Economic Management Network.

IBRD loans are usually for a period of 20 years or less. Loans are made to governments, or must be guaranteed by the government concerned. IDA assistance is aimed at the poorer developing countries (i.e. those with a gross national product—GNP—per head of less than US $925 in 1997 dollars). Under IDA lending conditions, credits can be extended to countries whose balance of payments could not sustain the burden of repayment required for IBRD loans. Terms are more favourable than those provided by the IBRD; credits are for a period of 35–40 years, with a 'grace' period of 10 years, and carry no interest charges.

The IBRD's capital is derived from members' subscriptions to capital shares, the calculation of which is based on their quotas in the IMF (q.v.). In April 1988 the Board of Governors approved an increase of about 80% in the IBRD's authorized capital, to US $171,000m. At 30 June 1998 the total subscribed capital of the IBRD was $186,436m., of which the paid-in portion was $11,288m. (6.1%); the remainder is subject to call if required. Most of the IBRD's lendable funds come from its borrowing in world capital markets, and also from its retained earnings and the flow of repayments on its loans. Bank loans carry a variable interest rate, rather than a rate fixed at the time of borrowing.

IDA's development resources, consisting of members' subscriptions and supplementary resources (additional subscriptions and contributions), are replenished periodically by contributions from the more affluent member countries. In March 1996 representatives of more than 30 donor countries concluded negotiations for the 11th replenishment of IDA funds (and for a one-year interim fund), to finance the period July 1996–June 1999. New contributions over the three-year period were to amount to US $11,000m., while total funds available for lending, including past donor contributions, repayments of IDA credits and the World Bank's contributions, were to amount to $22,000m. In November 1998 representatives of 39 donor countries agreed to provide $11,600m. for the 12th replenishment of IDA funds, enabling total lending to amount to an estimated $20,500m. in the period July 1999–June 2002.

During the year ending 30 June 1998 US $968.5m., or 3.4% of World Bank assistance approved, was for the Middle East and North Africa (excluding Turkey): of the total, $246.5m. was in the form of IDA credits and $722.0m. in IBRD loans. More than 21% of total Bank lending for the region was allocated to urban development; other main areas of support included the financial sector, education and health, nutrition and population.

The Bank has played a major role in promoting and co-ordinating international efforts in support of the Middle East peace process and in enhancing economic development throughout the region. Following agreement, in May 1994, on the implementation of the Declaration of Principles between Palestine and Israel, the Bank issued a report outlining an investment programme to assist Palestine in its transitional period to autonomous government: the Emergency Assistance Programme for the Occupied Territories was to cover a three-year period, with an investment budget of US $1,200m. pledged by the international community. Under the Programme, a Trust Fund for Gaza and the West Bank was established, in order to finance, on IDA terms, projects for the reconstruction and improvement of infrastructure, in particular education and health services. The Bank acts as the secretariat for the *Ad Hoc* Liaison Committee for the West Bank and Gaza, and for the joint Israeli-Jordan steering committee for the Jordan Rift Valley Development Programme. The Bank hosts annual meetings of a Consultative Group for the West Bank and Gaza, attended by donor governments and institutions, which considers projects for funding and reviews their implementation. In October 1996 the World Bank and the EU hosted an international conference, held in İstanbul, Turkey, to consider the privatization process in the Middle East and North Africa region and the participation of the private sector in major infrastructure projects. In the following month, at a regional economic 'summit' meeting, convened in Cairo, Egypt, the Bank declared its willingness to support the involvement of the private sector by reducing the perceived investment risks associated with such projects. In May 1997 the Bank sponsored a conference, held in Marrakech, Morocco, which aimed to promote economic development and regional competitiveness.

In September 1996 the World Bank/IMF Development Committee endorsed a joint initiative to assist heavily indebted poor countries (HIPCs) to reduce their debt burden, in cases where it impedes poverty reduction and economic growth. A new Trust Fund was established by the World Bank in November to finance the initiative. The Fund, consisting of an initial allocation of US $500m. from the IBRD surplus and other contributions from multilateral creditors, was to be administered by IDA. Of the 41 HIPCs identified by the Bank, only one country, Yemen, was in the Middle East and North Africa region.

TECHNICAL ASSISTANCE

The provision of technical assistance to member countries is a major component of Bank activities. The economic, sector and project analysis undertaken by the Bank in the normal course of its operations is the vehicle for considerable technical assistance. In addition, project loans and credits may include funds designated specifically for feasibility studies, resource surveys, management or planning advice, and training. Technical assistance (usually reimbursable) is also extended to countries that do not need Bank financial support e.g. for training and transfer of technology.

In 1992 the Bank established an Institutional Development Fund (IDF) to provide rapid, small-scale financial assistance, to a maximum value of US $500,000, for capacity-building initiatives. By the end of 1996 the Fund had approved a total of 345 grants for 108 countries.

ECONOMIC RESEARCH AND STUDIES

In the 1990s the World Bank's research, conducted by its own research staff, was increasingly concerned with providing information to reinforce the Bank's expanding advisory role to developing countries. Consequently the principal areas of current research focus on issues such as maintaining sustainable growth while protecting the environment and the poorest sectors of society, encouraging the development of the private sector, and reducing and decentralizing government activities. The Bank, together with UNDP, UNEP and the FAO, sponsors the Consultative Group on International Agricultural Research (CGIAR), which was formed in 1971 to raise financial support for research on improving crops and animal production in developing countries. CGIAR supports 16 research centres.

CO-OPERATION WITH OTHER ORGANIZATIONS

The World Bank co-operates closely with other UN bodies through consultations, meetings, and joint activities; co-operation with UNDP and WHO, in their programmes to improve health, nutrition and sanitation, is especially important. It collaborates with the IMF in implementing economic adjustment programmes in developing countries. The Bank holds regular consultations with the European Community and OECD on development issues, and the Bank-NGO Committee provides an annual forum for discussion with non-governmental organizations (NGOs). The Bank chairs meetings of donor governments and organizations for the co-ordination of aid to particular countries. The Bank also conducts co-financing and aid co-ordination projects with official aid agencies, export credit agencies and commercial banks. In April 1997 the World Bank signed a co-operation agreement with the World Trade Organization, in order to co-ordinate efforts to integrate developing countries into the global economy.

The World Bank administers the Global Environment Facility (GEF), which was established in 1990 in conjunction with UNDP and UNEP. The GEF became operational in 1991 for an initial three-year period, to provide grants to developing countries for measures that protect the environment. In March 1994 87 countries participating in the Facility agreed to restructure and replenish the GEF for a further three-year period from July of that year. Funds amounting to US $2,000m. were to be made available by 26 donor countries which would enable the GEF to act as the financial mechanism for the conventions on climate changes and biological diversity that were signed at the UN Conference on Environment and Development in June 1992. In November 1997 33 donor countries committed themselves to a target figure of $2,750m. for the next replenishment of GEF funds. The replenishment was approved by the Bank's Executive Board in July 1998. At 30 June 1998 the Bank had approved GEF projects totalling $939m., covering the following areas: biodiversity; climate change; the phase-out of ozone-depleting substances; and international waters.

In June 1995 the World Bank joined other international donors (including regional development banks, other UN bodies, Canada, France, the Netherlands and the USA) in establishing a Consultative Group to Assist the Poorest (CGAP), which was to channel funds to the most needy through 'grass-roots' agencies. An initial credit of approximately US $200m. was committed by the donors.

The Bank manages the CGAP Secretariat, which is responsible for the administration of external funding and for the evaluation and approval of project financing. In addition, the CGAP provides training and information services on microfinance for policy-makers and practitioners.

EVALUATION

The World Bank's Operations Evaluation Department studies and publishes the results of projects after a loan has been fully disbursed, so as to identify problems and possible improvements in future activities. Internal auditing is also carried out, to monitor the effectiveness of the Bank's operations and management.

In September 1993 the Bank's Board of Executive Directors agreed to establish an Independent Inspection Panel, consistent with the Bank's objective of improving project implementation and accountability. The Panel, which became operational in September 1994, was to conduct independent investigations and report on complaints concerning the design, appraisal and implementation of development projects supported by the Bank.

IBRD INSTITUTIONS

Economic Development Institute—EDI: founded in 1955. Training is provided for government officials at the middle and upper levels of responsibility who are concerned with development programmes and projects. The majority of courses are in economic and sector management and 'training of trainers', which aim to build up local capability to conduct projects courses in future. The Institute also produces training materials, and administers a fellowship scheme and the World Bank graduate scholarship programme (funded by the Government of Japan). EDI also organizes conferences, seminars and workshops, and is increasingly concerned with issues relating to good governance and with the development of human resources at all levels of society. In 1998 EDI supported programmes to promote the adoption in the region of international practices in areas such as water and irrigation policy, microcredit financing and 'grass-roots' management and decentralization. Dir AMNON GOLAN.

International Centre for Settlement of Investment Disputes—ICSID: founded in 1966 under the Convention of the Settlement of Investment Disputes between States and Nationals of Other States. The Convention was designed to encourage the growth of private foreign investment for economic development, by creating the possibility, always subject to the consent of both parties, for a Contracting State and a foreign investor who is a national of another Contracting State to settle any legal dispute that might arise out of such an investment by conciliation and/or arbitration before an impartial, international forum. The governing body of the Centre is its Administrative Council, composed of one representative of each Contracting State, all of whom have equal voting power. The President of the World Bank is (*ex officio*) the non-voting Chairman of the Administrative Council.

At mid-1998 129 states had ratified the Convention to become ICSID member countries, with a further 15 states having signed the Convention. During 1997/98 eight new cases were registered, and 19 cases were pending before the Centre. Sec.-Gen. IBRAHIM F. I. SHIHATA.

International Finance Corporation—IFC

Address: 2121 Pennsylvania Ave, NW, Washington, DC 20433, USA.

Telephone: (202) 477-1234; **telex:** 248423; **fax:** (202) 974-4384; **e-mail:** information@ifc.org; **internet:** http://www.ifc.org/.

IFC was founded in 1956 as an affiliate of the World Bank to encourage the growth of productive private enterprise and efficient capital markets in its member countries, particularly in the less-developed areas.

Organization

(August 1999)

IFC is a separate legal entity in the World Bank Group. Executive Directors of the World Bank also serve as Directors of IFC. The President of the World Bank is, *ex officio*, Chairman of the IFC Board of Directors, which has appointed him President of IFC. Subject to his overall supervision, the day-to-day operations of IFC are conducted by its staff under the direction of the Executive Vice-President.

PRINCIPAL OFFICERS

President: JAMES D. WOLFENSOHN (USA).

Executive Vice-President: PETER L. WOICKE (Germany).

REGIONAL MISSIONS

The Middle East: World Trade Center, 1191 Corniche en-Nil, 12th Floor, Cairo, Egypt; tel. (2) 579-5353; telex 93110; fax (2) 579-2211; Regional Rep. MANUEL E. NÚÑEZ.

North Africa: 8 rue Kamal Muhammad, 12th Floor, Casablanca 20000, Morocco; tel. (2) 48-46-86; fax (2) 48-46-90; e-mail sfi@winner.net.ma; Regional Rep. ANDRÉ LAUDE.

Activities

IFC provides financial support and advice for private sector ventures and projects, and assists governments to create conditions that stimulate the flow of domestic and foreign private savings and investment. Increasingly IFC has worked to mobilize additional capital from other financial institutions. In all its activities IFC is guided by three major principles:

(i) The catalytic principle. IFC should seek above all to be a catalyst in helping private investors and markets to make good investments.

(ii) The business principle. IFC should function like a business in partnership with the private sector and take the same commercial risks, so that its funds, although backed by public sources, are transferred under market disciplines.

(iii) The principle of the special contribution. IFC should participate in an investment only when it makes a special contribution that supplements or complements the role of market operators.

IFC's authorized capital is US $2,450.0m. At 30 June 1998 IFC's paid-in capital was $2,336.6m. The World Bank is the principal source of borrowed funds, but IFC also borrows from private capital markets. In 1997/98 project financing approved amounted to $5,910m. for 308 projects, compared with $6,722m. for 276 projects in the previous year. Of the total approved, $3,417m. was for IFC's own account, while $2,493m. was used in loan syndications and underwriting of securities issues and investment funds by more than 100 participant banks and institutional investors. Generally, the IFC limits its financing to 5%–15% of the total cost of a project, but may take up to a 35% stake in a venture (although never as a majority shareholder).

During the year ending 30 June 1998 IFC project financing approved for countries in the Middle East and North Africa was mainly concerned with the development of financial sectors, in particular services for small and medium-sized enterprises, tourism, industry and infrastructure. Examples of projects included support for Algeria's first commercial bank; other commercial and investment banking developments in Jordan, Lebanon, Tunisia and Turkey; hotel construction and expansion in Jordan and Lebanon, the development of industries and generation of employment in the West Bank and Gaza; a textiles project in Tunisia; and ceramic and porcelain manufacturing in Yemen. IFC technical assistance, training and advisory missions undertaken in the region during that year continued to focus on improving capital market institutions, privatization, management services and reviewing foreign investment laws and regulations.

IFC administers, jointly with the IBRD, the Foreign Investment Advisory Service (FIAS), which provides advice to governments on attracting foreign investment and strengthening the country's investment framework. In addition, the Technical Assistance Trust Funds Program (TATF) manages resources contributed by various governments and agencies to provide finance for feasibility studies, project identification studies and other types of technical assistance relating to project preparation.

Multilateral Investment Guarantee Agency—MIGA

Address: 1818 H Street, NW, Washington, DC 20433, USA.

Telephone: (202) 477-1234; **telex:** 248423; **fax:** (202) 477-6391; **internet:** http://www.miga.org/.

MIGA was founded in 1988, as an affiliate of the World Bank, to encourage the flow of investments for productive purposes among its member countries, especially developing countries, through the mitigation of non-commercial barriers to investment (especially political risk).

Organization

(August 1999)

MIGA is legally and financially separate from the World Bank. It is supervised by a Council of Governors (comprising one Governor and one Alternate of each member country) and an elected Board of Directors (of no less than 12 members).

President: JAMES D. WOLFENSOHN (USA).

Executive Vice-President: MOTOMICHI IKAWA (Japan).

Activities

The convention establishing MIGA took effect in April 1988. Authorized capital amounted to US $1,082m. In April 1998 MIGA's Board of Directors approved an increase in MIGA's capital base. A grant of $150m. was transferred from the IBRD as part of the package, while the capital increase (totalling $700m. callable capital and $150m. paid-in capital) was approved by MIGA's Council of Governors in April 1999.

MIGA's purpose is to guarantee eligible investments against losses resulting from non-commercial risks, under four main categories:

transfer risk resulting from host government restrictions on currency conversion and transfer;

risk of loss resulting from legislative or administrative actions of the host government;

repudiation by the host government of contracts with investors in cases in which the investor has no access to a competent forum;

the risk of armed conflict and civil unrest.

Before guaranteeing any investment MIGA must ensure that it is commercially viable, contributes to the development process and will not be harmful to the environment. During the year to June

1998 MIGA issued 55 investment guarantee contracts with a value of US $830.9m. The amount of direct investment associated with the contracts totalled approximately $6,100m., and created an estimated 8,000 jobs in 26 developing member states.

MIGA also provides policy and advisory services to promote foreign investment in developing countries and in transitional economies, and to disseminate information on investment opportunities. In 1998 MIGA sponsored a special conference, entitled 'Safeguarding Investment in the West Bank and Gaza'. In June 1999 MIGA issued its first guarantee contract, valued at US $5m., under a Trust Fund which had been established in 1997 to promote foreign investment in the West Bank and Gaza. In October 1995 MIGA established a new network on investment opportunities, which connected investment promotion agencies (IPAs) throughout the world on an electronic information network. The so-called IPA*net* aimed to encourage further investments among developing countries, to provide access to comprehensive information on investment laws and conditions and to strengthen communications between governmental, business and financial associations and investors. A new internet-based facility, 'PrivatizationLink', was launched in 1998 to provide information on investment opportunities resulting from the privatization of industries in emerging economies.

International Fund for Agricultural Development—IFAD

Address: Via del Serafico 107, 00142 Rome, Italy.

Telephone: (06) 54591; **telex:** 620330; **fax:** (06) 5043463; **e-mail:** ifad@ifad.org; **internet:** http://www.unicc.org/ifad.

IFAD was established in 1977 following a decision by the 1974 UN World Food Conference, with a mandate to combat hunger and eradicate proverty on a sustainable basis in the low-income, food-deficit regions of the world. Funding operations began in January 1978.

Organization

(August 1999)

GOVERNING COUNCIL

Each member state is represented in the Governing Council by a Governor and an Alternate. Sessions are held annually with special sessions convened as required. The Governing Council elects the President of the Fund (who also chairs the Executive Board) by a two-thirds majority for a four-year term. The President is eligible for re-election.

EXECUTIVE BOARD

The Board consists of 18 members and 18 alternates, elected by the Governing Council, who serve for three years. The Executive Board is responsible for the conduct and general operation of IFAD and approves loans and grants for projects; it holds three regular sessions a year.

Following agreement on the fourth replenishment of the Fund's resources in February 1997, the governance structure of the Fund was amended. Former Category I countries (i.e. industrialized donor countries) were reclassified as List A countries and were awarded a greater share of the 1,800 votes in the Governing Council and Executive Board, in order to reflect their financial contributions to the Fund. Former Category II countries (petroleum-exporting developing donor countries) were reclassified as List B countries, while recipient developing countries, formally Category III countries, were termed as List C countries, and divided into three regional Sub-Lists. Where previously each category was ensured equal representation on the Executive Board, the new allocation of seats was as follows: eight List A countries, four List B, and two of each Sub-List C group of countries.

President and Chairman of Executive Board: FAWZI HAMAD AS-SULTAN (Kuwait).

Vice-President: JOHN WESTLEY (USA).

Activities

The Fund's objective is to mobilize additional resources to be made available on concessionary terms for agricultural development in developing member states. IFAD provides financing primarily for projects and programmes specifically designed to introduce, expand or improve food production systems and to strengthen related policies and institutions within the framework of national priorities and strategies. In allocating resources IFAD is guided by: the need to increase food production in the poorest food-deficit countries; the potential for increasing food production in other developing countries; and the importance of improving the nutrition, health and education of the poorest people in developing countries, i.e. small-scale farmers, artisanal fishermen, nomadic pastoralists, indigenous populations, rural women, and the rural landless. All projects emphasize the participation of beneficiaries in development initiatives, both at the local and national level.

IFAD is empowered to make both grants and loans. Grants are limited to 7.5% of the resources committed in any one financial year. Loans are available on highly concessional, intermediate or ordinary terms. More than two-thirds of total IFAD lending is awarded on highly concessional terms, i.e. with no interest charges (although bearing an annual service charge of 0.75%) and a repayment period of 40 years. To avoid duplication of work, the administration of loans, for the purposes of disbursements and supervision of project implementation, is entrusted to competent international financial institutions, with the Fund retaining an active interest. During 1998 IFAD provided financing for almost 40% of the costs of projects approved during that year, while the remainder was contributed by external donors, multilateral institutions and the recipient countries.

IFAD's development projects usually include a number of components, such as infrastructure (e.g. improvement of water supplies, small-scale irrigation and road construction); input supply (e.g. improved seeds, fertilizers and pesticides); institutional support (e.g. research, training and extension services); and producer incentives (e.g. pricing and marketing improvements). IFAD also attempts to enable the landless to acquire income-generating assets: by increasing the provision of credit for the rural poor, it seeks to free them from dependence on the capital market and to generate productive activities. The Fund supports projects that are concerned with environmental conservation, in an effort to alleviate poverty that results from the deterioration of natural resources. In addition to promoting small-scale irrigation (which has proved more economically and ecologically viable than large-scale systems), projects include low-cost anti-erosion measures, land improvement, soil conservation, agro-forestry system, improved management of arid rangeland, and safe biological control of pests.

IFAD is a leading repository of knowledge, resources and expertise in the field of rural hunger and poverty alleviation. During 1995 a team established to review IFAD's activities focused on IFAD's role as an innovator, emphasizing the importance of pioneering practices and strategies that can be replicated, and of making its knowledge available to relevant agencies and governments. Through its technical assistance grants, IFAD aims to promote research and capacity-building in the agricultural sector, as well as the development of technologies to increase production and alleviate rural poverty. IFAD is financing efforts to improve the production of durum wheat in the dryland areas of West Asia and North Africa and is supporting the establishment of a regional animal surveillance and control network to identify and prevent outbreaks of livestock diseases in North Africa, the Middle East and the Arab Peninsula. In 1998 the Near East and North Africa Management Training in Agriculture programme was initiated with the aim of strengthening national training capacities in the fields of agriculture and rural development.

PROJECTS APPROVED IN THE NEAR EAST AND NORTH AFRICA IN 1998

Country	Purpose	Loan Amount (SDRm.*)
Egypt	Rural development in Sohag region	18.9
Gaza and West Bank	Community-based natural resources management	5.8
Oman	Community resources management	3.9
Romania	Apuseni regional development activities	12.4
Syria	Agricultural production in Badia rangelands	15.0
Tunisia	Integrated agricultural development in Zaghouan governorate	11.4

* The average value of the SDR—Special Drawing Right—in 1998 was US $1.3565.

During 1998 IFAD approved six projects in the Near East and North Africa region (which includes parts of Central and Eastern Europe, Djibouti, Somalia and Sudan) with loans amounting to US $90.7m., or 22% of total lending approved in that year. In early 1998 the IFAD Governing Council approved the establishment of a Fund for Gaza and the West Bank which enabled the Fund to provide financial assistance to those territories.

In October 1997 IFAD was appointed to administer the Global Mechanism of the Convention to Combat Desertification in those Countries Experiencing Drought and Desertification, Particularly in Africa, which entered into force in December 1996. The Mechanism was envisaged as a means of mobilizing and channelling resources for implementation of the Convention. A series of collaborative institutional arrangements was to be concluded between IFAD, UNDP and the World Bank in order to facilitate the effective functioning of the Mechanism.

Finance

IFAD's programme of work for 1999 envisaged loans and grants totalling US $472.8m., while the budget for administrative expenses amounted to $55.0m.

The State of World Rural Poverty.

International Monetary Fund—IMF

Address: 700 19th St, NW, Washington, DC 20431, USA.

Telephone: (202) 623-7430; **telex:** 64111; **fax:** (202) 623-6220; **internet:** http://www.imf.org.

The IMF was established at the same time as the World Bank in December 1945, to promote international monetary co-operation, to facilitate the expansion and balanced growth of international trade and to promote stability in foreign exchange.

Organization

(August 1999)

BOARD OF GOVERNORS

The highest authority of the Fund is exercised by the Board of Governors, on which each member country is represented by a Governor and an Alternate Governor. The Board normally meets annually, and an Interim Committee meets twice a year. The voting power of each country is related to its quota in the Fund.

BOARD OF EXECUTIVE DIRECTORS

The 24-member Board of Executive Directors is responsible for the day-to-day operations of the Fund. The USA, the United Kingdom, Germany, France, Japan and Saudi Arabia each appoint one Executive Director, while 16 of the remainder are appointed by groups of member countries sharing similar interests; there is also one Executive Director each from the People's Republic of China, Russia and Saudi Arabia.

OFFICERS

Managing Director: MICHEL CAMDESSUS (France).

First Deputy Managing Director: STANLEY FISCHER (USA).

Deputy Managing Directors: SHIGEMITSU SUGISAKI (Japan); EDUARDO ANINAT (Chile) (from Dec. 1999).

Director, African Department: G. E. GONDWE.

Director, Middle Eastern Department: PAUL CHABRIER.

Activities

The purposes of the IMF, as set out in the Articles of Agreement, are:

(i) To promote international monetary co-operation through a permanent institution which provides the machinery for consultation and collaboration on monetary problems.

(ii) To facilitate the expansion and balanced growth of international trade, and to contribute thereby to the promotion and maintenance of high levels of employment and real income and to the development of members' productive resources.

(iii) To promote exchange stability, to maintain orderly exchange arrangements among members, and to avoid competitive exchange depreciation.

(iv) To assist in the establishment of a multilateral system of payments in respect of current transactions between members and in the elimination of foreign exchange restrictions which hamper the growth of trade.

(v) To give confidence to members by making the general resources of the Fund temporarily available to them, under adequate safeguards, thus providing them with the opportunity to correct maladjustments in their balance of payments, without resorting to measures destructive of national or international prosperity.

(vi) In accordance with the above, to shorten the duration of and lessen the degree of disequilibrium in the international balances of payments of members.

In joining the Fund, each country agrees to co-operate with the above objectives, and the Fund monitors members' compliance by holding an annual consultation with each country, in order to survey the country's exchange rate policies and determine its need for assistance.

In accordance with its objective of facilitating the expansion of international trade, the IMF encourages its members to accept the obligations of Article VIII, Sections two, three and four, of the IMF Articles of Agreement. Members that accept Article VIII undertake to refrain from imposing restrictions on the making of payments and transfers for current international transactions and from engaging in discriminatory currency arrangements or multiple currency practices without IMF approval. By the end of 1998 147 members had accepted Article VIII status.

RESOURCES

Members' subscriptions form the basic resource of the IMF. They are supplemented by borrowing. Under the General Arrangements to Borrow (GAB), established in 1962, the 'Group of Ten' industrialized nations (Belgium, Canada, France, Germany, Italy, Japan, the Netherlands, Sweden, the United Kingdom and the USA) and Switzerland (which became a member of the IMF in 1992, but which had been a full participant in the GAB from 1984) undertake to lend the Fund up to SDR 17,000m. (increased from SDR 6,400m. in December 1983) in their own currencies, so as to help meet the balance-of-payments requirements of any member of the group, or to meet requests to the Fund from countries with balance-of-payments problems that could threaten the stability of the international monetary system. In July 1983 the Fund entered into an agreement with Saudi Arabia, in association with the GAB, making available SDR 1,500m., and other borrowing arrangements were completed in 1984 with the BIS, the Saudi Arabian Monetary Agency, Belgium and Japan, making available a further SDR 6,000m.

In May 1996 GAB participants concluded an agreement in principle to expand the resources available for borrowing to SDR

34,000m., by securing the support of other countries with the financial capacity to support the international monetary system. The so-called New Arrangements to Borrow (NAB) was approved by the Executive Board in January 1997. It was to enter into force, for an initial five-year period, as soon as the five largest potential creditors (of the anticipated 25 member countries and institutions participating in NAB) had approved the initiative and the total credit arrangement of participants endorsing the scheme had reached at least SDR 28,900m. While the GAB credit arrangement was to remain in effect, the NAB was expected to be the first facility to be activated in the event of the Fund requiring supplementary resources. In July 1998 the GAB was activated for the first time in more than 20 years in order to provide funds totalling US $6,300m. in support of an IMF emergency assistance package for Russia (the first time the GAB had been used for a non-participant). The NAB became effective in November, and was used for the first time as part of an extensive programme of support for Brazil, which was adopted by the IMF in early December.

DRAWING ARRANGEMENTS

Exchange transactions within the Fund take the form of members' purchases (i.e. drawings) from the Fund of the currencies of other members for the equivalent amounts of their own currencies. Fund resources are available to eligible members on an essentially short-term and revolving basis to provide members with temporary assistance to contribute to the solution of their payments problems. Before making a purchase, a member must show that its balance of payments or reserve position make the purchase necessary. Apart from this requirement, reserve tranche purchases (i.e. purchases that do not bring the Fund's holdings of the member's currency to a level above its quota) are permitted unconditionally.

With further purchases, however, the Fund's policy of 'conditionality' means that a member requesting assistance must agree to adjust its economic policies, as stipulated by the IMF. All requests other than for use of the reserve tranche are examined by the Executive Board to determine whether the proposed use would be consistent with the Fund's policies, and a member must discuss its proposed adjustment programme (including fiscal, monetary, exchange and trade policies) with IMF staff. Purchases outside the reserve tranche are made in four credit tranches, each equivalent to 25% of the member's quota; a member must reverse the transaction by repurchasing its own currency (with SDRs or currencies specified by the Fund) within a specified time. A credit tranche purchase is usually made under a 'stand-by arrangement' with the Fund, or under the extended Fund facility. A stand-by arrangement is normally of one or two years' duration, and the amount is made available in instalments, subject to the member's observance of 'performance criteria'; repurchases must be made within three-and-a-quarter to five years. An extended arrangement is normally of three years' duration, and the member must submit detailed economic programmes and progress reports for each year; repurchases must be made within four-and-a-half to 10 years. A member whose payments imbalance is large in relation to its quota may make use of temporary facilities established by the Fund using borrowed resources, namely the 'enlarged access policy' established in 1981, which helps to finance stand-by and extended arrangements for such a member, up to a limit of between 90% and 110% of the member's quota annually. In October 1994 the Executive Board agreed to increase, for three years, the annual access limit under IMF regular tranche drawings, stand-by arrangements and extended Fund facility credits from 68% to 100% of a member's quota, with the cumulative access limit remaining at 300% of quota. The arrangements were extended, on a temporary basis, in November 1997.

During the year ending 30 April 1997 a stand-by arrangement totalling SDR 271.4m. was concluded with Egypt, while in the following financial year an extended Fund facility credit totalling SDR 105.9m. was made available to Yemen. At 30 April 1998 stand-by and extended Fund facility arrangements remained, additionally, in effect with Algeria and Jordan.

In addition, there are special-purpose arrangements, all of which are subject to the member's co-operation with the Fund to find an appropriate solution to its difficulties. The buffer stock financing facility (established in 1969) enables members to pay their contributions to the buffer stocks which are intended to stabilize primary commodity markets. The BSFF has not been used since 1984. In August 1988 the Fund established the compensatory and contingency financing facility (CCFF), which replaced and expanded a previous facility. The CCFF provides compensation to members whose export earnings are reduced owing to circumstances beyond their control, or who are affected by excess costs of cereal imports. Contingency financing is provided, up to a maximum of 95% of quota, to help members maintain their efforts at economic adjustment even when affected by a sharp increase in interest rates or other externally-derived difficulties. In December 1997 the Executive Board established a new Supplemental Reserve Facility (SRF) to provide short-term assistance to members experiencing exceptional balance-of-payments difficulties resulting from a sudden loss of market confidence. Repayments were to be made within one to one-and-a-half years of the purchase, unless otherwise extended by the Board. In April 1999 an additional facility was established, for a two-year period, to provide short-term financing on similar terms to the SRF in order to prevent more stable economies being affected by adverse international financial developments and to maintain investor confidence. Under the Contingent Credit Lines (CCL) member countries were to have access to up to 500% of their quota, subject to meeting various economic criteria stipulated by the Fund.

The structural adjustment facility (SAF) was established in 1986 to support medium-term macroeconomic adjustment and structural reforms in low-income developing countries on concessionary terms. Following the adoption of the enlarged enhanced structural adjustment facility (ESAF—see below) it was agreed that no further resources would be made available for SAF arrangements.

The ESAF, established in 1987, was to provide new resources to assist the adjustment efforts of, in particular, heavily-indebted countries. Eligible members must develop a three-year adjustment programme (with assistance given jointly by staff of the Fund and of the World Bank) to strengthen the balance-of-payments situation and foster sustainable economic growth. ESAF loans carry an interest rate of 0.5% per year and are repayable within 10 years, including a five-and-a-half-year grace period. Maximum access is set at 190% (255% in exceptional circumstances) of the member's quota. From April 1992 11 additional countries were eligible to borrow from the ESAF, including Egypt. In February 1994 a new period of operations of the ESAF became effective, following an agreement to enlarge the ESAF Trust (the funding source for ESAF arrangement). The terms and conditions of the new facility remain the same as those of the original ESAF, but the list of countries eligible for assistance was enlarged by six, to 78. (In January 1995 Eritrea became the 79th member eligible for ESAF assistance.) The new commitment period for lending from the ESAF Trust was to expire on 31 December 1996, while disbursements were to be made until 31 December 1999. In September 1996 the Interim Committee of the Board of Governors endorsed measures to finance the ESAF for a further five-year period, 2000–2004, after which the facility was to become self-sustaining. The interim period of the ESAF was to be funded mainly from bilateral contributions, but drawing on the Fund's additional resources as necessary. The ESAF was to support, through long-maturity loans and grants, IMF participation in a joint initiative, with the World Bank, to provide exceptional assistance to heavily indebted poor countries (HIPCs), in order to help them to achieve a sustainable level of debt management. The initiative was formally approved at the September meeting of the Interim Committee, having received the support of the 'Paris Club' of international creditors which agreed to increase the relief on official debt from 67% to 80%.

At 30 April 1998 33 ESAF arrangements were in effect, with commitments amounting to SDR 4,410m. Disbursements in the financial year 1997/98 amounted to SDR 973m., while cumulative SAF and ESAF disbursements to the end of April 1998 totalled SDR 8,145m. (see World Bank p. 236). In April 1999, following a joint IMF-World Bank review of the HIPC initiative, the Interim Committee endorsed the sale of up to 10% of IMF gold reserves to generate resources to enlarge the scheme and enhance its effectiveness.

SURVEILLANCE

Under its Articles of Agreement, the Fund is mandated to oversee the effective functioning of the international monetary system and to review the policies of individual member countries to ensure the stability of the exchange rate system. The Fund's main tools of surveillance are regular consultations with member countries conducted in accordance with Article IV of the Articles of Agreement, which cover fiscal and monetary policies, balance-of-payments and external debt developments, as well as policies that affect the economic performance of a country, such as the labour market, social and environmental issues and good governance and aspects of the country's capital accounts, and finance and banking sectors. In addition, World Economic Outlook discussions are held, normally twice a year, by the Executive Board to access policy implications from a multilateral perspective and to monitor global developments. The rapid decline in the value of the Mexican peso in late 1994 and the ensuing financial crisis in Asia, which became apparent in mid-1997, focused attention on the importance of IMF surveillance of the economies and financial policies of member states and prompted the Fund to enhance the effectiveness of its surveillance and to encourage the full and timely provision of data by member countries in order to maintain fiscal transparency. In April 1996 the IMF established the Special Data Dissemination Standard, which was intended to improve access to reliable economic statistical information for member countries that have, or are seeking, access to international capital markets. In March 1999 the IMF undertook to strengthen the Standard by the introduction of a new reserves data template. At that time 47 countries had subscribed to the

Standard. In March 1997 the Executive Board agreed to develop a General Data Dissemination System, to encourage all member countries to improve the production and dissemination of core economic data. In April, in an effort to improve the value of surveillance by means of increased transparency, the Executive Board agreed to the voluntary release of Press Information Notices, following each member's Article IV consultation with the Board.

TECHNICAL ASSISTANCE

Technical assistance is provided by special missions or resident representatives who advise members on every aspect of economic management. Assistance is provided by the IMF's various specialized departments and is becoming an increasingly important aspect of the Fund's relationship with its member countries. In particular, the expansion of the Fund's technical assistance activities during the early 1990s resulted from the increase in countries undergoing economic and systemic transformations. The IMF Institute, founded in 1964, trains officials from member countries in financial analysis and policy, balance-of-payments methodology and public finance: it also gives assistance to national and regional training centres. The IMF is co-sponsor of the Joint Vienna Institute, which was opened in the Austrian capital in October 1992 and which trains officials from former centrally-planned economies in various aspects of economic management and public administration. During 1996/97 a total of 1,182 people attended training courses or seminars at the IMF Institute or the Joint Vienna Institute, while some 1,110 senior officials participated in overseas training courses.

Yemen	243.5

* The Special Drawing Right (SDR) was introduced in 1970 as a substitute for gold in international payments, and is intended eventually to become the principal reserve asset in the international monetary system. Its value (which was US $1.3512 at 30 April 1999 and averaged $1.3565 in 1998) is based on the currencies of the five largest exporting countries. Each member is assigned a quota related to its national income, monetary reserves, trade balance and other economic indicators; the quota approximately determines a member's voting power and the amount of foreign exchange it may purchase from the Fund. A member's subscription is equal to its quota. Under the Ninth General Review of quotas, which was completed in June 1990, an increase of 50% in total quotas (from SDR 90,000m. to SDR 135,200m.) was authorized. The increase entered into effect in November 1992; with additional contributions from countries that joined the IMF subsequent to June 1990, by 1 August 1997 total quotas amounted to SDR 145,300m. The Tenth General Review of Quotas was concluded, in December 1994, with no further increase of quotas. In February 1998 the Board of Governors adopted a resolution in support of an earlier decision of the Executive Board of an increase in total quotas of some 45%. The resolution completed the Eleventh General Review; however, the increase was subject to approval by member states constituting 85% of total quotas (as at December 1997). Sufficient consent had been granted by January 1999 to enable the overall increase in quotas to enter into effect. All members were then granted until 30 July to consent to the higher quotas. At March total quotas in the Fund amounted to SDR 207,982.9m.

† Iraq had overdue obligations and was therefore ineligible to consent to any increase, while Lebanon had not yet consented to the new quota by August 1999. The figures listed are those determined under the Eighth and Ninth General Reviews, respectively, while the figures in parentheses are the proposed Eleventh General Review quotas.

United Nations Educational, Scientific and Cultural Organization—UNESCO

Address: 7 place de Fontenoy, 75352 Paris, France.

Telephone: 1-45-68-10-00; **telex:** 204461; **fax:** 1-45-67-16-90; **internet:** http://www.unesco.org.

UNESCO was established in 1946 'for the purpose of advancing, through the educational, scientific and cultural relations of the peoples of the world, the objectives of international peace and the common welfare of mankind'.

Organization

(August 1999)

GENERAL CONFERENCE

The supreme governing body of the Organization, the Conference meets in ordinary session once in two years and is composed of representatives of the member states.

EXECUTIVE BOARD

The Board, comprising 58 members, prepares the programme to be submitted to the Conference and supervises its execution; it meets twice or sometimes three times a year.

SECRETARIAT

Director-General: FEDERICO MAYOR (Spain).

Director of the Executive Office: GEORGES MALEMPRÉ (Belgium).

REGIONAL OFFICES

Regional Office for Education in the Arab States: POB 5244, Cité Sportive Ave, Beirut, Lebanon; tel. (1) 850075; fax (1) 824854; e-mail uhbei@unesco.org; internet http://www.unesco.org.lb; Dir V. BILLEH.

Regional Office for Science and Technology in the Arab States—ROSTAS: 8 Abdar-Rahman Fahmy St, Garden City, Cairo, Egypt; tel. (2) 3543036; fax (2) 3545296; e-mail uhcai@unesco.org; Dir MUHAMMAD ED-DEEK (acting).

Regional Office for Social and Human Sciences in the Arab Region: POB 363, 12 rue de Rhodes, 1002 Tunis, Tunisia; tel. (1) 790947; telex 18409; fax (1) 791588; e-mail tunis@unesco.org; liaison office with the Arab League Educational, Cultural and Scientific Organization; Dir F. CARRILLO-MONTESINOS.

UNESCO Office—Amman: POB 2270, Wadi Saqra, Amman, Jordan; tel. (6) 5606559; fax (6) 5682183; e-mail uhamm@unesco.org; Dir ABD AL-QADER EL-ATRASH.

UNESCO Office—Doha: POB 3945, Doha, Qatar; tel. 867707; fax 867644; e-mail unesco.doha@unesco.org; Dr ABDALLA BUBTANA.

UNESCO Office—Rabat: BP 1777, 35 ave du 16 Novembre, Agdal, Rabat, Morocco; tel. (7) 670374; fax (7) 670375; Dir L. SALMAN EL-MADINI.

Activities in the Middle East and North Africa

UNESCO's overall work programme for 1998–99 comprised the following four major programmes: Education for All Throughout Life; the Sciences in the Service of Development; Cultural Development: Heritage and Creativity; and Communication, Information and Informatics. It also incorporated two transdisciplinary projects—Education for a Sustainable Future and Towards a Culture of Peace—which encompassed UNESCO's fundamental objectives of promoting peace, international understanding, respect for human rights, and sustainable development, through education, training and awareness-generating activities. In implementing the work programme UNESCO was to target four priority groups, identified as being women, young people, African member states and least-developed countries. UNESCO is responsible for co-ordinating activities relating to the International Year for the Culture of Peace, designated by the UN General Assembly to be observed in 2000. A core element of the programme of activities was to be the signing by individuals of a Manifesto 2000 for a Culture of Peace and Non-violence, which was inaugurated in December 1998 at a celebration of the 50th anniversary of the Universal Declaration of Human Rights.

In December 1993 UNESCO organized a meeting, held in Granada, Spain, of Israeli and Palestinian academics and experts. Under a process termed 'Granada II', UNESCO aimed to promote peace between the two sides through a series of co-operation projects. The process was formally inaugurated in January 1999 when representatives of the Israeli Government and the Palestinian authorities signed six agreements to collaborate on projects relating to medical research, joint music education, interfaith dialogue, and tourism and infrastructure.

EDUCATION

Since its establishment UNESCO has devoted itself to promoting education in accordance with principles based on democracy and respect for human rights.

In March 1990 UNESCO, with other UN agencies, sponsored the World Conference on Education for All. 'Education for All' was subsequently adopted as a guiding principle of UNESCO's contribution to development. The promotion of access to learning opportunities throughout an individual's life is a priority for UNESCO's 1996–2001 programme of activities: Education for All Throughout Life was a key element of the 1998–99 work programme and was allocated a budget of US $104.6m. UNESCO aims, initially, to foster basic education for all. The second part of its strategy is to renew and diversify education systems, including updating curricular programmes in secondary education, strengthening science and technology activities and ensuring equal access to education for girls and women. In December 1993 the heads of government of nine highly-populated developing countries (Bangladesh, Brazil, the People's Republic of China, Egypt, India, Indonesia, Mexico, Nigeria and Pakistan), meeting in Delhi, India, agreed to co-operate with the objective of achieving comprehensive primary education for all children and of expanding further learning opportunities of children and adults.

Within the UN system, UNESCO is responsible for providing technical assistance and educational services within the context of emergency situations. This includes providing education to refugees and displaced persons, as well as assistance for the rehabilitation of national education systems. In Palestine, UNESCO collaborates with UNRWA (q.v.) to assist with the training of teachers, educational planning and rehabilitation of schools. UNESCO also supports the Programme for Palestinian-European Academic Co-operation in Education (the 'Peace Programme'), which was initiated in late 1991 to support academic exchanges and to enable Palestinian students to study abroad. An office of the Peace Programme was established at UNESCO headquarters in 1995.

UNESCO is concerned with improving the quality, relevance and efficiency of higher education. It assists member states in reforming their national systems, organizes high-level conferences for Ministers of Education and other decision-makers, and disseminates research papers. A World Conference on Higher Education was convened in October 1998 in Paris, France. The Conference adopted a World Declaration on Higher Education for the 21st Century, incorporating proposals to reform higher education, with emphasis on access to education, and educating for individual development and active participation in society.

The International Institute for Educational Planning and the International Bureau of Education carry out training, research and the exchange of information on aspects of education.

SCIENCE AND SOCIAL SCIENCES

During 1998–99 UNESCO was to implement projects under the programme of the Sciences in the Service of Development, which aimed to foster the advancement, transfer and exchange of knowledge in the physical, natural, social and human sciences and to promote their application with the objective of improving the social and natural environment.

UNESCO has established various forms of intergovernmental co-operation concerned with the environmental sciences and research on natural resources, in order to support the recommendations of the June 1992 UN Conference on Environment and Development, and, in particular, the implementation of 'Agenda 21' to promote sustainable development. The International Geological Correlation Programme (IGCP), run jointly with the International Union of Geological Sciences, aims to improve and facilitate global research of geological processes. In the context of the International Decade for Natural Disaster Reduction (declared in 1990) UNESCO has conducted scientific studies of natural hazards and means of mitigating their effects and has organized several disaster-related workshops. The International Hydrological Programme (IHP) considers

the scientific aspects of water resources assessment and management, while the Intergovernmental Oceanographic Commission (IOC), focuses on issues relating to oceans, shorelines and marine resources, in particular the role of the ocean in climate and global systems. An initiative on Environment and Development in Coastal Regions and in Small Islands is concerned with ensuring environmentally sound and sustainable development by strengthening management of the following key areas: freshwater resources; the mitigation of coastline instability; biological diversity; and coastal ecosystem productivity. UNESCO's Man and the Biosphere Programme supports a worldwide network of biosphere reserves (comprising 356 sites in 90 countries in 1998), which aim to promote environmental conservation and research, education and training in biodiversity and problems of land use. Following the signing of the Convention to Combat Desertification in October 1994, UNESCO initiated an International Programme for Arid Land Crops, based on a network of existing institutions, including the Ben Gurion University of the Negev, in Israel, to assist implementation of the Convention. Also in 1994 UNESCO initiated an international research programme, the Management of Social Transformations, to promote capacity-building in social planning at all levels of decision-making.

The Regional Office for Science and Technology (ROSTAS) organizes courses and studies on the teaching of basic science, computer science, hydrology, oceanography, geophysics, soil biology, geomorphology and seismology. It provides regional seminars, training courses and consultancy missions. As part of its programmes in arid zone research, UNESCO has helped to establish research institutes in Iraq and Saudi Arabia, and has given financial aid to Egypt's Desert Research Institute.

In September 1996 UNESCO initiated a 10-year World Solar Programme, which aimed to promote the application of solar energy and to increase research, development and public awareness of all forms of ecologically-sustainable energy use.
